"How lonesome the house seems, mam'a," said HANNAH, Mrs. HUBBELL's help; "the master was such a pleasant man, to be sure."

"Oh, HANNAH!" groaned the widow, "my loss can never be made up to me."

"Sure, that's true for you, mam'a," but she added, retreating into the kitchen, "you deserved to lose him. I hope he's better appreciated wherever he is, poor soul!"

Time passed on, and the widow wore the deepest mourning; assuring her friends her loss could never be repaired. As she told Deacon DODD, upon receiving his congratulations—or condolences, rather—"her affections were buried with JOSEPH. It seemed at first as if she had nothing to live for; but she had become convinced that it was her duty to pluck her heart from his grave, and strive to live for others. We've both trod the paths of affliction, Mr. DODD," she said. "We can sympathize with each other, being partners in distress." Here the pearly drops bedewed the widow's hatched face, while the Deacon mopped his slabby cheeks with his yellow silk handkerchief. Altogether it was a moving scene. Soon after this the widow's six young hopefuls were attacked by the measles, and their father found a "friend in need" in Mrs. HUBBELL. Never was there a more indefatigable nurse. Indeed, as CLESTIA ANN rather sarcastically observed, "the widow couldn't have taken better care of the Deacon himself, had he been afflicted with the measles instead of his children." As soon as they fully recovered from the dangerous malady, the Deacon became alarmed for the future well-being of his red-headed offspring. They were such a serious responsibility for him to be in charge of,—deprived of a mother's care,—that he finally prevailed upon their kind nurse to "live" for him and his; or, in other words, to change her name from HUBBELL to DODD, and all live together on the "place," its being paid for forming no very serious objection with the Deacon. When the state of affairs was fully known in the village, there was no end to the talk. Miss CLESTIA ANN, who, in addition to her other maidenly accomplishments, was also "literate," as Mrs. DIBBLE expressed it, wrote a poem in twelve cantos upon "First Love," and had it published in the *Doddington Gazette*, in which poem there was so much mention made of "blighted hopes," "withered affections," etc., etc., as caused a great many surmises and conjectures among the good people of the village, respecting the state of CLESTIA's feeling towards the worthy Deacon.

Well, the spring violets had just reared their blue heads upon JOSEPH's grave, when his widow became a bride. What's the use of telling more—how CLESTIA ANN's ringlets looked more like pipe-stem's than ever, upon the happy occasion—how the widow appeared in orange blossoms, and the Deacon in white kids? It is useless—my pen would fail me. Mrs. Deacon DODD expressed her feelings thus:—"Her heart bubbled over with the loftiest emotions of gratitude—to say nothing of other feelings—to think that she could at last rest her weary head upon the 'pillow' of the church!" After a few days' shining, their honey-moon declined and set in the interminable darkness of a domestic storm. The Deacon and his little flock found by bitter experience that all things earthly are subject to change. Mrs. HUBBELL, the kind, attentive friend, was a different person from Mrs. DODD. Alas! for human judgment. What if the place was paid for? The memory of the former wife—a weak, uncomplaining woman—haunted him day and night. His children safe through the measles, he half wished himself a widower again, and Mrs. DODD and the place in Flanders. You may always know when this amiable couple have been indulging in one of the "scenes"—which I devoutly wish were blotted out from life's drama—for at night-fall, as the witching hour comes on, Deacon DODD may be seen, sitting on the door-step, singing through his nose:

"I would not live away, I ask not to stay,"
or,
"This world is all a fleeting show
For man's illusion given."
Rochester, N. Y., 1859.

THE BUSH GUINEA.

One of the most famous and flourishing hotels in England, when Bristol had a fair share of trade and commerce, monopolizing a great portion of the West India trade, was the Bush Inn, kept by a true-hearted, downright honest man named John Weeks. At the time of which I speak, this inn-keeper was not very wealthy, though he deserved to be. The poor were largely benefited by his charity, and it was discovered—not until after his death, for he was one of whom it might literally be said that his right hand knew not what his left hand did—that several decayed house-keepers were largely indebted to his benevolence for food, clothes, fuel and money, during the hard season of winter in particular, and at times in general.

In the Bush Inn there was a mighty kitchen—it is there yet I presume, if the house be kept up as an inn—down the centre of which extended a mammoth table. It was the delight of this Boniface, on every Christmas day, to cover this great table with a glorious load of roast beef, plum-pudding, flanked most plentifully with double home-brewed of mighty strength and glorious flavor, that one might have called it malt-wine rather than malt-liquor. At this table, on that day, every one who was pleased was welcomed to sit down and feast. Many to whom a good dinner was an object did so; and no nobler sight was there in Bristol, amid all its wealth and real hospitality, than that of honest John Weeks at the head of his table, lustily carving, and earnestly pressing his guests to "eat, drink, and be merry."

Nor did his generosity content itself with this. It was the custom of the house and of the day, when the repast was ended, and the guests had drunk some toasts, commencing with "The King, God bless him," (and be sure that their gratitude did not forget their generous entertainer), that each person should go to worthy John Weeks, in the bar, and there receive his cordial wishes for many returns of the genial season. They received something more—for according to their several necessities, a small gift in money was pressed upon each. To one man a crown, to another, half a guinea—to a third, as more needing it, a guinea. On the whole, some fifty or sixty guineas were thus dispensed. The gross amount might not be much, but the good done was great, and on that day, perhaps, John Weeks thus expended a good portion of his annual net profits, though less it might be,

than many a plethoric Alderman would lavish on a single entertainment to persons of his own rank who did not require, and would scarcely thank him for it.

On one particular year, it had been noticed during the months of November and December, that a middle-aged man, whom no frequenter of the Bush Inn appeared to know, and who appeared to know no one, used to visit the coffee room about every day, and calling for a sixpenny glass of brandy and water, sit over it till he had carefully gone through the perusal of the London paper of the preceding evening, which used to arrive about an hour before his visit—owing to Mr. Palmer's then acceleration of mail coach traveling from five to eight miles an hour—a great novelty, at that time considered to be the accomplishment of very extraordinary speed. The landlord of the Bush, seeing how anxious the reduced gentleman was to read the London paper, made it be understood that while he had it "in hand" no one else was to expect it. Thus, without being pressed for time, the reduced gentleman was allowed to read his paper at his ease, which he did, apparently commencing with the title on the first page, and ending with the imprint on the last.

Garments in that state, which though not actually "shabby," may be described as "seedy," a heaver, which, most rusty and napless, was carefully brushed—faded gloves—spattered shoes of doubtful hue covering shoes which appeared to have been made for a much larger man—plain buckles—a lean body—a confirmed stoop—and a limited expenditure of the single sixpence every day, without any gratuity to the waiter, so very clearly intimated this man's condition, that if a customer asked for the London paper, it was sufficient to say, "the decayed gentleman has it in hand."

On Christmas Eve, honest John Weeks, anxious that the "decayed gentleman" should have one good meal at least, in the Bush, addressed him as he was quitting the coffee-room, and delicately intimated that, on the following day, he kept open table, at which all who could not obtain good Christmas dinners at home, were very welcome to sit down free of cost. The decayed gentleman looked at the inn-keeper with some surprise, and smiled—but he presently recovered himself, and retired without saying a word, simply bowing his acknowledgment. If there had been any doubt of his condition, it was at an end on the next day, when punctually at one o'clock, being the appointed hour, he appeared at the Bush, in his usual seedy attire. By virtue of his being a stranger there, and the appearance of having seen better days, he was honored with a seat at the upper end of the long table, even next to John Weeks himself. He partook of the good dinner with the apparent relish of a man to whom such a feast had long been a novelty, and duly did justice to the "stunning ale," for which, far and near, the Bush then was famous. Now and then the landlord had snatches of conversation with him, and very soon perceived that the decayed gentleman was shrewd in his remarks, and had evidently sat at rich men's tables at some period of his life.

The dinner was concluded. The landlord retired to his bar, into which, one after another, straggled his guests, and then received the various money doles, which John Weeks' knowledge or suspicion of their respective wants had provided and apportioned out for each. The decayed gentleman remained the last at the long table—a kind-hearted waiter, who knew how much he liked to read the London paper, and knew also, that he had not visited the coffee-house that morning, had brought down the broad sheet (Cowper's folio of four pages), and the decayed gentleman read it by the kitchen fire after his dinner, with as true a sense of enjoyment as my Lord Duke could have had in his palatial library. Presently there came a message from some civic functionary, desiring the attendance of the landlord of the Bush, to receive instructions about a feast which was to be given at the Mansion House on the New Year, and to be provided from the Bush. Therefore, when departing to attend to this important summons, John Weeks called his head-waiter, a sagacious, well-powdered, steady man, to whom he confidentially entrusted the donation which he had set aside for the decayed gentleman, and with it were many instructions to exercise great delicacy in handing him the gift; "for," said John Weeks, "it is evident he has seen better days, and we should have regard for his feelings, Morris, particularly as he is a stranger in the city." Thus saying, he departed, and faithful Morris remained to execute his delicate and holy mission.

Just as the decayed gentleman was leaving the house, and when there was no witness of their interview, Morris blandly and respectfully accosted him, and slipping a guinea into his hand, said, "My master requests, sir, that you will do him the favor to accept this, and he is sorry that his being called away causes it to come through my hands." The money rested in the palm of the decayed gentleman. He looked at the gold—he looked at the waiter—he looked at the gold again. Morris thought, at first, that he intended returning it. But the decayed gentleman quietly put it into his waistcoat pocket, from which he drew a card which he handed to Morris, saying, "My compliments to your master, and my thanks. This is my name and address, and if he should ever come my way, or think that I can do him any service, I beg that he will call upon me, or write." He buttoned his coat, went away, and from that day to this, was never again seen in the coffee-room of the Bush. The inscription on the card was simply, "THOMAS CORRIE, 59 Strand." The owner was the great London banker, and had come to Bristol on some very particular business, and it was his humor to live there in a humble manner.

In a short time, John Weeks, to the surprise of the Bristolians, purchased the Bush Inn, at a large price, from Griffith Maskelyne, the owner. Next he embarked largely in the coaching and posting department, and thrived abundantly. Soon after, when a bargain was to be had of some land belonging to the Corporation, the purchaser was John Weeks, who let it off for building leases, by which he obtained twelve or fifteen per cent. for his investment. Finally, having acquired a competency, he withdrew from business, and went to live on an estate which he had purchased at Shirehampton. No one exactly knew how he had obtained the capital to draft upon Counts & Co. 59 Strand, were duly honored, and to her dying day, among the heir-looms which she most particularly prized, the Duchess of St. Albans, widow of Thomas Counts, used to show a coin richly mounted in a gorgeous bracelet, which bore the name of "THE BUSH GUINEA."

"THE EAGLE'S NEST OF THE REPUBLIC."

A NUMBER of years ago, happening to be in Paris on the 4th of July, with many other Americans, we agreed to celebrate "the day" by a dinner at the Hotel Maurice. There were seventy-two of us in all. We had but one guest. This was M. de Tocqueville, who had rendered himself famous by his great work upon Democracy in America. During the festivities of the evening, after the cloth had been removed, and speechifying had commenced, some gentleman alluded *en passant* to the fact that he was born in Connecticut. "Connect-de-coot," exclaimed Monsieur De Tocqueville, as he suddenly rose, with the enthusiasm of a Frenchman, "Voy, messieurs, I will tell you, vid the permission of de presidente of this festival, von very lectal story, and then I will give you von grand sentiment, to dat little State you call Connect-de-coot. Von day ven I vas in de gallery of the House of Representif, I held von map of de Confederation in my hand. Dere was von lectle yellow spot dat dey call Connect-de-coot. I found by the Constitution he was entitled to six of his boys to represent him on dat floor. But ven I make de acquaintance personelle with de member, I find dat more than tirty of the Representatif was born in Connect-de-coot. And then ven I was in the gallery of the House of the Senat, I find de Constitution permit Connect-de-coot to send two of his boys to represent him in dat legislature. But vonce more when I make de acquaintance personelle of the Senator, I find nine of the Senatlemen, I have made my lectle speech; now I will give you my grand sentiment.

"Connect-de-coot, the lectle yellow spot dat make the clock peddler, the school-master, and de Senator. De first give you time; the second tell you what you do with him, and the third make your law and your civilization"—and then, as he was resuming his seat amid roars of laughter, he rose again, and with that peculiar gesticulation which characterizes all Frenchmen in moments of excitement, he shook his finger tremulously over the assembled *conferres*, and exclaimed at the top of his voice, "Ah! gentlemen, dat lectle yellow State you call Connect-de-coot, is one very great miracle to me."—*Democratic Age.*

MISCELLANEOUS ENIGMA.

I AM composed of 21 letters.
My 18, 2, 8, 6 is a girl's name.
My 17, 1, 7, 9 is what we have some times
My 9, 4, 10 is the whole.
My 16, 2, 18, 18 is an insect.
My 8, 1, 18 is an animal.
My 20, 8, 0 is a covering for the head.
My 4, 7, 16, 14, 6 is what we have every day.
My 8, 11, 4, 15, 2 is one of the months.
My 10, 7, 19 is an organ of speech.
My 15, 2 is a preposition.
My 2, 18, 7, 10 is a measure.
My 6, 12, 5 is the way to solve enigmas.
My whole is a study.

RIDDLE.

I AM a king, my palace low, yet rule I with extensive sway;
Great kings had Egypt long ago, but yet I reign'd before their day;
To epicures my reign I owe more than to any other thing,
Though guillotine I undergo, it keeps me not from being king.
With head cut off I am a king; with neck cut off and head left on,
I will be king, yes, I'll be king, though head and neck should both be gone;
If head and foot I both should lose, a blood relation you'd espay;
For then a kin I would disclose—now tell, I pray, what king am I?
Sterling, N. Y., 1859.

KIRBY'S AMERICAN LITTLE BUFFALO HARVESTERS.

THE BEST COMBINED MOWERS AND REAPERS IN THE WORLD. Simplicity, durability, convenience; adaptation to all kinds of work and every variety of ground; light draft, low price; freedom from side draft, clogging, and pressure upon the horses' necks; portability, perfection of work—all these desirable features are combined in the above machines. The American Kirby Harvester is a two horse machine capable of cutting from 10 to 15 acres of grass, and from 12 to 18 acres of grain per day. The Little Buffalo Harvester is a one horse machine capable of cutting from 8 to 12 acres of grass, and from 10 to 15 acres of grain per day.

PRICES AT FACTORY.

American Harvester as Mower, \$105 00
Combined, 125 00
Little Buffalo Harvester as Mower, 90 00
Combined, 100 00

Manufactured by the BUFFALO AGRICULTURAL MACHINERY WORKS, Buffalo, N. Y., and D. M. OSBORN & CO., Auburn, N. Y., and for sale by their Agents in every County. A full and complete list of the names of the Agents, with Testimonials, accounts of the success of the Machines with the Farmers, and of the satisfaction of the Manufacturers or any of their Agents.

MANNY'S COMBINED REAPER AND MOWER,

WITH WORDS IMPROVEMENT, For the Harvest of 1859.

The subscriber here to inform the public that he continues to manufacture this popular machine, and pledges himself to produce an implement that will fully maintain its former reputation, as the best combined machine yet introduced, and inferior to none, either as a Reaper or Mower. It has had a steadily increasing popularity from the first, achieving a complete success in the first important trial at Geneva in 1852. It carried off the highest honors at the great National Field Trial at Syracuse in 1857; and amidst all the competition and trials of 1858, can only be said to have established points of excellence than ever before. The general principles peculiar to this machine, and upon which it is constructed, have proved so successful that there has been no attempt to change them. The main effort during the last year has been to improve its mechanical construction, to make it stronger and more durable, and to maintain its reputation as the leading and most acceptable machine to the largest class of farmers in the country.

Warranted capable of cutting from 10 to 15 acres of grass or grain per day, in a workmanlike manner. Price of Machine as heretofore, varies according to width of cut, and its adaptation in size and strength to different sections of the country, from \$135 to \$160, delivered here on the cars.

WOODS' MOWER.

Patented February 22d, 1859.

During the six years I have been engaged in the manufacture of the Manny Combined Reaper and Mower, I have given much thought and attention to the construction of what I foresee would be a great want of the Farmers, a lighter and cheaper machine expressly for mowing, than had yet been made.

And now, after the most thorough and repeated experiments and tests in every variety of field, and in all kinds and in every condition of grass, I am prepared, with entire confidence, to offer to the farmers and dealers of the United States, the great desideratum in the department of Agricultural labor-saving machines—a Mower, superior to any other for good work to any hitherto introduced, of easy draft, light, cheap, and durable.

This machine I now offer as my latest invention, to meet a special want of farmers, and to place within the reach of all, a Mower that for practical working, cheapness and simplicity, will be without a rival.

I build Two-Horse and One-Horse Mowers. The Two-Horse Mower weighs 435 lbs., and cuts a swath four feet wide (or more if specially ordered). The One-Horse Mower weighs 30 lbs. less, (305 lbs.), and cuts a swath three and a half feet wide.

For a more full description of the Mower, reference is made to my Pamphlets, which will be furnished on application. With each machine will be furnished two extra guards, two extra sections, one wrench and oil can.

Warranted capable of cutting ten acres of grass per day in a workmanlike manner.

Price of Two-Horse Mower, \$80 00
One-Horse Mower, 70 00
Delivered here on the cars.

I continue as heretofore, and with greater success than at any previous time, the manufacture and sale of "Manny's Patent Combined Reaper and Mower with Wood's Improvement."

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
RURAL, LITERARY AND FAMILY NEWSPAPER.
CONDUCTED BY D. D. T. MOORE,
With an Able Corps of Assistants and Contributors.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the RURAL NEW-YORKER a Guide on all the important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it so ably advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other Journal, rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.
For Terms and other particulars, see last page.

RURAL LETTERS FROM EUROPE.—I.

BY SANFORD HOWARD.

Voyage from Boston to Liverpool—Life on a Steamship.—From Liverpool to Glasgow, via Cardiff, Greta, etc.—Tourist's view of the Country, its Aspect, Soil, &c.—Principal breeds of Cattle and Sheep on the route.—Arrival in Ayrshire.—Show of the Glasgow A. S. Society.

TARNOLTON, Ayrshire, Scotland, June 6, 1859.

I LEFT Boston by the steamer Niagara, on the 18th of May, and arrived at Liverpool on the evening of the 29th. A voyage between these two ports at this season of the year, affords little which can be made to interest the general reader. In this case we had not even the excitement of rough weather, or the dangerous proximity of those wonderful objects, "from Greenland's icy mountains," which sometimes beset the navigator's pathway, and have sent ships to the bottom of the great deep. On a voyage made a little later in the season, last year, we met with numerous icebergs.

The principal business of the passengers (or of those in health,) was eating, drinking, and sleeping. We were called to breakfast at half-past eight, to lunch at twelve, to dinner at four, to tea at half-past seven, and to supper at ten o'clock. I send a copy of "bill of fare" for dinner, for one day, from which you will infer that the British and North American Steam Packet Company does not neglect the physical wants of its friends. If a passenger is seasick, as many will be for a while at least, the steward will bring the nicest of oat-meal gruel, and render the best attention. Or, if medical treatment is required, the ship's surgeon will politely administer to your necessities, without fee or reward. If your health admits of your walking about, you may interest yourself in obtaining from the Captain, or the Chief Engineer, some statistics in regard to the working and management of the ship. You will learn that she consumes daily, on her voyage, sixty tons of coal; that her boilers are supplied from the ocean, and that by condensing the escape steam, a large quantity of pure fresh water is obtained, which is used for the culinary and other purposes. You may obtain leave (or perhaps an invitation,) to go down with the Engineer, and see the ponderous and mighty machines which propel the ship through the water, sometimes at the rate of 800 miles a day. To watch their action when the course of the ship is opposed by a head wind and heavy sea, and observe with what certainty and precision the onward revolutions are made, overcoming even the resistance of the elements, cannot fail to give an idea of the high powers with which man has been endowed, and of the great ends which he was destined to attain.

My stay in Liverpool was short. I only wished to arrange some money matters, and make preliminary inquiries in regard to the shipment of live-stock. On Tuesday, 31st ult., I took the "rail" for Glasgow, that "Bee-hive of the North," which within a few years has grown into so much importance, both as a manufacturing and commercial city, having a population of nearly half a million.

The opportunity of viewing the country while traveling in a railroad car at the rate of forty miles an hour, (which was about the speed of our train,) is not such as would afford a very minute idea of its Agriculture. Still, certain things can be seen. Some idea may be obtained of the topography of the country, something of its geology, and something of the capacity and production of its soils.

Something can also be learned of the character of the breeds of cattle and sheep which are kept in different localities.

Leaving Liverpool, we find the soil rests on sandstone, and is for the most part warm and friable. The cattle we see in the pastures are of the Short-horn family, or crosses of it. They are not generally bred into the fashionable fattening variety, and are mostly rather coarse and large boned. The sheep are of the Leicester character, in some cases perhaps entirely of that breed. The pastures are well set with good grass.

As we proceed on our journey and approach the Cumberland Hills, the aspect of the country greatly changes. There is little level land—it is chiefly hills, in many instances showing a surface of rocks, (we cannot always, at the distance, tell what kind of rocks,) and in other places cleared fields with a somewhat thin and stony soil, which by good cultivation appears to produce fair crops of grass, or, in the most favorable spots, grain. Much of the land is in a wild state, having never been disturbed with the plow. It is covered with heath, between the patches of which a little grass grows. These wild tracts are sheep-ranges. But you do not see the sluggish Leicester which occupied the fertile pastures below. The Black-faced breed of the Scottish mountains is best fitted for the rough mode of life that must be endured here. You see the hardy animals grubbing the scanty grass among the wild shrubs, or resting themselves on the bare rocks. Occasionally the rattle of the train starts some of the young lambs from their afternoon nap, and they run off with almost the agility and wildness of the hare. Few cattle are seen, and they are of the Highland or of the Galloway breeds. Occasionally a more fertile tract intervenes. The fields are divided by stone walls, laid in mortar, and with almost as much nicety as we would build the walls of our cellars.

At length we reach the summit and descend to the vale of the Eden, a smiling, fruitful district, in the centre of which is the handsome town of Carlisle. Proceeding a few miles north, we cross "The Border" at Greta, so memorable for the facilities it formerly afforded to persons whose real or fancied "affoities" led them to the pursuit of marriage under difficulties. Here we commence the passage of the South Highlands. The road lies along the bank of a rapid stream, winding between high hills, which are sometimes covered with heath, but frequently with grass. It is almost entirely a sheep country, and the enclosures called "stells," for sheltering the flocks from severe snow-storms, often appear. They are situated in some sheltered spot, and are simply stone walls, generally forming a circle. The sheep are generally of the Black-faced breed, though the Cheviots are sometimes seen. In the broadest parts of the valley, there are farms where cattle are kept, and some cultivation is carried on. But you no longer see the large frames and gay colors of the Short-horns, or if now and then one is seen in a herd of a different breed, the projecting bones and lean carcass show that it is out of its legitimate sphere. The pastures are blackened with the short-legged Galloway and the shaggy Highlander, still partially clad in their winter coat, which has shielded them from the chilling storms. Or, if the location is more favorable, the farm is devoted to dairying, and the Ayrshire cow is the occupant of the pastures.

Having overcome the acclivity, we descend to the north through the valley of the Clyde, till we arrive at the commercial metropolis of Scotland—Glasgow. From this city my course was to the southwest, the place from which I date being about seven miles from Ayr. On another occasion I will speak of such branches of Agriculture in this district as appear likely to interest the readers of the RURAL.

GLASGOW, June 8th.—The Show of the Glasgow Agricultural Society commenced here yesterday and closes to-day. It is a large and very interesting exhibition. I have not now the opportunity to give a description of it, but will make the attempt in my next.

"BETTER GO UP THAN DOWN."

A few years since one of the residents of our goodly city made himself the possessor of a fine piece of property situated just within corporate limits. Fronting upon the highway, its situation was considerably above the level of the road, and this feature was deemed quite objectionable by a number of visiting friends. A spirited discussion ensued, in which the merits and demerits of such elevation were duly considered. "Gentlemen," remarked the proprietor, "better go up than down." This principle is of universal application, in religion, in politics, in trade, in any pursuit. The response was immediate. "With so great faith, why not adopt it as a family motto, friend S., giving it a prominent place upon the record?" The hint

was accepted, and the passer-by may catch the words as they issue from marble lips, "better go up than down."

"Sermons in stones," wrote the immortal poet, and though we are not in a sermonizing mood this morning, we purpose testing this "universal application" of our text by making the inquiry of RURAL readers whether, in agricultural affairs we had not "better go up than down."

In retaining the fertility of the soil, all will readily admit its truthness—not a doubter, not a skeptic do we find. But, friends, how does practice correspond with belief? What is the connection between the words of our mouths and the labor of our hands? There is no such thing as standing still in any of the multifarious avocations of man—up or down we move, and this law governs our being until "dust returns to its kindred dust." Between precept and example the lines may be closely drawn, (we hope they are,) they may be as widely separated as those which

"Arctic and Antarctic seas divide."

Some of our correspondents have been "taking liberties (?) with the sanctum, (as will be seen by referring to fourth page of present issue,) and in self-defence we have strong inclination to ramble over your farms, take notes and print them, and would do so were it not we prefer each should tell his own story. It is a matter of little moment what the balance on hand in one of our banking institutions—what your array of special interest in corporations—the points to be settled are—what the amount of capital in the soil, and are you keeping the investment good? "If a person is purchasing a house with all the 'modern improvements,'" remarks a witty writer, "the first thing to be inquired into is the amount of the mortgages upon it." Many a farmer who thinks he can give a clear title to his estate, we are fearful is in error. Through imprudence and carelessness there is an "incumbrance" of which he is not aware, one which will require the assiduous attention of both himself and heirs to liquidate. How is it with you, reader? When, weary of the toils and tribulations which fall to the lot of humanity, the armor is cast aside, and you seek final repose upon the bosom of our common mother, shall burden be written where blessing was intended—shall those composing the "home circle" bow under the crushing weight that parental hands has placed upon them? Whether we ever prove the fine gold involved in our subject or not, those who suffer by our indiscretions will have just cause to exclaim—"Better go up than down."

The Products of the Farm.—Farmers, as well as the rest of mankind, must plead to a love of good returns for capital invested and for labor expended. The thought of reward is the great incentive to toil—it encourages amid failure, soothes amid privation, and gives to the depressed spirit a further stimulant to exertion. Though present prospects may be shrouded in gloom, a "good time coming" is to all the Lamp of Hope. "Better up than down, in this respect," we are confident will be the response of every tiller of the soil, and a peculiar emphasis accompanying the expression is observable. When a man finds that his course is onward, upward, with what complacency he views the movement of the world about him. Pleased with himself, he would be pleased with every one with whom he comes in contact. But write that other word—down—upon his business, and mark the change. Frowns usurp the place of smiles—harshness rules where kindly feelings were wont to predominate. We have touched the fountain-head from whence emanated the life-stream, and the entire man wears a keep-your-hand-out-of-my-pocket air and appearance. Noting such metamorphosis, who would not rather "go up than down?"

Hens and its Surroundings.—Something (can it be scenes we have witnessed?) whispers "you are now in disputed territory." The acquisition of a home is the greatest of our earthly blessings.

WHITE GUINEA FOWL.

CAYUGA BLACK DUCK.

With what fullness of truth has it been written:—"Happy is the man who possesses a true home—the temple of his household gods, where he reigns as patriarch, priest and king—a refuge from envy and malice, a shelter from the storms of life, that no loss of wealth, no change of circumstance can affect—a rose without a thorn—a sun that knows no setting." The joys of a "true home" are not alone for the "patriarch"—though this would seem to be the creed of many who are laboring to procure one—all the inmates bask in its sunshine. To have children grow up with a love for rural life, and prevent even a desire for other scenes and other pursuits being harbored by them, it is the duty of the parent to provide such incentives as will win the household to calm delights. In the successful accomplishment of this purpose, we need progressive farmers—those determined that their influence and energies shall be given to the cause of advancement. Admitting the truth of the maxim, "man is the arbiter of his own destiny," we have great faith in the use of proper restraints and wholesome influences upon the youthful mind. These are the prerogatives of the parent, and according to the exercise and discharge of such sacred privileges, will our offspring be educated for good or evil. When we reflect that the impressions made by the home fireside reach out into that dim future which the eye of man hath not seen, neither can be comprehend, and we realize how fearful the responsibilities connected with our position, with what overwhelming truth is our text laden—"Better go up than down!"

THE POULTRY-YARD.

On Raising Ducks.

Ducks are, as a general thing, considered the most difficult to rear of any of our feathered domestic birds, and, in the ordinary "take-care-of-yourself" way, scarce one in fifty arrives at maturity. Yet, it is the easiest thing possible to bring up an entire brood; and when they can be made to weigh from five to seven pounds each, they will well repay the care and trouble required. It is better to start with the largest and finest breeds, such as will give sizeable progeny, either of the following named varieties will answer, viz.:—Aylesbury, Cayuga Black and Rouen. I would prefer them in the order in which they are named, though either variety will be good enough.

Setting.—Invariably make use of a hen to bring out the young, and if the weather is very hot, once in two or three days dip the hen's breast in water.

Management of the Young.—Do not allow them a wide range—have the yard roomy and dry. In fact they must not be allowed any water to dabble in; merely sufficient to drink, and that placed in a shallow vessel. The sun's rays must not be allowed to injure them. I do not mean by this that they should not have the sun during some portion of the day. They must be kept in these quarters till well feathered, after which they may be turned at large.

Feeding.—Procure liver or some offal at the butcher's, which cook with meal and potatoes, chopping the whole fine—never give them, while young, any food that has not been cooked.

If your readers would give their experience, some of the number might derive advantage from hints thrown out on any subject.

N. B.—I would here state that I have no ducks to sell.

Dedham, Mass., June, 1859.

EBEN WIGST.

The Guinea Fowl.

The Guinea Hen, or Pentado, is nearly an everlasting layer. They are said to unite the properties of the turkey and pheasant. They are a native of Africa, though said by some to belong equally to this country, and are easily domesticated. Its flesh is more like that of the pheasant than the com-

mon fowl, both in color and taste, and is reckoned a very good substitute for that bird. It assimilates perfectly with the common fowl in its artificial habits and kinds of food. Its gait is peculiar as are its cries. They are fond of marshy places—always perch during the night in high situations or on trees. It is a little singular that American farmers do not turn their attention to these fowls. A knowing Jerseyman, named DAVID BONKAS, from England, hired a patch of five acres, four years ago, and commenced raising eggs for the New York market. BONKAS has never hired any help, and at this moment owns a farm for which he paid \$4,700, of which the buildings cost over \$2,000. His farm is all paid for; he owes not a cent in the world and he owns a flock which varies from 800 to 1,300 Guinea Hens.

Fowl Items.

Feeding Poultry.—An idea prevails with many that any sort of grain, even if a little damaged, will do for poultry; but this is a great mistake. A friend of the writer once came very near losing his whole flock of valuable fowls from feeding them with damaged corn, which had been heated. Those who feed largely know better, and invariably make it a rule to feed none but the best, and if of corn, it is all the better for being broken.

On Breeding.—There is just as much necessity of breeding from birds that are good layers, as in selecting much cows those animals which are bred from good milkers, though, as in fowls, it does not necessarily always follow that their progeny are equally profitable.

Nest Eggs.—To those who keep fowls in winter and desire eggs, a good nest is important. The qualities of a good nest egg is a tolerable resemblance to a real egg. A hen will not lay to an egg-shell, however perfect it may be—for she knows by its want of weight that it is a counterfeit. The best artificial egg is that made of glass, which is so exact an imitation of real eggs, in form and color, that Mistress Biddy would find it difficult to detect it. These eggs may be had at most all the agricultural warehouses, seed stores, and of crockery dealers.

Fowls Eating their Eggs.—It is well known that hens when shut up are very apt to eat their eggs. The best preventive is to keep them well supplied with lime and gravel, and with fresh meat in some form. The nest should be so deep in the boxes that they cannot reach them without standing on the edge.

Floor for Poultry-Houses.—The floor of the house should be of any material easily scraped clean; quick lime and coal ashes mixed and put on hot bind well, and if coated with boiled tar when dry, will be found to stand well. Bricks have been recommended by some, but they are objectionable on account of their absorbing moisture.

Fowl Manure.—A barrel of fowl manure mixed with muck, or leaf mold, will manure half an acre of corn, and is as valuable as guano. The dung of poultry contains silica, and phosphate and carbonate of lime; and, along with pigeon dung has been dried and broken down and pounded, and mixed with earthy substances, and applied in moist weather, and covered by harrowing of the seed, at the rate of forty or fifty bushels of the mixture to the acre. If used fresh, the quantity must be small; but as a very small quantity of such excrements will come into the possession of the farmer, the readiest and probably the most economical application will be to spread it evenly on the top of a dung-heap, just before it's being turned over, which will mix the substances, and extend the benefits equally.

Asote Food Necessary for Fowls. A letter was read before the British Association from M. SACHS, of Switzerland, giving an account of some experiments in the feeding of fowls. He states, first, that fowls to which a portion of chalk is given with their food, lay eggs, the shells of which are remarkable

for their whiteness. By substituting for chalk a calcareous earth, rich in oxide of iron, the shells become of an orange-red color. Secondly, he informs us that some hens fed upon barley alone would not lay well, and that they tear off each other's feathers. He then mixed with the barley some feathers chopped up, which they ate eagerly and digested freely. By so adding milk to their food they began to lay, and ceased plucking out each other's feathers. He concludes that this proceeding arose from the desire of the hens for *asote* food.

Merit of Fowls.—Like human beings, fowls are susceptible of being influenced by change of climate, dirt, soil and water. They require a little care until they become acclimated, which they never fail to be after a time; but it is unfair to condemn them as tender or unfitted for any particular locality, because a trial of a few months has not been satisfactory. Their habits should also be studied. Some bear confinement without injury—others require a range. Their properties are so different, that every one may be suited if he will only take the necessary trouble and seek proper information.

Manner of Feeding.—Regularity where fed by hand, should always be observed in the hours of feeding; also in the quantity of food given. Not surfeit them one day and starve them the next, but give the fowls their food as regularly as you take your own meals. Nothing is easier kept than fowls. No kind of food comes amiss to them.

Weight of Poultry.—In England, more than forty years ago, there were exhibitions and prizes awarded for the best and largest poultry. At these exhibitions noblemen of the highest rank became competitors. Earl Spencer, in 1837, carried the highest prize for a turkey, which weighed 20½ pounds. One capon was exhibited which weighed 7 pounds and 14 ounces; one pullet, 5 pounds and 8 ounces; one goose 18 pounds 2 ounces; one pair of ducks 10 pounds and 10 ounces.

In December, 1829, two turkeys were sent to Cork, one weighing 38 pounds, and the other 34 pounds.

In December, 1833, three turkeys were sold at Leadenhall Market, which weighed 91 pounds, and brought three guineas each. One eighteen months old, and weighing 34 pounds, was sold at the same price.

We have seen it stated in a Philadelphia paper, that in 1842, a farmer from New Jersey obtained \$10 50 for a turkey, in this way:—He boasted that his turkey weighed 30 pounds, and asked a price for it proportionate to its dimensions. A customer, doubting this, said he would give him five dollars for the turkey if it weighed 25 pounds, and one dollar for every pound over that weight. The turkey was put on the scales and weighed 30½ pounds. The gentleman kept his word, paid the \$10 50, and took his turkey home for his New Year's dinner. Springfield, N. Y., 1859. O. N. BREMENT.

ECONOMY IN BUILDING.—CEMENT ROOFS, &c.

I ACKNOWLEDGE the receipt, through the columns of the RURAL, of a letter from Wm. LYMAN, of Moscow. We are obliged to him for his suggestion; for although his plan may not, on trial, prove to be the plan, yet the discussion may lead to valuable improvement.

There are in the West very many people—a multitude—of limited means, who desire to build, but who are deterred, more or less, by want of capital. These are all deeply interested in any plan which promises to diminish the first cost without too much sacrificing durability, usefulness, and taste. Durability is a very important consideration, yet it may be purchased at too great cost, especially by beginners in life. In illustration I give my own experience. Twenty-five years ago, having linked my destinies with those of a "fairer and better half," I found it necessary within the limits of six months, and a small amount of funds, to build a house and move into it, to build a barn and fill it, and dig a deep well that we might drink of its water. I accomplished it all, having the satisfaction of proving an estimate of receipt and disbursement made in the beginning of my undertaking, to be so far correct that the latter fell within the former. I placed a heavy and substantial barn frame on burr oak pillars, some of them five feet in length, obtained from a large tree near by at a cost of about \$3. A stone wall would have cost \$50. Twenty-four years after I renewed these pillars at a cost of \$10—making \$13 for, say 40 years. Now, had I built the stone wall, and paid for durability at the same rate through the whole of my undertaking, I should have seriously embarrassed myself, and been unable to obey the Apostle's injunction "owe no man anything."

Still, durability is very valuable. Frequent extensive repairs often seriously derange farm business, causing much loss; and sometimes they are not seasonably attended to, very much to the damage of the buildings. I made the inquiry about water-tight cement roofs, because I was informed that they had stood the test of years, at a cost of one-half, or less, than the cost of pine shingles. If this be true, I hope some one will yet respond to the inquiry. If the RURAL can be the medium of disseminating such information as the above promises to be, it will add one more valuable item of intelligence to the many it has published.

Friend LYMAN solicits criticism. Without pretending much qualification for the task, I venture on a little. 1st. I think his plan will not diminish the first cost. 2d. If cement is objectionable over the whole roof, would it not be more so between the tiles? 3d. Would not the severe extremes of heat and cold, of wet and drouth, expand and contract the tiles, causing leakage in the joints? 4th. The plan is not tested. All who have often come in contact with new inventions, know the weight of this item. Very respectfully,
Milan, Erie Co., N. Y., 1859. P. H.

COBBLE-STONE FLOORS.—In answer to the inquiry of A. R. about cobble-stone floors, I would say they are very good if laid right—that is, laid in leached ashes, dirt, or sand, with the dig and down, and then covered with dirt or sand. It would be well enough to lay a couple of planks at the back of the stable, on sticks laid in the ashes. —ALEX. BROWN, Borodino, N. Y., 1859.

MORSE'S PATENT DOOR HANGERS.

THE accompanying engravings are intended to represent Morse's Patent Self-Adjusting Door Rolls, or Hanger, for Sliding Doors—the small cut showing the hanger, and the large one the door complete—as manufactured by A. N. WOOD & CO., of Eaton, N. Y. This improvement is well adapted to barns and other out-buildings, is cheap, and has been highly commended by practical men who have it in use. The proprietors of the invention make the following statement:

"It is a settled question as to economy and convenience that Doors on Barns and out-buildings should be suspended on rollers. The great liability of the swing door to be broken in pieces by the wind, together with many other inconveniences, should be taken into consideration by every farmer. Sliding doors, when properly constructed, may be set down as a permanent fixture, always in order,

THE FROST AND ITS CONSEQUENCES.

"JUNE FROSTS" were never popular among this people, and I observe the more they abound the more they are spoken against. Some get along with them better than others. J. took to rejoicing over the escape of his peas and onions, while W. was assiduous in making himself miserable over the loss of his tomatoes and squashes. If people could spare a little time from their losses and tribulations to think of their mercies, they would get rich just as fast, and happier a great deal faster.

Looking, then, at what we have saved, I think one-half of our apples remain, (apples are worth all other fruits put together.) Now, as in good years, one-half of the apples of the country are uniformly and invariably lost by neglect, or by careless feeding and gathering, I propose that we take good care of our trees—dig, dung, prune and mulch them—and then save all that grow upon them, and so be as well off as common.

I think one-half of the corn in Western New York was not large enough to be materially injured by the frost. Much of it was not out of the ground. A few pieces were re-planted, in part, with beans. Corn is small, but it is generally of good color. We hand it over with our best wishes, to July and August—trusting that no one will forget that the soil should be mellow and the weeds be missing.

Early potatoes have suffered most, but the destiny of the potato crop is still with the future. Comparatively few beans (in Wyoming Co.) have been injured; the greater portion were not up. They are largely planted, and if we have a good fall to ripen and save them we can get up bean porridge enough to feed the nation, and have some to spare to "the rest of mankind."

Winter wheat, rye and barley were somewhat injured, but not as much as was represented.

Grass is the nearest to a failure. It was nipped and stunted by the frost, but the open winter, the cold, dry spring, and multitudinous neglect and abuse, as heretofore set forth by your correspondent, are the principal causes of the fearful shortness that fills many with alarm. It is calculated that many of our meadows will not yield more than half a ton of hay to the acre, but I can show any gentleman who will call upon me, some grass managed according to my directions, (given in the RURAL last April,) that will yield four tons to the acre. Anybody that goes to berating Providence on account of short grass, is a mean fellow, anyhow.

Oats, spring wheat and barley, (not much of the latter was sown in this quarter last spring, for people will seldom put in a crop unless they are allowed to pay high for their seed,) are small and backward.

Buckwheat is being sown, for it can take the place of grain that has failed, and it is bringing from a dollar and a half to three dollars a bushel for seed. Black raspberries were reported "failed," but persistent urchins and inquisitive females will find some on the lower branches and the sheltered bushes. Garden sauce of the tender sorts was saved in part by woolen.

On the whole, if we attend well to what remains, we may, with the blessing of Providence, live through.

E. T. B.

THE DRIVE WHEEL OUT OF PLACE.

FRIEND MOORE:—Your RURAL occupies a high and noble position as the faithful friend of honest industry, and your arduous labors are highly beneficial to the human race. Your task is assumed in an age in which the laboring man has fallen "among thieves," who have robbed him and left him half dead, and your weekly issue, like the good Samaritan, comes to his rescue, binding up his wounds, and affording aid and protection.

The spirit of speculation has long run rampant through the business world, proposing to revolutionize, remodel, and improve the whole machinery,

and may at any time be opened (pushed back,) to a greater or less distance, as circumstances may require. It is also a well known fact that doors being constantly exposed are liable to warp, changing their position more or less every day. The side of the building is seldom if ever true, rendering it difficult to make a straight track. In order to insure ease of operation, the above difficulties must be overcome. By allowing the roller an independent motion in a lateral direction, or a self-adjusting principle, which will admit of its accommodating itself to a crooked rail, or allow the door to warp without changing the relative position of the roller with respect to the rail, all cramping is avoided. The above cut represents a door hanger that has most effectually overcome this difficulty. This article has been thoroughly tested by many practical farmers, and has taken the place of the old-fashioned permanent standard. It has been much improved during the last year, and is now offered to dealers in hardware and agricultural implements, warranted in every respect superior to anything of the kind before the public."

and promising wealth without labor, and pleasure and luxury without care. The industrious, thrifty, happy farmer was allured from his field, and persuaded to "sow to the wind, and has reaped the whirlwind." The honest, unsuspecting mechanic was flattered from his workshop, deceived, stripped and cast down. Nor could this spirit cease its work until a blow was struck at the very foundation of permanent prosperity, and the long tried main-spring, or drive wheel, was displaced, and a new one with reverse revolutions, now occupies its position.

The Arts and Sciences, as applied to Agriculture and Mechanics, have ever constituted the drive or power wheel of all sound, honest, prosperous, and permanent business. But the fast age of speculation was unwilling to acknowledge dependence upon that which has been branded as the drudgery department of business, and now this old wheel, which has turned the whole machinery of business for centuries with strength and safety, must be torn out, and a new one substituted, one made of railroad and bank stocks, pride, and political gambling. To execute this work no patronage is wanting. Stocks are current in exchange for "Honorable Legislators." A new Administration with a chosen corps of Engineers, is organized. Will it run and drive the machinery profitably, is the great question in Wall street. Some fear, others hope, while the more shrewd know it will not. "All ready—clear the track—go ahead." Not a motion. "Go ahead—go ahead!" One turn and a crash—"37—57." It has proved a fatal experiment.

A man once built a brick ship for the ocean. She swamped, and went down in the harbor—the builder, just escaping with his life, comforted himself with the reflection, "It is worth something to know what I can't do." So in this reversion of the order of business, if we are satisfied to know what can't be done, and will learn to do what can and ought to be done, a little good may yet be gathered from the evil. What is to be done? Let the old power wheel be put back in the best possible state of repair, and swell the shout through the land, all honor to the real producers, and the whole machinery will be again in motion, and every department rapidly feel the invigorating impulse.

When we reflect that all animal existences are consumers, and that so small a portion are real producers, it is no marvel that the laborer is crushed under his unjust task, and the resources of the country are dried up. The time was when children were taught to love work and their books equal to their sports, and manual labor was a part of every child's education. It was never even hinted that honest labor was not respectable. Boys were not then educated in saloons, theaters, and gambling houses; nor girls fitted up for dolls, or show cases. The child was taught to live for an end and with a plan. These were time-honored days—days that reared healthful bodies, strong and well disciplined minds, and a nerve to plant and mature the free institutions of this country. To the doctrine of self-dependence in honest industry America is indebted for its high position among the nations of the earth. And so far as we have departed from this doctrine, either in practice or the education of our children, we have tarnished our good name, and endangered the best interests of society. The doctrine of wealth without labor, and pleasure without toil, is false in theory, dangerous in practice, and unworthy a place in any honest man's creed. Yours, then, is a responsible position.—You stand at the only available wheel that drives the whole machinery of society. Its sturdy revolutions, with a smiling Providence, send gladness and plenty through the land. The time I trust is hastening, when this doctrine will be more than ever appreciated, and prosperity more justly distributed through society.

C. P. O.

Accurate knowledge is the base upon which to build correct opinions.

Rural Spirit of the Press.

Drugging Animals.

IN nine cases out of ten when our domestic animals become diseased, they are at once the victims of the owner's misplaced confidence in some quack cow-leech, or drug, or patent medicine, and in their cure and treatment we are more in the dark than in any other department of farm economy. The drugging system is getting a good many hard knocks from the Agricultural Press now-a-days, and we hope it will soon be banished forever. A recent issue of the *American Stock Journal* remarks:—"Continually dosing animals is just as useless and injurious to them, as is the constant swallowing of drugs and poisonous compounds to the human system. It is all folly to allow your stables to become hospitals, and to smell and appear like an apothecary's shop. It is much more humane to shoot a horse, or knock an animal on the head at once, than to force down its throat doses of drugs whose quality of action you know little about, having the effect to create disease where it did not exist, and prolong suffering much beyond the time in which nature would herself effect a cure."

Management of the Barn.

A recent issue of the *Rural Intelligence* contains a few hints upon this subject which are to the point. They are as follows:—"Let the utmost neatness be observed in the management of the barn. No more hay or other fodder should be thrown on the floor at once than is requisite to supply one feed. By throwing large quantities from the mows or scaffoldings, there is an unavoidable loss from the drying of the fiber, which renders it less palatable to the animals, as well as less nutritious. Sweeping the floor daily promotes cleanliness, and conduces to the health and consequently the comfort of animals. The sweepings of the floors should be preserved, as this is the easiest way to save some of the most valuable grass seeds. The mangers and cribs should be daily cleaned out and frequently washed. 'What is the use of being so very particular? I never washed my cattle's manger,' said Solomon Shiftless. Very well, Solomon, your cows probably have as keen an appetite for their fodder as you would have if your wife gave you the same plate unwashed for a month, from which to take your meals."

A Grain of Gold.

EDWARD EVERETT is the most elegant rhetorician in America. Here is a little allegory taken from one of his agricultural speeches:—"Drop a grain of California gold in the ground, and there it will lie unchanged to the end of time. The clods on which it falls are not more cold and lifeless. Drop a grain of our blessed gold into the ground, and lo! a mystery. In a few days it softens—it swells—it shoots upward—it is a living thing. It is yellow itself, but it sends up an emerald green through the soil—it expands to a vigorous stalk—revels in the sunshine—its more glorious than Solomon in its broad, fluttering, leafy robes, whose sound, as the west wind whispers through them, falls as pleasantly on the husbandman's ear as the rustle of his sweetheart's garment; still towers aloft, spins its verdant skeins of vegetable floss, displays its dancing tassels, surcharged with fertilizing dust, and at last ripens into two or three magnificent batons like this, (an ear of Indian corn,) each of which is studded with hundreds of grains of gold, every one possessing the same wonderful properties as the parent grain, every one instinct with the same productive powers."

Henry Ward Beecher on Cows.

This last Star Paper in the *Independent*, is evidently written by Mr. Beecher from his new farm. He dates "from the country," and says "And now, do you ask, wondering reader, what all this preludes? Just this: that we are a three-cow gentleman farmer! Again, we know what is the real taste of milk. We have once more, before we do, seen cream! Twenty-six pans of milk were skimmed this very morning; and now, if you were riding past, you should see twenty-six inverted pans on the fence, in the sun, shining like silver, and sweetening themselves all day, in the air and sunshine, for the night's milk! Even the pigs far better here than citizens do in New York. For, although we take off the cream, we never think of giving them anything weaker than skim-milk—four pigs that once were longer than broad, but which are rapidly growing to the shape of a marble." Mr. Beecher says a cow is the saint of the barn-yard. She eats, ruminates, digests, and, in short, lives for the sake of others. She could be fat if she was only selfish, but nothing can well be more devoid of all beauty than a genuine milker. She economizes beauty that she may be profuse in milk. She is the very ideal and pattern of a saint, who is as poor as if living a life of maceration, who gives her whole strength to lacteal benevolence, who is patient, gentle, guileless, contented.

Ashes as a Manure.

SAYS the editor of the *Working Farmer*:—"Ashes may be composted with swamp-muck, river mud, or other soil containing much organic matter, and after the decomposition of the deodorizer by ashes, the whole may be mixed with stable manures; but ashes in its natural state should never be mixed with any manure containing ammonia or its constituents. Lime or ashes, if mixed with stable manure, causes its decomposition to be too rapid, forcing out the ammonia and causing its loss. The potash in wood ashes is of a progressive character, and is very valuable for most crops, and on all soils. We never met with soil overcharged with potash, for even when the organic matter of the soil has been too rapidly disposed of by an excess of ashes, it has resulted in a greater amount of plant-growth, enabling the owner to afford new doses of organic matter. Although ashes should not be mixed with stable manure, still, after the manures have been plowed under, a top-dressing of ashes is always useful; the potash leaches gradually into the soil, correcting acidity during its descent, and on meeting with the manure, decomposes it, and renders it soluble for the use of plants. Potash in the soil prepares silica, by rendering it slowly soluble, to form the outer coating of plants; it also assists in the various chemical changes necessary for rendering inorganic matter of all kinds soluble."

Agricultural Miscellany.

NATIONAL, STATE AND PROVINCIAL FAIRS are to be held this year, so far as ascertained, as follows:

U. S. Ag. Society, Chicago	Sept. 12
Maryland, Frederick City	Oct. 23-28
Tennessee, Nashville	Oct. 10-15
Georgia, Atlanta	Oct. 24-28
Illinois, Freeport	Sept. 6-7
Indiana, New Albany	Sept. 26-29
Iowa, Oskaloosa	Sept. 29
Kentucky, Lexington	Sept. 13-16
Maine, Augusta	Sept. 13-16
New Jersey, Elizabeth	Sept. 13-16
New York, Albany	Oct. 4-7
South Carolina, Columbia	Nov. 4-11
Ohio, Zanesville	Sept. 20-23
Vermont, Burlington	Sept. 18-19
California	Sept. 27, Oct. 6
Michigan, Detroit	Oct. 4-9
Missouri, St. Louis	Sept. 25
Canada West, Kingston	Sept. 27-30
Canada East	

STATE AGRICULTURAL COLLEGE.—We understand the Trustees of the Ag. College will meet at Ovid on Thursday next, July 7th, and that they propose to lay the Corner Stone of the building now in process of erection. Ex-Gov. KING, Chairman of the Board of Trustees, will deliver an address on the occasion.

THE FROST A PROBABLE BLESSING.—The Frost has been severe in many localities, over a wide extent of country, and no doubt occasioned much temporary damage. Thus much is beyond question. Yet, in the opinion of many intelligent cultivators, the result is likely to prove advantageous—a benefit, rather than an injury—in various sections, for many destructive insects have been checked or killed by the frost. It is believed that, but for the timely check, the midge, grasshoppers, &c., would have destroyed far more than the frost has injured. If, as is supposed, the grasshoppers have been "headed," the frost will prove a blessing rather than a curse in many localities of Western N. Y.

THE WEATHER is at last seasonable—so warm that none need examine the Almanac to ascertain whether it is really Summer. Last week closed hot, and the present opened hotter, the mercury in thermometers becoming very buoyant and elevated, while earth and air are so charged with caloric that corn, etc., must begin to make rapid progress upward. Of course all engaged in rural pursuits are greatly encouraged, and determined to "make hay while the sun shines"—though, speaking of hay, we fear the crop will be considerably less than the average of former years in this region. The present fine weather is, however, greatly enhancing the growth and maturity of grass and grain.

HORSE SHOWS.—During the ensuing week several Western New York Ag. Societies hold their annual exhibitions of horses. The Monroe Co. Show is to be held on the Fair Grounds, near this city, on Monday, the 4th inst.—that of Genesee Co., at Batavia, on the same day—and that of Wayne Co., at Lyons, on the 4th and 5th. A "Horse Fair" is also to be held at Waterloo, on Thursday, Friday and Saturday of this week (June 30th and July 1st and 2d.) The premiums are generally liberal, but we think "style and speed"—in other words, fast trotting—has the lion's share, leaving little for ordinary service, utility and "all work." We fear some of our Societies are getting altogether too fast in this matter. It may be well enough to liberally encourage the breeding and exhibition of horses of superior style and speed, but to offer ten times as much for this object as is given for general utility is not consistent, agriculturally considered.

SEEDING TO TIMOTHY WITH BUCKWHEAT.—Last season Mr. J. B. POTTER, of Madison, Ohio, inquired through the RURAL for information from farmers about seeding to Timothy with Buckwheat. In a letter just received from him, Mr. P. says:—"Though I got no response through the RURAL, I learned enough from other sources to determine me to try a small piece of low land, the soil of which is a mixture of muck and sand. The result was a first rate 'catch,' and the grass at this present writing (June 23d) looks well. I am so well satisfied with my success that I intend to seed seven acres in the same way the present season."

—HON. A. B. DICKINSON, of Steuben county—well known to many of our readers as one of the most extensive and successful farmers in Western New York—informs us that he always succeeds well in seeding Timothy with Buckwheat. His mode is to sow the buckwheat and drag once; then sow the Timothy (after tarring the seed and rolling in plaster), and drag in with a brush or light harrow, as it needs little covering. He then uses the roller, which completes the process. Mr. D. says this manner of seeding is most complete.

ABOUT TARRING SEED CORN.—A "Corn Planter" in Danby, Tompkins county, who was induced to try the mode of tarring corn recommended by the N. E. Farmer (and commended in the RURAL of May 11th), has not found it satisfactory and gives us his experience. Under date of June 16th he writes:—"It has been my custom for four or five years to soak seed corn in a strong solution of saltpetre, applied to the corn as warm as I could hold my hand in it, and allowed to soak from 12 to 48 hours, as circumstances might require—preferring just 24 hours if weather permitted. Hoping to find something better I tried the tar—applied in the approved method described in the RURAL—with the following result:—That soaked in the saltpetre was well up, and we could see the rows distinctly, in nine days from planting. The 'tar-water' was from 15 to 18 days in arriving to that state, and came up quite unevenly—the seed being the same kind and first rate. There was on Friday evening last at least one week's difference in favor of saltpetre over 'tar water'—both planted same day, (23d May), and both rolled in plaster at planting. The crows commenced first at the saltpetre corn, because that was first up, but since the 'tar-water' has got in sight, they have tried that also, but they do not like either first rate."

We willingly publish this statement, (though the author says if it is not given he shall certainly continue to read and pay for the RURAL next year, if he lives), and submit it to practical correspondents—suggesting that the failure may be owing to some imperfection in the tar or the mode of its application. Had our friend given his exact process, perhaps we could decide at once.

—Speaking of Tarring Corn, here is an item in its favor. A correspondent of the N. Y. Tribune, writing from Morrisstown, N. J., June 13, says:—"Passing along the road the other day, I saw a fact worth reporting. Two corn fields, divided only by a fence, were planted about the same time. The one was all destroyed by the blackbirds and crows, and the other was left unmolested. The first field was planted with corn just as it was taken from the crib; the other with seed which was thoroughly soaked in tepid water and then mixed so as to have a slight coating of tar, and then it was rolled in plaster. In this section many farmers have tried this plan with success, while many who have neglected it are complaining of their bad luck and the birds."

THE CROP PROSPECTS are improving. Late reports are quite favorable, indicating a confident hope of good crops in most sections of the Union and the Canada. Our advice in regard to the Wheat Crop throughout the country are generally encouraging.

HORTICULTURAL.

FRUIT GROWERS' SOCIETY OF WESTERN NEW YORK.

The Spring Meeting of the "Fruit Growers' Society of Western New York" was held in the city of Rochester on Thursday, the 23d inst., President Hoon in the Chair, and was one of the most interesting meetings ever held at this season.

The "Geneva Valley Horticultural Society" changed the day for its exhibition from the 24th to the 23d ult., in order that the Fruit Growers might exhibit their fruit in the Horticultural Hall, and by this combination of both fruits and flowers, made one of the most attractive exhibitions ever seen in Rochester at this season of the year. The excellent judgment of the officers was shown in the results; for a more numerous assembly of the lovers of Flora and Pomona, was never before congregated in Rochester.

Morning Session.

The meeting was called to order at about 10 A. M., and the minutes of the Annual Meeting (6th of January) were read by the Secretary, and on motion were approved as read.

The Secretary read some subjects which had been sent in by members for discussion.

On motion of P. BARRY, seconded by W. B. SMITH, the Chairman nominated Messrs. BARRY, TOWNSEND and AINSWORTH a Committee to select, prepare, and report subjects for discussion; and while the Committee were out an interchange of opinions was had as to the propriety of having the Committee select subjects for discussion at the September meeting, and advise the Secretary of the same, on or before the middle of August, in order that full notice might be given to members what would be the leading topics to be brought up at the September session. It was not intended that this should preclude the appointment of the usual Committee on subjects at each meeting, but only that members might feel that there were some prominent topics which would engage their attention, and also might realize that from the moment of organizing, business was laid out for the meeting, and the first subject that would be introduced.

P. BARRY objected to having the work and discussions of the Society laid out for months beforehand, because the desire was that when any subject was brought up, each member should relate the simple facts of his own experience. There should be no temptation to investigate the sayings of others and give long details of hearsay evidence. If the members were notified for months beforehand what were to be the subjects brought up, this temptation would be very strong.

Other members felt that the warning beforehand would interest the public, and that assurance would thus be given of interesting and animating discussions. Also, that those desiring to hear the experience of our fruit growers on special topics would be particularly induced to attend the meetings, by knowing that those topics were to be freely and thoroughly discussed.

A motion to nominate a Committee to prepare beforehand subjects to be discussed at the September meeting, was lost.

The Committee on Subjects here submitted the following questions for the consideration of the Society:

Question First.

Are there any benefits to be derived from the practice of ringing, ligating, girdling, &c., of the grape vine and if so, what are they?

S. H. AINSWORTH saw grapes exhibited at the meeting of this Society last fall, by a neighbor of his, Mr. PECK, of Bloomfield, which were so large as to attract great attention. A small ring had been taken out from the bark of the vine below the bunch, and the result, in the increase of size, was very apparent.

W. P. TOWNSEND recalled to the recollection of gentlemen who were at the meeting of the State Agricultural Society at Buffalo, that a person from Chautauque county exhibited some specimens of grapes which so far exceeded anything else shown there as to attract universal attention, and to cause even a doubt and an appeal to Mr. DOWNING as to the variety which the owner called the *Isabella*.

These grapes were fully one-half larger than the usual size, and a good deal of inquiry was made as to how they happened to become so. It was found, upon investigation, that the vine upon which they grew stood near the corner of the house, where there was a good deal of passing, and the portion of the vine which produced them had been accidentally so broken as to rupture the vessels conveying the return sap from the leaves. The balance of the crop was of the usual sized *Isabellas*, but this particular portion of the vine produced these large grapes. This is by no means a new practice. We read that in France many vineyards practice ringing, annually, whereby the size of the berry is very much increased, and the fruit is ripened from one to two weeks earlier than it otherwise would be. My neighbor PAINES, at one time, tied a string around a branch of a vine, and the effect was that the crop was increased in size and hastened in maturity.

Dr. SPENCE here questioned as to what would be the effect upon the crop of the next year from the branch mutilated by ringing.

Mr. TOWNSEND thought that where vines were trained and pruned according to the renewal system, there could be no possible injurious effect, because the branches which were ligated were those which were to be removed the next autumn, while the branches which were depended upon for bearing fruit the next year could not possibly be injured, because they were not operated upon in any way.

W. BROWN SMITH was in Buffalo at the meeting of the State Society referred to, and was upon the same Committee with Mr. TOWNSEND, but his recollection of the grapes is, that although they were not fully ripe when exhibited, they were nearly twice the size of ordinary grapes.

L. B. LANGWORTHY knew that the effect upon apples, peaches, &c., was to accelerate the period of ripening materially, and reasoning from analogy it ought to do the same with grapes. A certain person who owned a nice peach orchard near Rochester used always to astonish everybody by the enormous size and fine flavor of his earliest peaches, and for some time there was supposed to be a wonderful secret about it. It was found out that the gentleman, about the time of the setting of the fruit, used to go out and twist a small wire closely on the old wood of the bearing branches, and it produced the effect spoken of. After the fruit was pretty well developed, he would untwist and remove this wire, and no injurious effect resulted to the tree.

S. H. AINSWORTH remarked that two years ago, at the Ontario County Fair, some bunches of grapes were exhibited which attracted considerable attention, being as large as the *Black Hamburgs*, and perfectly enormous in size of bunches and berries, for a native grape. There was great inquiry to know what variety of grape they were, because nobody believed that the *Isabella* could be so large. They were upon the premises of F. B. PECK, who made a critical examination of the vine to find what caused such extra specimens, and found that near the ground a tendril of the previous year had entwined itself closely around the vine and prevented much of the growth of the plant that year, and the whole force of the vine went into the grapes, which were very ripe, and in quality very fine. This was the only fruit exhibited at that fair which was perfectly ripe—so that the accidental ligating of the vine did in this case hasten the ripening.

C. L. HOAG remembered that seven years ago a portion of one of his vines became accidentally girdled, one cluster, which was beyond the accident, ripened up perfectly, while some others did not ripen.

Mr. AINSWORTH brought to mind a similar case in which two bunches were more than two weeks earlier than the rest of his grapes, and the berries were fully double in size.

J. J. THOMAS could not but doubt whether the quality of the fruit could be improved by any such increase of size or hastening of maturity.

T. C. MAXWELL thought that the time of performing the operation had something to do with the result. Immediately after the fruit had set was the proper time to perform it. Again, too large a circle of the bark must not be removed, else the operation will kill both vine and fruit. There was an old gardener in Geneva who had practiced this for a long time, and always with very evident effect, both as to the size and the earliness of the fruit.

Dr. SPENCE, of Yates county, inquired of Judge LANGWORTHY whether in view of the fact that girdling the peach and apple produced an abnormal condition of the branch, he considered the advantages sufficient to recommend it as a steady practice.

L. B. LANGWORTHY had girdled a great many limbs of peach trees, but considered the limb lost, and removed it after the fruit was perfected in the fall. *Early Harvest Apples* were produced of very fine size, and remarkably early in the same way.

P. BARRY spoke of the numerous experiments upon this subject made by the French in 1856. The Horticultural Society of Paris were so much taken by the specimens which were exhibited before them, that they sent out a Committee to examine into the mode of its performance and its effects upon the vines. There is nothing new about it. It was well known to the Romans, and is an old practice.

Mr. KNIGHT, an English writer, mentions it quite favorably, if under suitable circumstances. Mr. RIVERS also speaks in terms of partial commendation. He was not convinced that it is an operation that is to be recommended for general practice. It does add to the size of the fruit, and certainly does hasten the maturity, but it does not improve the quality, while there is great danger of its injuring the rest of the fruit, and it does injure the roots of the plant. It can be performed upon the grape with more impunity than upon any other plant, because the vine makes new wood so easily.

The question before the meeting is an interesting one, and worthy the attention of the members. It is to be hoped that members will experiment, and will exhibit and report the results of their experiments at the September meeting of the Fruit Growers' Society.

Mr. TOWNSEND hoped that members would experiment and give us their results. Could not quite agree with the gentleman as to the injurious effect upon the vine. Suppose an *Isabella* trained and pruned upon the renewal system, and you have in fact two vines taking sap from the root and giving an outlet to the sap through the leaves. Now, by girdling and preventing the return of some of the sap, the only loss to the roots is from the extra development of the fruit and the growth of a little more wood.

L. B. LANGWORTHY.—If there be any good in this practice at all, its application to the *Catawba* in this climate will be a capital thing. We certainly shall gain a fortnight in the maturity of the berries. Hoped the members would try it. Use the small annealed wire, and the results will surprise you, gentlemen. Most of us never saw a ripe *Catawba* grape, and if by this operation we can ensure some fine ones, let us try it.

W. BROWN SMITH hoped the members would all experiment, for only thus could we hope to gain experience, and go on in the work of fruit culture.

Question Second.

The late frost.—What has been its effects upon the grape with reference to the present and next season's crop?

Mr. TOWNSEND stated that in Niagara county the effect had been the total destruction of this year's crop.

Dr. SPENCE said that the frost had been very severe in Yates county, and had resulted as in Niagara county, in the total destruction of this year's crop; also, that all this year's growth of wood was totally killed. In Steuben county extensive vineyards at the head of Crooked Lake had been left entirely uninjured. Many of these were upon side hills 200 and 300 feet higher than the lake, while near Seneca Lake which is 270 feet lower than Crooked Lake, the vines were entirely killed. This frost seems not to have been governed by any rules in its effects. In some cases it injured the lowest and most sheltered, and leaving the highest, most exposed, and least sheltered spots entirely uninjured,—in other cases killing the highest and not touching the lowest. Sometimes the currents of wind were what seemed to kill the plants wherever exposed, and in others the circulation of the sap seemed to be the only preservation. The effect upon next year's crop cannot but be injurious, for the wood already made is entirely killed, and the new wood now commencing, cannot mature in time for next year's crop sufficiently to stand this winter. The vines have commenced sending out new shoots, but, as before stated, they are very feeble.

L. B. LANGWORTHY remarked that the cold of the 4th of June was not a frost, but a freeze; that it seemed very singular in its vagaries. In some places nothing was killed that was over two feet from the ground, and in others it was only the leaves covering the top of the arbor, that were killed. Had noticed one case where things covered with metal, and ever so carefully protected, had been killed, while by their side others, with only a peach-basket turned over them, were entirely safe.

Dr. SPENCE had noticed that those vines which were laid down after being cut loose from the trellis, had remained unharmed, while those remaining upon the trellis, even though covered up with canvas, and ever so well protected, were killed.

BARRY FINE had noticed that on his trellises the largest part of the vines were injured, while the bottoms were uninjured. Thought we should still get a partial crop of grapes; that the chance in this part of the country for next year was pretty good, since the young vines were most hurt at the top, and could renew the lost portion quite easily and very soon.

C. L. HOAG said that at Lockport vines laid flat on the ground were all killed. Those that were left erect were killed at the top. Upon trellises, all that were above four or five feet from the ground were hurt at the tops. Noticed one circular arbor where the sides were not hurt, while over the top they were as dead as vines could be. Would call attention to one singular circumstance with him,—the *Rebecca* was not hurt, while vines of same age and condition all around it were killed. Accounted for this by the way the *Rebecca* ripened up its wood about as fast as it grew; while we know the others make a strong, rank, succulent growth, which does not ripen up for weeks or months. The *Rebecca* seems thus to be calculated to withstand sudden and violent changes of temperature almost with impunity.

S. H. AINSWORTH, of Ontario county, said that in his vineyards he had the *Diana*, *Isabella*, *Rebecca*, *Concord*, *Northern Muscadine*, *Charter Oak*, &c., &c., and that the *Rebecca* was the only vine which stood unharmed—not a leaf touched, while all the others were more or less killed. In answer to questions, he said the *Rebecca* were within two to three feet of killed vines, "all side by side, and mixed." His neighbors found also that their *Rebecca* were all uninjured, although standing (as his did) "mixed" with vines which were badly killed.

O. C. ROSS, of Monroe county, had seen no difference in his vineyard among the *Diana*, *Concord*, *Isabella*, &c., as to the effect of the frost; but his *Rebecca* were not hurt at all. When asked, he said his vines alternated; *Diana*, *Rebecca*, *Concord*, *Isabella*, *Rebecca*, *Concord*, &c.

C. P. BISSILL had been very slightly affected by the frost. Had thousands of vines of *Diana*, &c. His *Diana*, *Isabella*, *Childs Superb*, *Clinton*, *Concord*, &c., all stood equally exposed, and the *Isabella* was the only sort touched at all, and but few of those. Didn't say that any sort was more or less tender than the others. In answer to questions—"Isabella was the only kind that happened to be touched, with me; and so far as that fact showed, it seemed, in this freeze, to have been the most tender sort."

Dr. SPENCE inquired if at any other spring there should be imminent danger of a similar frost, "would laying down do any good?"

C. L. HOAG and S. H. AINSWORTH both replied that so far as they saw, in this freeze, those vines nearest the ground were hurt the most.

The President, B. HOOVER, remarked that near Buffalo the frost had been as severe as anywhere, and the grape vines were supposed to be ruined, both as to this year's crop and all future. There was a large commercial grower near Buffalo, used to grow vineyard grapes for the market, and in this the vines were frozen through the glass, although carefully sheltered, and the house as warm as it could be kept without fire heat. Near the lake, and near Niagara river, there did not seem to have been as much damage done.

A gentleman remarked that some *Hartford Prolific* vines which he was cultivating, and which were tied to stakes, escaped, while those which lay on the ground were hurt more or less badly.

Afternoon Session.—Question Third.

Which are the best varieties of Strawberry for general profitable cultivation, according to present experience? What is the most profitable and at the same time the most economical mode of cultivation?

H. N. LANGWORTHY remarked that particular attention should be paid to hardiness in winter. We want such as produce berries of good size, of high color, of fine flavor, and such as are firm in flesh, to bear carriage to market. Also, sorts which have strong foot-stalks to keep up the berries from the dirt; keeping the berries clean and bright without the trouble of mulching.

L. B. LANGWORTHY had found *Wilson's Albany* the greatest bearer; considered it the most productive, and it was of pretty good flavor. Feared that *Triomphe de Gand* would fall off in field culture; knew *Hooker* would make a good crop in field culture, and was sure that the berry did not run down.

Mr. L. spoke of the great *Palmyra Seed*, by which a Mr. STODDARD, of Palmyra, once produced berries of enormous size, got up quite an excitement about the plants, sold off all the plants he could raise for ten cents apiece; but when cultivated on other ground, these were the commonest sorts possible. His soil was a frog pond, filled with surface earth from his other grounds, so as to be dry at the surface, while the tap-roots could always be fed with an abundance of liquid aliment.

C. M. HOOKER thought that *Triomphe de Gand* must be cultivated in hills so as to be good, and produce good crops the second year.

J. J. THOMAS spoke highly of *Wilson's Albany*. Had cultivated *Peabody's Seedling* for two years, and considered the berry excellent. It is fine and large, is a poor bearer, and if allowed to send out its runners freely and cover the ground, it bears very little. If cultivated in hills, is better, and is of good flavor always. Some gentlemen speak of the flavor of the wild strawberry as being always superior to that of the cultivated. Now, this depends very much upon the condition of the eaters. We all remember those travelers who were crossing the Rocky Mountains a few summers ago, and found some strawberries there, which were the most delicious and the highest flavored which they had ever tasted; were, in fact, so far superior to anything they had ever eaten at home that they took up some of the plants and preserved them with great care, as promising to be a very valuable addition to the fruits at the East. They were sent to R. G. PARDES, who cultivated them with great care, and when the fruit was mature every one who tasted the *Early Scarlet* or *Burr's New Pine* and then the *Wild Berry* found it inferior. These travelers had not tasted fresh fruit for a long time; they were living upon half-Indian fare, and the transition from dried buffalo meat to these strawberries made the fruit seem beyond all comparison the most delightful they had ever tasted. A person who is hungry for fruit will call anything good, while those who have abundance are a little more nice in their taste.

Dr. SPENCE thought no water ought to be in any way confined in any basin under the roots of strawberry or other plants. Better sub-drain the soil if wet, and then put water upon the top of the plants. Irrigation at certain seasons improved the fruit mightily, both as to size and number. J. J. THOMAS wished to recommend *McAvey's No. 1*, as one of the most prolific berries he knew. It was a *pitillate* and more productive than the *Wilson's Albany*. It was far superior to the *Hooker* as to bearing. His custom was to plant a row of *Early Scarlet*, then two rows of *McAvey's No. 1*, then two rows of *Hooker*, then two rows of *Hoey's Seedling*, and so on. He gave all the same chance, never covering or protecting any of them in the winter, and (referring to the needed qualities spoken of by H. N. LANGWORTHY) he had found the *Hooker* was worse killed out by the winter than either of the others. The best mulching is grass, which is mown before the seeds are matured.

Mr. SMITH, of Geneva, said the *Early Scarlet* was the most probable berry that can be grown; it is a strong grower, keeps up a good succession of fruit, the same plants continuing in bearing for fully two weeks, while there is no other sort which continues so long. As a fertilizer to the *pitillate* sorts it is better than any of the hermaphrodites, and probably fully equal to the pure staminate. Next to *Early Scarlet*, *Wilson's Albany* promises the best of any vine that he had; it is larger and appears to be just as good a bearer. The *Hooker* doesn't seem to stand out the second season, don't seem to have vitality enough to ensure the second crop.

Mr. TOWNSEND had found the same objection to the *Hooker* as the last two speakers. Called upon Dr. SYLVESTER, of Lyons, a man who had long and successfully cultivated the strawberry.

Mr. S. said the flavor of *Wilson's Albany* was rather too acid to suit his palate; but it certainly was very productive, and its market price size makes them very desirable. The pickers can easily

fill five boxes with *Wilson's Albany* in the same time as two boxes of *Burr's New Pine* or *Hoey's Seedling*. As to flavor *Burr's New Pine* certainly was of the highest flavor and the best berry he knew; but, for market purposes we want the most abundant bearer. *Peabody's Seedling* seemed to have succeeded better with Dr. S. than with many other persons, and he considered it one of the best flavored of hermaphrodite berries. Dr. S. spoke of a kind of mulching which he had tried and liked very much. His mode of cultivation is to let all the runners grow, filling the whole ground, and each year to plow up alternate strips of the land, thus practicing a sort of renewal system, and having half the land supplied with new plants each year. In the fall he took a quantity of black muck, allowed it to freeze thoroughly, (the freezing and thawing causes it to become as fine as white sand,) each fall spread a quantity of this, say to the depth of half an inch over the part of the land which he wished to protect. It acted as a most excellent mulch, protecting from the cold; was an excellent fertilizer, and assisted in keeping the berries clean, for berries were injured no more by contact with it than with grass or the purest lake sand.

C. M. HOOKER stated his mode of cultivation in which he had found no much was needed. The rows were originally set out four feet apart and the plants one foot apart in the rows; then kept the land clean with horse cultivators and hoes; let all the runners grow, and thus formed beds which were allowed to bear for two years, and the third year plowed up and planted again. Three-fourths of the vines set out by them were always the *Early Scarlet*, and for all market purposes it had been found the most profitable. *Wilson's Albany* promises very well indeed, for market; to be sure, its quality is not in all respects equal to some others, but it is productive, large and fine-looking. *Crimson Cone*, for preserving, is always in demand and is also a capital market berry. *Hoey's Seedling* had never succeeded very well with him; but might with amateurs, who keep all the runners off. In private gardens the best way would be to mulch with grass or saw-dust. Had used the muck as a mulching; but not a great deal. Applied it fresh in the fall, and the result was that the berries were large and were kept clean.

M. G. WARNER had found the *Early Scarlet* to be one of the most delicious and the easiest grown of berries, and doubted if any berry would produce more fruit to the acre for field culture. It ripened at least four days earlier than *Burr's New Pine*, and eight to ten days earlier than *Hoey's Seedling*. Planted the rows three to four feet apart, and the plants eighteen inches apart in the rows, and in a very short time the whole surface of the ground would be completely matted with runners. The way he thinned out was to go with a narrow bitting hoe and chop up whatever plants seemed to be superfluous, and rake them off as he would weeds. Did not often thin out a bed before the third year after the planting. For a fertilizer for any and all the pitillate varieties no sort acts better than the *Early Scarlet*, for it continues in bearing a great while and the blossoms succeed each other as long as the pollen is needed as a fertilizer. *Burr's New Pine* is very highly flavored, but we cannot make a field berry out of it. For two or three years it will do very well indeed, for garden culture, but the trouble is the same as with *Hoey's Seedling*, it depreciates too fast as to size. As a market berry it was not equal to some others.

Dr. SYLVESTER had cultivated *Burr's New Pine* for several years as a market berry, and had found it very productive; sufficiently so for market, although not equal to *Wilson's Albany*. The reason for his excellent success may be that he fruitifies with the pure staminate plants, and the pitillates prove enormously productive, highly flavored, and maintain their size to the last. These pitillate varieties, in order to show what their true merits are, require a good deal of pollen, and Dr. S. maintained that the needful quantity could not readily be supplied by the hermaphrodite plants; that the pure staminate were needed to furnish pollen in abundance. When thus properly fructified he had picked 32 quarts of large, fine berries, from the pitillates growing upon a single square rod of land.

A ballot was taken as to the best six varieties of strawberries for market purposes, and as to which six the members thought best for amateur cultivation. These ballots showed a pretty wide range of opinion, although all united upon *Early Scarlet* and *Wilson's Albany*, which two were upon every ballot. *Hooker* received 11 votes, *Hoey's Seedling* 10, *Triomphe de Gand* 8, *Burr's New Pine* 6, *Genesee* and *Crimson Cone* each 4, *Jenny Lind* 3, *Cushing*, *Longworth's Prolific* and *McAvey's Extra Red* each 2, and the following sorts 1 each, viz.—*Scott's Seedling*, *Brighton*, *Victoria*, *McAvey's No. 1*, *Fishback*, *Hoey's Seedling No. 1*, *Hoey's Seedling No. 2*, *Walker's Seedling*, and *Pyramidal Chatham*.

The diversity of opinion among the gentlemen as to which should make up the six, after such entire unanimity upon the *Early Scarlet* and *Wilson's Albany*, it was suggested, must be owing to some peculiarities of soil and cultivation in each case; causing favorite sorts to succeed especially well in these cases, while others found other sorts to do far better.

Upon the varieties for amateurs the opinions of the members were expressed, with hardly a variation in the ballots, for *Early Scarlet*, *Hooker*, *Burr's New Pine*, *Hoey's Seedling*, *Wilson's Albany* and *Triomphe de Gand*.

While the ballots were being made out and counted, several gentlemen were called upon for their experience upon particular points in cultivation.

H. E. HOOKER had found for field culture the beds better than rows or hills, and he allowed the plants to make all the runners they wished. In his own garden he planted in hills or rows, mulched with care, and kept off the runners.

P. BARRY agreed with Mr. HOOKER.

B. HOOVER had noticed some lands near the shore of Lake Erie, near Buffalo, which were used as market lands for strawberries, and produced great crops. This soil was never manured, and would not raise Indian corn four feet high, but the crop of *Hoey's Seedling* was perfectly astonishing, both as to size and quantity. The practice of the gardeners was to leave all the runners upon the plants, and about the third year to plow up the fields and put in new plants again. *Hoey's Seedling* was a variety which made but few runners, and the most of the strength of the vine went to the fruit.

JOSEPH FIORE had found the earliest strawberry he raised to be the *Jenny Lind*. The berry was of good size, and always earlier than the *Early Scarlet*, which was a very desirable market quality, and besides it was sure to produce a better crop.

J. J. THOMAS strongly advocated large and good-looking berries, in order to ensure a quick sale in market; had known the looking *Wilson's Albany* to sell in the Buffalo market with rapidity at 25 cents per quart, while other sorts were slow at 10 cents.

H. E. HOOKER thought *Wilson's Albany* as poor as any other sort he cultivated as those other sorts were spoken of, that is, the runners forming mats covering the whole ground, and let run. It is a new sort, and every purchaser pays attention to the plants, and the high cultivation is what makes *Wilson's Albany* so good and productive. It does not form a great many runners, anyway, so that the strength of the plant can mostly go into the fruit, which must become large.

T. C. MAXWELL inquired whether the sourness of *Wilson's Albany* berries did not adapt them particularly for preserving, especially in *Yeoman's Fruit Butters*.

C. P. BISSILL had always been requested to buy *Crimson Cone* and *Royal Hudson* as preserving berries until late years, when "our folks" after giving the *Hooker* through trials, had preferred it to any and all other varieties for preserving. *Hooker* seems to be equally adapted for keeping in the fruit-cans or bottles, or for sweetmeats; its firmness of flesh and fine flavor both remain, whether kept for months or years.

P. BARRY recalled with pleasure the remarks made by Mr. H. N. LANGWORTHY, when subject No. 3 was first introduced. Let us be sure that we

know what we want; what qualities we desire in the plants, and what in the berries. Then let us cultivate our vines in the proper manner—let everything be done according to some system, and we shall have results which shall astonish those who just go along hap-hazard, anyhow, and who are consequently always having bad luck with their berries.

DISSEMINATION OF THE PEAR.

Dr. SPENCE here stated to the meeting that he had suffered upon his premises very severely from a mysterious disease affecting his *Pear trees*. They were standard *Pear trees*, 6 years old. In the fall of 1858 the leaves commenced to assume a red hue very prematurely. During the summer of 1859, they had made a good strong growth—(and here he showed some very long branches of last year's growth.) This spring, 1859, the buds had swelled as usual and seemed ready to develop. The fruit buds even began to unfold, and then all stopped.—The bark remains green all down the body of the tree until near to the ground, and root, and it then is all dead and has the appearance of having been dead for a year. The point where the bark changes from green and bright to brown, is sometimes above and sometimes below the point of junction between the pear stock and the graft. The wood is dead beneath the bark and the bark is dead.—Had examined thoroughly, with a microscope, and could find no insect there and no mark of any insect having been there. Had brought to the Society some of the stumps of the trees, and wished the gentlemen to look at them. The Doctor verified all his statements as he proceeded by cutting the bark, and showing it green above and dead at the roots. In answer to questions—the roots were always mostly dead. His loss had been within the last four or five years fully 250 out of 1,200 trees.

Disease is not confined to his own land, or to any particular kind of soil; is not confined to Yates county, but has been in different parts of the State. Never found the tree dead higher than a foot from the ground, except sometimes a spot of the bark as large as a silver dollar would be dead, but all would be green above and below it. The roots in all cases of these trees looked as if they had been dead for years. Is very sure that there is no stagnant water around the roots; there had not been any. Dr. SPENCE here stopped answering questions, and asked whether Mr. THOMAS could not tell him what it was, and how to prevent, or cure it.

J. J. THOMAS.—The more I study the diseases of the pear the less I find that I know.

T. C. MAXWELL thought it was the fire blight.—Had found in his experience that the blight uses all bark just in this same way. The disease seems to commence in the roots; the roots all seem to die. The further supply and circulation of fresh sap is of course stopped. There remains enough of sap in the bark and body of the tree to make the fruit buds and leaf buds commence to swell and to keep the bark green.

W. P. TOWNSEND had suffered more or less for several years from the various forms of fire-blight, and there are always some quite singular appearances in every case of the disease. In some instances branches will be dead while all remains green and apparently thrifty above and below them. In other cases, it attacks the top and works down, while in Dr. SPENCE's case it attacks the root first.

ALVAR COVER had lost *Cherry trees* in the same way. Two *Napoleon*, *Bigarreau* trees died last year, and upon digging them up found that the roots were dead, with the same appearance as those now before the meeting. Disease is not confined to standard *Pear trees*, by any means.

Mr. SMITH, of Geneva, thought from the look of the stumps shown by Dr. SPENCE, that there must have been something in the soil not adapted to the cultivation of the pear tree, or there had not been sufficient culture bestowed upon the trees; thought that very likely the land sustaining the trees needed manure. Could see by the trees here shown that the tap roots did not make good growth.—Feared there may have been a want of drainage and the subsoil cold and sour, so as to prevent the tap roots from penetrating it and doing well in it.

Mr. BOARDMAN had had trees die under precisely similar appearances, although standing over a blind drain.

B. HOOVER had lost many trees by the same disease, and had laid it to the freezing and thawing of soil with too much moisture in it; had noticed that it was mostly confined to wet soils. Offered this blind drain was just such a spot, for this drain would not have been put there except to carry off water, and water must have been in the time coming around these roots and freezing them.

Mr. YEOMANS, of Walworth, had planted two hundred standard pear trees, and they were all gone now; knew that in his case it had been caused by an excess of water. Having the excess of water once in a while is what does it. The shape of this land was so that the water would center to the trees; a sort of cup around each tree. The effect upon the tree was very much like that of boiling water—fire and frost act very much alike in their effects upon plants. After the roots of trees are dead and the bark is dead all around the root of the tree, the trees will leave out and live, and the fruit will even become half grown; yet, during the summer, the leaves, fruit and all, are sure to turn yellow and die.

P. BARRY.—This disease looks amazingly like the fire-blight; but the whole thing is mysterious.—Agreed exactly with brother THOMAS.

S. H. AINSWORTH.—Looking at these stumps of Dr. SPENCE would call attention to the roots.—They seem all to be lateral roots, to run near the surface of the ground—trees seem not to have had any tap roots. Thinks there must have been wet subsoil or some water which, flowing to the trees, prevented the growth of the tap roots. Much depends upon the condition of the earth in the spring; alternate freezing and thawing is almost sure death to the trees. Had lost a great many trees in his day, but never had any die where the subsoil was dry.

W. BROWN SMITH, of Syracuse, here moved that when we adjourn we adjourn to meet at Rochester, at the call of the Council.

P. BARRY, of Rochester, recalled to the memory of Mr. SMITH that when the Society was organized it was the *Fruit Growers' Society of Western New York*, and that it was understood that the meetings should alternate between Syracuse and Rochester. Mr. BARNUM, Buffalo, Lockport and Rochester, because it was as opposed to the resolution because it was the giving to Rochester more than its share of the giving to Rochester more than its share of the meetings, and moved to amend by substituting Geneva for Rochester.

T. C. MAXWELL, of Geneva, would be very glad to have the Society in their village; would entertain them to the best of their ability; could give them a good ball for the meeting; but he knew they could not get as great a number together; they could not make near as fine a show of fruits.—Reminded the members that although they had assembled at Buffalo, Syracuse, &c., that their largest and pleasantest meetings had always been held at Rochester.

THE OLD HOUSE.

That little brown house! I remember it well—
Mid roses and lilacs embowered—
No palace of kings was ever loved half so well,
Tho' in pride and in grandeur it towered.
With door always open to want and distress,
Kind hearts there to comfort and cheer,
And hands ever ready to give and to bless—
Sure, peace and contentment dwell here.

Its compass was small, yet there ever was room—
Its walls no rare pictures adorned—
No costly upholstery there to shed gloom
And discomfort on all things around.
But the "old kitchen chairs" that so nicely did fit,
The "arm-chair" all covered so neat,
And the "little chair," too, where I first learned to knit
Seated there at my dear mother's feet.

Not these, in exchange for the sofas, divans,
That modern apartments adorn,
Would I give, though with time, and the oft busy hands
Of children, disfigured and worn.
Then the "old German clock" that has hung on the wall,
And numbered the hours as they past,
Though of joy, or of sorrow, it recked not the while,
But whispered, "not always they'll be last."

And then the "old cupboard" with door never barred
To guard the rich dainties within,
But filled with a store of nice cakes, pies, and bread,
Which we buttered in slices not thin.
O, such bread and butter as there was produced,
Never since have I tasted, or can;
It seemed that new life with each slice was infused
As it came from our kind mother's hand.

'Twas the home of my childhood! that little brown house!
Where I whiled its bright hours away,
With the bird, and the bee, and the sly little mouse,
As wild and as careless as they.
And near it was there an "old barn," which I woen—
As piled with rich harvests it stood—
Some other *rude girl* like myself must have seen
And loved it as well as I could.

Oh, many and sweet are the memories that cling
Around that loved home of my heart!
'Tis hallowed by scenes that around me still fling
A charm that can never depart.
Tho' it standeth no longer, and I am afar
In a land that is new to my sight,
Yet my spirit oft passes and wanders back there
With a feeling of strange, wild delight.

GOVERNMENT OF CHILDREN.

Nothing in this world presents a sight half so pleasing, beautiful, attractive, captivating, (I speak for one), as a group or family of children attentively, aye, eagerly listening to the counsel of their parents. The divine injunction is explicit:—"Train up a child in the way he should go." And I remark that the way here meant is, firstly, obedience to its parents. For a child to disobey its parents is to dishonor them, which is a violation of both the natural and moral law.

Some one (I hope many,) may ask, *How would you have us do to prevent this.* Pay attention, my friends, and, if I may be allowed, I will answer you as briefly and plainly as I can, and with all the pleasure imaginable. First, for your encouragement, I will here tell you that it is a work that *will* pay, and that no parent can neglect it without meeting with a loss far "transcending all price." Let me impress it into your minds that the obedience of children to their parents depends *wholly* on carrying out strictly in practice a few plain, simple rules. The most important of these I shall here lay down.

1st. By *all* means both parents (if there are two living,) should be united—should act in unison, "in concert," in harmony. Bitter conflicts and many evils grow out of a disagreement between parents. Of these squabbles children are much earlier observers than parents have any idea, and will seldom fail taking the advantage of such occasions and weaknesses, and fly for shelter and protection to the one or the other that will take their part. Should parents differ as to their mode of government, as may sometimes happen, they should take the utmost care that it does not come to the knowledge of the child.

2d. The next thing is to *begin in season*. Almost all parents are apt to put off bringing their children under wholesome discipline and restraint, until they have been left to their own way so long that the habit of disobeying becomes so fixed, and the will so strong, that it takes full double the medicine to operate. Parents who thus neglect and postpone, are never known to make amends. The fact is, they have neither the disposition nor the ability. The child is beyond their control.

3d. At what age is it proper to commence? As soon as the child is capable of understanding a plain, simple order,—somewhere, say, from ten to eighteen months old. Parents by a little attention can very easily and correctly determine. At this age commence a thorough, uniform, regular, systematic, daily course of training. There are many in-door errands and offices which the child is capable of doing and should be required to do at this age; such as "bring me the broom,"—"carry sister the pan,"—"pick up the cake,"—"shut the door," and the like.

4th. Let your orders always be given in language adapted to the child's understanding—the plainest and simplest possible. Many children are blamed and cruelly punished for not understanding what it is utterly impossible for any one to understand.

5th. See that your requirements are just and reasonable, so that there shall be no difficulty whatever—that is, want of power on the child's part in complying with them. The reason for this it is not necessary to give. Then, when they are made,—when the order is given, see that it is obeyed without any failure, by speaking only once. To this end let it be given in a firm and decisive manner, yet spoken in tones of kindness and accents of love. If your child is once allowed to get the mastery over you, it will be next to, if not quite, impossible for you ever to conquer him afterward. Under such mis-rule, believe me, an instance of complete subjection was probably never known.

It is sometimes said that children of different dispositions, require different modes of treatment. Very true. Yet there are, in the science of government, certain established principles and rules which are wisely and happily adapted, and indispensably applicable, to all children, of whatever temperament, excepting idiots. Such are the foregoing.

Now, dear reader, as you have got through, do I hear you say:—"I wonder if that man knows any more about bringing up children than other folks? I don't believe he has ever had any to bring up."—Yes I have. "How many?" Why, enough to learn something about it—say a pretty fair experiment in reducing theory to practice. How many do you suppose a parent needs to bring up in order to understand the philosophy? Or does it depend on the number at all? If it does, why, then, do not those who have the largest families excel?—I presume you would not question or underrate the ability of a mineralogist to instruct you in his branch of science, because he had not laid as many rods of stone wall as a man of your acquaintance, who has devoted an entire life to the latter pursuit. Woodbury, Ct., 1859. D. WELLMAN, JR.

THE "SANCTUM"—WHAT IS IT LIKE?

I wonder if any of the lady Rural Correspondents have ever seen the inside of an Editor's sanctum? If you have, I wish you'd tell us how it looks, and initiate us somewhat, in its mysteries. Does he not have a great pile of letters, and newspapers, and periodicals, and books, to examine every mail—subscriptions, queries, articles for publication, &c. &c.—and who opens them, and disposes of their contents? Does the Editor himself, with assistants? Take, for instance, the office of the RURAL NEW-YORKER. Does the Editor condescend to look over all the communications, deciding which to publish, and which not; or does he trust that department to some other person? I have often wondered how he, or any one else, could endure to inspect all the articles sent to them; and so far from feeling dissatisfaction, if a piece has been deemed unworthy, or overlooked, have been surprised to see it again.—How can we judge of the fitness of an article for publication? It may be too late, or too early, or out of season, or on subjects not treated upon in that paper. In short, it may lack or possess too much, for that particular paper, or time, or region; or, in the multiplicity of an Editor's duties have been overlooked for months or years. As the Editor is responsible for the influence and impression his publications may exert or create, how impossible it would be for him to indorse the sentiments of all who choose to address his paper, by giving them publicity thro' its columns.

Probably, the mass of people are very ignorant of the duties, and exertions, attending the successful publication of newspapers. Few men are qualified to fill with continued popularity an "Editor's Chair," and we scarcely know how to appreciate the efforts he must make, and the obstacles overcome, before he can become fairly established in public opinion and receive an encouraging patronage. And is it not in his power, to do more good, or harm, than any other class of our public teachers? The Editor's influence ranks the highest and most extended in our country, and through him, if it ever comes, we must look for "the good time coming."

[Without assuming to answer the queries propounded to LADY Correspondents, we would refer QUERIES to an article in next column from the pen of a gentleman who has visited the RURAL sanctum, and knows somewhat thereof he affirms relative to its topography, &c. It is proper to remark, however, that though the principal editor opens and cursorily examines all communications, many are necessarily submitted to the close examination of assistants and contributors who have more leisure, and make certain branches their specialties.—ED. RURAL.]

THE INDUSTRY OF WOMEN.

THE last Edinburgh Review has an interesting paper on the labors and emoluments of women.—The writer affirms that education is the surest means of placing her in the position nature intended her to occupy. Out of six millions of women in England and Scotland, he shows that no less than half are industrial in their mode of life, more than a third being self-supporting. The matrimonial cases under recent laws have disclosed an amazing amount of female industry; almost every wife who sought protection proving that she had supported the household and acquired property. The reviewer does not hesitate to attribute difficulties in regard to the industrial independence of women to the jealousy of men. This jealousy, he says:

"Shows itself with every step gained in civilization, and its immediate effect is to pauperize a large number of women, who are willing to work for their bread; and we need not add, to condemn to perdition many more who have no choice left but between starvation and vice. The jealousy which keeps country women from the employment of engraving the brass work of a watch, and from pasting patterns of floss silk upon cards, for trade purposes, long kept the School of Design in London closed against female pupils, and renders it still more impossible for an Englishwoman to qualify herself for treating the diseases of women and children. The same jealousy cost many lives in the late war, by delaying the reception of the nurses into the hospitals in the East, and by restricting their action when there. In the Staffordshire potteries, women are largely employed in painting porcelain—an art which they are better qualified to practice than men. It will hardly be credited, but we can vouch for the fact, that such is the jealousy of men that they compel the women to paint without a rest for the hand, and the masters are obliged by their workmen to sanction this absurd act of injustice."

Men can better philosophize on the human heart, but women can read it better.—J. J. ROUSSEAU.

OUR JIMMIE AND HIS BRIDE.

BY JENNY MARSH PARKER.

I took upon a sunny path
Where two walk side by side;
They love each other true and well,
But, ah! the future, who can tell?
Kind Heaven keep
Our JIMMIE and his bride.

No clouds are frowning o'er their heads,
No thorns are 'neath their feet,
They think the wide world glad as they;
Dear Father, grant they ever may,
And let no woe divide
Our JIMMIE and his bride.

Their years are few, and may their locks
Grow white before they part,
But never let a snow-flake fall
To blight their bloom of heart;
We love them much, and to Thy care
We leave them, and confide
That angel wings will fold around
Our JIMMIE and his bride.

Rochester, N. Y., 1859.

"EXCELSIOR;"
A STORY FOR THE STORY MAKERS.

BY W. H. GARDNER.

In a three-cornered, high-walled room, fronting upon a busy, din-raising street sat a man surrounded with books, letters, and newspapers. He plies his task diligently, silently, save the rustling of paper or the occasional scratching of his pen.—The rumble of machinery barely reaches him, but undisturbed he toils on—the written page lengthening—the piles of examined manuscripts and exchange papers of various classes growing larger; until, after a time,—a long time of unceasing effort,—he rises, having filled the iron band-measure which encircles the metallic signs of his brain-labor. He is the Editor—the parent mind of the establishment we have unceremoniously entered,—the thinking power, like the sun lighting and warming a whole solar system of satellite workers.

In the room from which we entered this are stored thick volumes, containing the ligaments binding the sanctum to that portion of the outer world which feeds it. The result of the hand and brain-labor of which we are speaking, directed by those volumes, finds its way through the throbbing, beating, iron-arteried world to the hearths and homes of thousands in our loved land. The means furnished by enlightened and well-organized society are used—the universal mail conveyance of our domain—to pay to each creditor his dues, but this detracts naught from the praise which the master brain of the enterprise deserves.

In another apartment we hear the click, click, of lettered type, and the constant use of copy, drawn from the tri-cornered fountain, tells the unremitting toil of him who feeds the stream from that inner "holy of holies." Yes, copy is the constant want here—copy which, radiated upon the world, becomes real copy for an infinitude of forming, enlarging, progressive minds. The trickling stream from that worn pen-nib multiplied, is more effective in forming mind than the will of any tyrant who ever forged chains on a minion-supported throne. In yet another apartment is the magical product and invaluable servant of diffused science—the power printing-press. The product of the labor of that inner fount passing 'neath the magic touch of this machine may be exchanged for a trifle with thousands, instead of remaining only his. It is a wonderful consummation of labor to him who has passed more time in trapping than study—it is a wonderful success to every division of labor, and calculated to bring forth unconcealed wonder from even intelligent eyes.

None but carefully educated eyes, hands and brains labor here. The final immortal product bound in mortal casquets is too precious to allow aught but finished, gilded gems to speak upon the page of the sheet whose inspection is rigid, and motto is "Excelsior."

"Yet higher" is the aim of the pen-guide in the sanctum, the printer at his "case," and the workmen at the press, and the impress of their thought is enstamped upon their labor, to be engraven upon the heart of the herd-tending school-boy, who nightly denies himself hours with his skates, that he may share their thoughts. "Excelsior" is engrafted upon all who come within its radius, and truth impressed for eternity, is photographed upon the heart by the Editor's labor.

It is a vain endeavor to trace the influences which conspired to produce the artisan who labors in the sanctum to furnish copy to set in living forms, imperishable as immortal. We imagine preparation, youthful study, training hope, and, finally, the adoption of the ever-retreating beacon, "Excelsior." We have known him of the sanctum for more than half a score of years—we have within us caverned memories, youthful planted, fixed and unfading—ours for good from him forever. Others have them—we are not alone, and now proceed to give another view drawn from the sanctum's influences.

The snows of early winter were sifting upon farm-land and moor in the "Prairie State," when a teacher in a beautiful school-room—from whose windows fully four hundred square miles of prairie could be seen at one sweep of the eye—laid upon his table before the wondering eyes of his pupils a package of papers, fresh from the post-office. Unbinding the bundle he found it to contain specimen sheets from the establishment described by us.—When the hour of separation came, each tugging laborer for the lore garnered for him on the famed hill of science was bidden take one. Into capacious pockets they are thrust, and, one by one, with their noisy owners, have disappeared through

the opened door. Now and untrodden paths await those records of labor—new hearths—strange firesides are visited. They are hidden full welcome by all save those who have no desire for true, intelligent copy.

At the home of that boy setting out alone for a three mile walk to reach it, let us call and witness the scrutiny which the labor of the sanctum receives. His parents are New Englanders—educated and intelligent reading farmers, they left the early home land for this more fertile and promising soil. Their labors have been blessed, and they are enjoying the decline of life as only the industrious can enjoy it. Not their smallest comfort is that boy whom we have seen hastening along the prairie path, hardly able to wait until he reaches home to enjoy the copy in his possession. Good copy has ever been his—parental copy without a fault, from which others, as well as himself, have profited. But yet the parents feel a want of what, without exchange of labor, they cannot gratify—a real, pressing, not-to-be-foregone want of examples—of copy to point their boy's mind on the way to yet higher development in science and truth. The age demands that he should receive not only the impress of their own proper, everyday, stereotyped habits and manners, but the mind-labor and choice product of some one educated for the duty, constantly. Such is the great need in this house where want seemeth a stranger so full is the ample-stored abundance, the content and happiness which marks its indwellers. But their want is not for the temporal supply of their bodies—it is instruction—added thought. The thinking part of man requires strengthening and quickening as regularly as the body. He may acquire more consuming, hateful, burning thirsts, but until stilled, he possesses Nature's in-planted relish for the congenial, sympathetic condiments of other mind-labor, which ever prompts him to higher notion, and never satisfied, is constantly crying give, give. It is the yearning of the heart for true knowledge in the student of the farm as well as the laboratory. It is the want also of the parent for his offspring—the teacher for his pupils—the pastor for his flock—a want or association not to be denied. Money in the purse—herds in the field—measured stores in the garner, are naught compared with the want of the parents spoken of. They want the entire labor of him whose sanctum we have visited. They are not ambitious, neither extravagant, but after examining the stranger introduced by their school-boy son, resolve to bestow upon him the product of that Editor's labor—think of it ye who flourished in the days of PYTHAGORAS and DEMOSTHENES—think of it ye who value too highly your insignificant flock and herd products, to give in exchange a few caskered shillings for fifty-two measures of a full mind's action. Surely ALEXANDER received less in his early training under the philosophic ARISTOTLE, with national wealth at his beck, than this farmer boy of the prairie. Wonderful realization of desire—consummate success, the placing, by occasional recitations of the press given in exchange for a few hours labor, the aggregate experience and wisdom of ages in the hands of our youth.

The connection between the toiling Editor's sanctum and the hearts and homes of the people is very acute. While the latter are furnished mental sustenance by the former, the support of the sanctum is derived by supplying just such wants as the one described at the prairie hearth-stone. Although depending upon the voice of the people for success, intelligent, sufficient, honest labor fails not of appreciation and remunerating return. Liberal support accorded to the sanctum, and careful preparation of the product of the press with "Excelsior" for its motto, will result advantageously to both parties, proving to each an untold augmentation of happiness, as the effect of a division of labor. Amboy, Lee Co., Ill., 1859.

How YOU MAY KNOW GOOD FATHERS.—It is a good sign and true when you see amid a group of boys one dart from the rest, and, tossing his arms above his head, shout—"There's my father!" as he runs to meet him. You may be sure, no matter what business soever, that man may have, that there is a spot in his heart still fresh and green, which the cares of the world have no power to blight. "There's my father." With what a pretty pride the little fellow shouts this. He must be indeed a brute, whose fatherly heart does not swell with love, whose eyes do not glisten, who does not at such a moment feel amply repaid for that day's toil, no matter how wearisome. After all, love is the only thing worth having in this world. They who stand over now-made graves tell us so. Fame, money, and ambition divide into nothing, beside the white, calm brow of death, though God knows it may be the youngling of the flock whose lips have never even learned to syllable our names.

VERY TOUCHING.—Mr. Backus, the editor of the Canajoharie Radii, is a deaf mute; but how eloquently he gives voice to the language of grief in the following passage from his last paper:

We cannot this week fill our usual column—every time hitherto, before this, that we have sat in the old place, to the now regular recurring duty, we have had dear little fingers rambling along our knees, or making stray snatches at the paper. A little face, all lit with happy eyes, bo-peeping into ours. A little head, nodding, as it shook its curls, a mock "by-by, papa," and turning back again to the sweet childish teasing. But now, alas! the little fingers are no longer here; the little eyes are dim with a dimness that shall never know the old lustre again, and the little curls are yonder, beneath that sod that gleams so greenly beneath the trees and the glimmering white tombstones.

ARISTOCRACY.—I can respect the aristocracy of family—the consciousness of blood that has flowed through historic veins and throbbed under blazoned shields of renown. I can respect the aristocracy of talent, rising above all material conditions in its splendor and power. I can respect the aristocracy of enterprise that bursts all obstacles, and itself earns and holds with a modest self-exertion. But of all aristocracy, the aristocracy of mere vulgar, flaring wealth, and nothing else is the emptiest and silliest.—E. H. Chapin.

JESUS WEPT.

Oh! how sweet for weary ones
Of earth's sighing, fallen sons,
As they travel here below
In this world of woe and woe;
Sweet, though life a troubled deep;
Jesus wept that we might weep.

Mourner, hast thou naught to cheer
Thy lone path while traveling here?
Art thou of a friend in need?
Jesus is thy friend indeed.
He thy guide, thy hope will be;
Jesus wept, He'll weep with thee.

Careless sinner, dost thou scorn
Jesus Christ, for sinners born?
Dost thou scorn the path He trod?
Ere thou feel His chast'ning rod,
Pause, behold His love how free;
Jesus wept! He wept for thee.

Christians, journeying hand in hand
Till ye reach the promised land,
Can ye still inactive be,
While a world in sin ye see?
Bow in tears, in gladness reap;
Jesus wept and ye should weep.

Pittsford, N. Y., 1859.

Written for Moore's Rural New-Yorker.
LIFE'S MISSION.

How many reminiscences sad and sorrowful do we find recorded upon life's pages. Sad disappointments, hidden heart-aches, unrealized aspirations, and petty trials—how these at times come like a load of misery to crush our weary hearts, until it seems almost a burden to live, with such an array of bright hopes unrealized, and good resolves broken for a future warning. Life! What depths of meaning does this simple word convey! How it speaks of earnest struggles for right and truth, of good resolves and noble deeds,—how it tells of crime, misery, want, and wretchedness. Though the discords of sin are continually drowning the beautiful harmonies of life,—though evil and temptation ever surround us,—though disappointments and hourly trials may attend us through life's journey,—though the slanders of the malicious, and the faithlessness of those we have trusted may wound us; yet it will be but a short time before the winds above our graves will chant our requiem "while we rest from our labors." Life is not given us for vain repinings and murmurings, but for a higher and nobler purpose,—for the good of others. We have each a life-work to do, which noble and generous hearts should covet. It is to check the swelling tide of human wretchedness and woe, to comfort the broken-hearted, to scatter the gems of sympathy and kindness among the sorrowing sons and daughters of earth. Were it but the aim of every one to promote the happiness of others, how many hearts now sad would bound with life and joy—how many moments of anguish that are known only to the deeply sensitive heart, might be spared. How often has the unkind word, the thoughtless criticism, sent the burning tear of anguish unbidden to the eye, which by a simple word of kindness might have been sealed deep in their fountains. Ever, then, oh! earth-pilgrim, speak and act kindly. Kind words and deeds are more precious than glittering diamonds, or the laurels wreathed around a victor's brow. Perchance, by kindness and encouragement well bestowed, the erring wanderer from the path of purity and peace, may be led to return again to a better and a holier life—to the afflicted, a word or look of kindness may find a sunny resting-place, which may kindle the light of joy in his saddened heart, shedding a halo around his future pathway, cheering it to the tomb.

"Then ever speak in tones of kindness
To the sorrow-stricken heart,
And never let a word or action
Cause the bitter tear to start,
For how many spirits broken,
Bowed beneath a load of care,
Have been cheered by kind words spoken,
Cheered their daily cross to bear."

May it then be our "life mission" to crown each day of our lives with good and beautiful deeds, that when the snows of life's December shall whiten our heads, we may look back upon a life well spent, and enjoy a hope of a resurrection unto life immortal, a rest in that "Eternal Country" which God hath prepared for those that serve Him. Wilson, N. Y., 1859. MARION.

THE DIGNITY OF THE MINISTRY.—When the celebrated George Herbert informed a court friend of his resolution to enter the holy orders, he endeavored to dissuade him from it, as too much below his birth and the excellent abilities and endowments of his mind. To whom Herbert replied:—"It hath been formerly judged that the domestic servants of the King of heaven should be of the noblest families of the earth. And though the iniquities of the late times have made clergymen meanly valued, and the sacred name of priest contemptible, yet I will labor to make it honorable by consecrating all my learning and all my poor abilities to advance the glory of that God that gave them, knowing that I can never do much for him that hath done so much for me as to make me a Christian. And I will labor to be like my Savior, by making humility lovely in the eyes of all men, and by following the merciful and meek example of my dear Jesus."

MEDITATION ON THE WORD OF GOD.—By continual meditation on the sacred writings, a man as naturally improves and advances in holiness, as a tree thrives and flourishes in a kindly and well-watered soil. All the fruits of righteousness show themselves at the proper season, as opportunity calls for them; and his words, which are to his actions what the leaves are to the fruit, fall not on the ground, but are profitable as well as ornamental.

HELP IN COMPOSITION.

It has come to be quite a general article of belief with people who attend common school exhibitions, that the papers and separate essays, which form so large a share of the entertainment, and claim to be the work of the pupils, are often little more than examples of what Swiss mildly terms "digressing from one's self." Assuming that foundation for such belief exists, it is but fair to regard those who thus pass off as their own what belongs, in whole or in part, to another, as more sinned against than sinning in the case; since, in perhaps nearly every instance, the attempted fraud is less the result of a disposition to deceive, by appearing in borrowed or stolen plumage, than of a wish to come up to the requirements of ambitious teachers and no less ambitious friends. In many cases the pupil is merely a passive party to the fraud; the piece which the public are to suppose he composed being placed in his hands and himself exercised in the proper delivery of it; or his own production submitted for criticism and correction, being returned to him so altered that he recognizes it only by the title. Without inquiring into the wisdom of obliging pupils to write, or to appear to write, when they feel that they have nothing to say, let us indulge in a few general reflections on the mischievous practice teachers too often encourage, and even connive at, of beginners in literary composition begging or borrowing the materials for their pretended production; said incipient authors sometimes ransacking works on Rhetoric and the confessions of experienced writers for a patent method of putting the elements of their discourse together.

We commit a fatal mistake when we imagine and act on the supposition that a particular acquaintance with the intellectual modes employed by others is essential to a successful prosecution of our own work, or even affords valuable aid thereto. Except for the gratification of curiosity such knowledge is useless; for another's processes are not ours—and if it were possible for him to explain them minutely, which it seldom or never is, we could not adopt them if we would; the continued attempt to do so would very likely cost us what skill we have gained in our own method. So, if my friend furnishes me a thought or a sentence, no amount of generosity on his part, no rebuke in disclaiming the ownership of it can make it mine in any other sense than that of acceptance, just as the oldest thought in Literature may belong to me; whatever felicity resides in those words is inalienably his; the success is his, and not mine; for, instead of doing the little I was capable of, I have merely received from him and accomplished nothing myself.

Nor does the loss of practice in forming and giving expression to thought, which is the price of allowing another to say for us what we are pretending to say for ourselves, constitute the entire disadvantage of accepting this falsely-termed aid. It exposes us to the danger of self-deception—of unconsciously falling into the persuasion that we are really profiting in a disciplinary sense—are gaining skill and execution by these efforts of others added to trifling exertion of our own. But the immense moral injury involved outweighs every other consideration. Though innocent of wilful fraud in presenting as our own creation what is only partly ours, the practice, perhaps slowly and insensibly, but surely, induces a false estimate of respectability; an estimate in which appearance supplants reality—sham and show take the place of substance, and the superior ease of shining by reflected light sets aside the homely, prosaic truth that more honor resides in professing but little and being but little, than in high, baseless pretension. We see, then, that what our distorted vision too often regards as helps, are, in both a moral and an intellectual view, the worst of hindrances.

How many of us, though scorning to accept tangible aid, and jealous of anything that proposes to smooth the difficult approaches to the formidable task, yet find ourselves longing for direction—guidance! But the feeling of satisfaction with which we contemplate the finished work, fully balances the dread we experience in entering on its execution; when commencing it, we, in spite of ourselves, wish for some invisible agency, something that will not detract from our own merit, if merit there be,—that will assist us and yet not assist us, so that the work when done, shall be fairly and completely ours,—to help us through it. When completed, we rejoice that we were compelled to do it alone.

He is, indeed, fortunate, who early learns that in all the world there is no help for him equal to self-help; that though millions combine to thrust greatness on him, they cannot elevate him a hair's breadth above his purchased level,—purchased by conquering, inch by inch, and step by step, the ground that lay before him, and making it, by dint of careful guarding, a fast possession.

ROUTINE AND GUESSING IN SCHOOL.—Almost every profession has its peculiar perils to the moral and intellectual nature of the man, and that of the teacher is by no means exempt from them. Besides the danger of growing arbitrary and dogmatic, which he ought to remember in his daily prayer, he is particularly liable to become a routinist. As he obtains experience in his calling, which is as valuable to him as to the physician or the lawyer, he may sink into that state of indifference wherein his words and his acts are lifeless; wherein he becomes a machine, and discharges his duties as a grist-mill grinds corn. In this condition, he is no longer a teacher; he literally only "beats lessons." He puts questions, and, by a sort of mechanical skill, determines whether the answers are right or wrong. He scolds and frets from the force of habit, rather than because he is irritated by the stupidity and carelessness of the scholar.—*Man. Teacher.*

OUR TEACHERS.

How thoughtless must they be who can appreciate no lessons but those that they receive from professed teachers; and how illiterate must they be whose guide in practical life is confined to the say-so of books? Books are great helps, and they point us to the beautiful objects that surround us, the formation of which displays the skill of a superhuman artificer; they inspire us, too, with lofty aspirations, and kindle the flame of human ambition. But who would be willing to confine their knowledge of this world to what they may learn from professed teachers and books? Let us ramble abroad, with eyes open, and see these things for ourselves. Behold the modest, blushing flower as it springs forth from the bosom of mother earth; it clings to her like a fond child to its parent; it sucks from her unbounded resources all its rosy tints and mellow hues—and is nature impoverished by thus giving? No. Look again,—that flower begins to fade; its love-blushes are gone,—the soft blending of light and shade in its velvet petals have disappeared; it withers and droops upon the strong arm of nature, and she takes back the precious draught she gave, enriched by the sweet consciousness of having done good. Let us learn a lesson from the flower, and as we drink in so bounteously of nature's goodness, let it bud forth into new life, losing none of its varied richness by a blighting and withering influence; but, gathering fresh impulses from every contact with our natures, tuning our voices to sweet melodies, making our hands more helping, and our hearts more easily impressed with one's relations to humanity and our duty to our Maker.

OSCAR TALCOTT.

Ioan, Mich., June, 1859.

USE OF KNOWLEDGE.—Some men think that the gratification of curiosity is the end of knowledge; some the love of fame; some the pleasure of dispute; some the necessity of supporting themselves by their knowledge; but the real use of all knowledge is this, that we should dedicate that reason which was given us by God to the use and advantage of man.—*Lord Bacon.*

The Reviewer.

THE LIFE OF JAMES WATT, with Selections from his Correspondence. By JAMES PATRICK MURHEAD, M. A., author of "The Origin and Progress of the Mechanical Inventions of Watt," "Correspondence on the Discovery of the Composition of Water," etc. Illustrated. [pp. 494.] New York: D. Appleton & Co.—1859.

During the year 1854 a volume entitled "The Origin and Progress of the Mechanical Inventions of Watt" made its appearance in London, and, although a costly work, illustrated by numerous large copper-plate engravings, was well received. This fact led the author to the preparation of a book comprising all of interest which the volume mentioned contained, and, at the same time, at such low rates that the masses could procure it. The present work supplies this want, and every man may now be the possessor of a full and authentic biography of JAMES WATT. Mr. MURHEAD being a kinsman of the illustrious engineer—long the intimate friend, and now the executor of his son—had peculiar facilities for obtaining an accurate knowledge concerning all matters requisite for a complete and graphic life-history. Those opportunities were eagerly embraced, and the work happily carried forward to completion. The reputation of the publishers is a sufficient guarantee of the good style in which the whole is presented. For sale by DEWEY.

THE ART OF EXTENSIVE SPEAKING. Hints for the Pulpit, the Senate, and the Bar. By M. BAUTAIN, Vice-Chancellor and Professor at the Sorbonne, etc., etc. With Additions by a Member of the New York Bar. [pp. 364.] New York: Charles Scribner.

An acute observer of American institutions once remarked that "in no country whatever is a genius for writing or speaking a more useful or commanding endowment than in this." The truth of this assertion being admitted, the careful study and practice of the precepts contained in just such volumes as the one before us, will form a most important part of the education of all who are preparing to become public speakers in any of the callings of life. Prolific as is the English language in Treatises upon Rhetoric, and the Arts of Composition and Delivery, we do not know of a work that will rival M. BAUTAIN'S. The chapters added by the American editor, contain much valuable information, and his brief summary of "Rules of Order and Debate" will be found very useful to presiding officers and debaters. For sale by ADAMS & DANFET.

Our favorite among the Quartermasters—the *London Reviewer*—has come to hand for April, and the present issue fully sustains its goodly reputation. The political article in this number, "Foreign Affairs—War in Italy," has a peculiar interest just now, discussing, as it does, the views and position of Austria. We have also a review of Carlyle's *Frederick the Great*; The Ministry of Scotland; National Galleries; Devonshire; George III and Charles James Fox; Lord Brougham and Law Reform; Bunsen's Egypt and the Chronology of the Bible. The latter paper is the most thorough and best worked out of the eight comprised in the Table of Contents, and will prove of intense interest to students of biblical literature. Republished by LEONARD SCOTT & Co., New York. DEWEY Agent for Rochester and vicinity.

Books Received.

THE NEW AMERICAN CYCLOPEDIA: A Popular Dictionary of General Knowledge. Edited by GEORGE RILEY and CHARLES A. DANA. Vol. VI. Cough—Education [pp. 172.] New York: D. Appleton. Sold in Rochester by D. M. DEWEY, Subscription Agent.

COUNTRY LIFE: A Handbook of Agriculture, Horticulture, and Landscape Gardening. By B. MOKSIE COPLAND. [8vo.—pp. 812.] Boston: John F. Jewett & Co. Cleveland: Henry F. B. Jewett. From the Publishers.

FARM DRAINAGE. The Principles, Processes, and Effects of Draining Land with Stones, Wood, Plows, and Open Ditches, and Especially with Tiles; including Tables of Rain-Fall, Evaporation, Filtration, Excavation, Capacity of Pipes; Cost and Number to the Acre, of Tiles, &c., &c., and more than 100 Illustrations. By HENRY F. FLEXNER. [12mo.—pp. 354.] New York: A. O. MOORE & Co. Rochester—E. DAWSON & Co.

JOHN HALIFAX, GENTLEMAN. By the author of "Olive," "The Quiver," "Agatha's Husband," "The Head of the Family," "A Hero, and other Tales," etc. With Illustrations by ALBERT HOPKIN. [16mo.—pp. 452.] New York: Harper & Bros. Sold by DEWEY.

GEORGE: A Sketch of a Physical Description of the Universe. By ALEX. VON HUMBOLDT. Translated from the German by E. C. OTTE and W. S. DALLAS. F. L. B. Vol. V. [16mo.—pp. 462.] New York: Harper & Bros. Rochester—Dewey.

NATURE'S SCHOOL; or, Lessons from the Garden and the Field. [16mo.—pp. 347.] Philadelphia: American Sunday School Union. Sold by ADAMS & DANFET.

FIRST METHODIST CHURCH, ROCHESTER.

This edifice, though small, (being 50 feet front by 88 deep,) will, when completed, be one of the most tasteful churches in our city. It was commenced in 1858; the basement or lower room is finished and occupied, but the audience room is yet in an unfinished state. The style partakes somewhat of the Romanesque, but like the great majority of American churches, belongs to no order, unless it be an American Church Order. It is built of brick, and is to be covered with mastie; the roof is slate, the windows stained glass. The spire, which is very tapering and graceful, is 100 feet in height.

The audience room is to be 48 feet wide by 74 deep, with a Gothic ceiling, divided into panels by

raised mouldings. The height from the floor to apex of ceiling is 36 feet, and 23 feet at the sides.

The basement or lower room, for it can hardly be called a basement, being entirely above ground, is the pleasantest room of the kind in the city,—dry, airy, and the arched windows and stained glass give it an air of taste and neatness not usual in church basements. The ceiling is eleven feet from the floor. This room is now used as the audience room, but is designed for the Sabbath School and weekly meetings.

The building, when finished, will cost about \$15,000. Messrs. AUSTIN & WARNER, of this city, were the architects.

Rev. ISRAEL H. KELLOGG is the present Pastor.

IS THE NEW CENT POISONOUS?

EDS. RURAL:—Sometime since I noticed an account in a New York paper of the death of a child, caused, it was supposed, by swallowing a cent of the coinage of 1857—otherwise, the "new cent." This account was sent abroad on the authority of the attending physician, and at the same time implying that the swallowing of this coin was most baneful in its effects. Since then every mother has guarded the new cent with more than a "miser's care," least her child should lay hold of the poisonous currency. This course is right enough; but as I have never seen the New York physician's statement contradicted, the facts of the thing are different from his account, as there is but very little or no danger from the *infesta* of this coin.

Twelve cases are reported where children, from the ages of ten months to five years, have swallowed the new cent, none of which proved of any injury to the child, and but little or no change was produced in the appearance of the coin.

The new cent was to weigh 78 grains—48 grains being nickel and 24 grains being copper. "Nickel resembles very much the ferruginous (iron) preparations, and is not injurious when taken into the system." This being the case, the danger, if there is any, must be from the copper, and that cannot be very great, for often has the cent of the "old coinage" been swallowed without any bad consequence, and there being less copper in the new cent, the danger must be consequently less.

We believe that the great amount of danger attending the swallowing of such substances as money, buttons, &c., is due to attempting to do too much to procure their expulsion from the system, and the consequent irritation and prostration that follow the employment of harsh remedies. Emetics, as a general thing, are useless, as are also active cathartics. If anything at all is done, give the child a mild portion of oil; but, above all, exercise patience, and the satisfaction will be in knowing that nature alone is sufficient for the task.

Churchville, N. Y., 1859.

A PHYSICIAN.

EFFECT OF MUSIC ON ANIMALS.

That music has a charm on the animal creation has long been known. The sense of hearing in many animals is very acute. They love to hear gentle voices, and are grateful for kind words. The tiny mouse charmed by the whistle of the Alpine herdsman, will abide in his hut, and come from its covert to listen to his song. In ancient times the grazing herds were charmed in listening to the flute of the shepherd. The bell cow is proud of her bell, and shows it in her gait, as she leads off the herd, and shows grief when it is taken from her, and cattle have been known to pine away and die when deprived of their harmonious ornament. The horse is particularly charmed with music, for

At the shrill trumpet's sound he pricks his ears. Many will remember the account of the Libyan mares, who would only be handled when soothed with soft music, and of the horses of the Sybarites, that had been taught to dance to pleasing melodies, and then, when bearing their masters into battle, suddenly heard, in the enemy's ranks, the well-remembered sounds, and instantly set to dancing instead of fighting! The same love of music in the horse has been noted in more modern times. The eccentric Lord Holland, of the reign of William III., used to give his horses a weekly concert in a covered gallery, especially erected for the purpose. He maintained that it cheered their temper, and an eye-witness says that they seemed to be greatly delighted therewith.

Music is appreciated by the elephant in a remarkable degree. Sweet, gentle strains delight him, while loud, harsh notes rouse his passions to uncontrollable fury. The Arab entertains his camel with music, song and fairy tale, and with the plaintive tones of his voice. Birds are the true musicians of the animal kingdom. They have what many men lack, a genuine talent to learn and appreciate musical notes and melodies. You sing and they will repeat, bar after bar; others listen with eager attention to a hand-organ, and, little by little, learn whole tunes; the ablest of all even imitate the songs and notes of others.

—*Transcript.*

He is no mean philosopher who can give a reason for half what he thinks.

Wisdom is the olive which springs from the heart, blooms on the tongue, and bears fruit by the actions.

YOUNG RURALIST.

QUEER NOTIONS.

FRIEND RURAL:—In perusing the *Young Ruralist's* column, I observed a short effusion from the pen of CHRIS, entitled *High Notions*; and, as my notions do not exactly coincide with his, I take the liberty of disagreeing with him. I think that there is an old adage which says, practice what you preach, which is equivalent to this, viz., that in order to preach you must have some practice. If friend CHRIS would grasp the plow-handle for one year, and hang on to it, I think that his ideas of farming would assume a rather different position. At all events, he would find himself better prepared to discourse on the subject.

I should like to ask how much time the farmer has for study. If he is an enterprising farmer, he rises early; and if he is an industrious man he seeks how much he can accomplish, and of course works late. His chores, and keeping things to rights about the house, employs his odd hours, except evenings, and when night comes he much prefers rest to study. Now this is the exact course pursued by what are called enterprising farmers, which is no more nor less than absolute slavery. If a farmer does not take that course, he is denominated *lazy* or *shiftless* by his harder-working brethren.

Again, I do not agree with friend CHRIS, as regards waiting for destiny to shape your course. I think if he will look around a little, he will see a good many that are waiting for destiny to shape their course, or, in other words, waiting for something favorable to turn up. Now, that is the great stumbling block of three-fourths of the young men of our country; they have not got decision of character sufficient to drive ahead and carry out their designs. The only path to distinction is to adopt the course that you are best qualified for, and then bend every effort to its accomplishment. Stick to it with the tenacity of a bull-dog, and success will eventually crown your efforts.

EVAN DAN.

SUPPLY OF STREAMS.

MESSRS. EDS.:—In looking over the *Young Ruralist* of June 11th, I saw some very curious statements, made by a *Young Ruralist* of Illinois, in an article entitled *The Supply of Streams*. He says the constant supply of streams is from a depth, the water rising, and that water is raised up to high fountains by the weight of the land—which is at variance with philosophy and science.

Water will rise nearly as high, but cannot rise higher than the source from whence it issues, unless it is by capillary attraction. It is well known that though rivers frequently rise in lakes or springs from small elevations, the great storehouse from which the mightiest streams are supplied are the ice-cold mountains of the table lands.

That streams are supplied by rain and snow from the surface of the earth, is proved by many demonstrative facts, as we have the largest streams where the surface of the land contains the most water, and vice versa.

The writer also says, that inland seas in "depressed valleys are salt, for the reason that fresh water goes up to higher fountains, not by capillary attraction, but by the weight of the land, in which I think my friend is mistaken.

It is well known that all lakes and seas that have no outlet, are salt, as they have no means of discharging the saline matter that is brought down by streams; such as the *Caspian Sea*, which receives the water of the *Volga*,—a river which is 2,200 miles long,—and also the water of the *Ural*, and many other streams of considerable magnitude, and yet its level is never changed, though it has no outlet. It is therefore supposed its evaporation must be immense.

The surface of all fluids, when in a state of rest, partake of the spherical form of the earth, to which they all gravitate; and the influences that govern the tides of the ocean, do not cause rivers to flow, but they are governed by the same laws that cause water to flow down an inclined plane.

Pultneyville, N. Y., June, 1859.

FOR YOUNG MEN TO THINK OF.

IN the latest of his preachings upon "Popular Proverbs," Dr. HOLLAND closes a thoughtful and suggestive discourse on sensual pleasure, with the following earnest remarks to young men, which deserve to be thought of:

"Oh! if this world could rise out of this swamp of sensuality, rank with weeds and dark with deadly vapors—full of vipers, thick with pitfalls, and lurid with deceptive lights—and stand upon the secure heights of virtue, where God's sun shines, and the winds of heaven breathe blandly and healthfully; how would human life become blessed and beautiful! The great burden of the world rolled off, how would it spring forward into a grand career of prosperity and progress! This change, for this country, rests almost entirely upon the young men of the country. It lies with them more than any other class, and more than all other classes, to say whether this country shall descend still lower in its path to brutality, or rise higher than the standard of its loftiest dreams. The devotees of sense, themselves, have greatly lost their power for good, and comparatively few will change their course of life. Woman will be pure if man will be true. Youngmen! this great result abides with you! If you could but see how beautiful a flower grows upon the thorny stalk of self-denial, you would give the plant the honor it deserves. If it seems hard and homely, despise it not; for in it sleeps the beauty of heaven and the breath of angels. If you do not witness the glory of its blossoming during the day of life, its petals will open when the night of death comes, and gladden your closing eyes with their marvelous loveliness, and fill your soul with their grateful perfume."

All persons who form new clubs to commence with July, or introduce the *RURAL* in localities where it is not now taken, will be liberally remunerated for their time and attention.

Back numbers from April or January can still be furnished, if desired. We will send Specimen Numbers, Show Bills, &c., to all applicants, and to the addresses of as many non-subscribers as may be forwarded.

DOMESTIC NEWS.

Matters at Washington.

The opinion among gentlemen connected with the diplomatic corps is, that although the governments of Europe not engaged in the present hostilities are desirous and hope for peace, the complications are so great that there is almost an impossibility of preventing a general war. In such an event there is no doubt that Russia will array herself with France.

The U. S. Surveys in Utah, which were two years ago interrupted by the Mormon difficulties, are to be resumed immediately by Surveyor Samuel Stambaugh. The lands already surveyed amount to 2,000,000 acres.

Private letters from El Paso and Arizona, the 7th of June, state that the late attempt to revolutionize Chihuahua by Jose Maria Zuloaga, brother of the late President of Mexico, has been entirely suppressed, Zuloaga surrendering without a battle, and being pardoned.

The people of New Mexico adhere to their determination to take no part in the New Mexican election, on the ground heretofore stated in their memorial to Congress, of having no fair representation or vote. No U. S. Court is held at Mesilla this year. Arizona will send her own delegate to Congress, and if Lieut. Mowry consents to run again, he will be re-elected to Congress as a delegate from New Mexico, without serious opposition.

The Secretary of War has refused to permit any more officers on leave to depart for Europe. It is feared that they might join some of the armies, and in the event of being taken prisoners, would lead to serious complications, which our government desires to avoid.

A dispatch from Washington says an unexpected obstacle has occurred in the settlement of the Central American question, on account of the hesitation of Nicaragua to consent to the relinquishment by England of the Protectorate over the Mosquito Kingdom, upon the ground that if withdrawn the filibusters would enter and sweep the country; Gen. Walker's recent movements having produced alarm there; but the British Government denies having made any interference on this point, and expresses itself ready to carry out the arrangements conformably to the understanding at Washington.

Personal and Political.

Mr. SUMNER has arrived in Paris, in good spirits, and looking well.

DR. GAMALIEL BAILEY, editor of the *National Era*, died at sea, on board the steamer Arago, bound for Havre, on the 5th of the past month. Dr. Bailey had for some years been suffering from chronic dyspepsia, which had so enfeebled his system that on the 28th of May he left the United States, in company with his eldest son, to regain his health by a tour in Europe.

It has already been stated that Kossuth, with a number of Hungarians, has left England for Genoa, where Gen. Klapka, Col. Kiss, Gen. Perzel, Gen. Vetter, Col. Yasc, Col. Teleki, and other Hungarian refugees, await him. It is said to be his purpose to issue a proclamation at Genoa, calling on the Hungarians in the Austrian army to desert en masse, and with these deserters (should they number 15,000 or 20,000) and a small division of French troops under the French flag, to cross the Adriatic and the Austrian provinces into Hungary, and then promote insurrection.

In the New Hampshire House of Representatives on the 23d ult., a stringent bill in relation to the rendition of alleged fugitive slaves, was reported by the Judiciary Committee. The bill provides that any person who shall aid or abet in any rendition of a person claimed as a slave, shall be punished for the first offence by five years' imprisonment for life. The bill passed the House by a vote of 134 to 101. In the Senate, action was indefinitely postponed.

The Republican State Convention, held at Des Moines, Iowa, on the 22d ult., nominated the following ticket:—For Governor, S. J. Kirkwood; Lieut. Governor, N. S. Rush; Supreme Bench, L. P. Lowe, L. D. Stockton and Cabot Baldwin. Resolutions condemning Gen. Cass' naturalization letter, the slave trade, and the Massachusetts constitutional amendment, providing for two years' residence after naturalization before voting, were passed.

Advices from Oregon state that the Legislature met at Salem on the 16th of May. Luther Elkins

was chosen President of the Senate, and W. G. L. Faulk, Speaker of the House. Judge Williams and Mr. Grover, late representatives in the Legislature, are the most prominent candidates to succeed Delazon Smith in the U. S. Senate.

At the election held at Providence, R. I., on the 22d ult., for a Member of Congress from that District, Christopher Robinson, the American Republican candidate, was elected. He received about 3,200 votes. Thomas Davis, the straight Republican candidate, supported also by a portion of the Democrats, received about 2,500 votes.

The Leavenworth Times of the 13th ult., sums up the Kansas election for Delegates to the Constitutional Convention as follows:—Republican, 29; Democrat, 20; uncertain, 8.

The President of the United States has recognized Henry W. Ovenden, as Consul of her Britannic Majesty for the State of Maryland.

Mr. Fay, our Minister to Switzerland, will soon be recalled. He has not been within the limits of the United States for thirty years.

STEPHEN A. DOUGLAS is out with a bid for the Presidency in the form of a letter answering certain queries propounded by his friends. The "Little Giant" remarks:—"Before the question can be finally determined, it will be necessary to understand distinctly upon what issues the canvass is to be conducted. If, as I have full faith they will, the Democratic party shall determine in the Presidential election of 1860 to adhere to the principles embodied in the Compromise measures of 1850, and ratified by the people in the Presidential election of 1852, and reaffirmed in the Kansas-Nebraska act of 1854, and incorporated in the Cincinnati Platform of 1856, as expounded by Mr. Buchanan in his letter accepting the nomination, and approved by the people, in that event, my friends will be at liberty to present my name to the Convention, if they see proper to do so. If, on the contrary, it shall become the policy of the Democracy, but which I cannot anticipate, to repudiate these, their true principles, by which we have achieved so many patriotic triumphs, and in lieu of them the Convention shall interpolate into the creed of the party such new issues as the revival of the African Slave Trade or a Congressional Slave Trade for the Territories, or the doctrine that the Constitution of the United States either establishes or prohibits slavery in the territories beyond the power of the people legally to control it as other property, it is due to candor to say, that in such an event I could not accept the nomination if tendered to me."

Pacific Side News.

The steamship *Moses Taylor* arrived at New York on the 28th ult. She brought 600 passengers and \$2,041,000 in specie.

From California or Oregon there is no news of interest. Valparaiso dates are to May 28th. The revolution in Chili is perfectly suppressed. Frequent outrages are reported by bands of robbers throughout the country. The leader of the revolution in the North, Senor Gallo, was at Lima. Don Bartolome Riebo had been sentenced to death, and to two others to banishment ten days. Bolivia and Peru were in a peaceful condition. The blockade of the Ecuadorian ports, by the Peruvian squadron, continues.

The English ship *Indian Queen*, Capt. Brewer, from Melbourne, for Liverpool, with 41 passengers struck an iceberg April 1st. Capt. Brewer, the first mate, thirteen men and two passengers, got into a life-boat and came alongside a quarter of an hour afterwards, and, finding the ship making no water, attempted to get on board, but, losing their oars when too far off to catch a rope, drifted off and were never seen after. The ship, in a dismantled condition, but all on board well, reached Valparaiso May 10th.

SALVADOR.—An attempt had been made to assassinate Gen. Hernandez, Governor of the Department of Cuscutlan, who was severely but not mortally wounded. The would-be assassin was shot. War seems inevitable between Salvador and Honduras, but it was thought Guatemala would interfere to preserve peace.

Nicaragua.—Gen. Lamar had sent copies of Gen. Cass' dispatches to the Government demanding acceptance of the Cass-Yrissari Treaty, ratification of the Mosquito Convention, re-installation of the Wright Contract, transit holders' indemnification for the seizure of boats, and satisfaction and apology to the United States, for the insult of having offered them the Ousley Treaty.

The substance of the Nicaraguan reply is as follows:—Nicaragua, as a sovereign power, claims the right to accept or reject a treaty. She had previously made three treaties with the United States, which were ratified by her Congress and rejected at Washington; that on this one she only requires amendments, and that after the Congress considered the treaty last year, and it had been sent to Gen. Juarez in Washington, who had full power to remedy it, the Cabinet, though agreeing to certain modifications, did not make them; nor was the United States' Minister in Nicaragua authorized to do so. Furthermore, that when Sir Gore Ousley concluded his treaty, which was the Cass-Yrissari treaty, with the remodified amendments, according to the American view, Gen. Lamar made the Zeledon treaty, with the favorable amendments, as to England and the United States, of Sir Gore Ousley. The Government of Nicaragua cannot see any insult to the United States in this. As to the Mosquito treaty, it has not been rejected, and will probably be accepted. Nicaragua claims the return of the Mosquito territory unconditionally, and refuses to acknowledge a King whom neither she nor the United States ever admitted, and she prefers to let the matter remain *in statu quo*, than act against her ally. In regard to the service of the boats, Nicaragua justifies her conduct.

From Pike's Peak.

The telegraph, from Leavenworth, gave us the following on the 21st ult.:—"The overland express arrived here Sunday night, eight days from Denver City, bringing a large mail and \$3,500 in gold dust. The previous extraordinary reports of discoveries in Gregory, Jackson, and other mining camps, are confirmed. Horace Greeley arrived

out in less than seven days. He had visited Gregory's diggings, and signed a public communication endorsing the richness of the claims.

The result of the operations of a company of thirteen, given in Greeley's published letter, show the highest day's yield \$510. A company from South Bend, Indiana, has taken out 3,000 penny-weights of gold dust, with a sluice, within three weeks.

Emigrants are charged not to start without four or six months' supplies, as snows set in on the mountains in October, and adequate provisions should be made by all persons leaving this season for wintering in the mining region; this is to prevent a recurrence of the suffering and privations of the previous year.

Conflagrations, Casualties, &c.

The steamer *Morning Star*, which had been laid up at Bissell's Point, about four miles above St. Louis, was destroyed by fire on the 20th ult. Loss \$24,000—insured \$2,000.

A FIRE broke out at an early hour on the morning of the 22d ult., in Young's Block, adjoining the Custom House, Milwaukee. The block was entirely consumed. It was occupied by some 20 business firms. Loss on the building \$50,000—insured \$50,000. The Custom House is damaged to the extent of \$15,000. Loss in merchandise not yet ascertained, but very heavy.

The manufactory of Avery Babbitt, in Auburn, was struck by lightning on Friday evening, the 24th ult., and set on fire. Before it was subdued the damage done amounted to over \$9,000. Insured only \$3,000.

At the burning of a dwelling house on Plymouth street, Brooklyn, on the evening of the 26th ult., two men—James McGinnis and Daniel Olcott—were suffocated to death. A child was rescued in an insensible state. A fireman fell from a ladder and was fatally injured.

On the evening of the 21st ult., H. Van Dyck, Jr., aged 21 years, only son of Hon. Henry H. Van Dyck, Superintendent of Public Instruction, was thrown from a wagon while on his way home (Albany) from a visit in the country, and fatally injured.

A violent fall of hail took place in the neighborhood of Albany, N. Y., on the 21st ult., continuing half an hour, and extending over a space of about a mile in width. The hail stones were as large as marbles, and congealed into large cakes of ice almost as soon as they fell. Windows were broken, and flowers, &c., cut to pieces.

THE CLEVELAND (O.) Herald of the 24th publishes the following from a Hudson correspondent:—"What hope the frost had left the farmer, has just been destroyed by the worst hail storm I have ever witnessed. As I write, the ground is covered with stones of the size of robins' eggs and larger. It has stripped the trees almost bare, and probably left nothing in the form of wheat and rye. Almost all the windows which are not covered with shutters are broken, and the College looks like a perfect ruin. It would seem as if it were impossible to add anything to the disaster, unless it be to burn the houses."

News Paragraphs.

CORRESPONDENCE has taken place relative to the disposition of Sardinia to receive American physicians into the Sardinian army. The answer is, that the Government thanks the Americans for their sympathy, but cannot avail itself of the offer.

THE schooner *Exile* arrived at New London on the 12th inst., after having made what is believed to be the longest whaling voyage on record. She sailed August 18th, 1852; consequently she was absent six years, nine months and twenty-five days.

GOING into battle by rail, is one of the peculiarities of the present war. At the battle of Montebello the allied supports came into the field under the lead of locomotives, rapidly succeeding trains bringing up a brigade.

THE number of passports which have been issued during Gen. Cass' administration of the State Department, was, on the 11th inst., fourteen thousand and some hundred. If each person, observes the New York Journal of Commerce, for whom a passport is taken, spends in a tour \$500, the whole amount would be over \$7,000,000.

A severe hail-storm passed over the town of Glen, Schoenectady county, and Clifton Park, Saratoga county, on Tuesday, doing great damage to crops and fruits.

THE educational statistics of the United States show that there are four millions of the youth of this country connected with the various educational institutions in the different States in the Union. Their teachers number more than one hundred and fifteen thousand. The annual current expenses are estimated at about \$14,000,000.

It turns out that the "Vegetable Wax" of Japan, about which so much has recently been said in the papers, is nothing more nor less than the product of the common myrtle bush, to be found in every roadside thicket-bush in North Carolina.

THE N. Y. Times contains an address from M. Kossuth to the Hungarians in America, in which address, after referring to the present state of affairs in Europe, he warns his fellow countrymen that it is not yet time to move. Grave considerations forbid his entering upon premature explanations, but they shall be apprised in due time.

Como.—This famous city, now in possession of Gen. Garibaldi's forces, is situated at the Southern extremity of the Lake of Como, twenty-two miles north-west of Milan. It rests upon a very picturesque site, 702 feet above the level of the sea. Its population, including that of the suburbs, is 18,000. It was formerly well defended by fortifications, which have become nearly useless, unless recently repaired by the Austrians. The chief edifices of the city are of white marble, and the whole appearance of the place betokens commercial and manufacturing prosperity. It was an important hold, even in the middle ages, although its real fame goes much further back, the younger Pliny, (and probably the elder,) having been born there. Two Popes and the eminent chemist Volta were also natives of the city.

FOREIGN NEWS.

From the Seat of War.

In the last issue of the *RURAL* we gave some account of the great battle of Magenta, and the arrivals during the week tend to confirm the French report of that engagement. The Allies entered Milan on the 7th, when the municipality of that city issued the following address to Victor Emmanuel:—"The municipality of Milan are proud of being able to make use of its freshest privileges in being interpreter of its fellow-citizens at this great crisis. They are willing to renew the compact of 1848, and to proclaim again before the Italian nation the great fact which has required eleven years for full development in the intelligence and hearts of the people. The annexation of Lombardy and Piedmont is the first step in the new way of public right, which allows nations to be free disposers of their own destinies. The heroic Sardinian army and our brave Allies, who insist upon Italy being free, as far as the Adriatic, will soon achieve the magnificent enterprise. Receive, sir, the homage of the town of Milan at our hands, and believe that our hearts belong entirely to you. Our cry is the King of Italy."

The *Bremen* arrived at New York on the 26th ult., and we have the following by her files:—"It was rumored that Napoleon is about to return to France, and that Pelissier would be Commander-in-Chief of the army. The Austrians had evacuated Piacenza, after blowing up the Citadel and fortifications. Their provisions, ammunition and cannon were abandoned. Pavia and Lodi had been evacuated, and the Austrians quitted Bologna on the 11th for Modena. The Austrians had also evacuated Ferrara and Ancona, and indeed all the States of the Church. Garibaldi had occupied Bergamo, and repulsed the corps of 1,500 Austrians who were marching against — from Brescia. The French army had crossed the Adda without striking a blow. Prince Metternich died on the 11th. The French fleet in the Adriatic had received heavy reinforcements, and it was reported that a landing of troops would take place at Venice and Trieste. The Austrian head quarters were at Mantua. Five thousand Austrian prisoners had arrived at Marseilles and Toulon."

GREAT BRITAIN.—The "motion of want of confidence," pending in the House of Commons, mentioned in last *RURAL*, was carried by 13 majority, and the British Ministry resigned. Lord Granville was summoned, but was not able to form a government. Lord Palmerston agreed to serve under him, but Lord Russell would not. Lord Palmerston then had an interview with the Queen, and had undertaken to form a new government with the co-operation of Lord John Russell, who accepts the Foreign office.

The *Daily News* of the 14th says that it believes Lord Elgin has been offered the Secretaryship of the Colonies.

Mr. Cobden will have the option of the Board of Trade, and Milner Gibson will enter the Cabinet. Sidney Herbert will probably be Minister of War. Sir G. Lewis President of the India Board, and Mr. Gladstone Chancellor of the Exchequer. Sir R. Bethune is also spoken of for the later office. Sir James Graham and the Duke of Argyll had declined to join the new administration.

According to the opposition statements in both Houses of Parliament, a sum of £7,000,000 must be provided by the government to bring to bring the revenue up to the present rate of expenditure. The account will not probably prove quite so bad, but the Chancellor of the Exchequer seems to wish to prepare the public for a consideration of the subject, by announcing that the financial measures in preparation are of the gravest character.

PRUSSIA.—It is reported that the Prussian army is to be mobilized, and Prussia soon to take a part in the conflict.

RUSSIA.—The Russian government had concluded a convention with the Rothschilds, by which the latter are to raise any future loans the former may require in London.

Later and Very Important.

THE *Nova Scotian* passed Farther Point, on her way to Quebec, yesterday (Monday) afternoon about 4 o'clock. The telegraph gives us the following important intelligence:

A Turin dispatch says that after the retreat of the Austrians from Bologna, the Cardinal Legate departed, and the municipality proclaimed Victor Emmanuel dictator.

The King of Sardinia issued an order of the day, extolling Garibaldi, and awarding him a gold medal of the military order.

The official *Wiener Zeitung* says, the Emperor of Austria will forthwith assume the Commander-in-Chief, and has ordered a new position for his army, which would be taken up in the best manner. The Austrians were evacuating Modena, and were in full retreat towards the river Oglio.

Largere-inforcements were about to leave France for the army. Napoleon, on the 12th, removed his head quarters to Gorgonzola.

GREAT BRITAIN.—Lord Palmerston was making good progress in the construction of a Cabinet. The authentic list was expected to be made public on the day the Nova Scotian sailed. Rumor gives the Earl of Elgin the Colonial Secretaryship, Mr. Cobden the Presidency for the Board of Trade, and Mr. Gladstone the Secretaryship for India.

The Advertiser says after Russell accepted the Foreign Office, any office he might prefer was offered Sir John Graham, who declined from inferior health, but assured Palmerston that he cordially supported the Ministry.

The Herald, in publishing a telegram, says that six Prussian corps *de armée* are mobilized, and says, of course this means war. Palmerston had evidently induced her to take this decisive step and join Austria.

COMMERCIAL.—Broadstuffs.—Wheat declined 8c on English and 2c on Foreign. Flour dull, 25c@28c for American. Corn, white 82c@85c per quarter; yellow 82c@84c. Provisions dull. Bacon unimportant.

THE Philadelphia Ledger says that the United States shipping office in that city has been crowded for more than a week past with men and boys anxious to enlist in the naval service as seamen, ordinary seamen, landsmen and boys.

The News Condenser.

- The cry of destination is again raised in Upper Canada.
- Pennsylvania, this year, mines nearly a million and a quarter tons of coal.
- Dr. Elizabeth Blackwell is lecturing with success in Manchester, England.
- The city of Baltimore receives \$900,000 as its share of the McDonough estate.
- Seven hundred and eighty-eight oodles have lately been landed in Cuba from Mexico.
- The Chicago Tribune devotes over forty columns to the delinquent tax list of Cook Co., Ill.
- One thousand four hundred and seventy-six dogs were slaughtered in New York last week.
- Contracts for the new crop of corn are being made in Texas, at from 20 to 25 cents per bushel.
- Sewing machines are run by steam in Bridgeport, Conn., at the rate of 1,900 stitches per minute!
- Four thousand dollars have been collected in Boston in aid of the suffering inhabitants of Fayal.
- The crop of turnips, mangold wurtzels, &c., in Great Britain, is estimated at twenty million tons.
- A chemical match has been invented in England without phosphorus or other poisonous substances.
- The motto of the Carlinville (Ill.) Free Democrat is "Peace and good will to all who pay promptly."
- The Emperor of France has decreed the erection of a statue to Humboldt in the galleries of Versailles.
- It is said there are several young Americans in Paris, more boys, who spend \$100 per day in fast living.
- After the adjournment of the Southern Convention a society was formed for the encouragement of the slave trade.
- Two young ladies of Cleveland have lately accomplished the pedestrian feat of walking forty-five miles.
- Count Teleki, the former Ambassador of Kossuth in Paris, has just left for Italy as a volunteer of the army.
- The Central Park Commissioners in New York announce the completion of the first portion of their labors.
- J. T. Headley has been appointed by the Associated Press their special correspondent at the seat of war in Italy.
- The ship *Wanderer* arrived at San Francisco, in 153 days from New York, had, among other freight, two elephants.
- Complaint is made of a long protracted drought in certain districts of Mississippi, Georgia, Texas, and Louisiana.
- Four hundred and fifty United States troops arrived at St. Louis on the 26th, for the Plains, to protect emigrants.
- A Mr. Sullivan, of Dixon, Ill., died of hydrophobia on Sunday week. He was bitten on the hand about the 1st of May.
- The New Orleans papers say that, contrary to the reports, there has not been a case of yellow fever there this season.
- Quite a number of the U. S. soldiers in Utah have turned Mormons, through the influence of crinoline, it is intimated.
- Near Charlestown, Md., three hundred bats were killed in a single night by two or three indefatigable "sportsmen."
- A marine school for nautical instruction, similar to the one at Baltimore, was inaugurated at Charleston on the 22d ult.
- The Chicago, Iowa, and Nebraska Railroad has been opened to Cedar Rapids, eighty-one miles beyond the Mississippi.
- In 10 years, 18 Atlantic steamers were lost, with 8,000 persons—a loss of about one passenger in every hundred carried.
- The celebrated Miss Dix is now visiting the prisons of Illinois. She is making a general tour through the South and West.
- In the year 1858 the deaths in England amounted to 450,018. This mortality very greatly exceeds the normal rate of death.
- Five children were accidentally poisoned in St. Louis on the evening of the 16th, by a servant administering stramonium.
- The Patriot says the real indebtedness of the State of New Hampshire, above available means, is probably not less than \$100,000.
- A letter from Milan says that in consequence of the war, travelers staying there are exposed to the greatest annoyance.
- The London health officer reports that the Thames has again exhibited unmistakable symptoms of being incipiently odiferous.
- At Batrop, La., on Sunday week, the Rev. John B. Spencer, while preaching in the pulpit of the church, suddenly fell back dead.
- Persons at work in the Vermont gold mines are said to be making from \$2 to \$3 per day. One man found a "lump" worth \$62.
- There are at present three vessels on their way with negro emigrants to Liberia, including 80 liberated slaves of the late Mr. McDonough.
- It is rumored that Gortschakoff, the Russian minister, resigned because the Emperor refused to fulfill engagements with France.
- The savings banks of Connecticut have deposits to the amount of \$1,059,181 64, which is an increase of \$1,430,586 91 over last year.
- Rev. Mr. Stewart stated recently that there are now eight ships of the American navy, on each of which a daily prayer meeting is held.
- The Emperor of the French is a great smoker, and his subjects emulate his example, having consumed 928,639,000 cigars during 1853.
- The origin of the late fire in Salem, Mass., is unknown. Nearly three acres of ruins remain in the place of nearly \$100,000 worth of property.
- Hamilton E. Towle, an American engineer, is employed by Austria in the construction of one of the most important Italian fortifications.
- The ladies of Lee, Mass., have had a strawberry festival, the proceeds of which are to be devoted to widening the sidewalks of the town.
- The Pennsylvania Observer says there are at present 59 cases of Chæncey fever on board the sloop-of-war *Savannah*, lying at the naval station.
- The Canadian authorities have made material reductions on merchandise, wheat, flour, corn, cloves, and lumber, passing through the Welland Canal.
- The town of Lenox, Mass., has challenged Stock-bridge to meet her with a row of trees on either side of the highway, each planting to the boundary line.
- Letters from Europe state that great agitation prevails in Hungary, Galicia, and the Polish provinces of a war. They hope now to recover their rights.

Coughs and Colics, which are of such frequent occurrence and which so often lay the foundation of diseased lungs, bronchitis and consumption, may all be at once cured by the

FOR COUGHS AND COLDS.—A gentleman, well known in this City, in at our office, remarked: "Your COUGH PILLS have been of great value at our house this Winter. In every instance when one of the family has taken a cold, three or four doses of the COUGH and FEVER PILLS, given in alternation, have entirely cured the case in a day. The case has, also, directly, for itself, several times been cured."

DAD COLD.—A married lady of forty had taken a violent cold, which settled on her lungs, causing severe cough, pain in the side and considerable fever and hoarseness. Such colds were usually very lasting and troublesome, but by taking the SPECIFIC COUGH PILLS four times per day, in three days she was entirely well.

DYSPEPSIA OR WEAK STOMACH, CASE 1.—A young man of 19 had Dyspepsia for two years, attended with a severe pain in the pit of the stomach, coming on during eating or as soon as food reached the stomach, and continuing through the period of digestion. The pain was severe and aching.

2. A young lady of 26 had been troubled with indigestion for several months, so as to render great care necessary in the selection of her food. After trying the stomachic and tonic food along with her mouth with water, and unpleasant

and private. With them the parent is armed and prepared against the first approach of disease, and can meet it at the threshold and keep it at bay. A trifle of medicine, rightly directed in the first hours of disease, perfectly cures that which by delay can only be relieved by long and tedious hours of suffering, if at all. With these at hand, you are not obliged to await the coming of the disease.

We desire an active efficient agent, for the sale of our
remedies, in every town or community in the United States.

MOORE'S RURAL NEW-YORKER

AGRICULTURE RURAL LIFE EXCELSIOR LITERATURE SCIENCE ARTS NEWS

TWO DOLLARS A YEAR.

"PROGRESS AND IMPROVEMENT."

[SINGLE NO. FOUR CENTS.]

VOL. X. NO. 28.

ROCHESTER N. Y.,—FOR THE WEEK ENDING SATURDAY, JULY 9, 1859.

{WHOLE NO. 496.

MOORE'S RURAL NEW-YORKER, AS-ORIGINAL WEEKLY RURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,
With an Able Corps of Assistants and Contributors.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the RURAL an eminently Reliable Guide on all the important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it so assiduously advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other Journal,—rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.
For Terms and other particulars, see last page.

A SHORT CROP OF HAY.

It is pretty generally admitted that the crop of hay in this vicinity, and, indeed, in several States, is less than usual, even when unimpaired by frost, but in many parts of the country, as we learn by letters from our readers, as well as by published statements, the injury by the June frost was quite material. The prospect is, therefore, that next fall many farmers will find themselves possessed of an unusually small quantity of hay, with which to carry them through the winter. How this deficiency is to be met and provided for is an important question; and even to those more favorably circumstanced a few thoughts may not be uninteresting. Two plans suggest themselves, one of which, perhaps, is generally practiced under the circumstances.

First, to sell off a portion of the stock; second, to endeavor to keep all over the winter on rather short allowance. Both of these plans are unwise, and should only be resorted to in extreme cases, though the former is preferable to the latter. If a part is sold the farmer generally finds that the portion of his stock which it is to his interest to keep sells most readily in the market, and at the best prices, and he is tempted to part with those animals which he should by all means keep. Articles which the farmer is forced to sell seldom bring a fair price. Such sales are about as ruinous to the farmer as getting notes shaved is to the merchant. Then, in the spring, the manure pile is small and the dressing given to the poor fields scanty, and as a consequence the next crop is inferior; and the evils resulting from this one act run through a series of years. The effects of the other course, of attempting to keep stock through the winter on short rations—just keeping soul and body together without making flesh—is so evidently unprofitable and so revolting to the feelings of every kind-hearted man that we need not dwell upon it.

What then can be done to avoid these evils—to save the farmer from the necessity of choosing between the one or the other—a result from which many are beginning to think it almost impossible to escape?

As the grass in many places, in consequence of the frost, was cut uncommonly early, may we not anticipate with favorable weather, an unusually good second growth, which should be made available not only in saving that already secured, but in adding to it. The season is pretty well advanced for planting corn for fodder, otherwise we know nothing that will so well supply the place of hay. We have, however, planted corn the middle of May and cut it the middle of July, two months after planting, the stalks being from four to five feet in height. Western corn, sown in drills gives an enormous amount of dry food. Corn grown in this way cannot be well cured on the ground on which it is grown, as it is so bulky and contains so much water that it is apt to heat and mildew, unless spread out thin and well cared for. It is necessary, therefore, in most cases to draw a part of the crop on other ground for curing, and not to cut down more at a time than can be well taken care of. Many fine crops have we seen much injured by careless curing. This is particularly the case if the crop is cut late, or the weather proves unfavorable. Many have, no doubt, availed themselves of this resource, and will have a fine crop of corn hay to make up for any deficiency in the grass or clover crop.

Something can be done by giving extra culture so as to secure the best possible growth, and then preserving all coarse fodder, so that nothing is wasted. Those who have planted carrots or other roots, should give them a good chance by keeping the weeds down and the ground well cultivated.—An acre of ground in roots, if a good deal of labor is bestowed upon it, will give a large amount of food.

It is too late to sow *Ruta Bagas*, but the *White Turnips* may be sown from the present time to the middle of August; the first sown will generally give the largest crop, but the late sown will be the soundest, and the best for keeping. The best soil for Turnips is a deep or sandy loam, and they flourish extremely well on new land. The best crop we ever saw in this country was grown on a reclaimed swamp. The owner had drained it for corn the next spring, but thinking he might raise a few turnips, as he was likely to be short of winter feed, sowed thinly and broadcast, and with the most decided success. Turnips sown in drills are the most easily cultivated and kept clean. They are exposed to numerous insect enemies, among which, the fly or fly-beetle is most to be dreaded. Remedies innumerable have been promulgated, but the most of them, just when depended upon, have failed. Observation has shown, however, that a rough or gritty state of the leaf will put a quietus upon their operations, and any substance, such as ashes, that will thus coat the plant, will act as a preventive to their destruction. After an application is made, should rains occur, the process must be repeated. Care in this respect will almost insure the cultivator reward for his labors. For the experience of an English cultivator on this point, we refer our readers to the following article on *European Agriculture*.

EUROPEAN AGRICULTURE.

In perusing the Foreign Agricultural Journals which we receive, we frequently note "matter" for publication, but the crowded condition of our own columns frequently denies it admission, as we prefer to talk and present the *American side of the question*. A considerable portion of such segregations, however, is eminently valuable and practical to farmers in this country, and we believe a careful perusal of the subjoined will well repay those specially interested:

TO PREVENT THE RAVAGES OF THE TURNIP FLY.—At the "Weekly Council" of the English Royal Ag. Society, held June 24th, FISHER HOBS, in accordance with the request of the Society, related his experience in preventing the ravages of this fly. Mr. H. gives great importance to the preparation of the soil, care of manure, &c., (which we will not refer to at present, as the incipient portions of this labor are performed in the closing months of the year,) and this part of the proceedings is based upon the principle that "prevention is better than cure." The "cure" is simply the application of top-dressings. Mr. Hobs remarked as follows:—"I have tried various experiments, steeping the seed, and top-dressings, for upwards of thirty years, but though sometimes successful I could not depend on any of them until I adopted my present system, and I think it is only fair that I should state that I derived the chief features as to the use of this top-dressing from my late bailiff, Mr. O. HAWKINS, who came to me some nine years since with an especial recommendation on this point; in fact, he himself engaged to secure the turnip plant from the ravages of the fly, adding that he was willing to give up his situation immediately if he could not do so. I can only add that for eight years, during the whole time he was with me, he fulfilled all he promised in this respect. The following is Mr. HAWKINS' recipe for a top-dressing:—1 bushel of white gas-ashes, (gas-lime,) fresh from the gas-house; 1 bushel of fresh lime from the kiln, 6 lbs. of sulphur, and 10 lbs. of soot, well mixed together and got to as fine a powder as possible, so that it may adhere to the young plant. The above is sufficient for two acres when drilled at 27 inches. It should be applied very early in the morning, when the dew is on the leaf—a broadcast machine being the most expeditious mode of distributing it, or it may be sprinkled with the hand carefully over the rows. If the fly continues troublesome the process should be repeated; by this means 200 to 250 acres of turnips, Swedes, and rape have been grown on my farms annually for eight or nine years, without a rod of ground losing plants. The above is a strong dressing, to be used when the fly is very numerous, and has never failed when applied at night. Numerous experiments have been tried, and amongst them I recommend the following in ordinary cases, and intend to use it during the present season if necessary:—14 lbs. of sulphur, 1 bushel of fresh lime, and 2 bushels of road scrapings per acre, mixed together for a few days before it is used, and applied at night, either by means of a small drill, or strewn along the

rows by hand. I have known sulphur mixed with water, applied in a liquid state by means of water-carts during the night, and the horse-hoe immediately following the water-cart. This has succeeded admirably. In consequence of the dryness of the climate in my neighborhood (the rain-fall being on the average only about sixteen inches annually) I usually sow on the flat; but the dressings above named are equally applicable to crops sown on the ridge."

THE TASTE OF BUTTER.—A correspondent of the *London Agricultural Gazette* complained of the bad taste of his butter when the cows were fed upon Mangold Wortzels and beans, "a scrupulous cleanliness being exercised in dairy utensils, the cream being churned once a week." The editors called for an expression from dairymen upon the subject, and received "answers from Warwickshire, Cheshire, Gloucestershire, and Devonshire." As a general thing, the evil complained of had not been experienced by those who responded, some attributed it to ill-tasted weeds which were mixed with the fodder, and others give a remedy where said difficulty exists. We extract a few of these, as queries on this point often reach the RURAL SPECTATOR:

"1. I have found chloride of lime very effectual to remove from butter the taste of turnips, or any other bad flavor. A drachm of it to every expected pound of butter put into the water of the second washing, after it is taken out of the churn, and the butter well but rapidly kneaded in it.

"2. Do not feed your cows with turnips until they have been previously milked, by which means the animal has twelve hours to get rid of the flavor of the vegetable. Good hay must also be given in sufficient quantity. I need not add great cleanliness not only in the cow-house but in the dairy.—No stale pieces of turnip should on any account be allowed to remain in the manger, which should be cleaned out before feeding.

"3. As soon as the milk is brought into the dairy, (warm from the cows,) pour into it, in the proportion of half a pint of boiling water to a gallon of milk; cover it over with a cloth, four times doubled, for half an hour; then strain and pour it into milk dishes to stand for cream. I have never known this recipe to fail, unless the dairy-maid put a wooden cover over the milk-pail instead of a cloth, which absorbs the steam.

"4. I occupied a farm of 500 acres, and kept a large dairy of cows, and never had the taste of turnips in the butter, by applying hot water and steam, at different times, to the milk and cream, which entirely took away all flavor of the turnip. We generally made from 1d. to 2d. per pound of our butter more than market price. Our system been carried out for 40 years, and has never been known to fail where properly attended to.

"5. Make a strong solution of nitre, and add a dessert-spoonful of it to every two gallons of milk as it is brought in from the cow.

"6. The simplest and most convenient preventive against turnip taint, and one to the efficacy of which I can speak from daily experience, is to let your cows have their feed of turnips immediately after being milked, and at no other time."

HOW TO USE GUANO.—Among our European brethren Guano is very much used, and the success which a great majority of English cultivators have had, has wonderfully stimulated the demand for this valuable fertilizer. American farmers are beginning to learn its worth as a stimulant, and each year witnesses a large increase in sales, particularly in the Eastern and Southern States.—Such being the fact, the following rules, from the *Mark Lane Express*, will doubtless prove of utility, especially to those unacquainted with the manner of application:

"First.—Never mix guano with anything; all lime, compost, ashes and similar expedients, too often contain caustic alkali to drive off the ammoniacal parts before the soil can surround and absorb them.

"Second.—Mix it as much as possible with the soil, not too deeply, but plow it in after sowing it broadcast.

"Third.—If applied as a top-dressing—which is rarely advisable—always apply it, if possible, before rain, or when snow is on the ground; and if on arable land, harrow, hoe or scuffle immediately after the operation.

"Fourth.—For speedy and powerful operation, apply on limited surfaces dissolved in water.

"Fifth.—If sowed with drilled grain, or, indeed, with any seed whatever, it should never come in contact.

"Lastly.—Be sure to get, if possible, the genuine article, and use per acre, from two to three hundred pounds."

SYSTEMATIC LABOR accomplishes far more than that without plan or order, and with more ease.

CROP PROSPECTS IN THIS STATE.

A somewhat extended tour over that portion of our State west of the meridian of Utica, has given a very good opportunity to notice the crops as they appear up to this time.

GRASS.—This crop was affected by the early dry weather, and in many places by the frost. In some portions of the midland counties the hay crop will only be fair, but as a whole there will not be one-third of a crop, even if we have rains and a favorable fall. Thousands of acres will not be mowed till August or September. Pasturage is also growing short, and unless refreshed with timely showers, must soon prove wholly inadequate to the demands made upon it.

CORN.—A larger breadth than ever before has been planted to corn, and generally the stand is good. The frost put back the plant in many places, but it is coming on again well, and if we are not treated to a September frost, the yield will be large and fill up the gap in the hay crop very well.

WINTER WHEAT.—Through the great wheat counties there is but a small breadth, but generally the appearance of the plant is such as to promise a large yield. The Mediterranean is the prevailing sort sown, and should it this year escape the midge, immense quantities will be sown the coming autumn.

In some localities the frost did immense damage, but the loss is not spread over much surface.—Though its extent and severity have been exaggerated as a whole, the result will prove disastrous in limited sections.

WINTER RYE.—The cultivation of this crop, as well as winter barley, is spreading, and the yield this year must be a very satisfactory one.

SPRING WHEAT, and OATS, of which unusual quantities have been sown this year, are looking well, yet it is too early to predict the harvest with any accuracy.

FRUIT is more or less injured, but as a whole there will be a very good crop in most sections, especially of Apples.

As the result now depends, in a great measure, upon an early frost—or its absence—we can only keep hoeing, and pray for the right sort of weather.—P.

HOUSE BUILDING.—NO. IV.

In resuming our subject, let us take matters in the same order that the builder will be most likely to, and consider in this number the form and construction of the apertures, and the framing and covering of the roof. Although it is not our intention to raise these articles to the dignity of a work on Architecture, yet we must have more or less to say about style and appearance, and will endeavor to do so in a matter-of-fact way, keeping in mind RUSKIN'S great maxim:—"Until Common Sense finds its way into Architecture there can be but little hope for it."

If you build of wood, make the openings square heads, except perhaps in the gables or dormer windows. Couple or triple them if you choose, but do not circle the tops. You have no use for the arch, (the space above being self-supporting, both apparently and really,) and if you make them circling, you double the expense merely for show, and your windows will demonstrate more forcibly than words can, perhaps, that you are foolish.

Floors over the windows, where outside blinds are dispensed with, can be made an ornamental feature in the modern styles of building, and have a practical advantage beside—i. e., the upper sash can be lowered in stormy as well as pleasant weather, which is a better ventilator than most houses have. If your building is of brick or stone, and good, sound cut stone lintels can be easily obtained, it will be your cheapest way to span the openings with them, but if they cannot be had, the better way will be to use an arch made of the same material as the building, and the higher it is in proportion to the width the better. If what is worth doing at all is worth doing well, then make the arch a semi-circle, or pointed gothic, if the building is in that style.

Arched openings undoubtedly add to the expense, as well as to the beauty of a building, but not so materially if the arch is continued back only to the sash. This is sufficient for all practical purposes, and even better on some accounts, as it admits of using either the common curtain fixtures, inside shutters, or blinds. (See illustration.)

If outside blinds are used, the upper portion, as far down as the spring of the arch, should be stationary. In this way they will not appear unsightly when the lower half is open. Probably the best way yet invented to hang the sash is to balance them with weights, and fasten them with

OUTSIDE OF WINDOW, AND ONE-HALF OF BRICK ARCH.

ARNOLD'S side-meeting rail sash-locks, which will allow the upper sash to be lowered three or four inches, and yet be burglar proof, and it costs but two or three dollars more per opening than the common window.

The edges of the sash, and the grooves wherein they play, should be well oiled and not painted, which will allow the sash to fit much closer and yet play easily. ARNOLD'S improved sash-locks for common windows, and CHARLES PARKER'S improved blind trimmings, are much in advance of anything else now in use for the same purposes.

In constructing roofs, make the frame-work light and half-raised up square, strong. Do not depend on the stiffness of timber for the support of the roof, nor on the strength of the plates to withstand the outward thrust. Either will show evidences of their weakness in a few years, and the remedy had better be applied in the beginning. The roof may receive its support from the partitions and foundations below, or from a truss; and the plates from ties or collar beams should come to the lower ends of the rafters. Rafters 2x8 weigh and cost no more than those 4x4, and will support the same weight with only one-half the sag. The joints of the roof boards should come on alternate rafters, and the surface for slating should be true and the joints tight. Shingles and slate are probably the best roofing materials in general use, (the slate having the advantage in everything but the cost and liability to be damaged by frost,) and for either, a steep pitch is preferable. Shingles should be laid at least one-fourth of an inch apart at the lower ends, (so that the dirt, as it washes down, will not clog and dam up the water,) and nailed with one nail only in each shingle, that they may shrink and swell without splitting. I see in a late number of the RURAL a correspondent proposes to use what we should call a tile roof, and what he says sounds rather "sound." Such roofs are common in the East, and are said to be and look heavy. However, if your correspondent can make a good roof, we will invent a support for the weight, and can learn to endure the looks.

Pompey, Oron. Co., N. Y., 1859.

PLOWING, PLOWS AND TEAMS.

H. K. F., Esq.,—Sir:—Yours entitled "To Plow Boys," in No. 492 of RURAL NEW-YORKER, is all correct, and good advice to young or old farmers, except some things I will notice. Who ever heard of a science farmer being injured in or about the breast when following his plow? Such a thing is now only in the history of the past, when we were boys, and our father's plows were made under the old constitution. This is an age of improvement and experience, and we must be readers and hard students to keep up with the age.

Your having a team steady, and attractive, and well broke, setting the bolt, and shortening and letting out the tugs is all correct; and striking the first furrow, and straightening and inverting when you plow green sward or other lands, is equally right, and about a Plow Boy being a discoverer, is also true. But to walk outside of the furrow, or talk of breaking ribs or fracturing breasts, is all out of order and not true. If your plow kicks, (as Buckeyes say,) there is something not right about the draft, and the manufacturer did not understand

his business. A plow should never kick, nor should it be assisted to turn the furrow by compelling the plowman to walk on it to keep it down; the draft from point of cutter or shear, and the centre of clevis at end of beam, should be in such a position that when the plow strikes it will lift or jump perpendicular, and not side ways, so as to take a fellow in the ribs or breast with the point of the handles. Your plow should run square and true, just land enough and no more, and if anything a little too deep, because there is less danger in plowing too deep than not deep enough; besides, if your plow runs too deep, it is easy and natural for a good plowman to rest himself by bearing down slightly upon the point or end of the handles; it is much easier to bear down than lift up. I know it used to be the complaint in an earlier day, in plowing rough, stony, or hill-side land, that many were hurt in various ways, in the ribs and shins especially, by the plow; but this was a quarter and half-century of a century ago, when our parents were our age or less. When our plows had wooden moldboards and heavy and large beams, as if all the strength and qualities of the plow laid in the size of the beam. Were plows manufactured now as then, they would not sell at one-tenth the cost of making.

There is as much improvement in the make of a plow as any tool a farmer has to use; and if H. K. F.'s plow is in the habit of breaking ribs, I would advise him to get one of more recent make, for it is no small matter to have a rib broken. Why, if you had an animal that was in the habit of kicking you every time you went near him, you would rid your premises of the same as soon as possible.—Why not, then, rid yourself of a kicking plow, (for it is equally dangerous), and get a good one—one that is at least one-third lighter in weight, and that will perform a third more plowing with more ease to man and beast? Let mechanics live, also.

Your having a heavy and good sized team, with a left in proportion to your work, is all right; it is no use to plow heavy plowing with a light one. You talk, too, of having the ends of the lines of cloth, or something that will prevent friction around the neck. I always had a horror against carrying the lines around one's neck; it always looked too much like hanging. I don't believe I could stand hanging with any kind of a string. This putting the lines around one's neck, or fastening them around the wheel, or carrying the ends forward to hitch, is bad farming as well as bad practice, and many accidents happen in consequence thereof. Why not drive a horse team, in the plow especially, without a line, the same as an ox team, or stand without being hitched?

Marion, O., 1859. OMO RAILROAD FARMER.

ABOUT CHEESE AND CHEESE-MAKING.

EDS. RURAL:—Is it not a fact that a large portion of the cheese made in this country which finds its way to our markets, is far from what it should be in those qualities so desirable to all lovers of good cheese? The labor and expense of making a poor article is the same as that of producing a good one, as all dairymen will acknowledge. There is a best way for doing everything, and all admit the importance of doing things in that way in their particular branches of business, yet it seems that many dairymen lose sight, in great measure, of that word "Excellence" in practice, and thereby lose much in a pecuniary point of view.

Look at the different gradations in the price of cheese in market, and see if the producer of poor cheese does not suffer in comparison with his neighbor who may have an article that will out-sell him by far. The time has come when the old way of making cheese should be abandoned. Dry, hard cheese, that will crumble almost at the touch, is not what most of people want in these days when better can be had, that is, more moist, richer, finer flavored and pleasant. I think many salt too much, which has a tendency to harden cheese and make them crumble; seasoning too high will make it tough and tasteless. It is a nice point to know, and to acquire the experience to meet all the variations necessary to produce an even dairy the season through. The changes of the weather from heat to cold and back again. A certain amount of heat in scalding to-day may not answer for to-morrow. In very warm weather the tendency of the curd is to harden and become sour, and then less heat should be used because the whey and curd are more separated and in a more advanced state. Less salt should then be used. I think there are no set rules that can be given to make good cheese without practice to accompany them. The changes required are too many, yet a few suggestions may be valuable to new beginners. Any information that is wanted on this subject through the columns of the RURAL I will give as far as I can.

I would inquire if any one knows the cause of rennets being so poor and almost worthless with us—many others in this vicinity complain of the same.

Apulia, N. Y., June, 1859.

HOW TO SHEAR SHEEP.

EDS. RURAL:—In your issue of June 11th is an article from the Ohio Farmer, headed "Sheep Shearing." The writer gives very good directions till he comes to the "mode of shearing," which I think may be improved. I was so fortunate as to secure the services of a scientific shearer, Mr. EDWARD BLENKAP, who sheared a small flock for me to-day. I soon saw that he handled sheep adroitly, and thought I might benefit some of your readers by communicating his mode, and accordingly, pencil in hand, I noted down as correctly and minutely as I could, the operation, by watching the motions of the shearer. I send you the result. My notes are approved by Mr. BLENKAP.

Have a stool just knee-high to the operator, 18 inches square, of soft wood planed smooth, or covered,—a dry good box that height will answer. Place your right foot on the stool, set your sheep so that his back will rest against your right thigh, with your right arm forward of his fore legs; commence at the brisket, with your shears across the sheep, shear the belly, quite down, trimming the tags, &c. The belly wool must be laid aside to be done up with the fleece,—that done, place your left foot on the stool, with the left side of the sheep resting on your left leg, back to you; commence at

the point of the right shoulder, and with a curve backwards, open the wool with the shears to the back of the neck, nearly, and ending at the back of the right ear. Shear the shoulder, and the neck lengthwise, and forward to the under side of the neck. As the operation progresses, turn the sheep gradually to the right, till the back rests on your thigh, with the right side to you, shear around the neck, (lengthwise,) and down on the left leg and shoulder, (the neck being the first finished,) then downward along the side, hind leg, and ham, then lengthwise upward and backward till the backbone or spine is passed a little. Now gather the fleece, holding it against the back and unshorn side, turn the sheep on his haunch bones, as on a pivot, to the right, place your right foot on the stool, resting the left side of the sheep against you, with its back on your right thigh, shear down the right thigh and ham, which finishes the operation. In this way you roll the sheep out of his fleece, rolling the sheep to the right and the fleece to the left.

I think there are important advantages in this method. Sheep require an easy position, or they will be restless and often unmanageable. No position is more uncomfortable to a sheep than flat on his side, and none easier than the sitting posture—though kept on end during the whole shearing. The position is changed often enough to keep the sheep from being restless; for you are turning him nearly all the time to the right—he wants no holding, his feet or legs should never be touched, and he will scarce ever move them,—if he does, he cannot touch the fleece,—that is all the time out of the way of his feet, to the left. If handled gently, and not kept too long on the stool, he seems to enjoy the luxury of being divested of his fleece in warm weather. The lower point of the shears should be leveled a little, so that they will run easily over the skin without catching, and the wool should never be pulled, for the skin is raised with it. To smooth wrinkles, draw the skin with the left hand. Gentleness will make the sheep lie quiet. Finally, why not suppose this the ancient mode of shearing? I never was so fully convinced of the aptness and force of the passage "as a sheep before her shearers is dumb," than when watching the motions of Mr. B., while shearing our sheep. S. S. BATES.

Titusville, Crawford Co., Pa., June 20th, 1859.

CULTURE OF CARROTS.

MESSES. EDS.:—As I have had some experience in the raising of the above named root, I will, with your permission, give it to the readers of the RURAL. Perhaps I shall tell nothing new or valuable to farmers who have been in the habit of raising them, but it may be of some use to new beginners. There are few, if any, crops that will yield a greater number of bushels to the acre than carrots, when well cultivated. They are less affected by the worms and insects, are easily harvested, and keep well through the winter. Many animals, especially cattle, are very fond of them, and will thrive well when fed on them. I have heard that they will kill calves, but never saw any calves killed by them, or any that there was any signs of their dying or being hurt, and believe that there is much more danger of their being killed for the want of them.

The carrot thrives best in a deep, rich, sandy soil, or sand and clay mixed. The ground should be plowed deep, fine manure well mixed in, and all sticks and stones removed. They can be sown from the first of May to the first or middle of June, according to the weather and situation. In this State they do best when, sown on sandy soil, the first of May. Sow in rows or drills, from a foot to sixteen inches apart, according to the fancy of the raiser—I generally have the rows about fourteen inches apart. The seed should be sown thick, as some of the seeds will not grow, and many plants will be destroyed by worms and insects. After the young plants have attained a sufficient size, the ground should be hoed between the rows, and all the weeds destroyed. This process should be repeated through the Summer, and the plants thinned to about two or three inches apart in the rows. This is all the culture they will need. They will grow until hard frosts come in the Fall, when they should be dug and put in the cellar, or a pit dug for them—they usually keep well either way.

W. H. H. PEARSON.

SEEDING TO GRASS—LIGHT WANTED.

MESSES. EDS.:—Having failed in securing a good catch of grass seed for some years past, I write this in hopes to receive some advice and suggestions for further trial. In the first place, I will state what course I have taken, with the result. My land is a low, flat piece, (not marshy,) heavy clay, with from three to five inches black soil, or vegetable mold, on the surface. I first planted to corn, (it being an old meadow,) had a fair crop. The spring following sowed to barley—the next spring sowed to oats, and ten quarts of Timothy, with two of clover seed, per acre. Harvested a fair crop of oats, but the grass being in spots, and too thin at that, I plowed up one-half and sowed to rye the 20th September, with twelve quarts of Timothy seed per acre. This time the grass seed came up and looked as well as any I ever saw at the commencement of winter, but the spring following my prospects were blasted by finding the grass in one loose mat, completely thrown out. I then sowed twelve quarts per acre more, and obtained a meagre catch. In the spring of 1858, I sowed the other half to oats, with twelve quarts of Timothy seed per acre, harvested the seed lightly, but, as usual, not one-third of the grass seed came up and matured. Not wishing to plow the land again in the month of March last, I sowed eight quarts of Timothy and eight quarts of red top per acre, and this time it came up tolerably well, but the dry season here has nearly used it up again.

Now, I feel pretty well used up in the grass seed line, and as the land is uncertain for winter grain, I am thinking of trying once more by putting on buckwheat, and, sometime during the fall, harrowing over the ground and sowing to grass seed again. Will others, having experience and better judgment than I, be good enough to advise me through the RURAL what course to pursue, obliging the writer and perhaps others? H. J. B.

Hector, N. Y., 1859.

WHERE ARE WE DRIFTING?

EDS. RURAL:—During the pressure of '57-'58, a prominent Senator predicted that the business interests of the country would revive as speedily as they were prostrated. The sequel has not verified the prophecy. On the contrary, we notice a general quiet sobriety as compared with the mad excitement which everywhere prevailed two years ago. Then, with a wild burrah, we were bent on business, progress, wealth, improvement, &c.—Now, men are confused, and seem to be waiting for something to turn up that will bring back the swimming prosperity that was so suddenly checked. The prophecies of "smooth things" told us a year ago that the annual crop, soon to be harvested, would set everything in motion again and make all right, but did it prove so? Let our idle shipping, our comparatively light railroad receipts, our diminished canal revenues, the dearth of new enterprises, and the general stagnation, answer!—And the same hope is being again indulged. A splendid crop is being garnered—a very superb crop, the farmers having made a determined effort,—and this, assuredly, will set everything agog. The same old story, you perceive, to be followed, perhaps, by a similar disappointment.

Our difficulties lie too deep to be quickly cured. As a nation we have been "fast," and have boasted of it; and, as sometimes happens with young sprigs to whom that term is applicable, so we have got into trouble. In our haste, we have forgotten the Giver of the increase. We have magnified material progress. We have worshiped images which our own hands have made. We have sought to contravene the established law of God that we shall eat our bread in the sweat of our brow. We have glorified our so-called labor-saving inventions, and have imagined that in their perfection and by their use, we were all going to get rich surely and with ease. But lo! when all was ready, when the land was filled with reapers and mowers, and the thousand and one improvements of modern contrivance, and threaded with multitudinous lines of railroad, &c., to convey the products of the soil to market, and covered with a net-work of wires whereon to flash the latest prices in our centers of trade, what do we hear? Why, that the nation is in debt to Europe hundreds of millions of dollars for articles of necessity and of luxury; that our Government is a borrower in the market for money wherewith to keep its wheels moving; that one-tenth of the millions of our cities are supported, in whole or in part, by charity during a portion of the year; that the prisons of the State of New York need enlargement; that the whole vast sum of railroad stocks in the country is verging towards nothingness; that over extended tracts of the Northern States the standard fruits are failing; that flood and frost, drouth and tornadoes, rot and weevil, and the whole insect race are doing their dreadful work beyond anything dreamed of before the distinctive age of progress commenced; that our soil—even that for which the poor peasant cannot be set up that it has been made sterile by the foot of the bond-man—does not produce as much per cultivated acre, or as much per laboring man, as it did when the condemned implements of olden days were in use, while virgin prairies of unsurpassed richness are all the time inviting and receiving cultivation; and that the general mass of American farmers are growing neither rich nor happy from tilling the soil!

Is it not well to stop and think of these things, and to ask if prosperity may not lie quite in the opposite direction whence we have looked for it?—Whether human progress is not really downwards? Whether the highway to national greatness is not quite away from creature exaltation? Whether, in short, we may not profitably turn away our eyes from beholding vanity, to Him in whom our strength is? But such views are not relished.—Human nature greatly prizes human sagacity, and rejects, as sheerest nonsense, the truth that man's wisdom is folly, and his strength weakness in the every-day business of life.

W. A. P.

THE JENNY LIND POTATO.

MESSES. EDS.:—One of your correspondents, Wm. C. MILLS, Silver Creek, N. Y., makes inquiry through a recent RURAL about the potato called the Jenny Lind. I have grown the variety of potato described by Mr. MILLS for the last four years. It is very productive in this locality, and yields more to the acre than any other potato I am acquainted with. It does not rot in the field, but is very subject to dry rot in the cellar unless thinly spread. It is a late potato, and wants the whole season to come to maturity. The vines will be fresh and green until hard frosts in the fall. I came to the conclusion last winter that the dry rot was partly, if not wholly, in consequence of the potato not being fully ripe when dug, and I planted them last spring two or three weeks earlier than formerly, hoping by so doing to avoid their rotting in the cellar. Jenny Lind is the only name of this variety of potato. It was introduced into this place a few years since from the east side of the Hoosick Mountain, and said, by some, to have originated from the seed ball of the Merino, but it more nearly resembles the Rohan potato.

About the first of April last, not having seen any notice of the Jenny Lind in the RURAL, I put up a small package of that variety and of one other variety, which I think better of, to send to you, in hopes you would give both a fair trial in your locality, and make your report in the fall, but I failed of the expected opportunity of sending them to you in time for planting, but shall send you a sample of each kind next fall or spring. By the other variety I mean a kind, a few tubers of which came to this place from Boston a few years since, called the St. Helena potato. It nearly answers to the description you gave some months since of the Prince Albert potato, but whether it is the same or not, it is one of the best potatoes for our locality. It is very productive—does not rot at all—grows very smooth—is more easily prepared for cooking than the Jenny Lind—is quite as good for boiling, and better for baking.

Williamstown, Berkshire Co., Mass. S. HOSFORD.

RYE WITH BUCKWHEAT.—Allow me to inquire of the RURAL readers what has been their experience in sowing Winter Rye with Buckwheat? We propose to try it this season, and would like a little information of a practical nature on the subject before we sow, if possible.—I. W. B., Macedon N. Y., 1859.

Rural Spirit of the Press.

How to Cure Clover.

The following mode of curing clover is recommended by the Ohio Valley Farmer:—"In the curing of herbs, where it is desirable to retain all their virtues, we endeavor to have them go through the drying process without exposure to the heat of the summer sun. And if you would secure the best of hay from your clover, it should not be permitted to remain spread upon the ground only long enough for the leaves to become partially wilted. Then put it up in small cocks, say three feet in diameter and four or five feet high. Thus put up, the air will circulate through the same, and cure it sufficiently for the stock or the barn. Every farmer should, however, provide himself with cloth caps. To do this, take cheap muslin, a yard wide, and cut it up into yard lengths. These should be spread over the cocks, and the corners made heavy by fastening a stone or piece of brick in them, so that the wind will not blow them off. Clover, timothy or grain may thus be protected against foul weather. If the clover can remain a week or ten days, it will be all the better. If, however, there is an ample supply of bright, dry straw on the farm to mix with the clover, the latter may be removed from the field after remaining in the cock only one or two days. In stowing it away now, a layer of clover should be followed by a layer of straw, and so on, alternating the one with the other. This is an excellent plan, and when opened in the winter, the straw itself will be found superior fodder, besides having preserved the clover from heating or moulding."

Value of the Earth-Worm.

The new edition of the Encyclopedia Britannica speaking of the earth worm, remarks:—"Though apt to be despised and trodden on, it is really a useful creature in its way. Mr. Knapp describes it as the natural manure of the soil, consuming on the surface the softer parts of decayed vegetable matters, and conveying downwards the more woody fibres, which there moulder and fertilize. They perforate the earth in all directions, thus rendering it permeable by air and water, both indispensable to vegetable life. According to Mr. Darwin's mode of expression, they give a kind of under-tillage to the land, performing the same below ground that the spade does above for the garden, and the plow for arable soil. It is, in consequence, chiefly by the natural operations of worms that fields, which have been overspread with lime, burnt marl, or cinders, become in process of time covered by a finely divided soil, fitted for the support of vegetation. This result, though usually attributed by farmers to the 'working down' of these materials, is really due to the action of earth-worms, as may be seen in the innumerable casts of which the initial soil consists. These are obviously produced by the digestive proceedings of the worms, which take into their intestinal canal a large quantity of the soil in which they feed and burrow, and then reject it in the form of the so-called casts. 'In this manner,' says Mr. Darwin, 'a field manured with marl, has been covered, in the course of eighty years, with a bed of earth averaging thirteen inches in thickness.'

About Scare Crows.

ALTHOUGH a little behind the season, we think the following article from the Maine Farmer is worthy the space it occupies, and we consequently put it "on record." "This is the time of year for our cornfields to exhibit all sorts of artistic ingenuity, in the shape of old clothes statuary, and a very odd and expressible tableau, as well as a great amount of never-ending twine, glittering pieces of tin hung on poles, by ever twisting and twisting strings, old coffee-pots and dilapidated hats,—all to intimidate that very sabbie, but sagacious bird, the crow. Mr. Crow generally laughs in his sleeve at all this expenditure of cast-off toggery, and takes the corn he wants before the farmer is up, or in the house at his meals, or gone to meeting, or absent from the premises from some other cause. The best mode that we ever adopted to keep this inveterate poacher from pulling up our corn, was to surround him with assailants of his own kind. Make bird fight bird. We once set up a couple of martin-boxes on poles in our cornfield. These were occupied by families of martins, and we fell on every crow's devoted head that dared to show itself anywhere near the premises. They were out as early as Mr. Crow himself, and ready to give him battle all summer, or until their young had flown and they got ready to migrate South. There was many a battle fought over the field, but no corn was pulled up that year."

Tan Bark for Potatoes.

This subject is brought before the farmers of England, by a communication in the Mark Lane Express. Mr. R. B. Bamford claims thirty-five years' practice and experience in this matter; and has issued a pamphlet giving his method of using it, which is brief in the following:—He does not eat his potatoes for setting, but sets them whole, and the largest he can select. The rows are thirty inches apart, and the potatoes are put nine inches from each other in the row. The land is plowed only eight inches deep, treuds the manure firmly in the furrows, puts in the tubers, and covers them in with tan refuse, nine inches deep, instead of earthing up. In this way he reports that in 1857 he raised 675 bushels of potatoes—not a rotten one among them—to the acre, with nothing but waste tan as a covering. This is of great importance, the tan refuse being of little or no value, and if it can be put to so important and advantageous a use as in this case, it should be widely known and practiced.

Management of Horses.

NEVER attempt to clean or otherwise disturb your horse while eating his meals, unless you want him to bite and kick. But when you clean, take him out of the stall, and make a business of it. Tie your horse in the center of the stall, unless you want him to do, as most horses do, drive more on one rein than on the other. Horses that are liable to cast themselves in their stalls, should be tied with neck-halters, giving them much more freedom of the head than the nose-balter. Gentleness, firmness and moderation will subdue the most obstinate. So says the New England Farmer.

Agricultural Miscellany.

THE WEATHER of the past week has generally been quite favorable for vegetation, with copious rains in this region. The crops are looking better, though the hay crop must be very light. Harvest will be commenced hereabouts this week, considerable wheat and barley being ripe enough to cut, and we think the yield will be better than was anticipated a month ago.

THE HORSE SHOW of the Monroe Co. Ag. Society, on Monday, comprised a fair display in the various departments, and the attendance, though not as large as anticipated, was quite respectable. The weather was unusually fine—as favorable, for such an exhibition, as could be desired. We are unable to give any particulars as to the awards of premiums, or financial result, until our next.

TRIALS OF MOWING AND BEATING MACHINES are now the order in various parts of the country. Many are simple tests of a few machines, without premiums or committees, before neighborhood companies of farmers—while others are formal trials before judges, in competition for premiums. We are often requested to publish the results, but the trials are so numerous that we are unable to make room for even brief notices of all, and shall therefore only chronicle the decisions in the more important and complicated cases. Though it would afford us pleasure to accommodate personal friends so far as consistent, we cannot discriminate between friends and strangers in this matter, and must treat all ordinary trials alike—with equal publicity or silence.

AN INFORMAL TRIAL OF MOWING MACHINES—that is, one without premiums or awarding committees—was held on the Fair Grounds of the Monroe Co. Ag. Society, last Thursday. Ten machines were tried on the light grass of the grounds, (nearly twenty acres), and worked to the general satisfaction of spectators. The machines operated were—KETCHUM's double and one horse mowers, (two machines); WOOD's mower; MANNY's combined machine, with WOOD's improvement; KIRBY's combined machine; two of AULTMAN & MITCHELL's combined machines, as made by WILLIAMS of Henrietta; BURRALL's combined; PARKHURST's combined. Most of the machines did good work, and several were so nearly equal that it would be difficult to attempt to discriminate. The one-horse mower of KETCHUM's patent worked admirably, and was pronounced a decided success by many practical men who witnessed its operation.

THE HOMESTEAD announces that Mr. GEO. D. RAND has purchased the proprietary interest of Mr. WELD, its former publisher and associate editor, and assumed the business management of the paper. Mr. W. is retained in the Editorial Staff, no change being contemplated in that department. We believe Mr. RAND is well qualified for the position and duties of publisher or editor (or both) of a rural journal, and therefore cordially welcome him to the field of labor and usefulness he has chosen. Excellent as the Homestead has been in the past, we are confident it will be still better in the future, and sincerely wish it, Mr. R. and his associates, a prosperous and successful career.

PLOWING BY STEAM.—As we have already noted, several different steam plows are in the field this season, and the experiments inaugurated must tend to a favorable result—the success of plowing by steam. The Scientific American learns that a company has been formed in Chicago, with a capital of \$50,000, for introducing into practical use the Traction Locomotive Rotary Tiller of THOMAS KIDDY, (heretofore noticed in the RURAL), of which it says:—"KIDDY's steam plow is a locomotive that carries its own endless railroad to prevent sinking into the soil, and thus it is intended to save the power that would otherwise be expended to drag itself. Its tillers are not common plowshares, but double vertical revolving screw cutters, for cutting and stirring up the soil, and they appear well adapted for this purpose. Every American steam plow that has yet been brought before the public, embraced the locomotive principle of the engine moving over the entire field, dragging a set of plows, which is quite different in its nature from FOWLER's, the one which has been most successful in Europe. The engine used for operating a steam plow should also be capable of being applied to threshing, grinding and other operations of a farm, as none of our farmers can well afford to keep an engine for plowing exclusively. In hilly countries the steam plow will never be able to supplant the horse; but in such a State as Illinois, where the farms are very large, the soil mellow and the fields nearly level, and where fuel is abundant, the steam plow appears to be invited to success."

PLOWS AND PLOWING.—A member of the Club named writes us substantially as follows:—"The Farmers' Club of East Maine (Droome Co.) having at their meetings discussed at some length the merits of the different kinds of plows in use by its members, it was agreed that the only way to find out was to try them all side by side, and let each farmer decide for himself. A standard of depth and width was adopted, (suited to the locality,) and at a specified time and place the trial came off, each plow working on its own land, but held by any who wished to try it. A great number of plows were on hand, and were fully tested, each farmer judging for himself. But the work being done by so many different hands the Committee were unable to judge of the merits of the different plows. Another trial was therefore resolved upon, which resulted in a regular plowing match, the owner of the land plowed furnishing dinner for all, and also a cash premium for the three best specimens—after which the draft of the different plows was tested, and much useful information obtained. The plowing was good; in fact there is a marked improvement in the plowing this season within the influence of the Club, and as the farms grow older and admit of a finer cultivation, the farmers are wide awake and ready for every improvement within their reach."

AGRICULTURE IN OHIO.—The editor of the Ohio Cultivator disproves the truth of the oft-repeated assertion that the "wheat crop of Ohio has fallen off one-half." He shows from statistics that, for the last four years, "the wheat crop has been tending upwards, and this, too, in the face of its insect enemies, before unknown, and also in the face of the fact that while the early settlers occupied only the best lands, the later settlers have been made from the second and third-rate lands, which reduces the average per acre, without involving the farmer in the charge of mismanagement."

CURE FOR WARTS.—A correspondent asks how to cure Warts. To answer him, and benefit others also, we quote this remedy given by T. H. in the Ohio Farmer:—"My hands being literally covered with warts, I tried some dozen recommended cures, with no good effect, until I procured some muriatic acid. A few applications with a knitting needle to the top of the warts entirely removed the whole of them in a few days, without causing any sore or pain."

THE grasshoppers in certain parts of Virginia have taken to chewing tobacco. They have also commenced depredations upon wheat, corn, &c.

HORTICULTURAL.

DISSEMINATING NEW FRUITS.—PEABODY STRAWBERRY.

SOME of our friends thought we were rather severe when commenting upon the manner in which the Peabody Strawberry was introduced and sold. Mr. Peabody would not dispose of a plant, so that good judges could test it, until he had received orders for one thousand dozen, at \$5 per dozen, thus securing to himself five thousand dollars, whether his strawberry proved valuable or not; quite too large a sum to take from the cultivators of the country without a valuable return. In answer to a correspondent who asked our opinion about investing \$5 in this lottery, we said:—"If we believed one-half the good things that are said of this strawberry, we would advise our correspondent and all others to purchase it at once. Unfortunately, we do not believe one-quarter that is told to be true. We are decidedly opposed to the manner in which it is disseminated. The whole thing looks to us very much like a humbug, and we therefore refuse to countenance it in any way."

"We caution all persons against purchasing any new varieties of fruit sent out with a flourish of trumpets, at high prices, as by doing so, they will most assuredly get cheated. Whenever a new claimant for the public favor appears, its merits should be canvassed thoroughly and carefully by disinterested and competent persons, and whenever practicable, it should be presented to some Horticultural Society, and if deemed of sufficient importance, a committee should be appointed to examine the fruit, the habit, growth and productiveness of the plant or tree, the nature of the soil, manner of cultivation, and such other things as they may deem important. This committee should publish their report for the benefit of the public. If, after full investigation, they should deem it an important acquisition, planters would buy with confidence; if they considered it unworthy of general cultivation, it would prevent the reading public from being cheated. If they should think another trial necessary, it would be for the true interest of both buyer and seller to have this trial made before the plant or tree was offered for sale. We protest most decidedly against the patent medicine system of pulling a new fruit or flower."

For advising this, the only true course, we were rather severely handled, but had the satisfaction of knowing that we were saving our friends from imposition. Now, this strawberry is known, and what is its character? At the last meeting of the Fruit Growers of Western New York, when a vote was taken for the best six varieties for market, and the best six for amateur cultivation, the Peabody did not receive a single vote for either.

Again, then, we repeat our caution. Put no faith in the descriptions of interested parties in regard to new fruits, until they have been fairly and fully tested by competent Societies and Committees.

GENESEE VALLEY HORT. SOCIETY.

The June Show of the Genesee Valley Horticultural Society was held on the 23d ult. This, in many respects, was one of the most successful exhibitions made by the Society, and was largely attended by visitors from the opening until quite late in the evening. The show of Strawberries was magnificent, and, though rather early for cherries, very many fine specimens were on exhibition. The Committee on Fruits remark in their report that "there was a greater variety of strawberries and cherries than ever before exhibited—fewer of inferior quality, and the specimens finer grown than ever before."

The premium for the best quart was taken by H. E. Hooker & Co. for the *Triomphe de Gand*. The premium offered for the best six sorts was given to the following:—*Pyramidal Chilian*, *Hovey's Seedling*, *Wilson's Albany*, *Triomphe de Gand*, *Hooker*, *McAvoy's Superior*.

W. P. Townsend, of Lockport, exhibited a fine seedling cherry, and Zera Burn, of Perrinton, four varieties, which the committee think possess "much merit, but they refrain from expressing a more definite opinion until they shall have been thoroughly tested, for, before a premium can be awarded them, it must be known that they excel in some valuable qualities any varieties now in cultivation, and to be eminently worthy of dissemination."

The show of Flowers was fine, though not as large as usual, as the new rules of the Society prevent persons from making large exhibitions. But, in Roses, Peonies, Verbenas, the show was fine, as it was also in Bouquets and Floral Ornaments. One great feature of this display was a large and most beautiful *Sago Palm*, presented by A. Reed, Esq., of Hulberton, N. Y.

A goodly number of Vegetables were shown, and among them we noticed fine *Lettuce*, *New Potatoes*, *Pas*, *Rhubarb*, *Cucumbers*, &c., all well grown.

STRAWBERRY CULTURE.

MESSES. EDITORS.—I would like to say a few words to your readers about Strawberry Culture, as it is a kind of hobby of mine. It is surprising to me that it is not better understood and more attention paid to it, when I think what a luxury it is and how easily and surely it can be obtained. It does not cost me to exceed one dollar a bushel, aside from picking. And first let me say that a bed once set should not be considered a permanent thing. Many think if a strawberry plant is well taken care of and the runners kept off, it will bear any number of years, but my experience is that it soon becomes barren, or if not, the fruit becomes small and comparatively worthless. The same plant should not be allowed to bear more than two, or three years at most. My method is to

FLOWER OF THE TULIP TREE.

THE TULIP TREE is one of the most valuable and beautiful with which the Creator has adorned our world. An eminent American Horticulturist once observed that "the whole world does not produce a deciduous tree that surpasses it in stateliness and symmetry of form, in ample foliage and superb flowers." And yet, it is neglected, forgotten, in the race for new and foreign, though far less beautiful trees. It is scarcely ever seen in the private lawn, or in the parks and public grounds. Every season, however, we see it in flower in its native home—the woods—stand by its side in wonder and admiration, and feel much inclined to take off our hat in the presence of this queen of the forest. Its large, yellowish flowers, variegated with green and

orange, its broad, bright green leaves, its uniform, straight trunk, its general beautiful and stately appearance, make it one of the most magnificent productions of the temperate zones.

The principal cause of its neglect is the fact that it is difficult to transplant when large, and those who go to the woods and obtain large trees, as they do maples, seldom succeed in saving them. The proper way to procure these trees is to obtain them quite small from the nurseries, plant in a good soil where they will not be troubled with stagnant water and then take care of them. Our hurry has been the cause of our slow progress in horticulture. We have planted the largest and fastest growing trees that could be obtained, and the consequence is one-

are larger, but few on a hill, and it will not pay for cultivation.

My plan of putting out strawberries is in rows, two feet apart, and 16 to 18 inches apart in the row. Pull off all runners until they have done fruiting. Set in the fall, after early peas and corn, keep well hoed and free from weeds until the next bearing time, and I will warrant a good crop of strawberries. Some people think it too much trouble to cultivate strawberries, unless they will grow among grass and weeds. I wonder if farmers would expect a good crop of corn in this way. The strawberry likes a good soil, but not too rich, or they will grow too much vines and not fruit.

D. H. BENNETT.

Branchport, Yates Co., N. Y., July, 1890.

FRUIT AND INSECTS IN WISCONSIN.

DEAR RURAL:—I am a weekly reader of your pages, my son being a subscriber, and through his efforts and recommendation many copies are taken in this vicinity, read with much pleasure, and I trust with much profit. We get much useful information through your columns, about the best mode of managing our farming concerns and matters of an agricultural nature, which we could not do very well without.

Please indulge me, a plain farmer of sixty-two years' experience, in making some inquiries of you, and through you of your readers. I have been much interested in reading the reports of the Pomological Societies, as published in your columns, giving the opinions of many experienced men upon the best kinds of apples, pears, and other fruits, recommended to be cultivated, having myself had some experience in cultivating fruit, especially apples and pears, which I deem the most valuable of all fruits in our country.

And now to my inquiry. After having our orchards well filled with the best of trees of the choicest kinds of fruit, how shall we defend them against, and free them from, the various kinds of insects and pests that threaten to destroy them. Our trees here in Wisconsin are very much infested with what is called the *bark louse*, (I do not know whether they are lice, mites, or something else, nor how they propagate or get deposited.) Many of our largest and best trees are covered from the body to the tip of the limbs, so that a pin's head could hardly be got to the bark of the tree. The tree is covered with them very rapidly after they commence to appear, and I have tried to learn from those who have been longest troubled with them, what they come from and how they propagate, but have not been able to get any satisfactory information. Some have tried to destroy them by oiling the tree over with kerosene oil. I have seen an orchard that was thus served about two years ago. The lice are not destroyed, but the trees are mostly dead, and I dare not try it. Some have washed their trees with ley from wood ashes. I have thrown dry wood ashes on the trees when they were wet, and it has removed some of them. Now will you, or your readers, inform through your columns how we can get rid of these destructive insects, and save our trees, and in so doing, benefit a large community of farmers.

And now that I have commenced a communication, I will state to you what I accidentally experienced in my native State and place, Northford, Connecticut. The orchards in our neighborhood had been rendered almost leafless by those pestiferous worms called the *Canker Worm*. The following spring I tarred my trees around the body to prevent the millers from ascending. In one of my orchards, which had suffered with the rest the preceding year, I tarred a few times, but caught no millers of any account, and discontinued tarring, thinking I was too late, and that the millers had gone up and done their work. But when the time came for the worms to eat, my other orchards, where I had tarred and caught abundance of mill-

ers, were badly eaten, and the orchard above referred to was scarcely touched, and the following year I had a bountiful crop of first-rate apples, while other orchards around bore no apples.

The query in my mind was, what is the cause of this? It cannot be the direct interposition of Providence, favoring me above my neighbors, for my other orchards are affected like theirs. It cannot be because any particular crop was raised on it different from others. It cannot be because this was plowed and the others not plowed, for some of the others were plowed. The only satisfactory cause to me was that this orchard was plowed the last of June and first part of July, (it being then grass land,) about the time the worms were stringing down from the trees, and that the plowing at that time probably destroyed them. I know of no other cause that could affect this orchard more than my other orchards.

We are not yet troubled with the canker worm, here in Wisconsin, but if your readers where these worms are making havoc with orchards, can derive any benefit from this communication of my experience and conclusions, I shall be well pleased. Bristol, Wis., June, 1890. CHAS. M. FOWLER.

REMARKS.—Enclosed in the above communication we found a piece of an apple shoot literally covered with *Apple Bark Lice*. We have several times before spoken of this insect, and the best methods known for its extermination, and we again put the facts on record, as we well know that thousands of trees, in the West particularly, are being destroyed by this insect. The engraving shows a small piece of the bark with the insects, as they appear upon it. The *Apple Bark Louse* is about one-eighth of an inch long, of an irregular ovoid form, often bent in its middle, and more or less curved at its smaller end, which is pointed, the opposite end being rounded. It is of a brown color, of much the same tint with the bark, its smaller end being paler and yellow. It closely resembles a minute

oyster-shell pressed against the bark—a similitude so striking as to be readily perceived by every one, and is frequently designated in common conversation under the name of the Oyster-shaped Bark-louse. The shells or scales are situated irregularly, though the most of them are placed lengthwise of the limb or twig, with the smaller end upwards. These scales are the relics of the bodies of the gravid females, covering and protecting their eggs. During the winter and spring these eggs may be found on elevating the scales. The number of eggs under each scale is very variable, ranging from about a dozen to one hundred. In a late number of the *Michigan Farmer*, A. G. HANFORD gives a very favorable account of the effects of tar and linsed oil, beat together and applied warm with a paint brush thoroughly, before the buds begin to expand in the spring. This, when dry, cracks and peels off, bringing off the dead scales with it. Trees which were thus treated grew from two to two and a half feet last summer, which had advanced only a few inches in previous years. Another remedy is as follows:—Boil tobacco in strong ley till it is reduced to an impalpable pulp, which it will be in a short time, and mix with it soft soap, (which has been made cold; not the jelly-like soft soap,) to make the mass about the consistence of thin paint, the object being to obtain a preparation that will not be entirely washed from the tree by the first rains which occur, as ley, tobacco water, and most other washes are sure to be. The fibres of the tobacco diffused through this preparation, cause a portion of its strength to remain wherever it is applied longer than any application which is wholly soluble in rain water can be. First trim the trees well, so that every twig can be reached with the paint brush, and apply this preparation, before the buds have much swelled in the spring, to every part of the tree. This will effectually remove the scales.

RECIPES FROM A RUSTIC PLACE.

EDS. RURAL:—I will inform your correspondent, M. Taggart, that the "Domestic Department" is not quite hidden yet, for I, too, will add my mite to swell the columns in which I take so much interest. Here are my recipes that I have selected for the *New-Yorker*. These I have tested, and find them all they are recommended to be.

BREAD CAKE.—Three cups of very light dough; 3 do. of sugar; 1 of butter, and 8 eggs. Beat all thoroughly together, and grate in a nutmeg. Use as many raisins as you wish. Dissolve one teaspoon of saleratus in a little warm water. After putting it in the basin, let it stand a little while to rise, as it will make the cake lighter. This cake is excellent for raising cake.

SODA SPONGE.—One cup of sugar; 1½ of flour; 8 tablespoons of sweet cream; 3 eggs; 1½ teaspoon of saleratus, and as much cream tartar.

BOILED INDIAN PUDDING.—Two cups of butter-milk; 2 of milk; 1 egg; 1 teaspoon saleratus; a little salt. Stir in one-quarter of flour and the rest meal until quite thick, put it in a wet pudding bag pretty tight, yet leaving room to rise, place it in the pot with the meat and potatoes when you boil dinner, and boil it constantly, for three hours. Serve with cream and maple sugar.

Grove Hill, N. Y., 1890.

MOLLIE FLAGG.

CAKES, COOKIES, AND TARTS.

EDS. RURAL:—Having been much benefited by your domestic recipes, I am inclined to add a few of my own, hoping they will prove useful:

STRIPE CAKE.—Take the whites of four eggs beaten to a stiff froth; one cup of white sugar and half cup butter, rubbed together to a cream; half cup milk; one teaspoonful of cream of tartar; half as much soda—put all together with one cup flour and a little lemon extract—stir well.

TRIFLES, OR TARTS.—Take one egg and two tablespoonsful of white sugar, mix hard with flour, roll very thin, and cut out round, with notched edges, the size you wish, then boil in lard. Lay jelly or jam on the centre.

CHEAP SPONGE CAKE.—Take 1 egg; 1 cup of sugar; 1 cup of water or milk; 2 cups flour; 2 teaspoons cream of tartar and 1 of soda.

ECONOMY COOKIES.—One cup sugar; 1 cup thick sour cream; 1 teaspoonful soda—season to taste. Mix stiff, roll thin, bake quick, and eat when you please.

E. M. P.

Locust Hill, N. Y., 1890.

TO MAKE BREAD FROM GROWN WHEAT.—In reading the *Rural* I find many good recipes for cooking, but I think I can give you one for making bread of grown wheat that is much more wholesome and cheaper than that which appeared in the *New-Yorker*. My mother has urged me to write to you ever since we read yours, for we have tried our rule many years, and never knew it to fail. When we set our rising we put in one large spoonful of Indian meal, which we set in a quart pitcher. The meal will prevent the rising getting thin, and when we mix our bread—in what would make a loaf in a six quart pan—we put in one teaspoonful of meal. We have never failed having good bread, and if the meal is fine, you would not discover it. The meal is good to correct flour that becomes heated in the mill by grinding.—C. C., Belfast, N. Y., 1890.

RHUBARB PIE.—Being fully aware of the anxieties of the modest and inexperienced housekeeper, I submit the following for "Crissie," although quite late in the season for a recipe for Rhubarb Pie. I hope everything is not as backward in that region. The skins should be stripped from the stalks, and the latter cut into small pieces, then placed in the crust with a large teaspoon of sugar and a small bit of butter. Dust in a little flour—nutmeg or cinnamon for spice. Gooseberries and currants may be prepared in the same way for pies.—WESLEY, Walworth, Wayne Co., N. Y.

WASHING WHITE CRAPE SHAWLS.—In a late number of the *Rural* I notice a lady wishes to know something with regard to the best method of washing white crape shawls. My method is this:—Make a suds of soft water and a cake of refined soap, and after washing the shawl, starch it in scalded starch—made quite thin—then stretch and pin it on a clean carpet to dry. The fringe of the shawl should not be starched.—MRS. A. KETCHEUM, Victor, N. Y., 1890.

COCOA-NUT PIE.—Noticing an inquiry in a late *Rural* as to the mode of making Cocoa-Nut Pie, I take the liberty to send you my recipe, which I think is very good. Take the white meat of half a large cocoa-nut, grate it, and stir it into a pint and a half of sweet, fresh cream; two beaten eggs; one cup of white sugar; a little salt. Line a deep earthen pie-plate with butter crust, and bake half an hour. Eat as soon as cold.—SUSAN J. STEDDEN, Lyander, Onondago Co., N. Y., 1890.

STRAWBERRY CAKE.—As we are in the height of the strawberry season, the *Rural* would no doubt confer a favor on multitudes of its readers, besides ourselves, if you would publish the best recipe for the famous "Strawberry Short Cake." May we not learn from the pen of some of the peerless MARTHAS of the land the most acceptable mode of serving up this king of berries?—BACHELOR, Rutland, Vt. Co., N. Y., 1890.

TO PREVENT MELON VINES FROM BLOWING ABOUT.—MARTIN ROBERTS, of Henrietta, says the best thing to prevent melon vines from blowing about and becoming injured, is to mulch the ground with fresh cut grass or weeds. The tendrils will attach themselves to the mulching and keep the vines in place. Melon growers will try it.

Written for Moore's Rural New-Yorker.
KIND HEARTS

Let but the heart be beautiful
And I care not for the face,
I heed not that the form may want
Pride, dignity, or grace.
Let the mind be filled with glowing thoughts
And the soul with sympathy,
And I care not if the cheek be pale,
Or the eye lack brilliancy.

What though the cheek be beautiful,
It soon must lose its bloom;
The eye's bright lustre soon will fade
In the dark and silent tomb;
But the glory of the mind will live,
Though the joyous life depart,
And the magic charm can never die
Of a true and noble heart.

The lips that utter gentle words
Have a beauty all their own,
And more I prize a kindly voice
Than music's sweetest tone;
And though its sounds are harsh or shrill,
If the heart within beats free,
And echoes back each glad impulse,
'Tis all the world to me.

Northville, Mich., 1869. M. M. G.

Plain Talks to American Women.—No. 14.

BY MRS. M. P. A. CROZIER.

EMPLOYMENTS AND AMUSEMENTS OF CHILDREN.—Little restraint should be placed upon the boisterous merriment and activity of early childhood. Those exuberant spirits which constrain the little one to run, jump, climb trees, shout, laugh, and sing, are the wise provision of Providence, not only for its happiness, but for its physical development. Following out its native impulses, its limbs become strong for the labor of after years, the lungs are strengthened for their important work, and the whole body acquires a perfection which, under the "quiet" system of management, it is not possible for it to attain.

One of the most effectual means of promoting the happiness of children is to "keep them employed." But the employment must not be distasteful; their playful inclinations must be greatly consulted, and all labor or study made attractive. For very young children, perhaps all employment should be really amusement, but when a few years have passed over them, it will be necessary that they be taught patiently to endure toil, although they become weary, and the task be unpleasant.

In how many ways may be effected the combination of labor and play, in a manner to promote the child's enjoyment,—not alone from the stimulus of agreeable exercise, but from the idea of being useful! A child, rightly trained, will delight to feel that he has done some good—that he has added to the happiness of others. With what a keen pleasure will he sit down by the glowing fire on a stormy winter's day, when sliding, skating, snow-balling, and the like, are impracticable, to roast chestnuts, parch corn, and crack nuts, not only for his own eating, but his dear mama, who is too busy to spend time for this purpose herself! How will he delight to sit by her side and pick out stitches, or read stories to her while she sews! One kiss from her sweet lips is an ample reward. Then, the gathering of snow to wash—the filling of the wood-box, for her approbation, become pleasant labors—amusements, even.

But one of the most useful entertainments for children, and one in which they may be led to take great delight, is gardening. A spot of ground all their own, a hoe, a rake, a spade, their own property, and how assiduously will they work at digging the soil, laying out beds, sowing seeds and removing weeds. If required to keep it all in order, they may tire of the requisite labor, but if encouraged by the desire to do something nice in the way of furnishing the table with vegetables—of cultivating fine flowers for mama's vase—or, if allowed the proceeds of their toil for pocket-money, how faithfully will they labor for the reward! The hope of reward is always a stimulus to effort. It may be a parent's smile, or a pocketful of pennies, but some inducement must be offered, or the energies will flag, and a habit of indolence obtain.

Even in maturity we do not work without an motive. The back-woodsman who, axe in hand, enters upon the stern labor of subduing the wilderness, sees spread out before him, in some bright future, a beautiful home for his wife and children. The farmer who plows his ground in the storm, expects to reap golden harvests. The citizen who bends over his folios in the counting-room, till his brain is weary and his eyes are dim, is, perchance, looking forward to future wealth, days of independence, and retirement from business to the bosom of his family. The Christian, in the faithful occupation of his post, has his eye on "the mark of the prize." The philanthropist who, with his pitying heart, denies himself the comforts of life that he may relieve the "weary and heavy-laden," hears softly in the distance the approaching voice of his Master, the largest-souled philanthropist the world has ever known, saying, "I was an hungry, and ye gave me meat; I was thirsty, and ye gave me drink; I was a stranger, and ye took me in; naked, and ye clothed me; I was sick, and ye visited me; I was in prison, and ye came unto me!" The reformer, who, alone, braves the derisions of the world, and "presses the battle to the gate," hopes for the time when the truths he loves will be appreciated, and govern human action—when might shall be on the side of right. The student who grows pale with his midnight watchings, grows pale for the meed of glory, or of usefulness. The warrior who dares the sword and the cannon's mouth, is urged onward by the hope of victory. Even so must it be with the child; some bright star of promise must shine in

the skies, or he will prefer to fold his pinions in the vale of indolence rather than spread them for "the upward flight."

And in all our intercourse with children, it would be well for us to remember that their feelings are but our own, with a tropical growth of luxuriance. The sun shines warmer on the plains of childhood than away up on the mountain-tops of maturity! the flowers of hope which spring there, although, perchance, more tender and transient, have deeper tints, and yield a richer, sweeter fragrance; the birds of joy that warble there are more melodious, and wear a brighter plumage; and so also, perchance, are the serpents of passion which lurk there more ready to inflict their poison. For all this we should make allowance, and not attempt their government altogether by our own cold standard, but we should go back to the childhood of our own lives, think of their smiles and their tears, think how the one, gushing into our heart like the Spring's early sunshine, was as quickly followed by the other as the weepings of April dispel it—think how, to our inexperienced minds, there was no happiness like our happiness and no sorrow like our sorrows. We should go back again, and feeling how love was a full cup of gladness to our hearts, and unkindness the bitter draught that we could drink, govern gently, govern lovingly, govern sympathizingly, with the full belief, that, as a general thing,

"He who checks a child with terror,
Stops its play and stills its song,
Not alone commits an error,
But a great and moral wrong."

We may prune and direct the vine we have planted, but let us be careful lest by a too free use of the former means—efficacious if used prudently to promote a noble growth—we destroy its vigor. One or two severe applications might be useful, but five or ten might prove its ruin. One may be too strict in family government, as others are far too lax, not too strict perhaps in insisting upon uprightness and integrity, but too exacting in the requirement of attention to non-essentials. Especially should the parent be careful when the child approaches the period of life spoken of by HUGH MILLER, in the following passage from his "Autobiography." "There is," says he, "a transition time in which the strength and independence of the latent man begin to mingle with the willfulness and indiscretion of the mere boy, which is more perilous than any other, and in which many more downward careers of recklessness and folly begin, that end in wreck and ruin, than in all the other years of life which intervene between childhood and old age. The growing lad should be wisely and tenderly dealt with at this critical stage. The severity that would fain compel the implicit submission yielded at an earlier period, would probably succeed, if his character was a strong one, in insuring but his ruin. It is at this transition stage that boys run off to sea from their parents and masters, or, when tall enough, enlist in the army for soldiers. The strictly orthodox parent, if more severe than wise, succeeds occasionally in driving, during this crisis, his son into Popery or infidelity; and the sterner moral one, in landing his utter prodigality. But, leniently and judiciously dealt with, the dangerous period passes,—in a few years at most, in some instances in even a few months,—the sobriety incidental to a further development of character ensues, and the wild boy settles down into the rational young man."

THE OLD-FASHIONED MOTHERS.

The old-fashioned Mothers have nearly all passed away with the blue check and homespun woolen of a simpler but purer time. Here and there one remains, truly "accomplished," in heart and life, for the sphere of home.

Old-fashioned mothers—God bless them—who followed us with heart and prayer, all over the world—lived in our lives and sorrowed in our griefs; who knew more about patching than poetry; spoke no dialect but love; never preached nor wandered; "made melody with their hearts," and sent forth no books but living volumes, that honored their authors and blessed the world.

The old homestead! We wish we could paint it for you, as it is—no, we dare not say, as it is—as it was; that we could go together from room to room; sit by the old hearth, round which that circle of light and love once swept, and there linger, till all those simpler, purer times returned, and we should grow young again.

And how can we leave that spot, without remembering one form, that occupied, in days gone by, "the old arm chair," that old-fashioned Mother—one in all the world, the law of whose life was love; one who was the divinity of our infancy, and the sacred presence in the shrine of our first earthly idolatry; one whose heart is far below the frosts that gather so thickly on her brow; one to whom we never grow old, but, in "the plumed troop" or the grave council, are children still; one who welcomed us coming, blessed us going, and never forgets us—never!

And when in some closet, some drawer, some corner, she finds a garment or a toy that once was yours, how does she weep, as she thinks you may be suffering or sad.

And when spring

"Leaves her robe on the trees,"

does she not remember your tree, and wish you were there to see its glory?—Selected.

CULTIVATE DOMESTIC PEACE.—To those scenes of domestic peace which pure religion created and adorned, the thoughts of the youngest member of the family will cling in after years; they will become a kind of hallowed ground in his memory; they will exert a restraining and sanctifying power; and thus we may expect to see the promise fulfilled:—"Train up a child in the way he should go, and when he is old he will not depart from it."

WELL-SPENT TIME.—Spend your time in nothing which must be repented of. Spend it in nothing on which you might not pray for the blessing of God. Spend it in nothing which you could not review with a quiet conscience on your dying bed. Spend it in nothing which you might not safely and properly be found doing, if death should surprise you in the act.—Baxter.

Written for Moore's Rural New-Yorker.
THE OLD INSTITUTE BELL.

SILENT and still is the old school bell,
Hushed are the peals of its musical strain,
Notes that the heart of the ardent would thrill
With joy and new life will awake not again.
We have loved the old school-house for scenes of the past.

For the friends who have died that were once gathered
there,
For the bright happy hours, for the hopes that they
cast,
For the walls that long echoed the accents of prayer.

But the time-bellowed form we shall see never more,
Yet its influence sweet in each spirit will dwell,
And its image will live for long years in the soul,
While fond memory shall hear the old Institute bell.

Thou' the gondolier's notes are so sweet on the river
When 'tis night on the waters, thy music is still,
But when night on life's ocean our spirits will ever
Still hear the sweet sound of the Institute bell.

Farwell, then, old school-house! another can never
Fill the void in our hearts that was once filled by
thee;

In our joys, in our griefs, thou hast cradled us ever,
As the sea-bird has slept on the tempest-lulled sea.
Yet a soul was within thee that never can perish,
And thine influence pure for long ages shall dwell;
While the East and the West thy remembrance shall
cherish—
Till the sun has gone down on life's mountains—
Farwell.

Nunda, N. Y., 1859. LYRA.

Choice Miscellany.

Written for Moore's Rural New-Yorker.
FROM THE WOODS.

A BUSY "New-Yorker," whom I met this morning, a most enterprising Squirrel, quite animated me with a desire to secure him as an agent for your "RURAL." His activity and industry were amazing. What wonders he could accomplish if his energies were only directed wisely. Ah! he was a squirrel of capacity—he had ideas above his fellows, and their "quips, and cranks, and wanton wiles."

OSIAN makes the ghosts of his heroes bewail their lack of fame, and I fear that this little grey Knight is treated in his realm of squirrel-dom, much as we often treat our best authors. Most certain it is, that the "root of his fame will never be in his dead body." However, he is a gentleman farmer, and superintends the servants upon his estate; ants build, and depper crickets work, while he, trusty bailiff, watches by.

"Wad ye see him in his glee?
For mickle mirth he has."

A hermit Toad, who dwells in a dismal cave in the hollow, turns out as the Squirrel comes, and the two are as merry as the Curial Prior and bold Allan-a-Dale.

Imaginative, say you? Well, why should one not be, such a day as this, for no fairer was ever born in Tuscany or Attica. June is the violin month of the year—for the year is like an orchestra, and the months are the instruments. June is the violin, that mystical "violet-violin" of SERAPHAEL, which breathes of song, and poetry,—answers "in all its fullness of melody to the beat of human passions; is nearest allied to love and life—the very Skylark of music, that

"Singing still doth soar, and soaring ever singest."

In June, above all times, should the heart rejoice, and up-wing itself on airy pinions. For then all Nature is full of gladness; waters laugh, birds sing, wild lily-bells ring. Oh! "what is so rare as a day in June."

This morning our intelligent Cossack, nodding his sagacious head, took his own way into the woods, and stopping short under the thick shade, looked at us with a wink, as to say, "ben trovato." And now to lie perdue on this slope, soft with pine straw, an easy couch, backed by a gigantic sky-piercing pine. Exquisite mosses drape the stump close by, and there are ginsengs, and nodding Solomon's seals, and the glistening cornel, and viburnums, and vigorous green pines shooting up, proud as young palms. Bark!—the little, shy, plaintive notes of the Wood Sparrow. And there, twirling now here, now there, among the bushes, is that little sprite, the Chewink. You know him by his spots of white, red, and black, and his two long notes, and his squirrelly nimbleness.

Listen—amid the din of insects, and whirr of grasshoppers, and sighing of the pines, and all those soft sounds that vitalize the solitude of the forest, hear that slender note, scarce more than a shrill vibration. It is that of the Speckled Creeper, as he goes further into the depths of the forest. But a rush of song comes now, like the last trills of the Canary at home. It is that of the Golden-Crowned Thrush, sitting on the topmost oak bough, who "lets his illumined being erruon with the deluge of summer it receives." And far off in the wood resounds the voice of another Thrush, called the Cat Bird. And there wheels the gay Red Mavis, and involuntarily we cry, with dear old Scott,

"Oh merry it is in good green wood,
When Mavis and Merle are singing."

What a vivid consciousness of life these brilliant songsters awake for us, in the quiet, I had almost said the solitude of the forest. But that is an error, for no place is more populous than the depth of a forest. There are lessons to be learned of the tenants there, and good to be had for the wishing, such as we find no where else. And we realize, too, how full the world is of life, God-granted life, and we go home to understand more keenly how noble minds are stirred to utter great thoughts—how sublime life is to those who feel its deepest pulsings, and in whom action and thought are in harmonious balance.

All this while the birds are singing, rushing, flowing, outpouring notes of such vivid, intense joy, and the brook ripples on an accompaniment as melodious as one of TOM MOORE'S best flowing

lines; which I take to be complimentary enough for any brooklet not swollen with vanity.

But Cossack has moved on, and now looks back as if to ask, "Have you forgotten the Azaleas?" True, we started out in search of Azaleas, and it is full time we pass on; but I expect that Cossack, like his betters, has mingled motives, and that a certain repast at the hour of high-noon, though "lost to sight" is still "to memory dear."

Allons, brave comrade!—and now for the full glories of that sweet, love-flushed flower, the wild Azalea.

Written for Moore's Rural New-Yorker.
RURAL LIFE.

IN the simple life of the farmer there is, perhaps, more happiness, usefulness, and contentment than among any other class of people. Many are unaware of this fact, and often the tiller of the soil feels discontented with his calling, and envies the lot of others whom he deems more fortunate in the choice of an occupation than himself. But he who entertains this opinion is unacquainted with the high station to which he has been called. Man was appointed to it before he was compelled to roam on account of sin; for when the framer of the universe first fashioned this beautiful world, and everything therein, according to his divine pleasure and pronounced it good, he created man in the image and after the likeness of himself, and placed him in the delightful Garden of Eden "to dress it and keep it."

If we would seek for the nearest approach to that Eden from which man was expelled, where would we find it sooner than in a rural site, the abode of some peaceful and happy farmer, whose domain is his empire, and whose greatest pleasure is the right cultivation of his fields and the embellishment of his home. Go to yonder cottage, surrounded by trees planted either for utility or ornament, and there you will behold the abode of Industry—the home of Cheerfulness and Contentment. Here we see marks of thrift and prosperity—always the result of labor properly directed and cheerfully performed. He rises with the dawn, and, as he walks over his fields smiling with beauty and presenting the appearance of a rich and bountiful harvest, sees more to raise his thoughts and feelings, and to give him a just conception of Nature and her beauty, than he who, living in the city and shut in by human crowds, would see in a whole lifetime, did he always remain pent up in his prison. He sees the glorious sunrise—the innumerable diamonds of dew scattered upon every blade of grass, sparkling amid his glittering rays—the fields clothed with their mantles of verdure—the meadows covered with the blossoming clover—all about are "colors that please and charm the eye," and upon his ear falls the sweet music of the feathered songsters issuing forth in the joyful notes. No other occupation is better adapted to him who is the lover or student of Nature. His life is with her, surrounded on every side by her works, from which he may read instruction in every object.

But the farmer's life is one of incessant toil and labor. Each hand is employed—idleness finds no home here. From one season to another new labors present themselves from which there is no respite; but from being habituated to them he learns to love them, so that, instead of their being a task, they become a pleasure. He follows the plow behind his "smoking team" round after round, as the sun ascends the heavens and moves on until it sinks behind the western horizon. Through the long and sultry days of harvest he swings the glittering scythe, and in the autumn-time husks the yellow corn.

In every age the farm has been the birthplace, or the farmer's life the chosen occupation of men who have reached the eminence of distinction. CINCINNATUS, the savior, at one time, of the Roman Commonwealth, sighed to leave his little fields for the dictatorship of the "Mistress of the World." WASHINGTON, after fighting with the enemies of his country and gaining its freedom—after presiding for eight years as its Chief Magistrate, retired to his peaceful farm home, and there passed the remainder of his days. It has ever been "the nursery of great men." Orators and statesmen, poets and scholars, have had their early training in its school. Some one has beautifully and truthfully said:

"Would you be strong, go follow up the plow;
Would you be thoughtful, study fields and flowers;
Would you be wise, take on yourself this vow
To go to school in Nature's sunny bowers.
Fly from the city, nothing there can charm;
Seek wisdom, health, and virtue on a farm."
Yellow Springs, Greene Co., N., 1859. H. D.

A BEAUTIFUL FIGURE.

REV. MR. BARNES, in his sermon on "Life at Three Score," illustrates the magnitude of eternal things as he approaches the end of life, compared with those which ordinarily occupy the attention of mankind, by the following beautiful figure:

"The earth, as it moves in its orbit from year to year, maintains its distance of ninety-five millions of miles from the sun; and the sun, except when seen through a hazy atmosphere, at its rising or its setting, seems at all times to be of the same magnitude—to human view, an object always small, as compared with our own world. But suppose the earth should leave its orbit, and make its way its way in a direct line towards the sun. How soon would the sun seem to enlarge its dimensions!—How vast and bright would it become! How soon would it fill the whole field of vision, and all on earth dwindle to nothing! So human life now appears to me. In earlier years, eternity appeared distant and small in importance. But at the period of life which I have now reached, it seems to me as if the earth had left the orbit of its annual movements, and was making a rapid and direct flight to the sun. The objects of eternity, towards which I am moving, rapidly enlarge themselves. They have become overpoweringly bright and grand.—They fill the whole field of vision, and the earth, with all which is the common object of human ambition and pursuit, is vanishing away!"

NATURE is a pattern man-of-all-work, and does beat when least meddled with. She knows her work, and does it, if let alone.

Written for Moore's Rural New-Yorker.
SABBATH MUSINGS.

"Thou fool, that which thou sowest is not quickened except it dies."—Corinthians xv.: 36.

THE beautiful bud, so fair to human eye,
Unblossomed yields not fruit or flower,
As hopes in life are often wont to die,
So fades this beauty of an hour
And yields not seed to propagate its race,
Nor leaves a tablet of its lowly grace.

The Christian soul, like modest rose in bloom,
Unconscious of its jewels rare,
Yielding rich fragrance in the sick man's room,
Sweet foretaste of the upper air!
Sows its good seed upon earth's weedy soil,
And we regret when death shall seal its toil.

The heart, like stream whose pearly waters flow
Towards the ocean of its rest,
Encircled in its winter's ice and snow,
Forever would remain unblossomed,
Did God not kiss it with his warming light,
And bid it leave its dark and wretched night.

The eve, which moon adorns not with her smile
To guide our spirit on its way,
Without a star to light the weary mile,
And strengthen hope beyond decay:
Indeed! would be a sad and sorry sight
If morn should gild it not with golden light.

And thus with mortals, they who do good deeds,
And make the darkest spot most fair,
Sow in the field of Christ immortal seeds
Which blossom in this world of care,
But ripen not and are not garnered in
Till death shall free them from their earthly sin.
Dedham, Mass., 1866. E. W. K.

Written for Moore's Rural New-Yorker.
THE SPIRIT OF LOVE.

WE should cultivate the spirit of love if we would enjoy the present and have hope for the future, for this alone will re-create in us the image of God. We are interested when we look upon a noble rolling river, and think that it has been flowing on for six thousand years, slaking the thirst of a thousand generations, giving life and beauty to all within its reach, and yet showing no sign of waste or want; and when we see the sun rise above the crest of the mountain, draped with golden curtains, we wonder to think that he has melted the snows of so many Winters, renewed the verdure of so many Springs, painted the flowers of so many Summers, ripened the fruits of so many Autumns, and yet, shining as brilliantly as ever, undimmed, unabated in strength—not are the fountains of light less full for coming centuries of boundless profusion. These are but images of love as exhibited in all the works of God, and especially of the love of CHRIST to a fallen world. This principle is eternal, for "God is love." And when judgment flames have licked up the flowing stream and the light of the glorious sun shall be quenched in darkness, the love of God will flow on, in all its fullness, throughout the endless ages of eternity. Those who receive the image of love in their hearts, in this life, will hereafter enjoy a fullness of the love of CHRIST, in whose presence is "fullness of joy, and pleasures forever more."

Then let us seek the holy mountain
Whence flows love's stream, a gushing fountain,
For 'tis the fount of life's fair river,
It flows to all, and flows forever.

DEVILLO RYNDOLDS.
Mt. Pleasant, Wayne Co., Penn., 1859.

LITTLE SINS.

LET us be on our guard against little sins; against what men call little sins, for there is nothing really in the way of sins. Watch against anything that wounds the conscience, however slightly. Conscience is a sacred thing. Guard well your spiritual life. Watch against the little sins that insensibly may wound and thus in the end destroy. You can easily kill a man by stabbing him with one blow to the heart. But may you not easily kill a man also by opening a little vein in his wrist? The blood may only flow drop by drop, but if you don't stop that wound, you will bleed to death, and just as surely as if one plunged a dagger into your heart, and sent you into eternity in a moment. Beware, then, of the little things that keep the wounds of the soul open; guard against little sins, which, if not guarded against, will as surely destroy the soul as one great sin.

John Newton says Satan seldom comes to Christians with a great temptation, or with temptations to commit a great sin. You bring a green log and a candle together, and they are very safe neighbors. But bring a few small sticks and let them take fire, and the log be in the midst of them, and you will soon get rid of your log. And so it is with little sins. You will be startled with the idea of committing a great sin, and so the devil brings a little temptation, and leaves you to indulge yourself. "There is no great harm in this," "no great peril in that," and so by these little chips we are first easily lighted up, and at last the great green log is burned. Watch and pray, that ye enter not into temptation.—Rev. Newman Hall.

VALUE OF THE SCRIPTURES.—As the beauty of the world is set off by a graceful variety, so is it in the Scriptures. There are sublime truths, that the most aspiring reason of man cannot overtop; and there are more plain and easy truths, on which the weakest capacity may converse with delight and satisfaction. No man is offended with his garden for having a shady thicket in it; no more should we be offended with the word of God, that among so many fair and open walks, we here and there meet with a thicket that the eye of human reason cannot look through.—Bishop Hopkins.

How often do men mistake the love of their opinions for the love of truth.

Spice from New Books.

Mineral Springs, Strathpeffer, Scotland.

I descended the hill, and after joining my friends at the Strathpeffer, visited the Spa, in the company of my old friend, the minister of Alnca. The thorough identity of the powerful effluvia that fills the pump-room, with that of a muddy sea bottom laid bare in warm weather by the tide, is, to the dweller on the sea coast, very striking,—it is identity, not mere resemblance. In most cases, the organic substances undergo great changes in the bowels of the earth.

The mineral matter of the Caithness ichthyolite, exists, for instance, as a hard, black, insoluble bitumen, which I have used oftener than once as sealing wax; the vegetable mould of the Coal Measures, has been converted into a fire-clay, so altered in organic pabulum, animal and vegetable—whence it derived its fertility—that, even when laid open for years to the meliorating effects of weather and the visits of winged seeds, it will not be found bearing a single spike or leaf of green. But here, in smell at least, that ancient mud swam over by the Diplopteris and the Diptacanthus, and in which the Coccotheca and Pterichthys burrowed, has undergone no change. The soft bog has become solid rock, but its odoriferous qualities remain unaltered. I next visited an excavation a few hundred yards on the upper side of the pump room, in which the gray, fetid breccia of the Strath has been quarried for dyke building, and examined the rock with some degree of care, without, however, detecting in it a single plate or scale. Detached scales and spines, however, if carefully sought for in the various openings of the valley, might still be found in the original laminae of the fragments. They must have been amazingly abundant in it once; for so largely saturated is the rock with the organic matter into which they have been resolved, that when struck by the hammer the impalpable dust set loose sensibly affects the organs of taste, and appeals very strongly to those of smell. It is through this saturated rock that the mineral springs take their course. Even the surface waters of the valley as they pass over it contract in a perceptible degree its peculiar taste and odor. With a little more time to spare, I would have made this breccia of the Old Red Sandstone the subject of a few simple experiments, I would have ground it into powder and tried upon it the effect both of cold and hot infusion. Portions of the water are sometimes carried in casks and bottles to a considerable distance, but it is quite possible that a little of the rock, to which the water owes its qualities, might, when treated in this way, have all the effects of a considerable quantity of the spring.

It might be of some interest, too, to ascertain its qualities when crushed as a soil, or its effect on other soils. Whether, for instance, like the old sterile soils of the carboniferous period, it has lost through its rock-change the fertilizing properties which it once possessed, or whether it still retains them, like some of the coprolitic beds of the Oolite and Green Sand, and might not, in consequence, be used as a manure.

In mentioning at the dinner table of my friend my scheme of infusing rock in order to produce Spa water, I referred to the circumstance that the Belemite of our Lias deposits, when ground into powder, imparts to boiling water a peculiar taste and smell, and that the infusion, taken in very small quantities, sensibly affects both palate and stomach; and I suggested that Belemite water, deemed sovereign of old—when the Belemite was regarded as a thunderbolt in the cure of bewitched cattle—might be in reality medicinal, and that the ancient superstition might thus embody, as ancient superstitions not unfrequently do, a nucleus of fact. The charm, I added, might amount to no more than simply the administration of a medicine to sick cattle that did harm in no case, and good at times.—HUGH MILLER'S "Rambles of a Geologist."

Acclimating a Plow.

THE other day we were riding past a large farm, and were much gratified at a device of the owner for the preservation of his tools. A good plow, apparently new in the spring, had been left in one corner of the field, standing in the furrow, just where, four months before, the boy had finished his *shin*. Probably the timber needed seasoning—it was certainly getting it. Perhaps it was left out for acclimation. May-be the farmer left it there to save time, in the hurry of the spring work, in dragging it from the shed. Perhaps he covered the share to keep it from the elements, and save it from rusting. Or, again, perhaps he is troubled with neighbors that borrow, and had left it where it would be convenient for them. He might, at least, have built a little shed over it. Can any one tell what a farmer leaves a plow out a whole season for? It is barely possible that he was an Irishman, and had planted for a spring crop of plows.

After we got to sleep that night, we dreamed a dream. We went into that man's barn; boards were kicked off, partitions were half broken down, racks broken, floor a foot deep with manure, hay trampled under foot and wasted, grain squandered. The wagon had not been hauled under the shed, though it was raining. The harness was scattered about—hames in one place, the breeching in another—the lines were used for *halters*. We went to the house. A shed stood hard by, in which a family wagon was kept for wife and daughters to go to town in. The hens had appropriated it as a roost, and however plain it was once, it was ornamented now, inside and out. We peeped into the smoke-house, but of all the "fixings" that we ever saw! A Chinese Museum is nothing to it. Onions, soap-grease, squashes, hogs' bristles, soap, old iron, kettles, a broken spinning-wheel, a churn, a grindstone, bacon, hams, washing-tubs, a barrel of salt, bones with the meat half cut off, scraps of leather, dirty bags, a chest of Indian meal, old boots, smoked sausages, the ashes and brands that remained since the last "smoke," stumps of brooms, half a barrel of rotten apples, together with rats, bacon bugs, earwigs, sowbugs and other vermin which collect in damp dirt. We started for the house; the window near the door had twelve lights, two of wood, two of hats, four of paper, one of a bunch of rags, one of a pillow, and the rest of glass. Under it stood several cooking

pots, and several that were not cooking. As we were meditating whether to enter, such a squall arose from a quarreling man and woman, that we awoke—and lo! it was a dream. So that the man who left his plow out all the season, may live in the neatest house in the county, for all that we know; only, was it not strange that we should have dreamed all this from just seeing a plow left out in the furrow?—HENRY WARD BEECHER'S "Fruit, Flowers and Farming."

Secret of Pulpit Eloquence.

THE real orator should have but what is true in view; he should blot himself out in presence of the truth and make it alone appear,—as happens naturally, spontaneously, whenever he is profoundly impressed by it, and identifies himself with it, heart and mind. Then he grows like it, great, mighty, and dazzling. It is no longer he who lives, it is the truth which in him lives and acts; his language is truly inspired; the man vanishes in the virtue of the Almighty who manifests himself by His organ,—and this is the speaker's noblest, his true glory. Then are wrought the miracles of eloquence which turn men's wills and change their souls. Such is the end at which the Christian orator ought to aim. He should try to dwarf himself, to annihilate himself, as it were, in his discourses, in order to allow Him, whose minister he is, to speak and to work,—a result oftenest attained when the speaker thinks he has done nothing, on account of his too fervent and too natural desire to do a great deal.

Oh, you who have taken the Lord for your inheritance, and who prefer the light and service of heaven to all the honors and all the works of earth,—you, particularly, who are called to the Apostleship, and who glow with the desire to announce to men the word of God, remember that here, more than anywhere else, virtue consists in disinterestedness, and power in abnegation of self. Endeavor to see in the triumphs of eloquence if they are granted you, one thing only,—the glory of God. If you have the gift of touching the souls of others, seek one thing only,—to bring them, or bring them back to God. For this end repress, stifle within your heart, the natural movements of pride, which, since the days of sin, would attribute all things to itself, even the most manifest and the most precious gifts; and each time that you have to convey to the people the word of Heaven, ask urgently of God the grace to forget yourself, and to think of Him and of Him only.—BAUTAIN ON *Extempore Speaking*.

The Alpine Heights.

THE pen and pencil may attempt, and not unsuccessfully, to reproduce the soft gradations of the beautiful or the abrupt contrasts of the picturesque, but they are alike powerless and paralyzed before the awful grandeur of the Alpine Heights, where there is neither life nor motion; where a stern, unsmiling sublimity has molded every form, and stamped upon the scene the frown of a perpetual winter. There is nothing in the ordinary aspect of nature that prepares us for what we see when we have entered the region of perpetual snow. Here is no hum of insects, no rustle of foliage, no pulse of vitality. There is no provision for animal life in the pitiless granite, ice, and snow, that make up the landscape. The solitary eagle, whose slow circling form is painted on the dark sky above, seems but a momentary presence, like ourselves, and not a part of the scene. Nature is no longer a bounteous and beneficent mother, but a stern and awful power, before which we bow and tremble, and the earth ceases to be a man's farm and garden, and becomes only a part of the solar system.—HILLIARD'S *Italy*.

"ONWARD!"

Poetry by Miss R. M. Phillips.

Music by O. A. Archer.

1. On - ward from its crys - tal foun - tain, Speeds the lit - tle stream - let free; On - ward flows the no - ble ri - ver, Till it min - gleth with the sea :)

2. From the mind of man im - mor - tal, Soar - ing up - ward in its flight; Burst - ing through each bond and bar - rier. That de - tained it long in night.

3. In the fu - ture stretch - ing for - ward, No ho - ri - zon we can see; Bound - less as the fields of Hea - ven, Bright and glo - rious it may be.

4. On - ward in the paths of pro - gress! Let us bold - ly take our stand; Be for truth the rea - dy cham - pion, Stri - ving with our heart and hand.

On - ward, speak un - num - bered voi - ces, From the wide cre - a - tion round, From the dim and dis - tant a - ges, With the chains of er - ror bound.

Voi - ces from the past and pre - sent Tell what wil - ling hands have done. And of what, with strong en - dea - vor, In the fu - ture may be won.

Shall we in earth's vine - yard slum - ber, In our lives no ta - ble re - ar; Be like bub - bles on the o - cean, Rise to burst and dis - ap - pear?

On - ward! let it be our watch - word: E - ver high - er seek to climb. On - ward! let our lives e'er e - cho From each pass - ing step of time

WORK AND STUDY.

EDS. RURAL:—In a late issue, VINTON asks if a person can follow farming and a course of studies at the same time. I would ask VINTON, can you follow farming constantly and pleasantly, without permitting a single thought or care, not *directly relating thereto*, to enter your mind? Then, in our natures, you and I differ most materially. In these long days, after the sun has gone to seek a different scene in the farther west, don't you feel a little lonesome and much wearied after having applied yourself, both physically and mentally, within the limits of your own farm? Then seek relief in the studies you love! Study is a very essential ingredient in the composition of a useful life, though it is of little value unless accompanied by physical exercise and a searching mind.

Six or eight hours is enough to sleep. Then you have several spare hours, morning and evening. Through the whole season, you can do as much work from six to six, including an hour's nooning, as from daylight till dark each day; and in that hour after dinner, you might learn much from reading or some light study that will not require deep thought.

Experience tells me that neither labor nor study, alone, is at all pleasant; but with both, all glides smoothly and swiftly on. As the Editor tells us, we need mental discipline to teach us to turn our attention from one thing to another, and to take hold of the different ones with a will that shows that the mind and hands are both at work.

Most certainly, *one thing at a time* is enough. But it does not follow that that thing need last forever. For, at day-time we can work upon the farm, and at night, forget the day, and turn our attention towards some other object of a different nature. Then, VINTON, you can go to town without forgetting your errand there, and return to your labors with your mind refreshed by what you have seen. Try it. EUGENE.

Wisconsin, June, 1859.

"CAN a man be a student and a farmer at the same time," is a question which seems to excite the minds of some of the Young Ruralists; and I must say that I do not quite agree with DUANE, of P—. We would ask the question, Can a man be a farmer without being at the same time a student? I would judge from D.'s argument, that farming required nothing but the physical nature of man, for we understand a farmer to be one who manages a farm, and that his intellectual nature, as he terms it, would be free to cultivate the arts and sciences. Not so. I cannot conceive how a man can be a farmer without bringing his intellectual capacities to bear upon it, equally with his physical; or for a man to engage in any business profitably, without exercising his mind toward the object, particularly a farmer, who must study, and study diligently, the laws of Nature. Again, can a man be a student at law or medicine, and at the same time a farmer? I say he cannot, for his mind will be divided. He will either do injustice to the one or the other; he will have to entrust his work on the farm to a hireling, and "a hireling careth not for the sheep;" or, as Poor Richard says, "He that at the plow would thrive, Must either hold, himself, or drive."

Thus, I argue that for a man to be a farmer in the true sense of the word, he must direct his mind toward this one object. Yet this does not hinder the development of the mind; by no means. As I said before, he must study diligently the "beautiful" in the great book of Nature, and all subjects relative to the occupation of his choice; and if for his motto he has "Progress and Improvement," he will expand the better part of his nature, and he will drink deep from the fount of knowledge and wisdom which the CREATOR has placed in his hands.

Yet, again; can a man in the employment of a farmer be a student? (I think this the case of VINTON.) If I understand by the word student the following of any prescribed course of study, I think not, for want of time; for when a man engages to labor for another, he expects, of course, that his time will be spent to his (the farmer's) best interests, and

"When ruddy morning's broad day light Bids man to labor go," he must be up and doing. At least it is so in this part of the country; and when Night throws her gloomy shadow over the earth, we welcome "tired nature's sweet restorer, balmy sleep." Yet we find a few moments for reading and to gather intellectual food to digest while at work. York, Livingston Co., N. Y. D.

BOYS, DON'T KILL THE BIRDS.

"The robin red-breast till of late had rest, And children sacred held a martin's nest."

AT the present time the animal kingdom seems to be gaining the ascendancy over the vegetable, in the form of insects that vie with each other in their depredations upon vegetable products. A few years ago, the various kinds of grain, fruit, and flowers, were grown with little difficulty from that source, but now, almost everything that is planted or sown in the garden or field, is attacked by some villainous insect, that prevents the natural growth and development of the plant, and these pests of vegetation, are alarmingly on the increase; "see their numbers, how they swell." They are already formidable, and if they are permitted to proceed much further in their conquests upon the vegetable domain, it is evident, that they will subvert the kingdom, and Ceres will be despoiled of her crown.

The most prominent cause of this embargo upon vegetable nature, has been the indiscriminate and cruel massacre of the birds, for the last few years, by boys and itinerant sportsmen, who have destroyed yearly, tens of thousands of the insect-eating birds, in consequence of which, some species have become nearly extinct. If boys must arm and equip for sporting, they should retire to some back field, or to the margin of some swamp, and shoot at a mark, and the ones that return without injuring their comrades, or molesting the birds, ought to be called the best fellows!

The birds are the natural enemies of insects, and they seem to have been created to keep the odious vermin within proper limits; and if the moral and intellectual faculties of Young America, remain so obtuse, as to cause their possessors to take pleasure in pestroing the singing birds we should have stringent laws enacted for their protection.

The crows are perhaps the most useful of the feathered tribe, for they destroy worms, grubs, moles, mice, beetles, &c., through the summer, besides removing the putrid flesh from dead animals in the forests and fields, thus preserving the purity of the air, that would otherwise become destructive to animal life. It has been ascertained by experiment, that a chimney swallow consumes

seven hundred or a thousand flies per day, and the other birds are equally useful in their respective spheres. Nothing was made in vain, especially the birds, whose presence and cheerful music animates and enlivens the scenery of earth.

When "the morning stars sang together," these aerial minstrels undoubtedly performed a grand oratorio, in the bowers of Eden, the bird of Paradise presiding as chief director to the musical throng, whose enchanting melodies were in harmony with the most grand and imposing event recorded in the annals of the Universe.

When spring returns she is accompanied by these tiny songsters, whose rich and varied melody fill the air, while old Boreas retires to his arctic home. Aurora's approach is announced by a prelude from the sylvan songsters, while nature echoes with more than dulcet symphonies her greeting to the orb of day. The farmer is welcomed to the field by the songs of the robin and lark, while the thrush sits upon the top-most bough of some monarch of the forest, and gives utterance to the exuberant feelings of his nature in a clear, sweet and eloquent song, interspersed with brilliant variations, that never fails to delight his auditors. The birds form a charming link in the great chain of animated being, that cannot be broken with impunity, for,

"From nature's chain, whatever link we strike, Tenth or ten thousandth breaks the chain alike." Mt. Morris, June, 1859. N. B. AMENT.

THE SUPPLY OF STREAMS.

THERE seems to have been quite a little discussion going on, in the *Young Ruralist*, in regard as to from whence comes the water which fills our streams; and in a late number of the RURAL, W. M. MASON holds forth a new theory, at least to me, and which seems to be slightly absurd.

Rain and snow not only contribute to supply our springs and streams with water, but are the only contributors. Rain falling upon the earth is either absorbed by it or trickling through it, drop by drop, each drop uniting with other drops, until, forming a small stream, it bursts forth into what is called a spring, and from thence flows on the surface; or when the rain falls very fast, runs off immediately, sometimes causing floods. The idea that the water from the sea filters through and forms the source of the Mississippi and the waters of the great lakes, is absurd.

There is also another wrong idea about inland seas. These are salt-water lakes, having no outlet; and herein lies the reason of the fact of their being salt. The streams running into them carry along, in a dissolved state, salt and other mineral ingredients of the soil, which are left on the evaporation of the water. The evaporation goes on as fast as it comes in. This will also account for the saltiness of the ocean. Thus we see, in the constant circulation of the waters, in the rain falling upon and refreshing the earth, filling our springs and water-courses, the hand of the Creator, supplying one of the most important demands of nature and of man. The creation did not stop with the first seven days, but through the laws of Nature then established, has been continually going on, and is still going on, and will go on to the end of time. L. S.

Washington, Conn., June, 1859.

Our happiness depends very much upon the estimate we form of life, and the effort we make to bring ourselves into harmony with its laws. There are some who are unhappy on system—from weakly adopting a philosophy which lifts all beauty from the face of things, and imbues all their thoughts with a coloring of sadness. These look too much to the negative of things. With them, present joys are ever darkened by the shadows of future grief.

CONTENTS OF THIS NUMBER.

MOORE'S RURAL NEW-YORKER

NEWS DEPARTMENT.

ROCHESTER, N. Y., JULY 9, 1889.

TERMS, IN ADVANCE:

One copy, 1 year, \$2.00	One copy, 6 mo., \$1.00
Three copies, 1 year, \$5.00	Three copies, 6 mo., \$2.50
Six copies, 1 year, \$10.00	Six copies, 6 mo., \$5.00
Ten copies, 1 year, \$15.00	Ten copies, 6 mo., \$7.50
Sixteen copies, 1 year, \$20.00	Sixteen copies, 6 mo., \$10.00
Twenty copies, 1 year, \$25.00	Twenty copies, 6 mo., \$12.50
Thirty-two copies, 1 year, \$40.00	Thirty-two copies, 6 mo., \$20.00

And an Extra Copy, free, to every person remitting for a club of six or more copies; and two free copies for every club of thirty or over. As a new Half Volume commenced last week, now is the time to form clubs for either Six Months or a Year. All persons who form new clubs to commence with July, or introduce the RURAL in localities where it is not now taken, will be liberally remunerated for their time and attention.

Back numbers from April or January can still be furnished, if desired. We will send Specimen Numbers, Show Bills, &c., to all applicants, and to the addresses of as many non-subscribers as may be forwarded.

DOMESTIC NEWS.

Matters at Washington.

The receipts into the Treasury for the week ending June 27th, were \$4,879,000, of which about \$2,350,000 were from customs. The drafts paid amounted to \$3,175,000, principally on account of treasury notes. The balance in the Treasury is \$3,866,000.

Information has been received from a source regarded as thoroughly reliable, giving the particulars of the contemplated filibuster descent upon Nicaragua. The names of certain parties who supplied Walker with arms and money are given, and the enjoyment of the benefits of the transit route are to compensate in part for the expense thus incurred. It is stated that the expedition will start by the middle of August, and that a party of filibusters will rendezvous at Florida and be conveyed to Central America in the Scottish Chief. Whether or not this information is strictly true, it is certain our Government will endeavor to arrest all illegal enterprises, the orders to our naval vessels for this purpose heretofore issued being still in force. Gen. Juarez, before he left for Nicaragua, was fully informed of the filibustering movements.

Advices from Mexico of the 11th ult., state the American Minister had addressed a remonstrance to Miramon's Minister for Foreign Affairs, in the name of President Buchanan, expressing his great indignation at the withdrawal of the excoquatura from the American Consuls, and the murder of peaceful American citizens by Miramon's soldiers at Tacuba. The massacres are characterized as a violation of national rights and treaty stipulations, and Miramon is warned that it will be remembered and redress demanded and ultimately obtained, whatever may be the result of the remonstrance.

Dispatches from the Indian agent of New Mexico to Commissioner Greenwood, state the Navajos are again committing all manner of depredations, regardless of the authority of their chiefs, who are disposed to remain at peace with the whites. He thinks another Indian war is imminent.

The postage stamps and stamp envelopes sold by the P. O. Department during the two years and a half ending with December last, amounted to \$14,000,000; about \$1,000,000 have not been used in the pre-payment of postage.

Notwithstanding the failure of the Post-office Appropriation Bill, it is probable that the clerk hire and all incidental expenses will be paid by the Deputy Post-Master as heretofore out of the accruing revenue on postages for the quarter ending the 26th September.

Personal and Political.

Private letters received at New York by the California mail, report the death of M. Bely, the famous Frenchman whose canal schemes on the Isthmus have caused some commotion.

A letter from Rev. William Aitchison, dated Shanghai, April 6th, announces the death of Rev. William A. Macy, Missionary of the A. B. C. F. M., at that place on the 9th of April. Mr. Macy was a nephew of the late Benjamin F. Butler, Esq. He was a fine classical scholar, of sound judgment and intelligent piety; and his early removal from the Missionary work to which he had devoted his life, will cause many a tear in China, as well as among his personal friends, and the friends of Christ in this country.

The recent English papers announce the death of the Rev. Dr. Burns, who was known as "the Father of the Free Church of Scotland." This event took place towards the close of May, when in the 81st year of his age. He was ordained in 1800; in 1820 he removed to Kilsyth, where his 89 years of pastoral labors have been greatly blessed.

The next Electoral College, chosen in November, 1890, to meet in February, 1891, will—if Kansas should be admitted at the approaching session of Congress—consist of 308 votes, 195 of which will be necessary to a choice for President. The non-slaveholding States will have 186 Electors, and the slaveholding States 120.

The Iowa Democratic State Convention assembled at Des Moines on the 28th ult., and made the following nominations:—Governor, A. C. Dodge; Lieutenant Governor, L. W. Babitt; Judges of the Supreme Court, L. S. Wilson, Charles Mason, and C. C. Cole. The Popular Sovereignty platform was adopted.

The Democracy of Maine met in Convention on the 1st inst.—625 delegates present. The Committee on resolutions reported a series which were adopted, declaring among other things, that the Democracy of Maine re-assert the principles of Popular Sovereignty as the basis of their policy in reference to the Territories, opposing any Legislation by Congress to establish, abolish, regulate or protect Slavery in the Territories; that the people of the Territories, like those of the States, should decide the question of Slavery for themselves; declaring it the duty of the Democratic party to resist all temptations to interpolate in its creed a Congressional Slave Code for the Territories, on the doctrine that the Constitution establishes or prohibits Slavery in the Territories beyond the powers of the people to control it; and declaring against the opening of the Slave trade. The resolutions also denounce the two year amendment in Massachusetts, and go for the annexation of Cuba as a measure of humanity in regard to the Slave trade and favorable to American Commerce. They endorse the administration of President Buchanan in regard to its management of our foreign relations, the suppression of the Utah rebellion, the execution of the neutrality laws, and the exercise of retrenchment and economy.

The first ballot for Governor stood as follows:—Menassee H. Smith, administration, 305; E. K. Smart, anti-administration, 264; scattering, 85. On the second ballot, M. H. Smith received 367 votes, and was nominated. George F. Shepley, of Portland; E. Wilder Farley, of Newcastle; A. M. Roberts, of Bangor, and Bion Bradbury, of Eastport, were elected delegates to the Charleston Convention. The first two are claimed as administration, and the last two as anti-administration.

Terrible Railroad Accident.

A little before midnight of the 28th ult., the night express train from Chicago to Toledo, on the Michigan Southern Railroad, when between South Bend and Mishawaka, passing over an embankment spanning a ravine, at the base of which is a culvert, the embankment suddenly gave way, and the whole train was precipitated into the ravine, which was filled with a perfect torrent of water. The engine was literally buried in the opposite side of the ravine in quicksand and mud, and the tender, baggage and express car, and two second-class cars, were shattered almost into kindling wood, and piled on top of the engine. The two first-class passenger cars followed, and were torn to pieces and carried down the stream, while the sleeping car, although making the leap with the rest, was less injured.

The stream is naturally but a rivulet, but was swollen by the extraordinary rains of the previous afternoon and evening. Flood-wood had probably checked the culvert, converting the embankment into a dam, and the great weight of water, with the concussion of the crossing train, caused the sad calamity. From 150 to 200 persons were on the train; of those upwards of 50 have been taken from the ruins dead, and 50 or 60 more are wounded, or escaped uninjured; and the rest not heard from. As many of the dead were drowned in the ravine, it is feared that others not heard from have lost their lives in the same manner. The killed, as far as their names have been ascertained, are as follows:—Hartwell, express messenger; engineer and fireman, both named Tulip; Babbington, baggage-master; C. W. Smith, road-master; Mrs. E. G. Gillett and child, Stone Mills, New York; Thomas Mishau, Michigan City; J. McCarty, Holmesville, Ind.; Mary Cowan; Mr. Walworth, Adrian, Mich.; a man unknown, had on his right arm the initials W. S. E. S.; Richard Muldany, Calumet, Indiana; Streeter, Sparta, Wis.; Harry Fleckinger, Reading, Pa.; B. P. McCullough, Lawrenceburg, Pa.; two boys named Tidwell; Mrs. Increase Sumner, Alice C. Sumner, Neville E. Sumner, Chicago; Mary Ann Curran, Dunkirk, N. Y.; McNeely, Fon du Lac, Wisconsin; Thomas Mishau, train boy, Laporte; a woman and four children, named Tiswald; Mrs. M. H. Regan, Rockford; Jacob Smith, banker, Wall St.; Cornelius Walworth, Rome, Wis. Eleven bodies not recognized. Quite a number of passengers are missing, and it is supposed they were drowned, and their bodies have floated away.

The unfortunate train left Chicago at 8:30 on Monday evening, and consisted of five passenger cars, besides the baggage and express car. It arrived at South Bend about 45 minutes behind time, and made the fatal leap at about 12:45 o'clock at night.

The Great Balloon Voyage.

THE RURAL has made brief mention of a contemplated trip of several aeronauts from St. Louis to the seaboard, as a species of test trip preparatory to a similar undertaking in crossing the Atlantic. This aerial voyage was entered upon in good faith on the first instant. On the evening of that day, the aeronauts, Messrs. Wise, Lamontain and Gager, with a reporter from the St. Louis Republican, Mr. Hyde, embarked at St. Louis in the car attached to the Balloon Atlantic, and were floated off towards the empyrean. We next hear of them as having been seen, six miles north of Ft. Wayne, Indiana, at 4 o'clock on the morning of the 2d.—Three hours and a half later, at 7:30 A. M., the balloon was seen from Sandusky, Ohio, so near as to admit of reading the name inscribed upon it. As it receded it seemed to fall into the lake. But we hear of it again, two hours later, at Fairport, where also it is said to have nearly touched the water, and then to have risen and disappeared. It was seen from Buffalo about noon, directly over the Niagara River. At 12:15 it passed Niagara Falls. At half past twelve it was seen from Medina, N. Y. It went rapidly over Lake Ontario, and at 2 o'clock the passengers hailed the propeller Young America, then twelve miles north-east of Oswego. Soon after, the balloon landed at Adams, in Jefferson county, New York.

The editors of the Buffalo Courier have had an interview with Mr. Hyde, and obtained an account of the trip, which we condense, as follows: The aeronauts left St. Louis at 20 minutes past 7 o'clock, on Friday evening, and took a course almost due east towards the eastern seaboard. Their motion was very rapid throughout the night, with calm and beautiful weather.

They reached Lake Erie, above Sandusky, about 7 in the morning of Saturday, and about 12 M. were opposite Buffalo. In the last 100 miles on this lake, a current of air in which they floated gradually bore them to the water, until on several occasions their elevation did not exceed 300 feet. Soon after passing the Falls, the strength of this current rapidly increased, until they neared Sackett's Harbor. When over Lake Ontario, and about 30 miles from shore, it became a violent gale of wind, blowing almost directly downwards. Every effort was made to keep the balloon up, by throwing out ballast, stores and instruments, but in spite of all exertions, she made a tremendous dive, striking the water, saving the boat, and nearly bringing about a fatal termination of the voyage to Mr. Lamontain. The balloon then rushed towards the shore, which was reached in a few minutes, from whence it plunged into a dense forest, at a speed which Mr. Hyde estimates at about two miles a minute. The grapnels were cast loose, but the strong iron hooks were wrenched off like pipestems. The boat, which was still below them, went crashing through the trees, leaving a path as if the locality had been visited by a tornado. Mr. Hyde says that trees, of a foot or more in diameter, were snapped asunder as if made of clay, while the branches were flying in every direction. After proceeding about a mile at this rate, in momentary expectation of destruction, the balloon was dashed against a huge tree, by which it was collapsed, and scarcely anything left of it but countless ribbons.

The landing took place on the farm of a Mr. Whitney, in the town of Henderson, Jefferson county, near Sackett's Harbor, at 20 minutes past 2 o'clock P. M., (by the adventurer's time,) being just 19 hours from St. Louis, a distance of over 1,100 miles, being by more than double the longest balloon voyage ever made.

Conflagrations, Casualties, &c.

FOURTH OF JULY ACCIDENTS.—Our city has usually been exempt from those distressing calamities which are so apt to mar the festivities of our National Holiday, but yesterday formed a dread exception, and at an early hour a gloom was thrown over the community by the announcement that three young lads were dangerously, if not fatally, injured. A cannon in the possession of some boys on Main street, had been overloaded and burst, and the ragged pieces of metal were projected indiscriminately amid the crowd surrounding the piece, wounding a son of L. MOORE, four merchant, BARNEY SHEPARDSON, son of assistant in County Clerk's office, and CHAS. FRY. The first named had an arm broken and was fearfully lacerated about the throat; the second, his leg dreadfully mangled, and the third was shot through the body. Young Fry died at half-past one o'clock.—The others are as comfortable this morning as possible, with hopes of their ultimate recovery.

The ship Fleetwood, from Boston for Honolulu, struck a rock off Cape Horn some time in April, which caused her to leak so badly that she was abandoned by the crew, who took to the small boats. One of the boats was picked up and taken into Pernambuco. The other boats have not been heard from. One of the missing boats contained Capt. Dale, wife and child.

The steamship Argo, of the Galway line, left New York on the 23d ult., for Galway, via St. Johns, N. F. She went ashore near Trepassy, in a fog, on Tuesday morning, and sank in the evening. All the passengers and crew were saved by the prompt assistance from St. Johns. Boats were constantly passing from the ship to a cove about a mile distant, carrying ashore what could be saved. The fishermen plundered the ship. One hundred of them came around on hearing the signal guns. They cut away the masts, and completely skinned her. At 4 P. M. the ship filled, and fell on her beam ends, in six fathoms of water. The baggage of many of the passengers was lost. There was no house within eight miles of the shore where she struck. The Argo was a superior ship—costing at the time of her construction \$55,000 sterling. She was employed in the transport service during the war in the Crimea and in India. She was lately purchased by the Galway Co., and insured at Lloyd's for \$45,000 sterling.

The steamer Geo. Lambert, bound up the Missouri with a valuable cargo, took fire four miles above St. Louis on the night of the 25th ult., and was burned to the water's edge. The boat and cargo were a total loss. The boat was valued at \$28,000, and was insured for \$15,000. The cargo was insured. No lives lost.

News Paragraphs.

MR. ALFRED JANSSEN, of Le Claire, Illinois, died a few days ago from the sting of a bee. He was stung in the neck. When stung, he said it was a serious matter for him, as he had once, after being stung, swooned away and remained insensible for several hours. Saleratus was applied to the wound, but he was soon violently ill, became insensible, and in a few minutes had convulsions, and three-quarters of an hour from the time he was stung was dead.

A "WILD CAT" Bank, located at Hartford, Ohio, and called the Manufacturers' Bank, was recently broken up, and the principal banker was arrested. The property of the institution consisted of a trunk, called the "safe," which contained a California of worthless notes, two shirts, one waistcoat, and two sections of a flute. The chief banker said that he had paid a certain New York Counterfeit Detector \$1,900 to quote the bank as good.

A MACHINE to manufacture paper bags, such as are used by grocers, has recently been put in operation in Cincinnati, and turns out from 60,000 to 75,000 bags per day.

A READING drug house informs the N. Y. Tribune, in view of the ginseng excitement in Minnesota, that the autumn is the time to gather ginseng, and that the root dug in the spring is valueless as an article of export. Perhaps the Minnesotians, by rooting up the Big Woods so thoroughly, have rooted out the crop, and thus destroyed the goose that might have laid the golden egg.

The average expense per annum to the members of the different denominations throughout the United States, for the support of their different church services, is estimated to be about as follows: Baptist and Methodist about \$3.40; Presbyterian, \$7; Congregationalist, \$10; Roman Catholic, \$15; Episcopal, \$18; Reformed Dutch, \$22; Unitarian, \$23.

When the workmen suspended work on Minot's Ledge Light-House, last fall, they put a fish six inches in length in the well room, leaving him in close confinement, with nothing to eat. When work was commenced in the spring, he was found as lively as ever, having grown six inches in length during the time, but from his long confinement in a dark place had become totally blind. When the fish caught in the waters of the Mammoth Cave, were exhibited a few years ago, it will be remembered that they were not only blind, but eyeless.

The total number of sea-going vessels in port at New York, most of which are lying idle for the want of remunerative employment, is 620, including 24 steamers, 163 ships, 121 barques, 118 brigs, and 204 schooners. The freight trade continues surprisingly dull, except to France, whither considerable coal is being shipped.

A RECENT debate in the Spanish Cortes, upon the increase of the army, shows no want of patriotic determination, both on the side of the Government and of the opposition, not only to maintain the dignity and honor of Spain, but to retain her Island possessions in the Mediterranean and the West Indies, against every power, European or American.

The first newspaper established in North America was issued in Boston in 1689. The oldest existing newspaper in Massachusetts is now published in Worcester, established in 1770.

THE SUPPLY OF GOLD.—The Philadelphia Pennsylvanian learns from the Hon. James Ross Snowden, Director of the Mint, that there is every reason to believe that the yield of gold, during the present season, from our gold-producing States, will afford a favorable comparison with that of any former year. He also states that there are large amounts of bullion, (principally silver,) being received at New Orleans and San Francisco, from Mexico. The Branch Mint of the United States, at San Francisco, is pushed to meet the business thrown upon it, by reason of the increased yield of the mines of California, and the receipt of silver from Mexico.—These circumstances, together with the fact that the semi-monthly California steamer, which was at New York on the 23d, had on board \$2,600,000, justify the belief that whatever may be the shipment of specie to Europe for some time to come, it will be more than equaled by the product of our mines, and that our specie reserves will consequently be increased during the next few months instead of suffering such a diminution as to excite alarm, much less produce a money panic.

LAKE TRADE WITH EUROPE.—Since the inauguration of a direct trade with Europe from Lake ports in 1858, no less than thirty-seven vessels have cleared for foreign ports from ports on the lakes—chiefly from Detroit. Of these twenty-one have been sent out the present year. Their cargoes have been principally lumber and staves, with some wheat and a few hides. The Detroit Free Press furnishes the following table of the different articles exported during each year:

1858—Wheat, bush	15,000
1857—Hides, No.	8,000
Staves, No.	120,000
1859—Wheat, bush	12,800
Lumber, feet	675,000
Staves, No.	700,000
1859—Lumber, feet	1,100,000
Staves, No. (West India standard)	2,000,000

OVERLAND NEWS.—The Overland Mail from California, the 6th, reached St. Louis on the 23d ult. A passenger states that the Indians on the route are quite troublesome. At Mohawk station the Company employees had refused the Apaches water, in consequence of the great scarcity of that article, there being none for forty miles on either side of the station. The Indians were gathering in considerable numbers around the Corral, and threatening violence.

About forty miles this side of Fort Davis, some four hundred Mexican families, comprising over eight hundred souls, had crossed the Rio Grande. They were Liberalists, and had been driven out by the Church party. They were at Smith's station when the mail passed, and represented as being in a destitute condition.

NEW YORK STATE TEMPERANCE SOCIETY.—The adjourned Annual Meeting of the New York State Temperance Society will be held at Saratoga Springs, on Wednesday, August 2d, commencing at 10 o'clock A. M.

The News Condenser.

- Another revolution has broken out in Sonora.
- Exchange is selling in Chicago at 2½ per cent.
- An Inebriate Asylum is about to be started at Cleveland.
- Strawberries are worth only \$2.50 per pound in San Francisco.
- The "mumps" are raging in Petersburg, Va., as an epidemic.
- A man 74 years old has been arrested as a common thief in Buffalo.
- Snow fell at Hamilton, C. W., between 12 and 1 P. M., on the 21st ult.
- Two persons in Sterling, Ill., have recently been bitten by mad dogs.
- A hall stove fell in Saratoga Co., on Tuesday week, that weighed five pounds.
- A woman was killed last week at a fire-works exhibition in Boston, by a rocket.
- The sum of \$2,304 44 has been raised in New York for the benefit of the Italian fund.
- The Treasury balance is brought down to \$3,000,000, being \$3,000,000 below the working point.
- It is now confidently believed that either the Queen or the Prince of Wales will soon visit Canada.
- They are now using steam power to help the guests up and down stairs in the New York city hotels.
- The people of St. Joseph, Mo., having built two theatres, are now thinking of erecting a church!
- A board six feet and seven inches in width, cut from a California saw-log, has arrived in Boston.
- During a recent tornado in Iowa, a tree ten inches in diameter was uprooted and carried seven miles.
- A land terrapin, bearing upon its shell the date of 1832, was seen near Wheeling, Va., a few days since.
- "In a month's time," said Napoleon, "I will date my proclamations from Milan." He keeps his promise.
- The Mobile Tribune confirms the report that a cargo of slaves was recently landed on the Florida coast.
- Rev. Mr. Millburn, the blind preacher, is lecturing in Montreal on "What the blind man saw in England."
- Two convicts have been discharged from the Indiana Department of the Auburn Prison, perfectly cured.
- A nugget of gold found recently in Tuolumne county, California, yielded melted gold to the value of \$5,750.
- One firm in Cincinnati has sold during the present season sixteen thousand five hundred bushels of strawberries.
- The editor of the Charlotte (N. C.) Bulletin brags of having eaten several of this year's growth of ripe apples.
- In 27 days, Italy has been strewn with 27,000 corpses—poor fellows who sought an epaulet and found a grave.
- A noon-day prayer meeting of business men is held in Philadelphia every day in the week, except Sunday.
- Mons. Blondin, a French rope-walker, crossed the Niagara river last week on a cable stretched from shore to shore.
- The Macopin county (Ill.) delinquent tax list is 40 columns long. About the whole county will be sold for taxes.
- A block of gold worth \$3,339 has been received from California as a contribution to the Mount Vernon fund.
- A tobaccoist at Cincinnati says that he sells upwards of 200 pounds of snuff in the course of a month to ladies.
- The most of what is called court plaster, used in this country and Canada, is made at Portsmouth, New Hampshire.
- Some modern translators of the Bible have made the discovery that the prophet Elijah was fed by Arabs, and not by ravens.
- Apple-Jack, two drinks of which will make a man pick his own pocket, is extensively manufactured in North Carolina.
- The Auburn Advertiser announces thirty-nine arrivals and thirty-four departures from the State Prison for the last week.
- A "Women's Dress Reform Convention" was held at Auburn last week, but adjourned without doing anything worthy of note.
- In 1840, \$4,000,000 worth of dry goods was sold in Cincinnati. In 1860, \$10,000,000. This year it will foot up over \$25,000,000.
- It is said that the recent frost was so severe in Chautauque Co. as to cut down everything except town and county accounts!
- The news of the triumph of the French at Montebello was received with manifestations of joy by the French at New York.
- "Skunk Valley," in Iowa, is said to be a splendid country. It ought to have its name changed, to induce very rapid emigration.
- Eleven English cricket players are coming to this country in September next, to play against the cricketers of America and Canada.
- A man in Massachusetts recently drank three quarts of milk without stopping; then rested a moment and swallowed another quart.
- Ninety-five clerks were discharged from the New York Custom House last week. Their united salaries make over \$100,000 a year.
- The entire amount for purchasing Mount Vernon has been subscribed. The money now taken goes to repair the dilapidated premises.
- The ship Bolton of Bath was wrecked near Machias, on the coast of Maine, on the 16th ult. Only three out of the crew of 15 were saved.
- Thirty or forty feet of rock in the centre of St. Anthony Falls, Mississippi, has been broken off, leaving the falls like a horse shoe in form.
- Mr. Greeley endorses Pike's Peak as a rich gold region, but warns miners against going there without taking with them a supply of provisions.
- The entire receipts of the Bible Society from New Jersey, for the year ending the 31st of March last, were \$15,555 85, being greater than ever before.
- Five Americans who had been imprisoned at Rome had been released at the command of the American Commodore, and were on board the Wabash.
- Three Irish families in Springfield, O., narrowly escaped death, on Thursday week, by eating stramonium, commonly called jimson weed, for greens.
- We hear of a brutal old scamp up North who has perpetrated the atrocious joke of hanging up a dilapidated hoop skirt in his corn field for a scarecrow!
- Milton Curtis, of Piermont, turned a large boar into a pasture with a horse, and the latter was found dead, ripped open by the boar's tusks, the next morning.

FOREIGN NEWS.

From the Seat of War.

The Royal Steamship Arabia, Capt. Stone, from Liverpool on Saturday, 18th ult., arrived at Halifax at noon of the 28th, en route for Boston. Her news is meagre and without much importance. Gen. Gayai had been superceded in the command of the second Austrian army by Gen. Schlieff. The Austrians report that Gen. Urban had repulsed Garibaldi, and that the latter was at Brescia. Additional Austrian troops were moving towards Italy, and the Emperor Napoleon had demanded an additional 100,000 men to besiege the fortresses. The Austrians, it is said, were preparing at Mantua to attack the allies.

The mobilization of the Prussian army, together with the additional hostile attitude of Germany, had created great uneasiness. Kossuth had passed through France en route to Italy. Prince Napoleon's corps had commenced moving. It was reported that the Austrians had entered the Val-telline.

The telegram from Vienna of the 16th, says, that Gen. Count Schlieff had taken command of the 2d army, instead of Gen. Gayai, and that the French had established a depot at Aotivari, on the Albanian-Cosbabinian coast, and disembarked large quantities of gold coin there.

The last accounts from Napoleon's headquarters say that he was concentrating his forces in order to attack the Austrians with an overwhelming force, and it was believed in Paris that a decisive battle would be fought in the course of a week. The following bulletin had been received via Turin:

TURIN, June 15th. The Austrians are retreating from the Oglio, and the allied armies continued to advance. The Austrian corps de armee, which had left Ancona for Pescara, had been directed toward the lower Po, to be joined to the troops in the province of Venetia. It is at present uncertain whether Ancona has been entirely evacuated by the Austrians. Modena and Brescella are free. The numerous municipalities of the Romagna had pronounced for the National cause.

The allied army passed the Serio on the 13th, marching towards the river Oglio. Their advance guard is at Coccoglia.

The headquarters of the King of Sardinia are at Palazzina.

An Austrian bulletin, dated Verona, 15th, says the different corps de armee took their allotted positions unmolested by the enemy. The division of Gen. Urban alone sustained a fight at Castinodolo, with Garibaldi's bands, which, although amounting to 4,000 men and four pieces of cannon, were repulsed by the Austrians. The official Austrian correspondence says that the organization for the defence of the Tyrol territory was progressing. Several companies had already reached there and others getting in readiness. The mountain passes are all occupied.

Vienna letters say that the corps de armee commanded by the Arch Duke Charles were beginning to leave for Italy. The third corps, under the Arch Duke Albert, were moving from upper and lower Austria to Trieste.

A second Austrian extraordinary levy is to be terminated by the 15th of September, and the standard military stature of the men reduced.

Garibaldi's corps is represented as becoming daily more formidable. It was threatening the Southern Tyrol, where the people were getting extremely impatient of Austrian rule.

GREAT BRITAIN.—The new Ministry is constituted as follows, but had not been officially announced:—First Lord of the Treasury—Viscount Palmerston. Chancellor of the Exchequer—W. E. Gladstone. Foreign Secretary—Lord John Russell. Home Secretary—Sir C. G. Lewis. Colonial Secretary—Duke of Newcastle. War Secretary—Salisbury Herbert. India Secretary—Sir C. Wood. First Lord of the Admiralty—Duke of Somerset. Lord Chancellor—Lord Campbell. President of the Council—Earl of Granville. Private Seal—Duke of Argyll. Post-Master General—Lord Elgin. President of the Board of Trade—Mr. Cobden. President of the Poor Law Board—Milner Gibson. First Commissioner of Works—Mr. Cardwell. Chancellor of the Duchy of Lancaster—Sir G. Gray. Sir A. Cockburn succeeds Lord Campbell as Lord Chief Justice of England.

Lord Derby, in the Lords, officially announced the resignation of his Cabinet, and in doing so warmly defended the foreign policy of Lord Malmesbury. Earl of Granville reserved an explanation of the policy of the new government for a future day. The House adjourned till the 21st. In the Commons, Mr. D'Israeli announced the resignation of the Cabinet and moved a further adjournment to the 21st, which was agreed to.

The Times in its city article quotes advice from Frankfurt, which state that the German Confederation are understood to have resolved that 80,000 men, namely, that 40,000 Prussians and 40,000 Austrians shall be sustained on the Rhine. There were also strong rumors that Prussia will issue semi-decisive announcements in the course of a few days. According to the prevalent conjecture peace is to be proposed to the Emperor Napoleon on certain conditions and if these are refused, Germany is to enter into the war. Under these circumstances, there is great anxiety and stagnation in all commercial cities.

The Times also says that Russia is making most warlike preparations at all the naval depots. The Neris division of the fleet is reported to number 88 first class ships and the Baltic fleet 55 sail of the line, of which 14 screw steamers are at Cronstadt.

The Times accounts for the recent shipments of gold from St. Petersburg to London, as payment for machinery made in America and elsewhere. Large Russian orders are lying still unexecuted in England.

FRANCE.—The Moniteur would soon publish a decree, conferring the promotion of honors and crosses on nearly one thousand persons, for military service in Italy.

It was reported that the Generals under Palisier are forthwith to repair to their respective stations, and it was considered not improbable that the army now called the "Army of the East," would be denominated the "Army of the Rhine." The Emperor is said to have demanded 100,000 men

for Italy to besiege the Austrian fortresses. The French army of observation on the Rhine frontiers number 71,000.

AUSTRIA.—An Imperial decree proclaims that the public will receive, for the interest on the National loan now due, either bank notes at 125 florins for every 100 florins, or second government bonds redeemable with compound interest in five years. Commercial letters from Vienna describe the financial condition of Austria as one of complete bankruptcy.

RUSSIA.—A letter from St. Petersburg says if Prussia allows herself to be goaded into menacing steps, Russia will concentrate troops on the Gallician frontier, and send detachments of her fleet to the Russian Baltic ports.

TURKEY.—It is said that the 12th of June was the day appointed for the rising in European Turkey. The political ferment in Serbia was increasing.

COMMERCIAL.—Breadstuffs.—Wheat dull and declined 8¢ on Tuesday, but the market on Friday was firmer at the following quotations:—Western red 100@102; do. white 96@100; Southern white 100@102. In corn there had been a slight decline of all kinds since Tuesday, but the demand was better. Mixed 66@68; yellow 64@66; white 62@64. Provisions.—Meats, Bigland, Althys & Co., Richardson, Spence & Co., and James McHenry & Co., quote provisions dull and a trifle lower. Pork heavy and declined 2¢ but quotations were nominal.

Weather of Last Half of June and the Month.

Temperature average of this half is 67.8°, and for 22 years is 69.2°; and the month is 68.4°, and for the 22 years is 66.2°. The mean heat, then, for this half and for each of the halves, and of course for the month, is below the average about 8°. The last half has been warmer than the first. We had a cold period for three days at the first of the last half, and another on the last day, both owing to thunder showers here or in sight, or extending far over the country.

We had a hot period in the last half week. On the 27th, the heat was 93°, the 28th was 91°, and the 29th was equally hot at 92, but there was a thunder shower passed over us, and the weather cooled some degrees below 2 P. M., and much more afterwards, so that our heat on the 30th at seven A. M., was 52°, and only 64, at 2 P. M. of this day.

The changes have been great through the month; really unusual weather; great cold rapidly following high temperature. Hence, vegetation has been slow, except on the first half of the present week, when Indian corn advanced with great rapidity.

Great rains have prevailed over the country. The Mississippi was very high in the first part of the month, and much damage was done by the flood of that river, and of others.

The flowers of the season, both cultivated and common, have been splendid, and the fruits of the season abundant. Strawberries have been prolific through the month, and, with cherries, have been earlier than usual. The rain here has been below the average, and some farms begin to suffer from drought.

The effects of the frosts of the first half of the month have not been so injurious as was feared.—The wide extent of the frost was remarkable, as was its varying power in localities of the same vicinity. In some places winter wheat and winter barley were killed; in many Indian corn and potatoes, as well as many garden vegetables. But some have grown again, and some could be replanted. The leaves of shrubs and forest trees, even in the south part of our country, which were then young and tender, were entirely killed, and in two days the appearance was as if a fire had passed over them; but they will put forth again, as they were seen to do after the great cold of June, 1816, so that in Autumn, the vegetation will not appear to have suffered.

The harvest of winter barley commenced in the county a few days ago, and the wheat harvest is nearly finished in Southern Illinois, Southern Ohio, &c. The month has been relatively healthful in the great vicissitudes in the weather; and trust in the providence of Infinite Goodness is loudly demanded and will be richly rewarded.

ROCHESTER, July 1, 1859.

PROBABLY FATAL ILLNESS OF SECRETARY FLOYD.—A Washington correspondent of the St. Louis Republican says:—"I regret to report the continued ill-health of Secretary Floyd, who is now sojourning at the Military Asylum, near this city. His late trip to Virginia seems to have had but little effect upon his disease, and his friends are seriously apprehensive he will not soon recover. A member of the Cabinet, who visited Gen. Floyd on the 1st inst., in the country, expresses the opinion that his disease will probably terminate fatally. His family are anxious for him to retire from the Cabinet, and he may do so at an early day should his residence in the country not produce a change for the better."

WILD HORSES FROM SOUTH AMERICA.—Captain Thomas, of the schooner Burdett Hart, from the River Plate, has brought five horses and four ponies to Brooklyn. They are said to be beautiful specimens of the wild horse of that country. Capt. T. spent some time and traveled a considerable distance to procure the finest and best that could be obtained, and these are selections from droves exceeding 10,000 in number. They are indeed a noble sight, and though they have been on board for 45 days, are in as good condition as though just taken from a stable. Their coats shine and look in every way as though they had been under the management of a first rate groom, and received as much attention as a man who thinks as much of his horse as his wife, could bestow.

HORSES IN SOUTH AMERICA.—A correspondent of the Journal of Commerce, who accompanied the Paraguay expedition, says:—"Horses and mares are so abundant as to be slaughtered for their hides and tallow. I have never been asked more than a double for the finest animals I saw under saddle. The general price is \$5 to \$10 for geldings broken to the saddle."

MAPLE SUGAR IN VERMONT.—The Vermont papers state that the banner belongs to Harwick for making the most maple sugar this season. That town made 230,000 pounds. Orleans county boasts of fifteen farmers that have made 15,000 pounds. Harwick has twenty-five farmers that have made 75,000 pounds, and two farmers in the same town have made 14,000 pounds.

SEVANTS IN PARIS.—An American lady, long resident in Paris and perfectly acquainted with its customs, gives her experience of Parisian servants, in the following language:—"You are aware of the petty taxes which our domestics are in the habit of imposing upon everything purchased by them for the use of the household. First in order is the 'sou per pound,' paid them by the grocers, butchers, bakers, &c., for their custom. This, however, is but a trifle in comparison. On a rabbit, bought at two francs and fifteen sous, the cook pockets the fifteen sous. For each dish ordered from a restaurant, the servant gets a premium of five sous. So with butter, and every other article of food. I have calculated that, over and above her wages, my cook's profits amount to at least fifty cents a day. Nor is she satisfied with this. She has made a nice little bargain with my butcher, to the effect that when she buys six pounds of mutton or veal, for me, the butcher is to add a pound of sirloin steak, for her. There is no use in changing servant or butcher. They are all thieves alike, and I might only make bad worse if I interfered."

TWENTY THOUSAND WIDOWS.—Sir Walter Scott admits that the battle of Waterloo created in the British Empire fifty thousand widows. It is probable that the recent battle of Magenta has created at least twenty thousand widows and sixty thousand orphans.

Markets, Commerce, &c.

RURAL NEW-YORKER OFFICE, Rochester, July 5, 1859.

FLOUR.—The tone of the market this A. M. is the same as for several weeks, and we take off another 25 cents a barrel upon all grades.

GRAIN.—Wheat declining, the reduction for the week being equal to 5 cents a bushel. Corn drooping, a range of 75¢ to 80¢ being established. Oats are firmer and in demand. Buckwheat has got up to \$1.00@1.10—these are the figures paid by seedsmen.

POTATOES are advancing, although foreign buyers have withdrawn from market—60¢ to 75¢ is paid, as to quality. Wool has been purchased pretty freely during the week, but we hear of no change in rates.

Wool is steadily advancing—\$3.00@3.10 is the range. Our market reports from abroad are not as late as we would desire, but telegraph operators are supposed to be possessed of as much patriotism as people generally, and in addition, the lightning would not be forced into the harness on the glorious Fourth, so we must put up with those of Saturday—however, we do not think there is much change to be made.

Rochester Wholesale Prices.

FLOUR AND GRAIN.		EGGS, dozen		13 1/2
Flour, winter wheat, 100 lbs.	50 1/2	Honey, box	15 1/2	
Flour, spring do.	48 1/2	Candles, box	12 1/2

MOORE'S RURAL NEW-YORKER

AGRICULTURE RURAL LIFE EXCELSIOR LITERATURE SCIENCE ARTS NEWS

TWO DOLLARS A YEAR.

"PROGRESS AND IMPROVEMENT."

[SINGLE NO. FOUR CENTS.]

VOL. X. NO. 29.

ROCHESTER, N. Y.,—FOR THE WEEK ENDING SATURDAY, JULY 16, 1859.

[WHOLE NO. 497.]

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
RURAL, LITERARY AND FAMILY NEWSPAPER.
CONDUCTED BY D. D. T. MOORE,
With an Able Corps of Assistants and Contributors.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the RURAL an eminently reliable Guide on all the important Practical, Scientific and other Subjects intimately connected with the business of those who are its zealous advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other Journal. Rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.
For Terms and other particulars, see last page.

RURAL LETTERS FROM EUROPE.—2.

BY SANFORD HOWARD.

GLASGOW CATTLE SHOW.—Ayrshire and other Dairy Breeds, and the "Pointe" by which they are judged—Short horns, Galloways and West Highlanders—Draft Horses, Roadsters and "Ponies for Milk Carts"—Black faced Mountain Sheep—American Reading and Moving Machines—Cattle Fair at Tarbolton; Location, Traditions, &c.—The "Cane," Past and Present contrasted—WALLACE and BURNS; Historic Reminiscences, &c.—Closing Scenes of the Fair, KILMARNOCK, Scotland, June 18, 1859.

In my last I made a brief allusion to the Glasgow Cattle Show, and a more particular notice of some portions of it may be interesting to some of your readers. To the public generally, the most attractive department was the Ayrshire cattle. In several of the western counties of Scotland, dairying is extensively carried on. Butter and cheese are made in large quantities, and in the large towns much milk is sold. The Ayrshire breed of cows is almost universally kept here, and it is deemed settled that they are the most profitable for the purposes mentioned. In fact it is the only dairying breed in Scotland. Other breeds have been tried—as the milking (Yorkshire) variety of the Short-horn, and the Channel Islands (Alderney) breed. The former is less hardy than the Ayrshire, is a large consumer, and is said to afford less milk—and especially less butter—in proportion to the cost of keeping. The Channel Islands breed answers well for butter, where good shelter is given, but does not bear the exposure which the Ayrshires are generally subjected to, and is less profitable in the cheese dairy. The Ayrshires are constantly disseminating themselves. They are rapidly increasing in Ireland; many orders are annually sent from England for them, and even the governments of France, Prussia, Russia, and other countries have sent agents to procure them. The rising colonies of Australia and Van Diemen's Land have also introduced them. The reputation which the breed has acquired, has tended to make breeders more careful in their system of breeding, and much improvement has been the result. I cannot help thinking, however, that the rules by which this stock is sometimes judged, are in some respects at variance with the principles of actual utility.

Too much attention is paid to a fashion in regard to the shape of the udder and the position of the teats. No doubt the shape, and especially the capacity of this organ has more or less to do with the power of the animal for yielding a large quantity of milk; but that the special model assumed here, is always indicative of the relative intrinsic value of the animal for milking purposes, cannot be shown. Indeed, several persons have been candid enough to admit, that a cow which did not come up to the fashionable standard in this point, might afford an equal or greater quantity of milk, and be in no way inferior on the score of actual profit. Yet the shape of the "vessel," (as it is called,) is often made the leading, and sometimes almost the only point, in judging cows in milk. At a show, (not that of Glasgow,) which I lately attended, the medal for the best cow or heifer, was awarded to a clumsy-headed, four-countenanced, weak-backed animal, which I would not have accepted as a gift. But this was probably an exception, and I am glad to know that there are breeders who will not be led by the mere caprice of the day, to sacrifice the most important points in reference to constitution and general usefulness. The classes of "aged" animals (those three

years old and over,) of the Ayrshire breed, at the Glasgow Show, were very fine. Several of the bulls and cows were almost faultless, so far as regards their external points, and it was wholly by these, in connection with pedigree, that they were judged—no statement, so far as I could learn, respecting the quantity of milk, butter or cheese, afforded by any cow, being given or required.—The one which took the first premium as a cow in milk, was a really splendid animal, lately bought by her present owner for \$280—\$450.

There was a good show of Short-horns. They were judged wholly in reference to their fattening points. With the exception of a single animal, none of them competed in the dairy classes.

Next came the Galloways and West Highlanders—aboriginal breeds of Caledonia, and admirably adapted to her heathy mountains and moors. Both are very handsome in form, though differing somewhat from each other. The West-Highlanders occupy the bleakest districts, and thousands of them are reared without shelter and with no other food, except a little milk from their dams in early childhood, than what they grub from the rugged pastures. Nature has given them a coat of hair which protects their bodies against the winter's storm. Some of them at this show had still a considerable portion of their last year's hair, three or four inches long, hanging in patches on them. The Galloways are not as heavily coated as the Highlanders, and belong to a lower country. They are larger, but hardly as deep-chested in proportion to their size as the Highlanders—very round-bodied, and lay their legs very evenly. These breeds would be valuable in America, in the hilly and mountainous districts and on the north-western prairies. They are bred almost exclusively for beef, but some of the Highland cows present by no means a mean appearance for dairy purposes, and their milk is of the richest kind and affords butter of the best quality.

There was a large display of draft horses, chiefly of the Old-Scotland breed. They are the best horses of their kind that I have ever seen. Their weight is from 1,600 to 2,000 lbs each, their shape excellent, and their action much superior to that of any other large horses I have anywhere met with. There was a class of roadsters, among which were some fairish animals, but quite inferior to our best horses of this class. A very useful kind of horse was shown under the name of "Ponies for Milk Carts." They were generally about 14 to 14½ hands high, snugly made, full of muscle, and generally fair trotters. They would weigh from 950 to 1,000 lbs. each.

There was a large display of the Black-faced Mountain Sheep, and to me they had a very interesting appearance. Their native habitat is the same as that of the Highland cattle, and there is between them a similarity of characteristics. Probably there are no harder sheep in the world, or any which have a more striking individuality or fixity of type. The rams have very large horns, handsomely curved, and the ewes have small horns. Their heads, black or speckled, are beautiful—the eyes full and bright. Their wool, of a year's growth, nearly reaches to the ground. A prettier sight is seldom seen than a flock of these sheep, led by a line of bold, active, full-horned rams, followed by ewes and young lambs. I think the breed may be useful in America, and I have bought a small lot for Mr. ISAAC STICKNEY, of Boston.

Among the implements at the Glasgow Show were McCormick's reaping machine, HUSSEY'S, and MANNY'S and WOOD'S combined reapers and mowers. The two former have been somewhat modified since their introduction into Britain. The latter has been tried the present season as a mower, in England, with good results.

A few days ago I attended a fair for the sale of cattle, at Tarbolton. The occasion was not entirely novel, as I had attended some fairs of this kind before, but taken in connection with the associations of the place, it had a peculiar interest. It will be recollected that this town and neighborhood are connected with the Plowman Poet of Ayrshire, or to give him a higher title by which he is recognized, the National Poet of Scotland. The fair was held on what is called Fire Hill—that "hill" which Burns says he "had come round about"—(it is hinted that he could not have traveled the foot-path which leads over it that night)—where he met the grim personage who communicated to him the designs of Doctor HOARNSHOO. This hill is a singular spot for the curious. It is principally a natural elevation, at the apex of which is a mound of artificial formation, where, according to tradition, the Druids held religious worship. They kept a fire burning here day and night, for certain periods, and called the place Tarbolton. Partly in remembrance of this ancient custom, the present inhabitants keep a fire here all the night preceding the annual fair. This

MR. MACK'S TROTTER STALLION "NORMAN."

This fine Norman Horse, now the property of CHAS. S. MACK, Lockport, Niagara Co., N. Y., is 17 years old, 16 hands high, and weighs 1,255 lbs. His native color, a beautiful dapple grey, (now light dapple;) was got by Norman, (by some called "Morse's Grey,") out of a Messenger mare; grand-

sire, imported Norman, brought from Normandy, France, to Quebec, and purchased by JAMES MC-NERT, of Washington Co., N. Y., and put into the stud barn. "Norman" took the first premium at the New York State Fair, Syracuse, 1849, being then owned by WM. P. NOTTINGHAM, of Palmyra,

Wayne Co., N. Y., where he was very successful in the stud.

"Norman" is half brother to "Gen Taylor," of California—also half brother to "Grey Eddy," now of Philadelphia—and is the sire of "Prince John," of New York City.

has been done from the earliest period of the Anglo-Saxon occupancy. At the foot of the mound is a broad terrace, where it is said the heathen worshippers were gathered, and who were kept from the sacred mount by a circle of trees at its base. It is said that at a later period, this spot was the seat of judicatory tribunals for the inhabitants of the neighborhood.

On this terrace and on the slope of the hill below, were collected on the present occasion, within the space of two hours, between 100 and 500 head of cattle with their attendants, while on the whole hill were several thousand persons, as purchasers or spectators. It was a most interesting scene.—Viewing it from the top of the mound, one could hardly help comparing it, in the mind's eye, with the scenes enacted here in former years. How wide the contrast! Under the influence of Christian civilization, as here displayed, how has the condition of man been improved, and his sentiments exalted. Where the rude hunter obtained but a precarious subsistence, the landscape smiles under the hand of skillful cultivation; green meadows alternating with fields of waving grain are presented on every hand, while immediately before the eye is a rich display of one the most important products of Agriculture.

But there are other associations which heighten the interest of the picture. On an eminence within view, is the lofty monument erected within a few years to the memory of "Scotia's ill-requited chief," WILLIAM WALLACE, in the inscription on which the name of our WASHINGTON is combined with that of the Scottish hero and the hero of Thermopylae, and all of them declared to be "Watchwords of Liberty." At a little distance, and almost within sight, are the ruins of Craig Castle, which is said to have belonged to the WALLACE family, and where he is believed to have sometimes resided.

Much of "The Land of Burns" is embraced in the view. In the distance are the Cummock hills, over which "the rising moon began to glow;" when the poet sat himself with all his power to counter horns, but could not tell whether she had "three or four." A little nearer, in the same direction, are the woods of Ballochruig, the spires of the town of Mauchline, the scene of several of his poems, and near which is the farm of Mossiel where he resided; while Lochleven, his previous residence, is in this (Tarbolton) parish, and only two miles distant. At the foot of the hill is "Willie's Mill," "Johnny God's Hole," and the cottage where the "Brethren of the Mystic Tie" assembled, of whom he took that touching, "heart-warm, fond adieu," when he had prepared to go to the Indies.

The business of the Fair was dispatched with great rapidity. By one o'clock, P. M., nearly all the cattle had been sold, and many of them had left the ground. I may here remark, that a fee of

half a penny per head was collected for the cattle offered, and this was all that was required to obtain the facilities of the Fair.

Shortly after 12 o'clock a band of music appeared on the mound (the top of the hill,) and many well-dressed ladies stationed themselves there for a while, listening to the stirring airs from the instruments, and enjoying the rural holiday. Children of various ages had been out by hundreds all the morning. Soon after 2 o'clock every person and every animal left the hill, and nothing was seen of Tarbolton Fair, except the numerous lots of cattle wending their way, on the various roads, to the farms of their new owners. But the picture was daguerreotypied on my mind, and will often be reviewed with pleasure.

WHAT ABOUT FODDER?

The political element in hay-making is sadly deficient when a "short crop" looks the farmer full in the face. The "ring of the mower's scythe" is very musical, no doubt, when a full swath of rich, luxuriant grass marks its sweep, but harsh and discordant are the notes when naught but stunted, woody fibre falls beneath the strokes of the mower. The hay-making season is with us once again, but it brings not the agreeable associations, the "wealth of blossoms," and the "sweet odors" of days of yore. The most improved processes of cutting and curing will prove of little value to farmers in this vicinity—he who will tell how to manage so that one ton may be as valuable in stock-feeding as two have heretofore, will most assuredly become a benefactor worthy the highest honors. Less than this ratio will be gladly received, yet it is our belief that the money valuation will be nearly doubled within a year.

It may be profitable to review the current rates at which hay has sold in our market for ten years, (taking the middle of present month for the time,) hence we extract from the market reports of the RURAL for the period designated:

1850	\$ 8 00	\$ 9 00
1851	7 00	11 00
1852	8 00	12 00
1853	10 00	12 00
1854	8 00	12 00
1855	8 00	14 00
1856	6 00	12 00
1857	8 00	13 00
1858	6 00	9 00
1859	10 00	16 00

The extreme rates of '58 and '59 were but temporary,—caused by the pressure of labor upon the farmers and their consequent non-appearance in market,—and the close of the month witnessed a decline equal to two or three dollars per ton. In 1853 corn was considerably lower than at present—63¢65 cents per bushel—while oats were worth only 40¢42 cents. In 1855 grain of all descriptions took an almost unprecedented advance, on account of the foreign demand. Corn then reached \$1.00

and oats 58 cents, but wheat was worth \$2.50a \$2.62½ per bushel. Now, while all other kinds of grain are declining in price, corn holds its rate of 75¢80 cents per bushel, and oats are in demand at 45¢50 cents the weighed bushel—an advance of five cents since our issue of 2d July.

But enough concerning prices,—when men have nothing to sell an array of figures are only arithmetical aggravations. True enough,—did the aggravating influences extend no further we would be ready to exclaim, with the ocean-lookout, "all's well!" What is a depleted purse to an empty stomach? That the probabilities seem to indicate the necessity for an exceeding and very unusual care in the dispensation of fodder, or "short commons," at the very least, will inevitably follow, the greatest doubter in "panic crop-reports" cannot deny. One of the most observing and intelligent of our farmers, in speaking upon the condition of the grass lands, remarked that "upon new meadows the crop was light, and upon old, without exception, it was not worth the labor of mowing." The keeper of the hay-market in this city,—who has noted the various fluctuations in value, with the causes for such changes,—gives his unqualified opinion that hay, from its scarcity, will rule much higher in this market than ever before.

The evident lightness of our hay crop leads to the query, What About Fodder? During the ten years that the RURAL has been in existence, the stock in our county—and, in fact, through Western New York—has increased fully one third in numbers, and the consumption of fodder is proportionably heavier. The number of actual consumers—stock kept in cities,—exceeds the ratio given, and the needs of such will be greater than at any previous period. This being the actual condition of affairs, policy, if no higher motive, should urge the farmer to the accumulation and preservation of everything that can be profitably used in keeping up the animal economy of the country. The strongest of arguments for such a course may be gathered upon every grass field in this section—he that runs may read, and we hope all will be eventually benefited by the warning lessons now furnished us from the great Book of Nature.

HOW TO RAISE TURKEYS.

Messrs. Editors:—In the RURAL of June 25th there is an inquiry from Cayuga Co., N. Y., about raising turkeys, which I will answer. Feed young turkeys with corn, made by heating thick sour milk and draining it through a coarse cloth. Then season it well with powdered black pepper, and give them sour milk to drink. Put in plenty of pepper, especially if the weather is cold or wet. The old turkey, or hen, can be fed corn if you choose, as the young ones will not eat it until they

are quite advanced. "Meal" will make young turkeys "droop" and die, as surely as it is fed to them, but by feeding as above directed, a careful person will not lose one turkey in raising a hundred. If any should show signs of drooping or sickness, increase the pepper and they will come up all right. Quite young turkeys should be protected from the wet, as they are very easily affected by it—often fatally. MISS KATE A. GREENE.
Lancaster, Erie Co., N. Y., 1899.

MESSRS. EDS.:—In the RURAL of June 25th, I noticed an inquiry about turkey raising. Now it is just as easy to "raise" a brood of turkeys as of chickens, and (if raised for market) a great deal more profitable. I will give the method "our folks" have tried for the last three years and with good success, not having lost a single turkey. Here goes. We put the eggs under a hen and when "hatched" put them into a coop and fed them well with oat-meal, and occasionally some sour milk. We give no pepper. When they were about six or eight weeks old they leave the hen to scratch "on their own hook." We then fed them a little barley, say once or twice a day, till fall. A nice lot of "Thanksgiving Turkeys" was not to be found and they brought the highest price in the fall. Raising them with a hen prevents their rambling off as they would with the "old turkey"—and, again, corn meal is not good for turkeys—it is too "loosening." None of our neighbors who have used it have had good luck with theirs.—W. G. RICHES, Molone, Franklin Co., N. Y., 1899.

MESSRS. EDS.:—In answer to an inquiry by a "Reader of the RURAL," I will give him my mode of Turkey Raising. In the first place I winter over the largest and best turkeys that I have, and make them lay and set in the barn, but not near the roost, on account of the lice. When they come off the nest I grease their heads with lard, give them a boiled egg two or three times, and wheat bread and new milk till they get to be four or five weeks old. They do not like meal and I do not think it is good for them when young, but after they get to be a month old, then give them meal.—I wintered two turkeys and have got thirty-six young ones, have lost but one, and that was caught by the hawks.—C. H. REXFORD, Madrid, N. Y.

NEW YORK STATE AGRICULTURAL COLLEGE.

Laying of the Corner Stone.

OVID, July 7, 1899.

FRIEND MOORE:—The ceremonies attendant upon laying the Corner Stone of the State Agricultural College to-day, were highly interesting, and as you were precluded from participating in the proceedings of the occasion and taking notes, I give you a brief account of the "transactions."

The ceremonies took place on the College Grounds. About 1 o'clock Gov. KING, and most of the Trustees, with many leading and active friends of the College, formed a procession at the Farm House and were escorted to the platform by the citizens of Ovid, preceded by the Geneva Brass Band. A large concourse had assembled, numbering not less than four to five thousand—people who, from their behavior and attention, exhibited their deep interest in the proceedings.

On arriving at the foundation of the College edifice, Gov. KING called the assemblage to order, and an appropriate prayer was offered by the Rev. Mr. HUNT of Ithaca. Col. B. P. JOHNSON, Secretary of the Board of Trustees, read the contents of the box to be placed in the Corner Stone, as follows:

Contents of Box Deposited under Corner Stone, July 7, 1899.

Plate with the following inscription:
NEW YORK STATE AGRICULTURAL COLLEGE,
JULY 7, 1899.

Corner Stone Laid by
Hon. JOHN A. KING, Chairman Board of Trustees.
Chartered April 10, 1888.

JOHN DELAFIELD, 1st President: died October 28, 1888.
SAMUEL CHEEVER, 2d President: resigned June 30, 1888.
Trustees, July 7, 1899: John A. King, William Kelly, B. P. Johnson, Henry Wager, Wm. Buell, A. A. Post, Joel W. Bacon, J. B. Williams, E. P. Prentice, Samuel Cheever, Addison Gardner, M. R. Patrick, Rufus K. DeLafield, Alexander Thompson, Arad Joy, James O. Sheldon, Benjamin N. Huntington.

Officers: John A. King, Chairman Board of Trustees; B. P. Johnson, Secretary; Arad Joy, Treasurer; J. E. Seelye, Counsel to Board; B. E. Hewes, Albany, Architect; Thomas Crawford, Geneva, Builder.

The Bible, Transactions of the New York State Agricultural Society and American Institute, Red Book, Legislative Manual of New York, Norton's Elements of Agriculture, John DeLafield's Report of the Seneca County Agricultural Society, Charter of the College, 1888, List of Officers, and Trustees and Regulations—Reports of Trustees to the Legislature, 1888-89. Agricultural Papers, State of New York. Daily Papers: Albany and New York, and other papers from the State. List of Trustees and Officers since charter.—Rev. E. W. Sprague's Sermon on the Completion of the Atlantic Telegraph. Copy of the last letter of Baron Alexander von Humboldt on receiving the Transactions of the New York State Agricultural Society, April 15th, 1899, with a letter from the Hon. J. A. Wright, American Minister, Berlin. List of Premiums of the New York State Agricultural Society, 1899, and list of officers. Proceedings at the Dedication of the New State Agricultural Rooms, February 13th, 1897, with addresses by B. P. Johnson, Samuel Cheever, T. C. Peters, Wm. H. Bogart, Wm. Kelly, Gov. John A. King, Harvey Baldwin. Addresses before the New York State Agricultural Society, by Hon. Edward Everett, Jos. E. Williams, Alonzo S. Upham, Wm. T. McCoun and others. Dr. Asa Fitch's Reports on the Insects of New York. B. P. Johnson's Report on the World's Fair, 1893. List of the Subscribers and Donors to the College.

Gov. KING then laid the Corner Stone, and delivered a capital address to the people in attendance. The address will of course be furnished for publication. Brief addresses were also made by Maj. M. E. PATRICK, of Saratoga's Harbor; Hon. A. D. CONORS, President of the State Ag. Society; Hon. J. B. WILLIAMS, of Ithaca, Col. B. P. JOHNSON, and others. The remarks of the several gentlemen were appropriate, timely and interesting.

The evening was celebrated in the village of Ovid by a very liberal display of fireworks.

The New York State Agricultural College has now become a fixed fact, and its completion placed beyond the contingency of a doubt. I am not, on

many accounts, pleased with the location, but still the Farm has great capacity, and perhaps is well adapted for the purposes intended. I regret that want of time precludes me from entering into details regarding the future of the College. It must not now be allowed to falter or fail.

Yours, P.

RICE vs. BEANS.

THAT an antagonistic spirit exists in man is fully evident—that a similar spirit exists in vegetables is not so generally known, and yet, believing it does exist, we shall offer in evidence the following:

No country was ever settled by a people laboring under severer deprivations and difficulties than New England. The determination to succeed, alone carried them through the labor of making the desert to "blossom as the rose." The hardships endured by them were romantic and thrilling beyond description. Thrown upon a rugged, uncultivated soil they were forced to be frugal in dress and diet. Among the vegetables found at their board we note one, chief in excellence and first in importance as a nutritious, healthful food. Grown upon their own soil by their own labor, and, withal, being exceedingly palatable, it is no marvel that this vegetable should become the patron diet of the hardy Puritans. It was not to gorge the appetite with the enervating products secured by commerce that they risked all in one throw for a home in the rugged forests of the West. The wilderness is no place for the gratification of an epicurean palate—at least it is not when men have the making of a nation and a government before them. To confess the truth, it must be admitted that the fare of the New Englanders was seldom that to tempt the appetite. It was rather promotive of sound heads, strong nerves, and sinewy arms for labor and defence. Hence, because first in value—prominent among the gifts of CERES—we record Beans.

This product entered very largely into the diet of the early settlers, and was prepared in several different ways—prominent among which was bean-soup—more commonly known as bean-porridge,

"Best when nine days old."

To this invaluable aid, we attribute the manly virtues, and strict morals, so long characteristic of the New Englanders. At the period of which we speak, this leguminous vegetable was so extensively cultivated and was so fully promotive of the success and progress of the people as to deserve being called the Era of Beans—or the age when the Yankees were emphatically above the reproach of "not knowing beans!" The boys and girls of this period were hardy and vigorous, and could tell "which side their bread was buttered" and "how they came by it." Their wants, engendered by such a regime, were neither fetitious nor difficult to satisfy, while the strength imparted is evidenced in the changes produced by their labor in not only the Eastern States, but New York, Ohio, and the West.

Their homely diet begat no burning desires for the expensive or showy in dress, and frequently the genuine home-spun arrayed the strong limbs, and set off the charms of the generous, hearty and happy "young folks." Wisdom smiled upon them, and the first men of our nation out-grew their sunny looks within range of the hunger-appeasing, odoriferous soup kettle.

The War of Independence served in no way to detract from the value and fame of beans. In fact they seem to have joined in promoting the cause, and contributed no inconsiderable items of aid in times of necessity towards the final result. The devotees of our hero looked for developments fluttering alike to their own labor and abstemious diet at the close of the war; nor were they disappointed. Cities arose,—commerce increased,—wealth was sought and flowed in as a reward for their constant labors. Nor in trade, commerce and the accumulation of wealth, were they alone successful—they maintained their rights in legislative halls, and commanded not only national respect, but the respect of all nations; so that the representatives of the "bean faction" were the messengers of the government.

But at length, after having enjoyed long and uninterrupted supremacy over all other vegetables, a rival enters the hitherto unobstructed path of our progressive hero. Cultivated by a different race of people who neither possessed the soil upon which it was grown, or were allowed the product of their own labor, Rice was at an early day offered in exchange for the ingenuity of the partisans of beans. Every argument which fancy could invent—and every inducement which reason could offer—were used in introducing this vegetable upon the tables of the Spartan followers of our "Hero of the North." Its success was not immediate, but it gained a foothold, and as a luxury, was occasionally offered upon the same table with our veteran, free-labor product.

Little fear was entertained in the beginning of an unfavorable result to our own toil-earned product; but for some unexplained cause,—although rice did not supply the place of beans as food,—the latter grew into less and less repute, until only found offered when an occasional day of extra physical exertion called for increased supplies of healthful nutriment.

The result of the abandonment of beans has been fertile in multiplied disasters. The wisdom of judgment,—the energy of action,—the high aim and unswerving integrity of purpose,—which once characterized our representatives is no more. Our parties are broken—our councils distracted—our efforts feeble and profitless. Rice has gained in every onset, and if not apparently victorious, manages to recruit its strength in every struggle. Triumph has followed triumph, until we behold the antagonism of vegetables engaging the attention of the highest intellects of the civilized world and distracting and rendering stormy and boisterous the councils of a great people.

The powers of wisdom, the labors of philosophy, and the cunning of reason, have all been invoked to assign the cause of our present position in the financial, commercial and political world, and each has been baffled—the real cause remaining hidden. Our finances are deranged by the gratification of imaginary wants—our commerce through the derangement of our finances; while the cause

of our political troubles is the prolific cause of each and singular of the above—simply this; we no longer know the patron diet of the north—the leguminous bean.

The whole swarming throng of evils which have come upon us like the murrain, and frogs, and lice of Egypt, are but afflictions from a dispensing hand to bring us again to a knowledge of our peculiar interests by acquaintance with beans.

Our people have not only forgotten beans in the outward world—politics, finance, &c.—but the body and heart have become contaminated. Rice, with its able and efficient supporters in the contest—Cotton and Tobacco—has introduced many and grievous habits. And as one vice alone seldom takes its abode in the human heart, so others follow in sickening detail, clinging like leeches to the deluded recruits of our Arch-Adversary until taken as worm companions, thus evidencing that we are worthy the reproach, as a people, of not knowing beans.

O! ye deluded sons and daughters of the Puritans! acquire the habits and virtues, and adopt the manners and dress of your successful fathers, that your liberties may be upheld, your good name maintained, and your triumph insured. Think not to acquire happiness by abandoning the teachings of your worthy sires for those of to-day, and remember that, although "the wicked flourish for a season, their end is death." Harden not your hearts like PHARAOH of old, but consider present visitations persuasive enough to direct you into the way, and ever after in national councils—in politics, and finance, and morals, cling to the interests of your own soil in opposition, if it must be, to all others, and let no antagonism of vegetables, or lure of trade, blind you from knowing our true-born, politic and sagacious counselor—the Shekinah of our success and liberty—the Leguminous Bean.

W. H. GARDNER.

Amboy, Ill., 1899.

HOW SHOULD HAY BE CURED?

EDS. RURAL:—A farmer in a late number says, "The process of curing (hay) should, if possible, be perfected in the cock," and he seems afraid of the burning sun. This is a mistake. The true way is to "make hay when the sun shines." I have owned horses for the past twenty years, and have never had one get the heaves. I attribute their exemption to making the hay I have fed them, by curing in the sun, without cooking. Grass, with all its juices, particularly clover, will soon heat and sweat. And hay that has ever been sweated, let it be in cock or mow, must be dusty. In fact, the hay is partially or wholly destroyed in proportion to the heating. I admit, in most climates, (like the English,) there is some excuse for curing in the cock, but not the least in this climate. In drying by the sun the grass is cured by extraneous heat, while cock-cured grass has, by destructive fermentation, to furnish its own heat, and it does so at a great loss. Now, if we had room and leisure to hang up our hay and cure it in the same manner that tobacco is cured, and as medical men do their herbs, it would be the best way, but that, of course, won't pay. Nobody would think of putting tobacco, or any herbs for medicinal purposes, when green, in heaps or cocks to self cure by the heating and destructive process. Then why persist in curing the food of animals in that way?

CALEB WINEGAR.

Lake Grove, N. Y., 1899.

Rural Spirit of the Press.

Culture of Potatoes.

A WRITER in the *Prairie Farmer* thinks potatoes are seriously injured by working when wet with dew or rain, and relates the following experiment tried last year:—"A part of his potato field, the whole of which was treated alike, and a good soil, he plowed and hoed once only, in the middle of the day when the ground was perfectly dry, leaving them untouched until dug in October. The vines kept green throughout the season, and the crop of potatoes was very large. The other portion of the field was worked three times when the ground was wet with dew. These blighted early, gave but a half a crop, and that of an inferior quality. The seed and time of planting were the same."

Chafing Under the Collar.

WE clip the following from the *Boston Journal*: "A gentleman who has tried the plan successfully for five years, communicates the annexed method of preventing horses from chafing under the collar. He says he gets a piece of leather and has what he terms a false collar made, which is simply a piece of leather cut in such a shape as to lie, singly, between the shoulders of the horse and the collar. This fends off all the friction, as the collar slips and moves on the leather, and not on the shoulders of the horse. Chafing is caused by friction, hence, you see, the thing is entirely plausible. Some persons put pads or sheep-skins under the collar; these, they say, do as much hurt as good, for they augment the heat. A single piece of leather, like that composing the outside of a collar, without any lining or stuffing, he assures us, is better than anything else."

New Kind of Cattle Food.

The English beef breeders are always on the lookout for cheap and nutritious feed for their stock. They use up everything that they can grow at home, and import millions of tons of different kinds of feed to supply the deficiency. More than 100,000 tons of oil cake are imported annually into the island, the greater part of which is obtained in the United States. The *London Farmer's Magazine* gives an account of a new species of cattle food which is beginning to be imported in large quantities, and used by the farmers. It is called the "Locust," or locust beans. It is the fruit of the locust tree (*Ceratonia Siliqua*) which grows in Spain and South of Europe. It states that in Sicily the quantity gathered amounts to eleven or twelve thousand tons in a year. They have long been used as cattle food in Spain, and are even relished by the inhabitants when fresh and ripe, from the sweet pulp they contain. According to a careful analysis these Carole or Locust beans give 65 per cent. of sugar and gum, and about 25 per cent. of nutritious vegetable matter.

Agricultural Miscellany.

THE WEATHER.—HAYING AND HARVESTING.—The weather of the past week has been most auspicious for the labor in which farmers are generally engaged—Haying and Harvesting. The present week opened very warm, and as we write (Tuesday) the weather is becoming hot and dry. Considerable grass was cut last week. The crop is very light, as previously reported. Many farmers commenced harvesting wheat and barley ten days ago, and that important labor will be mostly completed in this region the present week. Both crops are generally good. Except in limited localities where it was injured by frost, the wheat crop is remarkably fine. Of course comparatively little is grown, but in proportion to the amount the yield promises to be most satisfactory. Had as much been sown as of yore—of early varieties, at the right time, and on proper soil—Western New York would this season produce a large surplus of "pure Genesee."

WHEAT IN WESTERN NEW YORK.—For nearly a decade past, Western New York has scarcely been "counted in" by those who annually make estimates relative to the Wheat Crop, its probable yield, &c. The prevalence of the mildew for several successive years, discouraged the great mass of wheat growers, and but little ground has been occupied lately by the former staple—though the success of some in obtaining a good yield last year, induced many others to "try again," and sow somewhat liberally last fall. The result, thus far, has been most favorable, where the proper conditions were observed as to varieties, soil, and time of seeding—except in localities where the Wheat was affected by the severe June frost. Indeed, during the past ten days we have seen as fine fields of Wheat in this country as were grown before the appearance of the mildew. Many of these bid fair to produce from thirty to forty bushels of first quality Wheat to the acre. Among others, we examined several fields of Dayton wheat, the product of seed brought from Ohio last fall by Capt. R. FLETCHER, of Le Roy. It is a very fine variety—a white bald wheat, with short, stiff straw, and if it acclimates as well as the Mediterranean, will prove invaluable in this region. ELISHA HARMON, Esq., of Wheatland, has seventy acres of this variety, which he will average at least thirty bushels to the acre. We are aware that "one swallow does not make a summer"—that the present season has been remarkably favorable for the growth and maturity of the wheat plant—yet, from information obtained last season and this, from observation and reliable cultivators, we are satisfied that the former great staple of this section of the Union, can still be successfully and profitably cultivated. We are devoting time and attention to the subject, and confidently believe that we shall soon be able to state how the mildew can be headed and wheat grown abundantly in Western New York.

Most of the wheat we have seen is of the early varieties—such as the Mediterranean, Golden Drop, and Dayton—yet we hear of some fine fields of the Soule's variety. A great portion of the wheat heretofore will be harvested the present week.

STATE AG. COLLEGE.—Though we were prevented from witnessing the laying of the Corner Stone of this College, on Thursday last, one of our Special Contributors, who was present, gives a brief account of the proceedings, as published elsewhere. The occasion was apparently very pleasant and interesting to all participants—and we suspect that our friend P. was then and there more active and oratorical than his modest report showeth. The origin, progress and objects of the Institution are fully set forth in the address of Ex-Gov. KING, a portion or all of which we shall endeavor to publish in a future number. The affairs of the College have not, perhaps, been managed in the wisest manner, thus far, yet we trust the Institution will, ere long, become worthy its name and an honor to the Empire State. The College edifice is said to be well advanced—one entire story being complete, and also portions of the second. The Farm extends from Seneca Lake to the village of Ovid, a distance of nearly two miles, and possesses many advantages, in both soil and location, for the purposes to which it is to be devoted.

A correspondent writing us relative to the laying of the Corner Stone of the State Ag. College, calls attention to the fact that the Programme of the occasion was headed "New York State Agricultural Society," and asks for an explanation—whether it was a misprint, or an intended (though sudden) intermingling of the two institutions. We are not advised, and can impart no light on the subject.

THE NEW ENGLAND FARMER of last week announces that Mr. NOBBS, who revived the paper in 1849, and has been its principal proprietor since that period, has relinquished a portion of his interest—one-third, to Mr. ALBERT TOLMAN, who has chiefly managed its business concerns for the past five years, and one-third to Mr. RUSSELL P. EATON, recently of Augusta, Me., and for several years editor of the *News and Miscellaneous* departments of the *Maine Farmer*. The new partners are said to be young, enterprising and capable, and will add strength to a journal which has long ranked among the best of its class. Ex-Lieut. Gov. BROWN will continue as the Agricultural Editor, in which position (with Wm. STIMMONS, Esq., as General Editor,) he has earned an enviable reputation, and rendered the *Farmer* both popular and profitable. The new firm—Messrs. NOBBS, EATON & TOLMAN—and all concerned in conducting the *Farmer*, have our best wishes.

A telegram just received, announces that Mr. SYMONDS, General Editor of the *N. E. Farmer* and author of the popular "Aimwell Stories," died of consumption on Friday night last.

FROST IN JULY.—The "glorious fourth" opened very coolly in this region, for we learn that there was a regular white frost in many localities of Western New York. We hear of no special damage, however—owing, perhaps, to the firing of cannon, (though the object was different from that suggested by our Chautauque Co. friend, whose article on "firing cannon to prevent frost" was noticed two weeks ago.) Letters from Ohio and Michigan mention frost there also, on the 4th, but no serious damage is reported.

THE UNITED STATES FAIR, which is to be held at Chicago this year, is the subject of a sharp chapter or two by our friends of the *Prairie Farmer*, who evidently don't like national interference with State affairs—affirming that the "Great National Exhibition" will prove injurious in lessening the interest and attendance at the Illinois State Fair.

AN Endowment in behalf of Agricultural Education has been made by F. ST. GEORGE COCKE, Esq., who has presented to the Virginia Military Institute \$20,000 for the establishment of an Agricultural Department in that institution.

CORRESPONDENTS are again advised that all articles must be accompanied by the real name and residence of the writers to secure attention. It is not necessary that the names be published, but they must be in our possession.

AGRICULTURAL FAIRS FOR 1899.

ANNEXED is as complete a list of National, State, County and Town Fairs for 1899 as we are enabled to give at the present time. We shall re-publish the list, with additions, next month, and trust Secretaries of Societies will meantime assist us by forwarding the necessary data in regard to Fairs not now enumerated:

U. S. Ag. Society, Chicago	Sept. 12
Maryland, Frederick City	Oct. 25-29
Tennessee, Nashville	Oct. 10-15
Georgia, Atlanta	Oct. 24-28
Illinois, Freeport	Sept. 8-11
Indiana, New Albany	Sept. 26-29
Iowa, Oskaloosa	Sept. 29
Kentucky, Lexington	Sept. 18-16
Maine, Augusta	Sept. 18-16
New Jersey, Elizabeth	Sept. 18-16
New York, Albany	Sept. 18-16
South Carolina, Columbia	Nov. 8-11
Ohio, Zanesville	Sept. 20-23
Vermont, Burlington	Sept. 18-16
California	Sept. 27, Oct. 6
Michigan, Detroit	Oct. 4-9
Missouri, St. Louis	Sept. 25
Canada West, Kingston	Sept. 27-30
Canada East	

NEW YORK.

Cayuga, Auburn	Sept. 14-16
Delaware	Sept. 14-15
Erie, Buffalo	Sept. 27-29
Jefferson, Cairo	Sept. 27-29
Jefferson, Watertown	Sept. 21-22
Livingston, Genesee	Sept. 20-22
Monroe, Rochester	Sept. 20-22
Oneida, Rome	Sept. 24-26
Orondaga, Syracuse	Sept. 27-29
Orleans, Albion	Sept. 20-22
Putnam, Mexico	Sept. 13-15
Putnam, Carmel	Sept. 27-29
Rensselaer, Lansingburgh	Sept. 15
Saratoga	Sept. 18-16
Schoharie, Watkins	Sept. 8-10
Seneca, Waterloo	Oct. 12-14
Steuben	Sept. 23-30
Westchester, North Salem	Sept. 20-22
Wyoming, Warsaw	Sept. 27-29
Yates	Oct. 12-13

TOWN SOCIETIES.

Brookfield, Brookfield	Sept. 23-29
Cattaraugus, Danville	Sept. 23-29
Convent, Convent	Sept. 27-29
Dryden, Dryden	Oct. 8-5
Galen, Galen	Sept. 15
Palmyra, Palmyra	Oct. 11-13

OHIO.

Fayette, Washington	Sept. 7-8
Pickaway, Circleville	Sept. 7-9
Ashtabula, Jefferson	Sept. 13-15
Geauga, Burton	Sept. 13-15
Brown, Georgetown	Sept. 6-9
Jefferson, Steubenville	Sept. 14-16
Erie, Euron	Sept. 14-16
Marion, Marion	Sept. 14-16
Madison, London	Sept. 14-16
Portage, Ravenna	Sept. 14-16
Brown, (Ind.) Ripley	Sept. 20-22
Cincinnati, Ohio Branch	Sept. 27-30
Delaware, Delaware	Sept. 11-18
Lake, Painesville	Sept. 21-23
Priebe, Eaton	Sept. 22-23

HORTICULTURAL

THE CHERRY.

For many years, even from the first settlement of the country, until the past two or three seasons, the cherry trees in Western New York have been entirely free from disease, and have borne regular and abundant crops of the finest fruit. Set out in almost any yard or garden, without pruning or care, bruised and broken, at the time of picking, they have borne all, struggled manfully against the greatest difficulties, and regularly as the season came round gave a generous crop of delicious fruit. For three years past, however, our cherries have suffered from unfavorable seasons, until many have been led to believe that their culture must be abandoned—the trees were injured in the winter, the fruit poor, wormy, and rotted on the trees before becoming fully ripe. The present season has put to flight all these gloomy forebodings. Never have we seen the trees more healthy and vigorous, or such an abundant crop of sound, beautiful fruit, and for days, and in some cases, for weeks, have ripe specimens remained on the trees uninjured. To-day (July 11th) we saw *Early Purple Guigne* on the tree, the first ripe specimens being gathered on the 20th June. This should teach us not to be too easily discouraged. If our seasons change for the worse, may we not reasonably believe that they will change for the better again? Let us exercise patience, wait and hope. Impatience is a worse enemy to fruit culture than insects or bad seasons.

The Cherry, although not grown extensively for market, like the apple, is one of our most valuable fruits. It ripens during June and July, when scarcely any other fruit can be had. The *Heart* and *Bigarreau* are fine for the dessert, and the *Morello* and *Duke* excellent for cooking. The trees grow rapidly and bear early, so that no one, however old, need despair of eating of the fruits of his own planting. In three and four years after planting, the Cherry will produce from one to two bushels. Then it is a beautiful tree, useful for shade and ornament, as well as the fruit. It is nicely adapted for small village lots, where there is only room for a few trees, and in such cases may well take the place of ornamental trees.

The Cherry bears so early, and is of so good a form, that not much attention has been paid to dwarfing, though in all our best gardens we find a few dwarf trees. On the grounds of Ellwanger & Barry are some beautiful specimens that are now bearing excellent crops, and the fruit is larger in many cases than we find it on standard trees. The *Early Purple Guigne*, for instance, was shown by these gentlemen at the last meeting of the *Fruit Growers' Society*, as large as the *Black Tartarian*. Almost every one declared, at first sight, that they were incorrectly named.

The Cherry is divided into three classes,—1st, *Heart*; 2d, *Bigarreau*; 3d, *Duke* and *Morello*.

1st, *Heart Cherries*.—The fruit of this class is heart-shaped, and the flesh sweet and tender. The trees are rapid growers, and attain a large size. The leaves are large, thin and pendant. The *Black Tartarian* and *Black Eagle* are two of the finest varieties of this class.

2d, The *Bigarreau* class comprise some of our largest and finest sorts, such as the *Yellow Spanish*. The flesh of this class is firm,—in other respects it is like the *Heart Cherries*. The growth and habit of the tree are the same. Indeed, the distinction, although made, we believe, by most cultivators and writers on the subject, is not very marked, as some sorts that are classed with the *Heart*, have quite firm flesh.

3d, *Duke* and *Morello*—have roundish fruit, very tender, juicy and acid. It is only this class of Cherries that are fit for cooking. Indeed, some sorts are so sharp that while they are excellent for this, they are good for nothing else, such as the *Kentish*, *Morello*, and others like them. Other sorts, like the *Mayduke*, when fully ripe, are excellent for the table. The trees of this class have a slow growth, and never make as large trees as the *Heart* and *Bigarreau*. The leaves are small, thick and dark. This class is very hardy, succeeding well in almost any climate and soil. They are the only kinds that succeed in some parts of our country particularly at the South. The Cherry succeeds well generally on any good soil, though a sandy loam seems most suitable. Trees of the two first classes should be planted at least 25 feet apart, and the third class about 20 feet. We describe a few varieties—all that at present we can find room for.

Bauman's May is one of the first cherries to ripen in Western New York, and is very popular, both on account of its earliness and productiveness. It is of French origin, and was first introduced into this country, by Col. Wilder. The fruit is small, oval, heart-shaped. When fully ripe, of a darkish red color, nearly black. Flesh, dark colored, juicy, and of good flavor. The trees are free growers, and attain a large size.

Early Purple Guigne is larger than the preceding, ripens about the same time, and better in quality. It is about medium size, and of a blackish purple color when fully ripe. Both of these varieties generally ripen here between the 10th and 20th of June.

Knight's Early Black is one of the best black cherries, and comes in season just about the time the two preceding varieties are gone, generally between the 20th of June and the 1st of July. The fruit is oblong, heart-shaped, and somewhat irregular in outline. Nearly black when ripe, and abounding with a rich, high-flavored juice.

Gouverneur Wood is a tender and delicious cherry, raised by Dr. Kirtland, of Ohio, which we have before commended. Ripe generally about the 1st of July. The fruit is a little above medium size, of a beautiful amber color, and of a delicate cherry cheek on the sunny side, when fully ripe. One of the very best cherries grown.

GREAT BIGARREAU OF MEZEL.

DONNA MARIA is a very good acid cherry, following *Early Purple Guigne*, and valuable for pies, preserving, &c. It is of medium size, flattened at both ends, light red until matured, when it becomes dark. It makes but a small tree, in fact, not much more than a bush.

GREAT BIGARREAU OF MEZEL, or *Monstrous de Mezel* is the largest and finest looking of all the black cherries. Its appearance is well shown in our engraving, though we have seen specimens larger. It is so large and showy, and the flesh so firm, that when generally grown it will no doubt prove one of our best market cherries. The tree is a strong and irregular grower, more so than any other variety we are acquainted with. The fruit is black, larger than *Black Tartarian*, heart-shaped, with an uneven surface. It is not high flavored, but juicy and agreeable. The fruit is produced in large clusters. Ripe in Rochester about the 1st of July.

ELLIOT'S FAVORITE is one of Dr. Kirtland's seedlings, and is a beautiful small cherry, yellowish, mottled and shaded with red—flesh tender and almost transparent; not high-flavored. The tree a good bearer. A pretty, fancy fruit, for the amateur.

HOVEY CHERRY.

HOVEY is a good, large cherry, and bears immense crops. The branches this season are fairly covered with the bright-red, showy fruit, making the tree a most beautiful object. In appearance it is somewhat like *Napoleon Bigarreau*, and about the same size, though of better quality. The fruit is oblong, heart-shaped, with a shallow suture on one side.—Skin, fine rich amber in the shade, mottled with brilliant red in the sun, often covering the whole fruit, when exposed. Stem, rather stout, about an inch and a quarter in length, inserted in a deep, round cavity. Flesh, pale amber, rather firm, rich and juicy. Ripe this season here, from the 10th of July.

MAYDUKE.—The *Mayduke* is an old, a very popular and a very useful cherry. Before ripening so as to be fit for the table, it is excellent for cooking, and when fully ripe it is one of the richest of the half-acid cherries. It is, therefore, an excellent family cherry, and is well adapted by its hardiness for localities where more tender sorts fail.

LATE DUKE.—Following the *Mayduke*, is another excellent duke cherry, the *Late Duke*. It is large, when fully ripe, rich, dark red. Flesh, tender and juicy, with a sprightly sub-acid flavor; not quite as sweet as *Mayduke*. Ripens gradually from about the 10th of July, and hangs on the tree a long time. One of the very best of the *Duke* cherries.

BLACK EAGLE is perhaps the highest flavored of

all the black cherries. Indeed, it is so good that after eating freely of it, many other good sorts taste insipid. Ripens early in July, a few days after the *Black Tartarian*.

FLORENCE.

FLORENCE.—Were we to select the brightest and most beautiful of all cherries, we don't know but the *Florence* would be our choice. Fruit is about the size of the *Hovey*, and somewhat similar in form. Skin, amber, shaded and marbled with a most lively red, with a tinge of delicate violet that distinguishes it from all other varieties we are acquainted with. Flesh is very firm, but very juicy and sweet. Ripe from the 10th of July to the 1st of August. An excellent sort for market.

DOWNER'S LATE RED.—Fruit large, roundish, slightly mottled, tender, juicy and sweet; an excellent late cherry. The tree is an erect, beautiful grower, bears well, and the fruit hangs for a long time on the tree. Ripe from the middle of July to the 1st of August.

BIGARREAU, OF Yellow Spanish.—This variety has been cultivated in America about 60 years. It retains the popularity it acquired many years since, and is still one of the largest and finest of the light-colored, firm-fleshed cherries.

NAPOLEON BIGARREAU is firmer in flesh than the *Yellow Spanish*, fully as large, and more heart-shaped. It is of good flavor, and a showy, popular market cherry, though the flesh is too firm to suit many.

REINE HORTENSE.

REINE HORTENSE.—A French Cherry of the *Duke* family, and an excellent variety, the largest of its class. Fruit, heart-shaped and bright red at matu-

rity. Flesh, tender, juicy, sweet and rich, with a slight acid. The tree is a vigorous and handsome grower of the sort, resembling the *Mayduke*, and bears early.

BLACK TARTARIAN is perhaps the most popular of all our black cherries, and may be considered among the dark-colored cherries, what the *Yellow Spanish* is among the light. The tree is a rapid grower, erect, and makes a beautiful tree. Fruit, large, heart-shaped; skin, glossy, purplish black. Flesh, purple to black, thick; stone, small; rich and delicious.

Inquiries and Answers.

DISEASED APPLE TREES.—Being a reader of your valuable paper, I wish to inquire, through its columns, what is the cause of young apple trees turning black, a foot or eighteen inches from the ground, and afterwards dying? Our trees are on a loamy soil, well drained.—Will the *Rural* readers please give their opinion on the subject, and the cure, if any.—C. M., Cicero, Onondaga Co., N. Y.

PLANTING FOREST TREES.—I should like to be informed by some reader of the *Rural* of the proper time to set out young forest trees, and the varieties which are most likely to live.—W. H. H. FRANKSON, Pittsford, St. Lawrence Co., N. Y., 1859.

FOREST TREES may be transplanted either in the spring or the fall. Among the best and most certain of our native trees, we will name the Sugar Maple, Soft Maple, Basswood, White Ash, and Elm.

OLD STRAWBERRY PLANTS AND RUNNERS.—Can the true and genuine Strawberry be obtained by setting off sets or divisions of the original or true vines? Are those obtained from runners better plants, and more sure of producing fruit identical with the parent seedling? Your views upon this subject will be not only interesting, but probably profitable to many of your readers.—E. H. B. Buffalo, July, 1859.

The fruit will be the same, whether old plants or young ones from runners are set out. Young plants are the best, though we have often set out old ones rather than wait late in the season for runners, and with the best results. The old plants if watered, or the season is showery, will throw out runners, when set early in July, and cover the ground with young plants before fall.

DROPPING OF PEACHES.—PRUNING PEACHES.—I receive almost daily inquiries for the cause of the rapid dropping off of peaches, (which are now about as large around as a copper.) I have noticed that gum issued from them in several places, and then in a few days they would drop off. Can you, or some of your subscribers, give the reason, and a preventive, if any, against it? I don't remember of ever seeing any similar disease on peaches here before. My trees are all very healthy and growing rapidly. Our soil here is mostly clay. When is the best time to cut back peach trees to have them form fruit buds for the next year?—W. C. R., Granville, Licking Co., O., 1859.

COLD, wet weather, when the fruit is young, often causes it to drop. In many of the fallen specimens you will, no doubt, find a white maggot near the stone. The only tree we know of bearing fruit in this section the present season, is losing much of its fruit from the maggot. Where trees make a very rank growth of wood without forming fruit buds, pruning in July will check growth and induce their formation.

FRUIT CULTURE IN MICHIGAN.

Messrs. Eds.—I notice an inquiry in the *Rural* relating to orcharding in Western Michigan, and not having seen any reply, I would say that for three or four years past much attention has been given to fruit-growing in this section. The immediate Lake shore, or within one or two miles, is considered better than it is further from the water. The peach crop very seldom fails here, and there is an abundant crop in prospect this season, near the lake, though further inland the crop suffered more or less from the severe frosts of June.

A dry soil of good quality, well adapted to fruit-growing, may be found both on openings and timbered land. Most of the orchards already set are upon the openings. Some prefer the timbered land. I think the peach does not do as well in the Grand River country as it does here. No doubt the apple will flourish here as well as further south. I was myself a resident of Macedon, N. Y., about nine years; and if my friend there desires to make any further, or any special inquiries, he may address me at Millbury, Berrien Co., Mich., and I will cheerfully reply. I. J. HOAG.

WORTHY OF ENCOURAGEMENT.—A somewhat novel yet benevolent project, for the amelioration of the condition of the poor orphan girls, is now under consideration. It is proposed by Mrs. T. W. PHELPS, of Irving Place, who has generously donated an extensive and suitable plot of ground near New York for the purpose—to establish a Horticultural School, where young girls may learn such light and healthful branches of industry as are embraced in the growing and canning of all the finer fruits and vegetables, the care of bothouses, the breeding of birds, the rearing of fowls, etc. Prosperity attend the attempt to teach young ladies something useful!—*Horticulturist*.

REPORT OF THE FRUIT GROWERS' MEETING.—Duties as an officer of the *Genesee Valley Horticultural Society*, prevented us from attending the July meeting of the *Fruit Growers' Society*. For our report we had to depend upon the kindness of a gentleman who is unused to reporting, and this will account for some inaccuracies of which we have received complaint. J. J. THOMAS, for instance, spoke of wild grapes being brought from the Rocky Mountains, and not strawberries. R. G. PARDEE cultivated the wild strawberries to which he referred, and which proved inferior in flavor to most cultivated sorts.

HORTICULTURAL EXHIBITION.—The July show of the *Genesee Valley Horticultural Society* will be held on Friday, July 22d, at Corinthian Hall, in this city. Cherries, Gooseberries, Currants, Raspberries, Herbaceous Flowers, and Vegetables, are included in the premium list. The June exhibition was excellent and was visited by very large numbers. We anticipate equal success this month.

HINTS FOR HOUSEKEEPERS.

Eds. Rural.—Perhaps a few hints and suggestions may not come amiss to those housekeepers who do not yet understand the mysteries of domestic management and economy. The season for flies—those great pests to a house-keeper—is now hastening, and if you would not be swarmed and annoyed with them, you must use constant and unceasing precautions, which, if you will think so, are not half the trouble the flies will make you. Flies will "congregate most" where there is something to tempt them, and so leave nothing exposed to attract. A good housekeeper is uniformly neat and methodical, and usually has food away from dust. But now, especially, you need to be careful. Cover your bread, pies and cakes, as soon as out of the oven with a thin cloth, if nothing more. Keep meats of all kinds in a safe, if you have one, or in something they cannot get at. Keep covers on your sugar-bowls, and have your box open as brief a time as possible, and do not set food on the table, such as bread, cheese, sauce, cake, &c., to stand long uncovered before eating, and the moment the table can be cleared take care of them, and do not leave even a fragment of sauce or other food lying on a shelf, or any place. Have a definite place to cut bread and cake, keep a knife and cloth there, cover what you leave, and have a brush handy to brush away crumbs—it will not consume a moment's time to attend to all these little things, if you only have your mind on your interests, and have order and method about you. Go into a pantry in fly-time, and see a pie or two standing about, a dish of sauce, sugar uncovered, flour bin open, and shelves scattered with crumbs, dirty milk-pans, a dish of meat, &c., &c., and you may set down the mistress as a slovenly, untidy housekeeper, whose table will never be inviting, nor house in order.

We cannot expect to have a pleasant, cheery home, unless we take a little pains, and to do so it is not necessary to be too careful, and so fastidious as to render every one uncomfortable. Just be thoughtful, quiet, attentive, doing things in the right time and place, and doing them well. In cooking a meal you need not get your self, table, and sink, tidy-turvy with dishes, knives, spoons, covers, and traps that will take half an hour to pick up, and get in order to put away; and never get your hands in dish-water till you have enough to finish your work, and your dishes, &c., all snugly picked up and placed handy. Some girls and some women, too, begin to wash dishes with a little water, the fire just out, and none heating, and the table but half-cleared, dishes standing all over the pantry or cupboard, making them twice the work necessary.

Another important item in hot weather is to get over your dish-water the moment you have your meals prepared, and it will heat with the remaining fire, so you need not sweaten in a warm kitchen to do up your work. Unless you can keep your wits about you, and attend to these trifles, you must expect a world of vexation, fatigue, and unnecessary labor. If you would not be a slave to your own heedlessness, think, see, observe, and you will be abundantly repaid in your clean, quiet home and dress, and especially will your husband bless the luck that gave him a thoughtful, orderly, tidy, cheerful wife and housekeeper.

A FARMER'S WIFE.

Western New York, June, 1859.

COOKING MEAT, CAKES, &c.

BREAD CAKE.—"Very Nice."—Three cups of dough (very light); 8 cups of sugar; 1 of butter; 8 eggs; a nutmeg; fruit; 1 teaspoonful of pearl-ash dissolved in a little hot water. Rub the butter and sugar together, add the eggs and spice, and mix all thoroughly with the dough. It will do to bake immediately, but will be better to stand a short time.

A NICE WAY TO COOK MEAT.—Take a couple of pounds of mutton, cut in small pieces about the size of a nut, put into a clean iron pot, add half a dozen good-sized fresh tomatoes, peeled and cut in pieces. Salt, and, if liked, a tablespoonful or more of rice. Water enough to cook it. Let it cook very slowly, and keep it covered. This is a very nice way to make a stew, and we have used it constantly during the season of tomatoes.

BLACK CAKE.—One pound of flour; $\frac{3}{4}$ of a pound of butter; $\frac{1}{2}$ pound dark sugar; 1 pint of milk; 1 teaspoonful pearl-ash; 4 eggs; 2 glasses brandy; spice and fruit; 1 pint of molasses. If wished richer, add another quarter pound of butter. GABRIELLA.

HOW TO STARCH COLLARS.—My wife wishes me to inquire through the columns of your paper the best method of starching collars. There is a gloss and a firmness upon them when they come from the store that differs from the ordinary domestic way of "doing them up," and the process by which this is done is what my wife desires to know. Any information from your intelligent correspondents will be thankfully received.—J. A. McCOLLUM, Newfane, N. Y., 1859.

We give the following in response to Mr. McCOLLUM's query. This may prove just what is needed, meanwhile the wives and daughters of the land can report their various modes:

Take one ounce of spermaceti and one ounce of white wax; melt into a thin cake on a plate. A piece the size of a quarter dollar, added to a quart of prepared starch, gives a beautiful lustre to the clothes, and prevents the iron from sticking.

KEEPING EGGS FRESH.—Take fresh eggs, cover the shell with grease, and lay the small end down, in a jar or tub and cover tight. In this way I have kept them as fresh as when just laid.—Mrs. A. V. M., Buffalo, N. Y., 1859.

ASLEEP.

An hour before she spoke of things
That memory to the dying brings,
And kissed me all the while;
Then, after some sweet parting words,
She seemed among her flowers and birds,
Until she fell asleep.

'Twas summer then, 'tis autumn now,
The crimson leaves fall off the bough,
And strow the gravel sweep.

I wander down the garden walk,
And muse on all the happy talk
We had beneath the limes;
And, resting on the garden seat,
Her old Newfoundland at my feet,
I think of other times;

Of golden eyes, when she and I
Sat watching here the flushing sky,
The sunset and the sea—
Or heard the children in the lanes
Following home the harvest wains,
And shouting in their glee.

But when the daylight dies away,
And ships go dark in the bay,
Those recollections cease:
And in the stillness of the night
Bright thoughts, that end in dreams as bright,
Communicate their peace.

I wake and see the morning star,
And hear the breakers on the bar,
The voices on the shore—
And then, with tears, I long to be
Across a dim, unbounded sea,
With her forevermore.

Written for Moore's Rural New-Yorker.

THE OLD TRUNK.

We have got one!—and its physiognomy has grown brown and defaced with age. The brass-headed nails have become tarnished, but I can distinctly perceive my father's initials upon the top—"H. D." I write these letters very reverently, for they are upon his tombstone in our country graveyard. There is a large padlock attached to this trunk, which has traveled over land and sea, but has now arrived at its "haven of rest"—"the garret." If it could tell its own story, I presume that it would call our attention to the many hard knocks upon its battered sides, and we should hear of long nights upon the stormy deep, when mighty winds lashed the waves into huge drifts of foam which swept down upon the rocking ship like an avalanche from the mountain height. But I love to look over the contents of this old trunk, for there are many sacred relics stowed away in its capacious corners.

"I must burn up some of this rubbish," said my sister, one day, when we were trying to reduce the mass of confusion to something like order.

"No, you shall not! for Time has been busy here, and I never liked to obliterate his dusty foot-prints."

It was ever my delight to pore over old dusty books, which were printed when literature was in its infancy. What changes the "age of progress" has wrought! Our own generation "takes time by the forelock," and marches through difficulties in a moment's period which our forefathers were all their life working to overcome. Here is an almanac twenty-two years old; 1837 is marked upon it, and busy fingers turned its pages to find "the day of the month," long before I was born. I will look in the glass of history to discover what important events are reflected upon it from that year. First I behold "a great commercial crisis, which was brought on by a madness of speculation, when city lots, real or imaginary, were so bought and sold that fortunes were made in a day." Idleness and extravagance stalked throughout our land, but after this public fever had subsided, numberless families were reduced to hopeless poverty. Upon the 4th of March, 1837, MARTIN VAN BUREN sat down in the Presidential chair for the first time, and his eyes looked over a nation that was sunk in pecuniary distress. But "whom the Lord loveth He chasteneth." Our country has been brought low many times, and as it sat weeping and bemoaning in sackcloth and ashes, with bowed head and pride humbled, a great lesson was taken into the hearts of her children—how soon it was forgotten is testified by the recent calamities which have befallen them. We hope for better things now, for Aristocracy has laid aside her "royal purple," and condescends to appear in a "calico dress" at the house of God. But what is this!—my father's little, time-worn hymn-book! It has black morocco covers, and the leaves are yellow with age. The lines look blurred, too, but perhaps it is my eyes, for the tears are brimming over them, and my hands shake so I can hardly read the first verse of this hymn:

"On Jordan's stormy banks I stand,
And cast a wistful eye
To Canaan's fair and happy land,
Where my possessions lie."

I can almost see the gray head keeping time, while my father sang this in his own old-fashioned way. But there was melody in his voice, and a prophetic light in his eyes, for they seemed to behold the possessions he has gone to claim. Ah! will his beloved companion and children join him there? He went down to the "dark valley" greatly comforted, for the angels sang to him,

"Come away, come away, to thy rest in the sky,
The tear, the last tear, wipe away from thine eye;
The wife of thy bosom, thy children so dear,
Bid adieu! till in heaven they all shall appear."

Here is "The Family Guide," printed 1833, "comprising many useful directions for cookery, pastry and confectionery," from the best authorities, it says. Well, I can testify that they were extraordinary recipes, for my memory can tell about a tin oven in which many delicacies were "done to a beautiful brown," after this cook-book had been duly consulted, and various condiments

stirred up and turned into the little heart-shaped cake-dishes "to bake." Those were the good old-fashioned days, when we had but one room, which served for parlor, dining-room and kitchen during the early settlement of our prosperous Western country, and the forest trees wrapped their green arms all around "our home." Now, broad meadows stretch away to distant woods, which encircle our horizon with a narrow belt.

But this June afternoon is going down to clasp hands with the night, and I must finish my explorations in "the old trunk" at another time.

A. P. D.

WOMAN'S EQUALITY AND "RIGHTS."

There is much contention in these days with regard to woman's equality and rights with man, and men are denounced as "monsters," "tyrants," &c., which seems to me somewhat ahead of the truth. True, men have enacted some laws which are not favorable to us—abridging our right to hold property, and this they did thinking women were incapable, by nature or practice, to manage and control business, and contend for and preserve their rights. And how far wide of the truth did they get? How many women are there who are fitted, by nature or education, for accumulating and controlling property. And as for her having the right of suffrage, if we were to take time and enter into the public arena of strife and corruption, what becomes of our homes and families? Things are better as they are. Men are men, and women are women, and we are no more fitted to fill their position than they are ours. What half of the women are hallooing and haranguing about I cannot imagine—we weak, defenceless pigmies of women!

What have our race ever done worthy of a monument? True, we are patient, enduring, gentle, and all that—but man is great, wonderful! He is, truly, "the noblest work of God!" His genius reaches to the clouds and spans the universe! He discovers planets and measures them, and calculates space and distance—even the lightning comes and goes at his bidding! His steamships traverse the boundless seas. Men build our railroads—they design and erect our temples, our churches, our buildings, and their art and ingenuity furnish and adorn them. They invent our machinery, construct our factories, weave our cloth, till the earth for food, and to their energy, strength and skill we are indebted, directly or indirectly, for every convenience or luxury of life—even to the small items of pins, needles, &c. Our legislators, statesmen, our orators, our editors, sculptors and painters, are men—with, perhaps, one or two exceptions.

And amid all this power and greatness, there are few who are not noble, generous, gallant, and considerate of the weak and unfortunate, as our public institutions for the relief of the distressed abundantly testify. And everywhere we women are feted, honored, protected and guarded against insult or danger, and every arrangement made for our comfort and ease that ingenuity can devise or expense accomplish. And what do we? We grumble because we do not receive more attention, and are not considered of more consequence! We receive all the benefits we enjoy as our just dues, and scarcely deign even a polite acknowledgement. And yet, what have we ever done—or the most of us—except to wear gracefully, or otherwise, the splendid and comfortable fabrics their industry and means have given us, and to eat, or perchance, to cook the food furnished for us, and to stay in and order the sumptuous houses they build for us, and ride in their carriages, and perhaps take care of our children, &c., &c.—a multiplicity of multitudinous nothings. What more we have ever done, or are likely to do, I have not discovered. All honor, say I, to the strong and superior intellect and the toil-hardened hands! Heaven be praised that the world is not full of women! We are well enough—perhaps we act our part, and fill the niche nature intended; but to assert or assume an equality with man, in strength or intellect, how vain, how futile! QUEBEC.

PLEASURE FOR A CHILD.

Blessed be the hand that prepares a pleasure for a child, for there is no saying when and where it may bloom forth. Does not almost everybody remember some kind-hearted man who showed him a kindness in the day of his childhood? The writer of this recollects himself at this moment as a barefooted lad, standing at the wooden fence of a poor little garden in his native village; with long eyes he gazed on the flowers which were blooming there quietly in the brightness of a Sunday morning. The possessor came forth from his little cottage; he was a wood-cutter by trade, and spent the whole week at work in the woods. He had come into the garden to gather flowers to stick into his coat when he went to church. He saw the boy, and breaking off the most beautiful of his carnations, which was streaked with red and white, he gave it to him. Neither the giver nor the receiver spoke a word, and with bounding steps the boy ran home; and now, here at a distance from that home, after so many events of so many years, the feeling of gratitude which agitated the breast of that boy expresses itself on paper. The carnation has long since withered, but it now blooms afresh. —Douglas Jerrold.

BEAUTY is always a charm. It may be a cheat. The fruit which follows the flower gives character to the tree. A sweet, gentle heart crimsoning with its modest blush the face of beauty, is that finer touch which God impressed upon human nature, when he took a rib from the side of Adam and of it made woman.

HAD I a careful and pleasant companion that should show me my angry face in a glass, I should not at all take it ill. Some are wont to have a looking-glass held to them while they wash, though to little purpose; but to behold a man's self so unattractively disguised and disordered, will conduce not a little to the impeachment of anger. —Plutarch.

Sad it is when fate kindles the funeral pile of hope that Remorse should bring the torch. —Jean Paul Rufford.

A SILVER LINING TO EVERY CLOUD.

Written for Moore's Rural New-Yorker.

BY MRS. MINNIE WALDON.

Striking by my window gazing out into the West,
Where the lingering rays of sunset beautifully rest,
Where its arrows swiftly speeding gleam like burnished gold,

And rest them in the billows which the snowy clouds unfold;
A ray of peace steals o'er me, and a joy I cannot tell
Has lighted up the shadows that o'er my spirit fell.

Distant sounds of music gently greet my listening ear
Like the harpings of the angels coming ever near;
And so heavenly in its tones, so divinely sweet,
As its murmurings and swellings softly blended meet,
That the sorrows of life's pathway quickly pass away,
And the flowers of existence fill each coming day.

Life need be no lengthening shadow fitting in our path,
Every night, however dark, a brighter dawning bath,
"Every cloud a silver lining," every leaf a light,
If the woes that thicken round us do not dim our sight,
And if we would catch the radiance of each glimmering star,
Hope must send its beacon light to guide us from afar.

Friendship's laurels may entwine us, and her genial smile,
Beaming 'neath a crown of roses, sorrow must beguile;
Let us win her favor and endear her to the heart,
Let the thorns that now surround us overmore depart,
And breathing in a purer air show that we have been
Where the lights are ever gleaming shadows in between.

Wilmington, Del., 1859.

LITERATURE.

Written for Moore's Rural New-Yorker.

LITERATURE is a natural and necessary attendant on civilization. The wandering savage may possess his rude songs,—interpreters of the heart,—and his wild traditions, chronicling the glory of by-gone ages, but a scientific, æsthetic and religious literature he cannot have, from causes inherent in the nature of things. The trifling productions named, spring rather from an emotional nature than from a mind redeemed from its bondage to matter, developed, strengthened and matured by ages of intellectual culture. What is there in the calm, eventless, monotonous character of savage life, flowing idly by with scarce an ebb or ripple to arouse the nobler part of man, to cause the unfolding of the hidden wings, and the steady, resistless flight onward and upward to those serene, cloudless regions where the Day-Spring has its place? The daring adventures of the chase,—the simple tales of passion,—the exciting incidents pertaining to "the wager of battle,"—form the staple of the legends that the dark-eyed Arab maiden listens to in the quiet tent at the close of day.

There is no more interesting study than the progress of literature from these offsprings of nature and impulse to the chastened and carefully pruned productions of brain and soul—it is "first the blade, then the ear, then the full corn in the ear." It is said that the discovery of the use of iron was the first step from barbarism to civilization, and this is true in a certain sense. Iron is the lever which moves the mechanical world. But there is something of infinitely more importance than anything which merely elevates the physical condition. The invention of letters, or hieroglyphic symbols of whatever kind, has done more for the advancement of society than any mechanical art or science could do. The thinking mind alone is competent to guide the working hand. It is said that in Scotland they could compose elegant Latin verses before they could make a wheelbarrow. The characters traced by the hand of Cæsar, were the germ of all the noble inventions which have since blessed the world so abundantly; and if ever man is able to pierce the veil that separates the known from the unfathomable,

"To tread unhurt the sea's dim lighted halls,
To chase day's chariot to the horizon walls,"

it will be traceable to the same general cause. When thought has been awakened, and a way found to express it, it grows and matures most gloriously, and no human hand can arrest its progress.

The preservation of the memory of the noblest achievements that have shed lustre over the annals of mankind, is due alone to the embalming power of literature. All the chivalrous daring of the high-souled patriot,—the exalted calmness of the martyr dying for conscience-sake,—the lofty heroism of absorbing love,—would be forgotten and the example be lost to future generations were it not for this preserving power. The vast monuments of art in Egypt, designed to commemorate those who erected them, have been powerless to effect that purpose, while the intellectual monument reared by the genius of Boswell, will convey the fame of the Urso Major of English literature to untold myriads. The nations destitute of a written language and a literature, have utterly perished, and their very names are forgotten on the earth; but were Greece and Italy stricken out of existence tomorrow, they would still live, to all practical purposes, and possess the same influence over the thinking of all coming time.

The process of building up a national literature is often discouragingly slow, but it should be remembered that it is a work destined to last,—not a fleeting bubble, bursting as soon as formed.—The appreciation of literature grows with its growth and strengthens with its strength. England was content to listen for centuries to the simple rhyming of untaught rhymesters before she was prepared to understand the rare philosophy embedded like pearls in the rough bed of SHAKESPEARE'S mind,—Greece, when first emerging from the shades of barbarism, (say for example in the heroic age), would have derived little instruction from the pure metaphysics of PLATO,—the majestic strains that VIRGIL drew from his sounding lyre would have fallen on unheeding ears had they been poured

forth when Romulus laid the foundations of the Eternal City. That which has cost much toil and labor and wasting of the midnight oil, cannot be understood without some preparatory culture of the mind. Before literature can perform its rightful task of civilization and refinement, education must be general among the common people. They must hold in their hands the key to this choice mental treasure, otherwise, when the gifted few who guard it are gone, the blessing of it will perish with them, and those whom it would have benefited sink back into rayless night. It was so in ancient Egypt where the priests carefully closed every avenue to learning from all but themselves,—it will be so in any country daring enough to repeat the experiment. The true glory of literature, and the conditions of that glory, are but imperfectly understood. To be worthy of the name it must adapt itself to all parts of man's nature, and not only instruct him how to conquer the opposing elements, but also how to gain that nobility of all conquests, the victory over self; not only how to use this life, but also so to employ it as to gain a better,—not alone how to tread this earth, but also how to ascend into heaven. Literature is but the handmaid of religion, and the nation who converts her into the mistress, is sure to reap the reward of such folly. It is the violation of a most sacred law. A celebrated divine remarks that literature has a much feebler hold in America than is generally imagined, and would die out were it not for religion." It is well that it is so. Far distant be the day when religion is driven from our happy land; but if that day ever comes, literature will go, too; for God has joined them together, and man may not put them asunder. L. E. WALD.

Cohocton, Steuben Co., N. Y., 1859.

THE PRINTER.

The printer is the Adjutant of Thought, and this explains the mystery of the wonderful word that can kindle a hope as no song can—that can warm a heart as no hope—that word "we," with a hand-in-hand warmth in it, for the Author and the Printer are Engineers together. Engineers indeed!—When the little Corsican bombarded Cadiz at the distance of five miles, it was deemed the very triumph of engineering. But what is that paltry range to this, whereby they bombard ages yet to be?

There at the "case" he stands and marshals into line the forces armed for truth, clothed in immortality and English. And what can be nobler than the equipment of a thought in sterling Saxon—Saxon with the ring of spear on shield therein, and that commissioning it when we are dead, to move gradually on to "the latest syllable of recorded time." This is to win a victory from death, for this has no dying in it.

The printer is called a laborer, and the office he performs, toil. Oh, it is not work, but a sublime rite he is performing, when he thus "sights" the engine that is to fling a worded truth in grander curve than missile ere before described—fling it into the bosom of an age unborn. He throws off his coat indeed; we but wonder, the rather, that he does not put his shoes from off his feet, for the place whereon he stands is holy ground.

A little song was uttered somewhere, long ago—it wandered through the twilight feebler than a star—it died upon the ear. But the printer takes it up where it was lying there in the silence like a wounded bird, and he equips it anew with wings, and he sends it forth from the Ark that had preserved it, and it lies on into the future with the olive branch of peace; and around the world with melody, like the dawning of a Spring morning.

How the type have built up the broken arches in the bridge of time. How they render the brave utterances beyond the Pilgrims, audible and eloquent—hardly fettering the free spirit but moving—not a word nor a syllable lost in the whirl of the world—moving in connected paragraph and period, down the lengthening line of years.

Some men find poetry, but they do not look for it as men do for nuggets of gold; they see it in Nature's own handwriting, that so few know how to read, and they render it into English. Such are the poems for a twilight hour and a nook in the heart; we may lie under the trees when we read them, and watch the gloaming, and see the faces in the clouds, in the pauses; we may read them when the winter coals are glowing, and the volume may slip from the forgetful hand, and still, like evening bells, the melodious thoughts will ring on.—B. F. Taylor.

THE BEST SEWING MACHINES.

The following, from *Punch*, contains an admirable description of an old-fashioned but invaluable sewing machine:

"The very best sewing machine a man can have, is a wife. It is one that requires but a kind word to set it in motion, rarely gets out of repair, makes but little noise, will go uninterruptedly for hours, without the slightest trimming or the smallest personal supervision being necessary. It will make shirts, darn stockings, sew on buttons, mark pocket handkerchiefs, cut out pinafores, and manufacture children's frocks out of any old thing you may give it; and this it will do behind your back just as well as before your face. In fact, you may leave the house for days, and it will go on working just the same. If it does get out of order a little from being overworked, it mends itself by being left alone for a short time, after which it returns to its sewing with greater vigor than ever. Of course sewing machines vary a great deal. Some are much quicker than others. It depends, in a vast measure, upon the particular pattern you select. If you are fortunate in picking out the choicest pattern of a wife—one, for instance, that sings while working, and seems never to be so happy as when her husband's linen is in hand—the sewing machine may be pronounced perfect of its kind; so much so, that there is no makeshift in the world that can possibly replace it, either for love or money. In short, no gentleman's establishment is complete without one of these sewing machines in the house!"

The culture of social feelings, under the dew and sunshine of religion, is a duty as well as a pleasure.

MOURNING PILGRIMS.

BY SPENCER F. TOOLEY.

MOURNING PILGRIMS, O, how many
Gleams of anguish wait afar;
Night of sorrow, without falling,
Comes on black without a star.
Hopes and prospects now are blasted,
Flower-gems lie long the plain,
Giant oaks the storms resisted,
Struggled hard, but all in vain.

Mourning pilgrims, marching slowly
To the quiet church-yard grave;
Heads bowed on your bosoms low,
While upon the airy wave
Music, doleful music's wailing
To the closets of your hearts;
O, what throbs of anguish ever
Does the tolling bell impart!

Mourning pilgrims, cease your wailing,
Weep not for the dear ones gone;
All earth's fairest gems are passing.
To their higher, better home.
There no rushing tears are falling—
There no mourning heart is riven—
Life is given everlasting—
There's no tolling bell in Heaven.

Marshall, N. Y., 1859.

THE BIBLE.

An, Holy Book! shall pen like mine
Bear witness of thy truth divine?
Unworthy worm like me engage
To tell the beauty of thy page?
Father, forgive my feeble powers,
And with it bless departing hours.

Yes, who does not love the Bible?—and who shall say that it is not divine? It is a complete text-book of moral philosophy. It furnishes a complete index—as it were a chart of the human mind. The different characters that are brought to notice in the varied scenes of action, each harmonizing with the other, in that they act upon each other, and, combined, produce one grand result, the revealing of the human heart, intricate labyrinth as it is, full of deep mysteries inexorable to us. This, we say, is one grand argument in favor of its divinity. For who but He that formed the never-dying soul, could understand its wants, and direct us in the path of duty?

With what clearness of expression and vivid coloring is each scene and each transaction brought before the mind calculated to stir up every emotion of the soul. No book since the world began has ever equaled it in sublimity of thought, harmony of sentiment, concise reasoning and moral grandeur. Still it is only clothed in plain words—words which convey a world of meaning, and come home to the heart with a power that the productions of man could never exercise. Yes, our Saviour, in his teachings, spoke truth to man. His were "Words fully spoken," like "apples of gold in pictures of silver." Ah! few and faint are our words to tell of its glories. He that loves the Author of it, loves the book. O! could we all feel its truth. We are all ready to admit that the Bible is true, but do we feel it to be true?

Indeed, it is a message of love to a sin-cursed world, with "healing on its wings." A message of love from God. Yes, such love as man never knew; a guide and a comforter, that we may know His will concerning us. Oh! precious book! Did we all perfectly obey its teachings, this world would be a paradise. Then let us read it more diligently, with a prayerful heart, that we may understand and obey its precepts. JANE E. H.—Pittsford, N. Y., 1859.

Written for Moore's Rural New-Yorker.

"IT MIGHT HAVE BEEN."—'Tis a common expression, and oft-times lightly spoken, yet how chillingly it falls upon the heart! It has a deep meaning; its words are eloquent of grief. In their little sum is contained the history of thousands. What sorrow, what agony, what desolation of heart, hath earth's vain promise wrought! Disappointment stalketh abroad as a giant, and stricken souls are murmuring everywhere—"It might have been!"

'Tis the dirge of fondest hopes, the lament of the soul. From the frozen pole to the burning clime, the Angel of Grief spreads his leaden wings, and the note of wailing, like the plaintive cry of the dying swan, goes up from earth's myriads of broken hearts. It hath no pause, no change. The passing hours repeat its mournful music through the day, and darkness taketh up the strain through the night-watches. O! how often has the spirit caught the sad refrain, and echoed back amid its wild complainings, that death-knell of hope—"It might have been."—BERTHA MORTIMER, Stanardsville, Va., 1859.

THAT ONE SINGLE VERSE.—An old negro in the West Indies, residing at a considerable distance from the missionary, but exceedingly desirous of learning to read the Bible, came to him regularly for a lesson. He made but little progress, and his teacher, almost disheartened, intimated his fears that his labors would be lost, and asked him, "Had you not better give it over?" "No, massa," said he, with great energy, "Me never give it over till me die;" and, pointing with his finger to John, third chapter, and sixteenth verse: "God so loved the world," etc., added with touching emphasis: "It is worth all de labor to be able to read dat one single verse."

A TENDER CONSCIENCE.—It is an inestimable blessing to have a conscience quick to discern what is sin, and instantly to shun it, as the eyelid closes itself against a mote.—Adams.

A GREAT part of mankind employ their first years in making their last miserable.

Written for Moore's Rural New-Yorker.
USEFULNESS—NOTORIETY.

THIS is, emphatically, a utilitarian age. Never, perhaps, was there a more general desire in the hearts of men to perform some service which shall render them eminently useful. The rising generation have caught the spirit—they are eager in their preparations for usefulness. By them the useful arts and sciences are being extensively studied, often to the entire neglect of those accomplishments which are sometimes so much prized. We say *extensively* studied. By this we mean extent in breadth, not in depth of investigation. Their researches often include a vast catalogue of sciences, and they obtain a superficial knowledge of some of the general principles of these, but have no leisure to attend to the dry detail. "Action," "labor," "effort," seem to be their watchwords, but the labor is not of that patient, persevering kind by which the minds of the great were formerly built up—it is rather of a spasmodic, nervous, restless character, more suited to this age of steam—this busy, bustling age. Their ardent spirits are impatient of the restraint and discipline of study. They are eager to try their strength on life's great battle-field—eager to become actors in life's drama before the preparatory lessons are well conned. The stripling feels sure that the poet meant him when he said

"Act, act in the living present."

Each seems to be deeply impressed with the idea that he has a very important mission to perform, while he has a very lively sense of the shortness and uncertainty of life. He is convinced of the propriety of the Scripture injunction, "Let your light shine before men," and he is resolved to kindle a blaze which shall fill the world!

Many of our lesser institutions of learning, and even some of our colleges, have been compelled to succumb to the spirit of the times. They have made numerous excursions from their course of study, by the wise suggestion of a combined company of striplings, who would not, for the world, spend their precious time in studying anything which has not evidently a direct tendency to increase their usefulness! The languages are being condemned to have a place upon the useless list, and the "Scientific" is rapidly taking the place of the "Classical" course of study. There is also a "Shorter Course" being introduced in some of our colleges.

The spirited Sophomore or Junior may now often study to wonderful advantage away from the college which is honored with his connection, while he is engaged in some other useful pursuit, such as politics, or public speaking. How can his capacious mind find sufficient exercise within the narrow limits of the college walls! If his public spirit will allow him to remain connected with the institution until the proper time arrives for him to take the stand on Commencement Day, he is prepared to make a flaming speech, convincing his fond mother and dotting relatives that he is a paragon of learning, and they flatter him until he is fully convinced that he is one of the wonders of the age!

The unfettered aspirant now takes his place among those who, by a like course of discipline, have prepared themselves for active life. He does not shrink from responsibility, but is most willing to use his talents in the service of the public—to fill an office in which he will surely have need of all his previously acquired knowledge, discipline, and mental acumen. He studies unceasingly the lives of the great. Not that part of their lives which relates to their preparation for service—he would consider himself dull, not to have got beyond this—but the history of their progress after they have entered the field demands his attention. He there finds an account of many important actions. He would fain not them over again. He learns that many who have been eminent for their talents and usefulness have had faults and eccentricities. He is willing to imitate even these, if so be that he may thereby become more influential. All this labor, all this effort, to be useful! Surely he can hardly fail to soon be acknowledged by all the discerning as a public benefactor in embryo!

The ladies are not behind the spirit of the age. They are becoming clamorous that their sphere of usefulness should be enlarged. They, too, have a strong desire to be public servants. They have become weary of the beaten track which their mothers have trod, and wish to branch out into a new field. They are not content that "their children should rise up and call them blessed." They have that greatness (?) of soul which is satisfied with nothing less than the praise of the whole community. They would have their sphere of action indefinitely enlarged, so that they may have an opportunity for the exercise of all their talents. Each is anxious to be a pioneer in this great reform. "Let us act like men," is their motto. "Let us be warriors in the battle-field of life," they say. "Let us enlist in the ranks of those who engage in the fierce of the conflict. We would willingly ransack earth to find a new field of action if we might thereby but become more obviously useful."

Let us sincerely ask whether these professions to be so much devoted to usefulness are altogether truthful—whether there is no selfish ambition, no restless desire for notoriety mingled therewith? Whether they are not really seeking the advancement of their own personal interests, rather than that of those for whom they profess to labor? Whether, indeed, the great influencing motive of their efforts—that which impels them on with such railroad speed—be not an ardent love of notoriety? We would not suspect all of being influenced by this principle; but is it not altogether too prevalent? Hence the vast number of those who fail to accomplish anything desirable. The

basis, the governing principle of their actions is wrong, therefore their efforts cannot be blessed. In their over-anxiety to do something great,—to become renowned,—they fail to make the needful preparation for life's duties. Especially do they neglect that preparation of heart which is necessary to the accomplishment of any worthy purpose. Did they have more real benevolence—a greater desire to act well their part—to do right regardless of consequences—they would have a more correct view of things. They would be too conscientious to offer themselves as candidates for places of trust, which their common sense tells them they are not well qualified to fill. They would be more patient and industrious in their preparations for active life, and less sanguine in their expectations of success—therefore, less liable to undertake what they cannot accomplish.—Those virtues which qualify us for home enjoyments would be more prized,—even those accomplishments which contribute so much to the amenities of social life, would not be so much neglected.

We would not desire to repress the natural ardor of youth—we would not dissuade them from wishing to leave their "Footprints on the sands of Time." This desire is laudable, and need not be restrained—it should only be properly directed. Let them but seek to become worthy of renown for superior qualifications of heart and of intellect. Let them seek to have a heart to prompt them to noble deeds, and a knowledge to rightly direct them how to accomplish their purposes. Let them desire more to merit renown than to possess it. Let them strive rather to excel in goodness than in greatness. Let them be content with the consciousness of possessing real merit, being assured that it will have its reward. And let that lady who has acted well her part wherever Providence has placed her—even though it be in the centre of a large family circle—feel that she, too, has left her "footprints"—that her influence will be felt until the end of time, though her name may never be blazoned abroad. Surely, this thought will not be unwelcome to a womanly heart. E. A. SANDFORD.

Walled Lake, Mich., 1859.

Written for Moore's Rural New-Yorker.
A CHAPTER ON WORDS.

WORDS are the embodiment of thought. They are the most general, though not the only media of communication between mind and mind. They are the pictures and reflections of ideas. The hidden experience of the soul, the inspiration of true genius, the products of profound thought, are all—as soon as they are given birth—crystallized into words, and thus become the common property of man. From arbitrary marks, words become living things, all breathing with the life of the inner spirit, all glowing with the fires of intellect, all powerful with energetic forces. PLATO and SHAKESPEARE are by no means dead; their souls have transmigrated to new bodies—even the words which compose their works live on our library shelves, and we may commune with them at pleasure.

Nearly five-eighths of the words in the English language are of Anglo-Saxon origin; the bulk of the remainder is derived from the Latin and Greek, while nearly every written language of the world has its representatives in our mother tongue.

Words expressing primary ideas, simple and natural objects, are genuine Anglo-Saxon, as "home," "faith," "shepherd," "meadow." The Greek and Latin element was gradually infused into the language by the need of law terms, the opening of scientific fields, and the advance of literature.

It is proposed to trace the origin and changes of the signification of words that are of interest to the readers of the RURAL.

Agriculture is primarily from two Greek words—but incorporated into English through the Latin—which still retain their original signification, viz., "field" and "tilling." *Colony* is from the same root as "culture," and the original word is often used by Virgil in the sense of "inhabiting" or "founding" a State. Culture has a higher signification when applied to the mind. By an appropriate figure, we carry up the idea of tilling the soil to the mind, and make it the field whereon to plow, sow and reap. From "ager" comes *acre*, which, in all languages except English, means any open plowed field. Hence the beautiful conception of the Germans of calling the burial place "God's acre." Its use was first prescribed to a definite portion of land in the time of EDWARD III. The terms "Agriculturist" and "Farmer" are nearly synonymous in the United States. In England the agriculturist is one who merely advances theories of farming, and the farmer is he who actually holds the plow. *Farm* is a Saxon word, and originally signified "provisions," "produce." Rent being paid in the productions of the soil, the word was gradually transferred from these to the soil itself.

All the ordinary and most common farming utensils are Saxon words, as "plow," "rake," "spade," "hoe," "drag," "harrow," "cradle," "scythe," &c. The elementary idea in the word *plow* is to "plug," "thrust," showing the simplicity of the origin of the word, and the connection of the meaning with its use. *Arable*, and the Latin word for "plow," have the same root. *Harrow* and *rake* have the same derivative origin. "Cradle" receives its name from its rocking motion while in use.

Some words are a small volume of history. In the early ages, before money was employed as a representative value, exchanges were made by means of cattle and flocks. SERVATIUS TULLIUS first issued coin with the image of cattle stamped upon it. The Latin name for cattle is "*pecus*," whence is derived our term "pecuniary."

Marion, Perry Co., Ala., 1859.

ANAD.

NEW ENGLAND COLLEGE COMMENCEMENTS.—The following are the dates for this year's college anniversaries in New England.

Harvard, Cambridge	July 30
Dartmouth, Hanover	July 28
Yale, New Haven	July 28
Williams, Williamstown	August 3
Bowdoin, Maine	August 3
University of Vermont, Burlington	August 3
Watkinsville, Maine	August 10
Andover	August 11
Middlebury, Vermont	August 11
Norwich University, Vermont	August 11

NATIONAL TEACHERS' ASSOCIATION.

THE Second Annual Meeting of the Teachers' Association will be held in Washington, D. C., on the Second Wednesday, the 10th of August next, commencing at 9 o'clock A. M. At this meeting, Lectures are expected from the following gentlemen, viz.:—Introductory Address by the President ANDREW J. RICKOFF, of Cincinnati, Ohio. Lecture by ELBRIDGE SMITH, of New England. Lecture by J. N. MCJILTON, of Maryland. Lecture by JAMES LOVE, of Missouri. Lecture by Mr. ———, of the South-West.

Several Essays and Reports are expected from gentlemen of different sections of the country. It is expected that papers embracing the several departments of instruction, from the Primary School to the College and University, will be presented.

The order of exercises will be announced at the meeting. Measures have been taken to make this the largest, most interesting and influential Educational Meeting that has ever been held in the country. A large number of the most distinguished educators, representing every department of instruction, are expected to be present and participate in the deliberations of the meeting.

The Local Committee at Washington, the Chairman of which is Prof. Z. RICHARDS, is actively engaged in making preparation for the meeting.—Gratuitous entertainment will be given to ladies, and a reduction of fare made to such as put up at the public houses. A reduction of fare has also been secured on the principal lines of travel. Thus all who are interested can attend this meeting, and at small expense.

Further particulars may be had by addressing the President, A. J. RICKOFF, Cincinnati, Ohio; Z. RICHARDS, Washington, D. C.; D. B. BAGAR, Jamaica Plains, Mass.; C. S. PENNELL, St. Louis; or the Secretary, J. W. BULKLEY, Brooklyn, N. Y.

GRAND MOUND OF CHOLULA, MEXICO.

CHOLULA is a decayed town in Mexico, 15 miles North-West of La Puebla, and inhabited by Indians. At the time of the Conquest of Mexico, by Cortez, it was said by the historians of the Conquest to contain 20,000 houses, besides an equal number in the suburbs, and more than 400 towers of temples could be seen in one view. The town was particularly noted for its great pyramid, which was erected by the ancient Mexicans, and according to the ancient historians of the Conquest, was 177 feet in height, measuring 1,440 feet on each side, ascended from its base by 120 steps. It was reported as composed of earth and brick. The Spaniards erected a chapel on its summit.

WILSON, in his *New History of the Conquest of Mexico*, gives the above engraving of this great mound or pyramid, taken on the spot, and says that much that is said of Cholula and of its pyramid, is mere romance; that the town is small and poor, and exhibits no signs of former greatness; that the pyramid is a mound of earth, covered with grass and bushes, that there are no steps to be seen, and no sign of art but the chapel on its summit. Mr. W. says:

"The striking resemblance of this to the mounds through the country of our northern tribes, satisfied us of their common origin, and that this, like the others, was but an Indian burying-place, formed by the deposition of earth upon the top of a sharp, conical hill, as often as fresh bodies were interred, and this is probably the fact. Its greater size is doubtless attributable to its situation in the midst of a most fertile plain, [vega] where from generation to generation a dense population must have dwelt, who used this as the common receptacle of their dead. The appearance of that structure, which Humboldt and other Europeans have considered a monument of antique art, is readily explained by opposing facts, familiar only to Americans, to the scientific speculations of foreigners!—But to this one there is now no question—an excavation having been made into the side of the mound, it revealed that truth which we only surmised."

A PERFECT MAN.—The man deserving the name, is one whose thoughts and exertions are for others, rather than for himself; whose high purpose is adopted on just principles, and never abandoned while heaven or earth affords means of accomplishing it. He is one who will neither seek an indirect advantage by a specious word, nor take an evil path to secure a real good purpose. Such a man were one for whom a woman's heart should beat constant while he breathes, and break when he dies.—Scott.

It is easy in the world to live after the world's opinion; it is easy in solitude to live after our own; but the great man is he who in the midst of the crowd keeps with perfect sweetness the independence of solitude.

Written for Moore's Rural New-Yorker.

THE AIR.

THE air is an elastic fluid surrounding the earth, and extending forty-five miles above it. It is the medium of light with all its phenomena of colors, of heat, and sound. Its principal ingredients are nitrogen, oxygen, and a little carbon. So says philosophy, and such a definition we receive with great satisfaction, under the impression that we have added greatly to our store of knowledge. But, in reality, we know as little what air actually is as the little Nautilus that, launching his boat so trustingly on the waters, commits himself to the guidance of the winds. What is oxygen, what is nitrogen and carbon?

But, after all, it is useless to quarrel with this explanation, so long as there is no better one. Besides, it is an acknowledged principle in science that of the essence of matter we know nothing. If we are so restricted as to know nothing of its essence, we may tell of its qualities, effects, and uses. Here is field wide enough for our time and capacities.

Air is the great temporizer of the earth. The warm air of the tropics comes to spread beauty and verdure over the frosty fields of the north, while the cool northern wind rushes southward. Constantly, warm and cold currents of air are rushing past each other, or meeting and mingling together. As we ascend, cold increases, and we may conclude that beyond the limits of our atmosphere, heat is unknown. Air furnishes quite a proportion of the sustenance on which plants and animals subsist, so that, in the language of a recent writer, "we live upon air." It is so gentle that when at rest it will not disturb the down on the breast of a bird, but let it arise in its might and march through the earth, and nothing can resist it. Huge rocks are but as pebbles before it; tall pines and venerable oaks bow themselves, while the catarrh lowers its voice to listen to its dreadful roar. Reader, you have often listened to the sighing of the night wind, and the answering whispers of the multitude of leaves. You have heard the caroling of birds, and the sweet, low strains of the *Molian* harp-like music in the distance. You have heard the majestic strains of the organ, when the volume of sound almost lifted you from your feet. Perhaps from thousands of human voices you have heard the song go up,

"Praise God from whom all blessings flow."

Then, may be, you have listened to the roll of old ocean in a storm, when the frantic waves seemed almost ready to break from the fettering shore. What has been the agent in all this? Nothing but the vibrations of the air. Unseen, unheard when at rest, but its particles move among each other, and the effects are astounding.

If, in the natural world, the most spiritual essences are the mightiest, may we not expect that it will be the same in the world of mind? Yes. The most hidden powers of the mind, those which remain the longest unrecognized are the most powerful. The thought, too, is exceedingly painful, that so much mental strength is hidden and unappropriated. In a still day let a fire be kindled upon a common, and from all directions the wind will rush to meet it. So let the fires of earnest zeal be kindled in the soul, and the latent powers of that soul will make themselves known.

Condensed air is greatly increased in power, and is capable of sustaining life much longer than that of the common density. Reader, is there not a density of mind, too? Some are capable of sustaining great thoughts, and enduring long continued action. With others the mental atmosphere is exceedingly rare. With such, light substances in the form of diluted thoughts are more congenial than any other.—The air may be condensed by pressure, and by the disciplining pressure of close thought and study, the mind may be greatly solidified. Is it not a duty to make it so? Let the sensibilities, the reason, the will, and imagination, each be trained to its proper function, and balanced by a proper development of each, and the mind will take care of itself.

MINERVA OSBORN.

THE AMERICAN IN ROME.

A CORRESPONDENT of the Boston Courier gives the following description of Brother Jonathan at Rome:

Rome he pronounces a one-horse town, slow, fearfully dull, and the people a set of rascally beggars. As for Murray, he is a humbug. What does he mean by going into frenzies about certain ruins, devoting pages to minute descriptions of them, when Yankee Doodle finds nothing but a poverty-stricken fragment of a wall, that, in his opinion, ought to be pulled down and carted away? What splendid building lots might be made out of Mount Palatine, and what fools the Romans are to permit that rubbish, called the Palaces of the Cæsars, to occupy it. The Coliseum rather staggers our countryman, who is willing to bet that Barnum could take it down, put it up in America, and yet make a good thing out of it. "It would pay well, sir."

Jonathan rushes through the Vatican in half an hour. In one statue, in one painting, he sees all; galleries of art are ever the same to him. St. Peter's he regards as a great waste of time and money; and as for its immense height, he assures his *valet de place* that when the Washington monument is completed it will beat St. Peter's all to nothing. He visits the artists' studios, and can't see what satisfaction there can be in a profession where so little money is to be made. He inquires the price of marble. Murray says that Rome can be done in eight days, but advises no one to make the attempt. For the one hundredth time Jonathan calls Murray a humbug, and declares he can see as much of Rome as he desires in less time than that. Frequently he does, rushing from one place to another with a perseverance and determination that, when applied to business matters in America, leads to fortune.

To be cast down by undeserved censure, or elated by unmerited compliment, is alike proof of weakness.

YOUNG RURALIST.

PLOWING.

MESSERS. EDITORS:—I noticed in the RURAL of June 11th, an article addressed to Plow Boys, by H. K. F., and a similar one in your issue of June 25th by A. C. G., and as I am one of the Boys, I think I should be entitled to a small space in the columns of the RURAL.

There are many valuable suggestions in both articles, but in one or two points I would beg leave to differ with them. H. K. F. says you should have a "steady, well-trained team," which, of course, is preferable, but not always obtainable. He also says "the lines should pass around the neck." In this I think he is mistaken, as a person cannot control or guide a team as well with the lines in that position, as he could with them around his body.—O. H. K. F., I would suggest that you hold the lines firmly in your teeth, as you could guide your team about as well, and in case they were not "well-trained," but were inclined to run away, you could let go, and not be in danger of getting your neck twisted.

In marking out lands, A. C. G. says:—"Set a stake at one end, and make a mark with your heel at the other end; set the plow in the mark, place the lines around your waist, look between the heads of your horses and get something between you and the stake, in range with it, as a small stone or weed, start your team, turning the body to the right or left to guide them, and be sure to hit every object of range between you and the stake." In all this I agree with him exactly, except the range, which, instead of "a small stone or weed," between him and the stake, should be a tree, a building, or something else far beyond the stake, the farther the better, as a little variation on the part of the plowman will be more plainly seen than if the object was nearer the stake. When done in this way you need not fear the consequences, as the furrow will be straight if you keep your range, which is easily done, especially if you have a "well-trained team." In cases where you are marking towards a thick woods, or anything that would obstruct the view beyond, you would have to follow A. C. G.'s plan, but it is not as accurate, and would seldom be necessary.

ANORA, N. Y., 1859.

P. V. EGBERT.

A FEW WORDS ABOUT DOGS.

MESSERS. EDS:—In the RURAL for May 9th, 1857, there is an article entitled "Dogs, a Dissertation," which is worthy of a place in every newspaper in the world. The writer's opinion of them exactly coincides with mine, and I, too, wish that there was not one in existence. They are, as he says, "a serious and increasing evil." Besides the many losses from sheep-killing dogs, there are many other evils which they are the cause of. It is dogs, dogs, dogs, everywhere, in city and country—nowhere can we flee away from them. Travel wherever we will, we are almost sure to be saluted with the "bow-wow-wow," of one or two dogs about every house we pass, and are often in danger of being bitten by these yelping curs. A person might reasonably expect that they would be tired at night after their long labor, and wish to rest and allow people to sleep, but not even this can be said in their favor, for when night comes some one of the miserable pests will imagine he sees or hears something wrong, and will—after he is sure that he is in a safe place—at once start his music, and, other dogs hearing him, also commence, and in a short time there is a whole band of dog-musicians playing.

There is, doubtless, occasionally a dog that is of some benefit to his master, but there is a far greater number that are of no benefit to anyone. I do not write this to encourage the ill-treatment of dogs—I like to see those who keep dogs treat them with kindness, but I believe it would be better if there was not one in existence. Perhaps some will think that this is of little importance to farmers, and altogether out of place in the YOUNG RURALIST Department, but it is of as much importance to them as to others. At all events, I believe the subject is of sufficient value to have the opinions of others—for myself, I am willing to do my part towards waging a war of extermination against the entire canine race. W. H. H. PEARSON.

Pittsboro, St. Law. Co., N. Y., 1859.

WORKS IN BEE-HIVES.—Will some of your subscribers inform me, through the columns of the RURAL, the best way of destroying worms in bee-hives, and oblige a young reader of your valuable paper.—J. K., *Le Roy, Jan., 1859.*

REMARKS.—The best way we know of is to take the comb from the hive, and then their track can be discovered, and they can be dug out with a pointed knife. How this thing is to be managed, we may describe hereafter, when we obtain the necessary engravings. In the meantime any of our experienced bee-keepers may give their views.

A QUICK QUARTER.—A boy worked hard all day for a quarter of a dollar. With the quarter he bought apples, and took them to town and sold them in the street for a dollar. With the dollar he bought a sheep. The sheep brought him a lamb, and her fleece brought him another dollar. With the dollar he bought him another sheep. The next spring he had two sheep, two lambs, and a yearling sheep. The three fleeces he sold for three dollars, and bought three more sheep. He now had six, with a fair prospect. He worked where he found opportunity, for hay, corn, and oats, and pasturing for his sheep. He took the choicest care of them and soon had a flock. Their wool enabled him to buy a pasture for them, and by the time he was twenty-one he had a fair start in life, and all from the quarter earned in one day.

NORMAN establishes confidence sooner than punctuality.

LIST OF NEW ADVERTISEMENTS.

Pratt's Patent Self-Ventilating Covered Milk-Pan—Arthur, Dunham & Gilroy.
To Farm and Manufacturers of Mowing and Reaping Machines—J. A. M. P. Jackson.
Wheeler's and Seeding—Wm. Richardson.
Pain and Pleasant Talk about Fruit, Flowers and Farming—Dr. J. B. Jackson.
George Powers' Threshing and Mowing Machines—B. G. H. Hathaway.
Ingham University—Samuel Hanson Cor.
Three Year Old Bull, Heifers and Bull Calf—A. A. Beebe.
SPECIAL NOTICES.
For the Complexion—Joseph Burnett & Co.

MOORE'S RURAL NEW-YORKER

NEWS DEPARTMENT.

ROCHESTER, N. Y., JULY 16, 1859.

TERMS, IN ADVANCE:

One copy, 1 year, \$2.00	Three copies, 6 mo's., \$1.00
Three copies, 1 year, \$5.00	Six copies, 6 mo's., \$2.50
Ten copies, 1 year, \$15.00	Ten copies, 6 mo's., \$7.50
Sixteen copies, 1 year, \$22.00	Sixteen copies, 6 mo's., \$11.00
Twenty copies, 1 year, \$26.00	Twenty copies, 6 mo's., \$13.00
Thirty copies, 1 year, \$30.00	Thirty copies, 6 mo's., \$15.00

And an Extra Copy, free, to every person remitting for a club of six or more copies; and Two free copies for every club of thirty or over. As a new Half Volume commenced July 24, Now is the Time to form Clubs for either Six Months or a Year. All persons who form new clubs to commence with July, or introduce the RURAL in localities where it is not now taken, will be liberally remunerated for their time and attention.

Back numbers from April or January can still be furnished, if desired. We will send Specimen Numbers, Show Bills, &c., to all applicants, and to the addresses of as many non-subscribers as may be forwarded.

DOMESTIC NEWS.

Matters at Washington.

There is such information in Washington as warrants the belief that the recent change of the British Ministry will not affect the present position of her Majesty's representatives abroad, with the exception perhaps of Lord Cowley at Paris.

One of the conventions concluded by Minister M'Lean with the Juarez Government, has been forwarded hither by him, and others are in a fair way of consummation, there being no difficulties about the preliminaries. While the import and export duties at Vera Cruz have considerably diminished in consequence of the unsettled affairs in the interior, the receipts at the other ports on the Mexican coast have largely increased.

It is estimated that a reduction of from \$200,000 to \$300,000 will be effected during the fiscal year just commenced, by the retrenchments in the expenses attending the collection of the custom revenue now in progress. These will continue to be made from time to time, as reliable information on the subject shall reach the Secretary.

A Washington dispatch to the N. Y. Times says it is now understood that the Russians wholly repudiate the Perkins' claim for ammunition contracted for during the Crimean war, as being entirely without merit or proof.

A dispatch to the Tribune says an effort is being made by interested parties, both in Washington and in New York, to press upon the administration a treaty with Mexico, stipulating for a perpetual right of way for the Tehuantepec and other routes to the Pacific, and a right of a way on the line of the line of the Rio Grande to the Gulf of California, for the consideration of \$25,000,000.

Among the measures contemplated in our intercourse with Mexico, is a limited reciprocity treaty. This, however, will not be proposed during the pending negotiations on other subjects.

Personal and Political.

The Hon. Rufus Choate, who sailed from Boston in the steamship Europa, on Wednesday week, for Liverpool, was obliged by illness, to leave the steamer at Halifax.

PRINCE PONIAKOWSKI, the sole representative of the Royal family of ancient Poland, who has escaped from exile in Siberia, has come to this country, intending to become a citizen. He is lecturing at Portland and Newburyport on Siberia and Russia, but means to go West for his residence.

The Republican State Committee of New York, met at Albany, on the 6th inst., and resolved to call a State Convention at Syracuse on the 7th of September next. The basis of Representation is to be two delegates from each district.

The Maine Republican State Convention, held at Portland on the 7th inst., nominated Hon. Lott M. Morrill, for Governor. The customary resolutions were passed and the Convention adjourned.

The Republicans of Wisconsin will hold a Convention at Madison, the Capitol, on Wednesday, the 31st day of August next, to nominate candidates for Governor and other State officers, and to select delegates to the National Republican Convention, should the Convention deem it advisable to do so. Each Assembly district will be entitled to two delegates.

The Republicans of California held a State Convention at Sacramento, on the 1st of June, and adopted resolutions re-affirming the Republican platform of opposition to slavery propaganda; also, in favor of a Pacific Railroad, a central mail route, a homestead bill and Mr. Grow's land bill. The following are the State nominations:—Governor—Leland Stanford, of Sacramento. Lieutenant Governor—J. F. Kennedy, of Santa Clara. Judge of the Supreme Court—O. L. Shafter, of San Francisco. Clerk Supreme Court—S. D. Parker, of Trinity. Treasurer—Philip P. Caine, of Butte. Comptroller—J. R. Clarke, of El Dorado. Superintendent of Public Instruction—S. W. Brown, of Sonoma. Surveyor General—A. G. Randall, of Amador. Attorney General—H. S. Love, of San Francisco.

In one of the counties of Wisconsin, it is said, there are three candidates for the Legislature:—J. M. Root, Democrat; Robt. Hogg, Free Soil; and T. H. Dye, Whig. So the people can have their choice,—"Root, Hogg, or Dye."

News Paragraphs.

A horse turned loose in the streets of Albany, recently kicked a little boy in the head, so that he died; whereupon the owner was pronounced guilty of manslaughter by the coroner's jury.

JENKINS SAWIN, a native of Westmoreland, N. H., died at his residence in West Windsor, Vt., on the 23d ult., aged 100 years 8 months and 23 days. The deceased was a private in Capt. Josiah Fish's Company, in Col. Fletcher's Battalion, in the Revolutionary War.

YALE COLLEGE is said to own ninety acres of land in North Canaan, Ct., which has grown up to alders and hardbacks, and is so worthless that the lessees will not pay two shillings an acre for it.—The papers thereabouts suggest that rusticated students should be sent out to cultivate the wilderness.

The Charleston Mercury says that Mr. Antonio Canale, a well known fruiterer of Charleston, who recently sent 800 bales of cotton to Genoa by the barque Hollander, has been impressed into the Sardinian army, while in Genoa on business connected with his shipment.

The Louisville papers note the death of Victor F. Ward, aged 20 years. He was whipped by Butler, the school teacher, which whipping was the first act in the Matt Ward tragedy in Louisville.

The New London Star says that at the present time there is not a single whaler sitting in that port, and it is said that the business is rapidly declining.

It is now proposed in Philadelphia to tax the Insurance Companies some \$10,000 for the water used in extinguishing fires. The reason for this is that the city pays \$50,000 annually to Fire Companies, while all the property belonging to the city is insured, thus making the Insurance Companies gainers by this expenditure.

The Express bag sent by the United States Express Agent at St. Louis for New York, in the balloon Atlantic, was picked up on the 4th inst., on the lake, six miles west of Oswego. It contained over forty letters to New York correspondents, among which is a draft of \$1,000 on a bank.

It has just been discovered that a young man sent a year ago to State Prison for ten years, for shooting a private watchman, is innocent, one of the really guilty parties having confessed their crime. The wounded man aware to his identity, and collateral evidence pointed to him as the criminal, and in spite of his assertions of innocence, he was convicted.

RECRUITING in the U. S. army, which was stopped some months ago, in consequence of the ranks being full, as was given out at the time, has been revived to a limited extent, for the purpose of filling vacancies which are constantly occurring, especially in the Infantry service.

FROM UTAH.—Later advices from Salt Lake state that Judge Cradlebaugh, who had just returned from his Circuit, had issued during his tour nearly 100 warrants against persons engaged in the Mountain Meadow massacre, and various other murders. The Judge says that for eight miles along his route, before reaching Santa Clara, he found human skeletons on almost every camping ground. He also says that eighty white men were concerned in the massacre of Mountain Meadow.

METTERNICH'S DEATH.—The London News felicitously says:—"Metternich was the fanatic of the status quo whom Paul Louis Courier beheld in a vision on the morning of the creation of the world, crying out in indignation an alarm, 'Mon Dieu! conservons le chaos.' Political life and liberty, national independence, the dignity of man as man, were chaos to him. Darkness was his 'order,' and when the darkness broke, he had the wit to die."

ARRIVAL OF THE OVERLAND MAIL.—The overland mail arrived at St. Louis on the 5th inst., with California dates to the 13th ult. Business at San Francisco continued dull, and most of the leading staples had declined. Money was scarce, but the next shipment of treasure to the eastward would be large. The accounts from the mines continue favorable. Advices from Oregon state that the Legislature had adjourned without electing a U. S. Senator. Advices from Fraser River mines continue unfavorable. Crowds of emigrants were returning to California, and many others were settling in Oregon and Washington Territories.

THE LATE KIDNAPPING CASE.—The trial of Low, Jennings, Mitchell, and Davis, for kidnapping, was commenced in Cleveland, Ohio, on the 6th inst.—At the instance of their counsel an arrangement was made by which *nolle prosequi* were entered in their cases, and those of the Oberlin rescuers who awaited trial, and the prisoners on both sides were discharged.

THE JAPAN MINISTER.—The following is an extract from a letter written by an officer of the U. S. steamship Mississippi:—"Simoda, Japan, April 5th.—The Japanese Minister declines going to the United States until next February. We expect to have to wait for him, as cabins have been built for him upon our deck, and our ship detailed to take him to the States. We shall, at all events, spend the summer months in these waters. We will sail for Nagasaki in two or three days. Letters for our ship will reach us if sent to Hong Kong as heretofore."

THE PIKE'S PEAK GOLD STORIES.—Advices received at Leavenworth, July 2d, state that the news from Pike's Peak is still encouraging. A letter from Horace Greely says there is gold in paying quantities. Some claims were yielding \$600 a day. A hundred dollars per day for each sluice, was considered a fair average. New and rich discoveries were being made every day, and it was calculated that 500 sluices would be in operation by next August. Large prospecting parties were being organized for an extended exploration of the mountain districts. Business was reviving in Denver City.

We have again flattering accounts from Pike's Peak, but the statement of Mr. McCoy to the St. Joseph's Gazette is more reliable. He says that the mines on the Gregory road are profitable, and will support 5,000 people, while there are 25,000 or 30,000 people there who are unable to earn a livelihood.

FOREIGN NEWS.

From the Seat of War.—A Great Battle.

In our last issue it was stated that Napoleon was concentrating his forces for the purpose of attacking the Austrians, and that a decisive battle would soon be fought. The steamers *Vigo* and *Adelaide* arrived at St. Johns on the 3d inst., and the *Hungarian* at Farther Point on the 8th, and we learn that the Austrians re-crossed the Mincio and attacked the Allies (with the expectation of beating them before the arrival of reinforcements,) but were obliged to abandon their positions and withdraw. Napoleon telegraphed to the Empress as follows:

"CAVRANA, June 24, 11:30 A. M.

A Great Battle.—A Great Victory. The whole Austrian army formed a line of battle extending five leagues in length. We have taken all the enemy's positions, many cannon, flags and prisoners. The battle lasted from 4 in the morning till 8 in the evening."

"June 25, 1:30 P. M.

It is impossible as yet to obtain the details of yesterday. The enemy withdrew last night. I have passed the night in a room occupied in the morning by the Emperor of Austria. Gen. Niel has been appointed a Marshal of France."

"CAVRANA, June 26, 11:30 A. M.

The Austrians, who had crossed the Mincio for the purpose of attacking us with their whole body, have been obliged to abandon their positions, and withdraw to the left bank of the river. They have blown up the bridge of Gotta. The loss of the enemy is very considerable, but ours is much less. We have taken 30 cannon, more than 7,000 prisoners, and 8 flags. Gen. Niel and his corps d'armes have covered themselves with glory, as well as the whole army. The Sardinian army inflicted great loss on the enemy, after having contended with great fury against superior forces."

The following is the order of the day, published by the Emperor Napoleon, after the battle of Salferino:

"CAVRANA, June 25.

SOLDIERS.—The enemy, who believed themselves able to repulse us from the Chiese, have re-crossed the Mincio. You have worthily defeated the honor of France; Salferino surpassed the recollection of Lonato and Castiglione. In twelve hours you have repulsed the efforts of 150,000 men. Your enthusiasm did not rest there. The numerous artillery of the enemy occupied formidable positions for over three leagues, which you carried. Your country thanks you for your courage and perseverance, and laments the fallen. We have taken three flags, 30 cannon and 7,000 prisoners. The Sardinians fought with the same valor against superior forces, and worthy is that army who marched beside you. Blood has not been shed in vain for the glory of France and the happiness of the people."

The following is the Austrian official account of the battle.

"VERONA, June 25.

Day before yesterday our right wing occupied Pozzolega, Salferino and Cavarana, and the left wing pressed forward as far as Guidizzolo and Cioffredo, but were driven back by the enemy. A collision took place between the two entire armies, at 10 yesterday. Our left, under Gen. Winpen advanced as far as Chiese. In the afternoon there was a concentrated assault on the heroically defended town of Salferino. Our right wing repulsed the Piedmontese, but on the other hand the order of our center could not be restored, and our losses are extraordinarily heavy. The development of powerful masses in the evening against our left wing, and the advance of his main body against Volta, caused our retreat, which began late in the evening."

Austrian correspondence contains the following: "Day before yesterday the Austrian army crossed the Mincio at four points, and yesterday came upon the superior force of the enemy in the Chiese. After an obstinate combat of twelve hours our army withdrew across the Mincio. Our headquarters are at Villa Franca."

The London Times says the Austrians have most candidly admitted their defeat, and that history scarcely records a bulletin in which such a disaster is more explicitly avowed.

The Paris Presse says that private messages from Berne are spoken of, which put down the Austrian loss at the enormous number of 35,000 *hommes du combat*, 15,000 made prisoners, together with 14 flags and 75 pieces of cannon.

It is inferred from the telegraphs that the French army suffered so severely, that two days after the battle it was still unable to resume the offensive.—There were vague rumors of 10,000 to 12,000 French troops killed and wounded.

Official Austrian correspondence of the 27th of June, contains the following:—The Emperor of Austria will soon return to Vienna, on account of important business. The Commander-in-Chief of the army, which is preparing battle, is Gen. Hess.

Forty thousand men were embarking in Algeria for the Adriatic, and at Paris news was expected of the occupation of Venice by the French.

A dispatch from Stienne says that the attack of the French on Venice and Tagliamento, about 45 miles northeast of Venice, was expected to take place on the 25th of June.

The Austrian reserves, numbering 175,000 men, were on their way to Italy. They are considered the flower of the Austrian army. Not a man of them has served less than eight years.

GREAT BRITAIN.—Lord Palmerston, in his address to his constituents, expresses the hope that the Ministry he has formed will prove satisfactory to the country. He says it will be one of the great objects of the Government to preserve for their country the blessings of peace, and to take an advantage of any favorable opportunity that may present itself, to exert the moral influence of Great Britain to assist in restoring peace to Europe. In regard to the reformation, Lord P. simply says, that he trusts his Government may be able so to deal with the subjects as to strengthen the institutions of the country, by placing them on a broader and firmer foundation.

The elections for Members of Parliament to fill the seats vacated by those who have accepted office in the new Ministry, were generally resulting in the return of the Government candidates. Mr. Gladstone, however, was being close pressed for Oxford University by the Marquis Chodas.

An alarming and destructive fire took place at Cork on Thursday night, the 23d. Loss not stated.

FRANCE.—It was announced in Paris on Friday, that a corps d'armes of 40,000 men, mainly from African regiments, is expected shortly in the Adriatic sea.

The advices from Frankfort-on-the-Maine state that on the 25th of June Prussia made a proposal

to the Federal Diet to place a corps of observation on the Rhine, to be the 7th and 8th Federal corps d'armes, under the superior orders of Bavaria. The proposal was referred to the military committee.

The Paris *Siecle* and *Journal des Debats* ridicule the idea of German mediation on the basis which rumor has placed in circulation.

It was reported that the Emperor of Austria would soon have an interview with the Prince Regent of Prussia.

The Nord publishes the following, dated Berlin, June 21st:—At a military conference held yesterday, it was resolved that the Guards shall remain at Berlin and Pottsdam, and six regiments of cavalry and infantry shall be cantoned in the province of Brandenburg. Three corps d'armes will take up positions between the lower and central Rhine. Two other corps d'armes will be stationed upon the upper Rhine and the river Maine. One of the corps will proceed to its destination through Silesia, Saxony and Bavaria. The departure of troops will take place about the first of July.

The *Journal des Debats* asserts that the Bavarian Government has refused to allow Prussian troops to pass through its territory, until the Prussian Cabinet shall have answered the series of questions as to the meaning and purpose of the resolutions it has taken.

The naval expedition, possessing immense means of destruction, is on its way to Venice. One hundred and twenty flat-bottom boats, keeled with iron and filled with cannon, are, it is said, to ascend the Adige and the Po. If Venice falls, the fleet may land a corps d'armes on the Adige, and take the Austrians in the rear, while the land army attacks them in front.

PRUSSIA.—The official *Preussische Zeitung* of Wednesday, says the French and Sardinian army is moving near the frontiers of Germany. The Prussian Government regards the security of Germany as intrusted to its care. The Italian conflict is assuming even increasing dimensions. England and Russia are arming on the greatest scale. The Prussian Government would be faithful to its duty and to the sense of the nation if she should neglect to act commensurably with that spirit by which Prussia has become great. Prussia is free from every engagement. She obeys only those obligations which spring from the inmost nature of her State interests. It will soon be seen whether Prussia's initiative will be supported with the necessary weight by the German States. Prussia's policy stands firm, and whoever lays obstacles in its way may consider that he is rendering service to the enemies of his fatherland.

TURKEY.—Advices from Constantinople say that Said Pacha had been summoned to send his contingent to Rommelia, but replied that the indecisive policy of the Porte compromises Egypt, and that therefore he will send no succor, but will put his army on a war footing.

ROME.—Advices from Rome say that an attempt was made to display the tri-colored flag and proclaim for the Dictatorship of Victor Emanuel, but General Gorgon interfered to prevent. The Pope has notified his protest against the dismemberment of his States, to powers represented at the Paris conference. He had also communicated to the Cardinals a letter of the Emperor Napoleon, guaranteeing independence.

COMMERCIAL.—Bradstreet's.—Richardson, Spence & Co. quote breadstuffs tending downward. Flour was offered at higher prices, but sales quite unimportant.—The quotations are 10s6d@11s6d. The prices of wheat are easier, but without any decided change. Western red was quoted at 8s@8d; Southern white 10s@11s. All quotations of corn had declined slightly. Mixed 8s@8d; yellow 8s@8d; white 8s@8d; and others quite pork dull. Lard heavy, and declined slightly. Provisions.—Messrs. Bigland, Althya & Co., James McHenry & Co., and others quote pork dull.—Lard heavy, and declined slightly.

Clippings from Foreign Journals.

The London papers report that some of the oldest churches of that metropolis are about to disappear to make room for new warehouses. The churches in which Tillotson and Burnet preached, and in which so many people were "converted" for their own good, are now themselves to be converted into warehouses for the goods of Manchester, Halifax and Leeds.

An earthquake occurred at Erzeroum, the principal city of Asiatic Turkey, on the 2d of June, and 1,500 persons are said to have lost their lives. The city has a population of 50,000.

Orders have been given for introducing athletic games and gymnastic exercises in the British army. The idea is derived from the French. The Zouaves are trained gymnasts, and are as agile as so many Ravens. Their exploits in scaling ramparts are almost incredible. They climb over each other's backs, making a ladder of their bodies against a wall. The exercises are promotive of health, as well as of efficiency in the hour of action.

The correspondent of the London *Times* writes, "The battle of Magenta was 'regular slaughter-house work,' in the performance of which the parties concerned displayed equal skill and resolution. The retreat was made with such extreme rapidity that the men, who had no time to prepare their food, fell to the earth completely exhausted by heat, hunger and thirst. A medical man who is with the army, says that the first things required by the wounded men brought into the hospitals are 'food and drink.' This remark confirms me in the belief that the train was unable to keep pace with the army." The following short passage from a letter written at Binasco by a correspondent of one of the Vienna papers, probably gives a correct idea of the battle of Magenta:—"In hardly any battle was so much blood shed in so short a time. The bullets of the French came into our ranks like hail-stones into a field, and without word or groan very many of our valiant fellows fell to rise no more. You will be able to form a correct idea of the way in which the officers fought, when you have been informed that one battalion of the 'Kaiser' regiment of the line was brought back by a sergeant, and another by a lieutenant."

BRITISH LORD CHANCELLORS.—On the resignation of Lord Chelmsford there will be five ex-Chancellors—viz.:—Lords Lyndhurst, aged 87; Brougham, aged 81; St. Leonards, 78; Cranworth, 69, and Chelmsford, 65—each receiving a pension of \$25,000 per annum. Lord Campbell, the new Lord Chancellor, is in his 78th year.

The News Condenser.

- Railroad enterprises are active in Texas.
- They have in Philadelphia, for a novelty, a rego-ran church.
- About seven hundred important battles are recorded in history.
- A pickerel was caught the other day with a squirrel in his stomach.
- A man went over Niagara Falls in a boat, on Wednesday week.
- Nicholas Longworth, of Cincinnati, paid last year for taxes \$37,510.56.
- Blondin crossed Niagara Falls, blindfolded, on a tight rope, on the Fourth.
- The Asta brings the news of the appearance of the cholera at St. Petersburg.
- All the New England States support one clergyman to less than 600 persons.
- The number of dead letters annually returned to the department is about 2,250,000.
- Rev. Dr. Whipple, of Chicago, has been elected Bishop of the Diocese of Minnesota.
- Eight million bottles are annually made at a manufactory of bottles at Folembraj, France.
- The receipts of the Treasury week before last were one million two hundred thousand dollars.
- The emigration of free colored people from the United States to Hayti is rapidly increasing.
- Horace Greeley thinks the child is now born that will see titious a State of ten million people.
- Seventy-three new counterfeits have been put in circulation in the United States since June 1.
- A Portuguese seaman, name unknown, died on Wednesday week in New York, from coup de soleil.
- A man named Rosseau, living at Chippewa, is supposed to have gone over the Niagara Falls Saturday week.
- The New Hampshire House of Representatives has 825 members—the largest number of any State in the Union.
- A recent charity concert by Jenny Lind in London cleared \$6,000. She sings, it is said, with all of her old power.
- The boy Mortara has been "confirmed," with great display, in the church of San Pietro and Vincula, Rome.
- For past six months the amount of imports is \$22,553,460—for the same period in 1857, it was only \$45,054,464.
- Isabella Thompson, of Washington county, Ohio, although not quite six years of age, weighs over 300 pounds.
- Three out of four, says a Mississippi paper, of the imported Africans, bought by planters in that vicinity, have died.
- On Friday morning, the 1st day of July, 1859, there was a white frost at New Boston village and in West Goffstown, N. H.
- Saturday week Mount Morris, N. Y., was visited by a tornado which removed chimneys, battlements, balustrades, roofs, &c.
- The imports at New York for the week ending June 25th, exceed those of the corresponding week in 1858 by \$1,192,016.
- A Kansas paper publishes a report that three hundred persons starved to death on the Plains, on the Smoky Hill route.
- The cotton exported to Great Britain this year is 1,593,000 bales, and to France and other foreign countries, 917,000 bales.
- The names of no less than 24 individuals are now prominently before the country as candidates for the Presidency in 1860.
- There are 380 patients in the California State Lunatic Asylum, and the number increases at the rate of about one each day.
- Elegant wigs are now manufactured in London from hemp, which is dyed, greased, and curled to resemble the natural hair.
- Twenty lives are reported to have been lost by fire in the Pinerles that divide Gregory's and Jackson's diggings, near Denver City.
- Gold has been discovered among the hills of Boston Co., Mo., and the excitement of the neighborhood is up to Pike's Peak pitch.
- The Court of Appeals has unanimously decided that the Atlas & Argus, (Dem.) and not the Journal, (Rep.) is the State Paper.
- The Sullivan Republican says gold has been found in small quantities at South Charlestown, N. H., on the land of Roswell Robertson.
- Among the prisoners in the Schenecady jail is an old man of 90 years, who is charged with assault with intent to kill his son-in-law.
- An automaton chess player is now being exhibited in N. Y. city. It is the form of a solemn old Mussulman, and plays a very good game.
- A Philadelphia real estate owner says there is this difference between his houses and his tenants, the former settle, while the latter don't.
- F. W. Bond, of Hudson, Wis., claims to have invented a process by which music may be printed by the act of playing it on the piano!
- Ex-President Pierce expects to return home next month, recent indications in Mrs. Pierce's health being less encouraging than heretofore.
- The Archbishop of Agram has written a pastoral, in which he describes Victor Emanuel as "a cock sparrow presuming to peck at the eagle."
- The library of Baron Humboldt, left as a legacy to his body servant, has been purchased for \$4,000, by Mr. Wright, the American Envoy at Berlin.
- A block of gold, valued at \$3,330 has been received as the result of one month's contribution to the Mount Vernon fund by the ladies of California.
- John Gorrie, M. D., of Apalachicola, has invented an apparatus for freezing by steam! The next step will be to warm ourselves with a snow-bank.
- Friends of the Bible cause in New York are now making contributions for supplying the armies now in the field in Europe with New Testaments.
- The Henry Clay monument at Lexington is more than 108 feet high, and nearly ready for the capital, on which is to stand the statue of the statesman.
- The drinking-fountain movement is spreading.—There is one of the mercurial dispensations in Pittsburgh, and they are agitating the subject in Baltimore.
- Some women in Kansas are signing petitions to the new Convention, asking for equal political rights with men, on the popular sovereignty principle.
- Rev. J. W. Riles, of California, has been fined \$500 for marrying Miss E. McDonald to John Yate, without the consent of her parents, she being under age.
- The Florence correspondent of the Newark Advertiser writes that many of the Americans who wintered at Rome are now there, generally on the way for home.

[WHOLE NO. 498.]

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
RURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,
With an Able Corps of Assistants and Contributors

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the Rural an eminently Reliable Guide on all the important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it so ably advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other Journal,—rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.
For Terms and other particulars, see last page.

DO POTATOES MIX IN THE HILL?

This question was unhesitatingly answered in the negative a week or two since—just as we would have answered had some one inquired whether different kinds of apples would mix by being grown in the same orchard; or whether calves and lambs would mix by being turned into the same yard; or the children mix by being congregated in the same school-room. Thousands of potato cultivators are ready to say that they have not seen the least evidence of mixture in the hill, and yet one occasionally asserts that such things do take place, and claims to have witnessed a perfect demonstration of the fact. Our brief note has called out the following reply in the *Patent Democrat*, and the author, or some other friend, forwarded us a marked copy.

"Do POTATOES MIX IN THE HILL?"—MR. EDITOR:—In "MOORE'S RURAL NEW-YORKER" the above question is answered in the negative. It is there asserted that a trial for several years of *Marino* and *Mexican* in the same hill proves that no amalgamation occurs. Perhaps those two miserable varieties are so miserable as not to produce a new progeny. But I think good potatoes, legitimately descended from good ancestry, will mix in the hill. And you, Mr. Editor, with several other gentlemen of this village, have seen evidence of such fact. Now, what would our friend of the "Patent Democrat" say of that fact left by me at your office last fall, of three varieties actually on and grown upon one stalk? The year before I planted the "Carter" and the old blue, rough-skinned, round potato together, and last year nothing but Carter seed came where this grew. The seed was thus almost pure. On that one stalk, you remember, there were one round and one blue, two conical-shaped long pink eyes, three Carter-shaped pink eyes, and one Carter, all of fair size.—W. B. RABBITON

Our friend of Oswego County is not quite as careful in his statements as he might be. We think, or he would not call the *Mexican* a miserable potato. Although unprofitable on account of the small yield, yet, for quality, we know of no variety superior, if any equal; and we believe this is the general opinion of good judges. Then what two varieties could be selected more likely to "mix" were such a thing possible, as these: the *Marino*, a strong, vigorous, productive red sort, just the thing to impress its character upon the fine, white delicate, slender-growing *Mexican*, could such a thing be accomplished by anything short of a miracle. But, with all our experience with these, as well as other varieties, we have never seen a single fact to warrant even a suspicion of the kind. This morning (July 7th) we dug *Small Early June*, *Mountain June* and *Buckeye*, grown in rows side by side, within two feet of each other, and they were as true to kind as though grown miles apart.

What, then, shall we do with the statement of Mr. R.? Vegetables, fruits and flowers occasionally "sport," that is, depart, in form, color or general appearance from the variety to which they belong, so as to appear like a new or different sort. Then, though there is a general resemblance in the different specimens to the variety to which they belong, no two are precisely alike. It is for these reasons that careful men, when called upon to name a fruit, prefer to have several specimens for examination, and, if possible, also the wood and foliage, and without these it is often difficult to arrive at a correct conclusion. From a bushel of potatoes of almost any variety, though the characteristics are very strongly marked in some, we can usually select a few specimens so

unlike the others as to confound the best judges, were they called upon to name them. Potato plants taken up while in a growing condition, with some tubers almost matured, and others in the different stages, are not in the best condition to show their true character.

Some time since, an intelligent farmer, who well understood how unphilosophical was the idea that the tubers could become changed by growing near each other, was at a loss to account for the fact that the potatoes which he had been growing for a number of years, were very evidently and gradually changing in their character. This led us to examine them, and all the inquiries necessary to arrive at the facts. When first planted, about eight or nine years ago, they were of one kind, or nearly so, for he admitted that there might have been, in fact, there was, a slight mixture; occasionally a potato of another sort, though so few that it did not detract from their value or injure their sale. In a few years they were so mixed or changed as to affect their sale, the interlopers being of an inferior sort, which made it necessary to procure others for seed. We had no difficulty in accounting for this without a change in the hill. The bulk of the potatoes, when first planted, were *Mercers*, a first-rate potato, but, like most of our good sorts, not very productive. The others were much inferior in quality, though more productive, perhaps yielding one-half more than the true *Mercer*. Supposing that when first planted one in twenty was of the poor sort, producing three bushels where the *Mercer* produced two, and that no pains were taken to select the seed, but all planted promiscuously, as produced; in eight years the proportion of each would be equal, and in fifteen years only one in twenty would be of the original and good sort. Good potatoes mixed with a variety producing double the quantity of the true seed, and planted as before described, in four years the varieties would be equal, and in eight years but about one in twenty would be of the original stock. This not only accounts for some facts which have caused many to think that potatoes mix in the hill, but also shows the necessity of carefully selecting seed.

Hybridization is effected alone through the sexual organs of the flower, the pollen or fertilizing powder of the stamens falling upon the pistil, and fructifying the half-formed seeds contained in the ovary or lower part of the pistil. The tuber, whether of the potato or artichoke, is but a thickened portion of an under-ground branch, the eyes being the buds, having no flower, and consequently, no sexual organs. As well might the branches of a tree mix and change their character as the branches of the potato. Were this so, then all our works on vegetable physiology must be rewritten—we must unlearn all we have learned and commence anew.

WATER PIPE.—HOUSEHOLD DUTIES, ETC.

SOME things in this world are worth all they cost,—some things are worth less. Among the former may be numbered, as a general rule, arrangements for a full and convenient supply of water for the household and for stock.

Lovers of cleanliness value antidotes for dirt, and lovers generally would lighten the labor of fair hands. Suppose a person, or, to make the case stronger, a woman, has quite enough to do,—just enough to do,—well, that's right, do it and be glad. Add something else thereto, that's a burden; small, counted immaterial, infinitesimal if you please, added thereto it exhausts the vital powers, and is at the expense of health and enjoyment. In the long run we shall accomplish most by avoiding oppressive labors. By far the largest portion of what most people do is reasonable labor; it is no more than health and happiness require of us; but the little too much, the added cares, make hard work of the whole. Instead of being free laborers, we look distantly upon our slavish tasks, count all labor drudgery, and sigh for some other sphere of usefulness.

Let this nineteenth century consider it—consider by what appliances industrious people (other kinds may look out for themselves,) may do their necessary work a little easier, making duty pleasure. Pursuing this inquiry, "the century" will find among the possibilities, and in some cases, it gives me pleasure to say, among the actualities, arrangements for bringing water into the house, the fields, and the yards.

Water has a habit of running down hill, which most people have doubtless observed; it will also run up hill if you sometimes by running up hill. If you wish to bring water to any given point, all you have to know is that the spring, stream or reservoir that supplies you, is higher than the place you wish to bring it to, and that your conducting pipe does not in any place rise higher than the fountain head. Put it down under these circumstances, make the pipe tight and keep it clear, and

the water will run; be sure and get it below the frost; sandy and gravelly land freeze deep.

How far it will "pay" to convey water in this way, depends upon the conveniences of digging, the expense of materials, and the magnitude of the interest to be served. Expensive arrangements would not be justified to give water to a horse and one cow, or to a very small family, needing but a small supply. I know of many cases where a very trifling expense would set the water to running through the house or the yard, and yet from mere inconsideration the chance is unimproved. In the hilly sections of New England and New York, there is scarcely a place to which water may not be brought by going a mile for it. Where springs or streams do not appear, resolute digging into some of the neighboring hills will develop them.

Free access to water should be considered an indispensable condition in raising stock. Occasional and semi-occasional supplies of water do not answer—a man drinks frequently and prodigiously some days—temperance men, too—at other times they don't drink at all. So with cattle—let them have "the largest liberty" in this respect, and they will not abuse it. I was pleased to notice extensive water arrangements made by Capt. Root, in York, Liv. Co. He used basswood logs, connected by iron sockets, and his logs extend more than a mile. He says basswood logs have been in use in that town more than forty years, and are good yet. They absorb water freely, and are thus preserved. He splits them into convenient size. I hope he will furnish the *RURAL* with the expense per rod of his conductors, &c., by way of encouragement to others.

H. T. D.

INQUIRIES AND NOTES.

PAINTING LIGHTNING RODS.—After having made repeated inquiries of our savans, without receiving any satisfaction, I would like to know of you what paint or varnish is best for a lightning rod. Copal varnish is said to be a non-conductor, and will not do to apply to the joints where parts come in contact; for in that case the point and the upper joints would be isolated by the non-conducting varnish. Is there any paint or varnish that is an electric conductor? An answer in the *RURAL* might be acceptable to many others of your Western readers.—A SUNSHINE, *St. Louis, Mo., 1859.*

LIGHTNING RODS may be painted with a paint of lamp-black and oil, or lamp-black, being charcoal, or carbon, is a conductor of electricity. Of course the white points of the rod need no painting. The joints should be too close for the paint to separate them; indeed the joints should be connected by screws.

THUNDER SPOILING MILK, &c.—Please to explain, through the *RURAL*, why it is that heavy thunder will sour milk,—also why dead bodies are raised upon firing heavy cannon over the water, and oblige an inquirer after knowledge.—W. W. CHAPMAN, *Walton, Mich., 1859.*

The change in milk by a thunder storm is not understood very well. Assuming the change as a fact, some have supposed that the jarring by the thunder, when the temperature is high, was the cause. It is known that electricity passing along a wire through new milk, will cause a change in the milk so that the curd collects around the wire. Hence, some have supposed that the mere passage of electricity in a thunder storm, in greater quantity, causes the milk to thicken. Others have said that the change will take place in milk in a metallic pan sooner than in a glass vessel, which is a poor conductor. By such this is held to be proof that the motion of electricity does the work. Let W. W. C. try some experiments to prove or disprove, and give them to the *RURAL*.

Who knows that the firing of cannon will cause a drowned body to rise to the surface of water?—Did W. W. C. ever witness the operation? I have known the explosion not to produce the effect.—The body had been under water only a few hours. If the explosion can produce such an effect, it can only be after the body has begun to be decomposed, when the concussion may cause the gases to be liberated, and expand the body so as to be lighter than water. When the body rises of itself it is by such expansion being produced. Consult the *RURAL* of 1857.

RUTA BAGAS GOING TO SEED.—Why do Ruta Bagas go to seed the first season instead of forming bulbs, thus destroying the crop and the hopes of the planter? Is the trouble with the seed?—T. J. WHEATLAND, *N. Y., July, 1859.*

On this subject we have several inquiries, and one gentleman brought to us about the first of July a plant in flower, and stated that all his crop was in about the same condition. The turnip belongs to the *Brassica* family, embracing the cabbage and turnip. These have been much improved by cultivation, but under unfavorable circumstances, seem to go back to their wild condition. Under good treatment the turnip forms a bulb, in which

BILLS' PATENT COULTER CLEARER.

THE above engraving is designed to represent a new invention patented by Mr. E. C. Bills, Jr., of Perry, Wyoming Co., N. Y. We have not seen it in operation, but from an examination of a model, and the certificates of practical farmers and mechanics who have used the Clearer, we are inclined to believe it a valuable improvement.

The inventor claims that this Coulters Clearer "is just what every farmer needs to plow under clover, stubble or straw manure, which every scientific farmer has to do. It is simple, cheap and durable. It can readily be attached to any coulters by a blacksmith, at a trifling expense. This Clearer is so constructed that it is put in motion by the grass or straw rising against it, and thereby removes all such obstructions as clog an ordinary coulters. This improvement upon the Coulters pre-

vents clover, stubble, manure, &c., from gathering in bunches in front of the same, and thereby enables the plowman to turn all such stuff under as evenly as it was on the ground before plowing. It of course avoids the vexation which often occurs from having to stop and clear the Coulters, and the expense of an extra hand to push away the stuff, as is always the case in plowing under such material as above mentioned; and thereby it is a saving of much time and labor, and does the work in a systematic manner. At the New York State Fair for 1857, this Clearer was awarded the First Premium, in addition to numerous other premiums and complimentary notices from the Press and scientific men."

For particular information relative to obtaining the Clearer or rights, address the patentee as above.

is stored the material to be used in sustaining the growth of seed the next summer. But, when sown too early on a warm soil it forms only a small bulb, and goes on to its second stage the first season, forming flowers and seeds. The specimen brought us in flower the first of July, was evidently sown much too early. Could we be sure of showers in July sufficient to germinate the seed and secure the rapid growth of the young plants, on a warm soil it would be better not to sow until quite late in June. On a cool, clay soil, earlier sowing would be advisable. Any one can force the turnip to form seed the first year, in several ways, but the most successful would be the following:—Sow the seed early and thick in a poor soil, allow all the plants to grow without thinning or cultivation, and almost every plant will go to seed during the warm weather. The turnip makes its greatest growth, particularly of bulb, during our cool fall rains, and if the plants are healthy, though small at the first of October, a good crop is pretty certain. Seed raised from plants that matured the first year should not be sown, as the bad habit would be perpetuated, no doubt. Still, we do not think that any great quantity of seed sold in the stores is obtained in this way. It is mostly imported from Europe, where the cool, moist weather is favorable to the proper development of the turnip, and where growing of seed is an important business, conducted with energy and skill.

MARKING SHEEP.—I wish to know the best method of marking sheep, so it will last from one shearing to another.—S. S. B., *Titusville, Cravo, Co., Pa., 1859.*

We subjoin several modes for performing this operation, and S. S. B., with any others desiring like information may adopt whatever seemeth good in their sight:

In France sheep are marked with figures in India ink on the under side of the ear, by which number they are registered. The process is a very simple one, easily and rapidly performed. The operator has a set of numbers, three of each, the face of which are small points which will make slight punctures in the skin, when pressed upon it. Suppose the sheep to be marked is No. 721, he sets these figures in a pair of pincers, and then rubs a little prepared ink, vermilion, or indigo, on the smooth skin of the ear, gives it a pinch, rubs it a moment with the finger, and 721 is fixed forever upon that spot. Thus changing figures, with a simple little machine, a sheep can be marked any number from 1 to 999,999,000.

L. A. MORRELL, in the *American Shepherd*, speaking of the uncouth and ludicrous manner in which sheep are often marked, says that this can be obviated by having the letter cut in pasteboard, and thereby some degree of taste and uniformity will be result. If a letter is not indispensable, it will be better to have an iron formed to represent a ring, triangle, or diamond, with a handle attached; then dip the iron in the paint, which should be deposited in a shallow vessel, and immediately apply it to the withers on the right shoulders, eyes on the left, or vice versa, and the bucks on the rump. This is practicable, if others near by do not adopt the same mark. Such marks of ownership are quite necessary, with a view to distant or more obvious

marking sheep, so it will last from one shearing to another.—S. S. B., *Titusville, Cravo, Co., Pa., 1859.*

RANDALL gives preference to boiled tar—the boiling continued until it assumes a glazed, hard consistency, when cold, and a brilliant black color is given by stirring in a little lampblack when boiling. It is applied when just cold enough not to burn the sheep's hide, and it forms a bright, conspicuous mark the year round. Boil it in a high-sided iron vessel (to prevent it from taking fire) on a small furnace or chafin-dish near where it is to be used. When cool enough, forty or fifty sheep can be marked before it gets too stiff. It is then warmed from time to time, as necessary, on the chafin-dish. The rump is a better place to mark than the side. The mark is about as conspicuous on the former, under any circumstances, and it is more so when the sheep are buddled in a pen, or when they are running away from you. And should any wool be injured by the mark, that on the rump is less valuable than that on the side. Will not our sheep-breeders respond to the inquiry of S. S. B., giving their mode, materials used, and experience?

FARMERS' BOYS.

THE season of the year involving the cultivation of the soil with most strenuous exertions, is now upon us. The preparation of the soil, the sowing of the seed, the cultivation of the growing crop, and the joyful ingathering of the same, follow each other in rapid succession; and, while each particular part of the process is demanding our attention, we are to bestow on it the best efforts of our brains and muscles.

In the excitement and interest which very naturally attend the hopeful and busy prosecution of our callings at this season, there exists a few considerations of great importance which we are apt to overlook, because apparently not directly bearing upon the objects of immediate pursuit.

One of these is involved in the following proposition:—Most parents are naturally desirous of seeing their sons grow to habits of steady industry, frugality and thrift. This nearly all desire, and especially so those agriculturists who possess most eminently these characteristics themselves. Such are particularly anxious to imbue their sons with a thorough love of their own chosen avocation.

How shall we accomplish this object? I propose to make a few suggestions in answer to the query. The question is not how shall we make them intelligent, virtuous, useful men, but how shall we make them interested in their business? The answer to the first would involve us in a consideration of all the means of social, intellectual, moral, and physical development and improvement. We are too busy just now to discuss these, but the

answer to the second is immediately important, and I will endeavor to make it pertinent and brief.

1st. We must disabuse our minds of the impression, if it exists, that our boys are to give us a certain amount of service, in consideration of the fact that, as parents, we have reared and supported them until able to care for themselves—an impression false in theory and injurious in practice. We rear and educate them because we love them, and not from the identical motives which induces us to rear a horse.

3d. We must consider that our boys are reasonable beings, and, like "boys of larger growth," are influenced by motives. They must have incentives to action, like ourselves, based on considerations of personal advantages. They are not machines which can be wound up at stated intervals, and then left to the performance of their stated tasks, but thinking, miniature men, that need the stimulus of direct and controlling motives.

3d. To accomplish this end, we must give our boys a direct interest in the result of their labor, by allowing them, according to circumstances, a small or large proportion of all the products of the farm, to be devoted to their own special uses and pleasures,—to be their own. Prudence and judgment must determine, on the part of the parent, whether this proportion is to be a half or a hundredth, or something intermediate; and, according to the disposition of the boy, how these proceeds are to be spent or invested; but, somehow, the boy must have a direct interest in the result of all his labor. Thus situated, his motives to industry,—to studying the principles of agriculture,—to making himself generally useful and intelligent in his profession,—will be the same as ours, and equally efficient in their operation.

4th. Our boys must have ready access to the best agricultural reading. Beautiful and entertaining periodicals on farming must be constantly before them, and their attention frequently called to whatever may appear worthy of their thought and reflection.

5th. Our homes must be beautified, and our boys must assist in making them beautiful. Encourage them to plant trees, cultivate flowers, gravel the walks, paint the out-houses,—anything, indeed, to create interest and a love of rural life.

6th. We must allow ourselves never to feel, and so express a sentiment of dissatisfaction in reference to our profession. God knows, and so does every intelligent man, that agriculture is the only truly noble profession in existence; the rest, at best, are but more incidental—exercises that we tolerate because of necessity. These truths we must act, and our boys be made to feel.

7th. We must teach them by precept and example that intelligence and gentlemanly accomplishments are the cultivator's birthright; that the accomplished agriculturist is the high priest of Nature, and needs to be initiated into all her mysteries; that these are his duty and interest. They must be educated,—head, heart and hands.

Corunna, Mich., 1859.

G. M. RYNDOLPH.

LETTER FROM KANSAS.

MESSRS. EDS.:—Being here by compulsion, I thought I would write you a few lines to let you know that we cannot find them, last evening I found a copy of the RURAL NEW-YORKER in the shanty where I am stopping, and perused it with great pleasure, although I saw, but did not read it, before I left my home in Attica, N. Y. Here I am, however, and to improve the time, will send you some notions of the country, soil, etc.

The one great difficulty in traveling in this country, especially during the rainy times, is the numerous small rivers and creeks, as we have no bridges, and when those sudden rises happen, we must hold up till the waters subside. The landscape views here are magnificent beyond description. Any person in Western New York who has been on the highest spot in the village of Genesee, and looked north-west over the Genesee Valley, can have some idea of a thousand (even now in the state of Nature) just such prospects in Kansas. No other person can ever approximate to an appreciation of the natural beauty of this Territory. And the country is good as well as beautiful. I claim that the stone in Kansas adds millions to her value over any prairie country I have ever seen. So far as I have been, there is an abundance for fencing and building purposes, thus supplying the scarcity of timber. The stone are mostly lime and sand-stone, and are found in all localities, but do not often injure the land for farming purposes. Enough of timber and stone can be found on or near every claim for fencing and building purposes, and before the present timber is gone, trees of quick growth may be planted to supply all future demands. This is one important feature of the country. Another is, it is generally rolling. While many of the prairie lands in Western Ohio, Indiana, Illinois, and other Western States, are flat for great distances, those of Kansas are almost invariably rolling, in some instances so much so as to be called mounds or bluffs. The consequence is that—the soil being rich and loose—the rains, no matter how heavy or long continued, after moistening the earth, pass off, and do not stagnate and kill vegetation. So the farmer is sure of his crop whether it rain or shine. This is a feature peculiar to Kansas which cannot be too highly valued.

Where I sit is one of those beautiful rolling prairie bottoms, surrounded partly by skirts of timber along the creeks, and partly by mounds or gently swelling bluffs. Between these groves and mounds is spread out as splendid a lawn, for a mile or two, as the eye ever rested upon, tenanted all over with various kinds of unsurpassingly beautiful prairie flowers, "born to blush unseen." Among the most numerous is the Prairie Pink, resembling, more than any other, our garden Sweet William, but of a much brighter and showy color. Last night, at sunset, was seen this charming spot in all its gorgeousness. The parting rays of the sun lent a mellow luster to the scene, which gave a heavenly peace to our weary spirits, and we soon sank into repose. This seems to me to be "the land of the sun."

"Where the virgins are fair as the roses they twine,
And all but the spirit of man seems divine."

Respectfully yours, A. S. STREYNS,
Valley Precinct, Linn Co., Kansas, 1859.

SOMETHING FOR HORSE OWNERS.

EDS. RURAL:—Scarce a man who owns a horse or uses one, but has been asked the question—Why are so many horses lame? Echo answers, why? Lameness is so common that we can rarely see a horse that is not either lame, or stiff and sore. As we pass along the street it is seldom we see a horse moving freely, or standing with his limbs and feet in a natural position, but generally find some with one fore-foot set out as far as it can be reached,—others with both thrown forward,—some with contracted hoofs favoring their feet,—some standing tip-toe, with their knees bent forward,—others sprawling like a bear on their pasterns,—some with sunken breasts or strunken shoulders,—many with cracked hoofs, ridged surfaces,—and more with contracted heels. In it is rare to see a perfect foot on a horse after he is five years old.

Have you ever examined the foot of your horse? Its parts are somewhat complicated, yet their design is simple and obvious. The foot is not as it appears to the careless eye, a mere solid lump of insensible bone fastened to the leg by a joint, it is made up of a series of thin layers or leaves of horn, about five hundred in number, nicely fitted to each other and forming a lining to the foot itself. Then, there are as many more layers belonging to what is called the coffin bone and fitted into this. These are elastic. Take a quire of paper and insert the leaves one by one into those of another quire and you will get some idea of the arrangement of these several layers. Now the weight of the horse rests on as many elastic springs as there are layers in his four feet, and all this is contrived not only for the easy conveyance of the horse's own body, but of human bodies and whatever burdens may be laid upon him. In the first place the colt is taken in hand to break. The owner, perhaps, not a judge of colts, thinks he will make rather a fancy horse, and he tells the blacksmith that he wants the colt shod forward,—wants it done in the most scientific style in order to make his foot look nice, cut the heel down so as to have a wide heeled shoe, cut away the frog, dress out the bottom of the foot and "do it up brown"—as colts should be shod scientifically the first time—so the nails home, clinch fast, and don't be afraid of the rasp. The job finished, the colt looks as if he could travel, and if there is any trot in him it must come out.

The question is again asked, What is the cause of this lameness? I trust reasons may be given for this. I hope this may put some on their guard, and may set others thinking. This is my first attempt, and nothing short of twenty-five years observation of this growing evil would have induced me to appear in print, and I confidently hoped that the remedy will be given, very much to the benefit of the horse and his owner.

J. H.
Horsesheds, Chemung Co., N. Y., 1859.

ABOUT HORSES.

MESSRS. EDS.:—In the RURAL of April 9th I noticed a portrait and description of the Black Hawk horse "Philip Allen," which was all very well, but when I observed that you congratulated the owners of Livingston and adjoining counties upon this chance to propagate from the best, I thought it was high time for some man to write something that would set farmers to thinking that it possibly might be as well to propagate from a very different class of horses. Gifford and Black Hawk Morgan horses have been all the cry here for the last twelve or thirteen years, and the horses of Onondaga county, at least, have been fast running down all this time. I think the colts raised in this vicinity at the present time do not average over nine hundred pounds in working condition. The Morgan colts will not average that. What are such colts worth to farmers? Are they the kind to turn the stiff soil of old Onondaga or Livingston, or draw the products of said soil to market? And as for speed, it is all in the papers, or sires, the colts certainly have no business on the road with the colts that we used to raise fifteen years ago. Great judgment should be used in crossing, but I think for most of our mares the stallion should be 16½ hands high, well proportioned, and weigh 14 to 16 hundred pounds. If it takes him 4 minutes to go a mile over our common roads his stock will be worth keeping at least, and as for selling, nine out of ten will sell at three or four years old at fifty per cent more. Look about the country; what are our best farm teams? Go into our cities—what are the best coach horses, or best selling horses there? But enough for the first.

South Onondaga, N. Y., 1859. J. W. PARSONS.
REMARKS.—We cheerfully give place to the above, and shall not now particularly dissent from its conclusions. We may remark, however, that many of the farmers of Livingston, Monroe, &c., find it more profitable to breed small than large horses, as the former are in greater demand and bring higher prices than the latter. Extra size, weight and strength are necessary for some purposes, yet at a time when "style and speed" are the fashion, horses which abound in nerve and muscle (and only weigh from 900 to 1,100 lbs.) are the most profitable to breeders who supply the demand for road and carriage horses—and profit is an important item with most people. As to the final query of Mr. P., "Go into our cities—what are the best coach horses, or best selling horses there?" we can answer (so far as this city is concerned,) that light, Morgan-built horses are preferred for most purposes, and bring the best prices.

BLACK SPANISH FOWLS.

EDS. RURAL:—Fowls are such pests to gardeners, if not kept in their proper place, that I have always been a great enemy to them. One year ago last spring, my children got a present of a few of the Black Spanish breed, and it was only with great entreaty that I consented to let them keep them, and seeing in the RURAL the profits of fowl-keeping, I thought I would keep an account of mine. I sold a few pairs last fall for two and three dollars per pair, and kept twelve. They commenced laying when five months old and have continued laying steadily since, omitting a day in every six or eight. I kept them warm during the winter, letting them out on mild days. Their food

was principally corn, wheat screenings, with corn meal and potatoes occasionally, and fresh meat two or three times a week. I commenced keeping accounts on the first of January, and from that to the first of July I got 1,135 eggs from eleven hens—two of them are half-breeds—the latter brought out a flock of chickens each, and one I parted with on the tenth of May. The pure bloods seldom want to sit and are easily put off, I have one hen, three years old, that never wanted to sit yet. I have kept a regular account of each day's eggs, and the price of those not sold, at the rate that eggs were bringing at the time. I could have sold more in April and May than they produced, and even now I can scarcely get any to use. I mean to keep account for six months longer, and will give a true statement of it.

Troy, N. Y., 1859. J. C.

IMPROVEMENT IN WELL-BUCKETS.

EDS. RURAL:—For some time I have contemplated writing concerning what I call an improvement on the well-bucket represented in your valuable paper. It is this:—Instead of taking the old bucket, make one out of a board—make it square, and of the following dimensions:—Twelve inches long, eight inches at the top, and eleven at the bottom. This gives a good chance for a large valve. Put on a heavy hoop at the bottom so as to sink it readily. Instead of a rag-wheel put on a break in the shape of a lever—cut a notch in the said lever to fit on the cylinder, or shaft, that the rope winds on, and you have the bucket at perfect control. The lever will be fastened to one corner of the curb, and at the other end fasten a strap or chain with a loop so as to slide back and forth to tighten the lever and hold the bucket at any point you please. This is the best fix for lifting water out of the well that I have ever tried.

Before closing this I must make inquiry of you Empire citizens, if you can beat or come up to the size of a Parson that I dug the other day. I had to get my post-auger to get it out, and did not get all of it at last, as the bottom was crooked and the auger out to pieces, but what I got measured 4½ feet in length, and 16½ inches around the top.
Wataga, Ill., July, 1859. S. GOLDSMITH.

SOWING WINTER RYE WITH BUCKWHEAT.

MESSRS. EDS.:—In a late issue of the RURAL, I. W. B. inquires what has been the experience of sowing Winter Rye with Buckwheat? I will briefly state mine. Last year I purchased a tract of new land from which the wood had recently been cut; took possession on the 20th of May; grubbed, cleared and plowed nineteen acres, and spread thereon 500 bushels of lime, and sowed fifteen bushels of buckwheat, fifteen of rye, and two and a half of clover seed,—harrowed all in together,—finished about the eighteenth day of July. The buckwheat and rye both grew finely—an early frost shortened the buckwheat, though we have 154 bushels of prime grain, 40 bushels of which I sold at \$1.25 for seed—balance made into flour. The rye made an excellent crop, well grown and heavily filled. We had two hundred and thirty shocks, which I think will average one bushel each,—the grain is light colored and plump,—we have threshed a part of it. The clover was a failure—the new ground, filled with sticks and roots, was too loose for it to stand dry weather, except along the edge of wagon roads, or such places as were more compact. Soil rather sandy.—W. PARRY, Cinnaminson, N. J., 7th Mo., 12th, 1859.

A FEW WORDS ABOUT BEES.—INQUIRY.

EDS. RURAL:—Last winter I kept over twenty-three swarms, and they all appeared in good condition till after the last snow. A few days after the snow storm I examined them, and to my astonishment I found that three swarms had left for parts unknown, their hives being full of good, white comb. I have now got twenty swarms, and to-day, June 18th, not a hive has swarmed. There are quite a number that keep bees about here, and I have not heard of a single instance of swarming. Last year my first swarm came the 18th of May, and they were all done swarming by this time, or nearly so. I took from fifteen hives last year four hundred and ten pounds of honey. Now, what I am the most anxious to learn, is how to try out beeswax. We generally place the comb in a coffee sack, put in a large kettle, and sink it by putting on weights, the wax rising on the top; but it is always of a very dark color, and not fit for market. Will some one please give me the desired mode?—R. BRILL, Danville, N. Y., 1859.

TURKEY RAISING.

EDS. RURAL:—In your issue of the 25th ult., "A READER" asks the experience of some person in raising Turkeys. As I have had some experience in that line I will give it for what it is worth. As soon as the turkey chickens are hatched I coop them and commence feeding, giving them wheat bread, soaked, and boiled potatoes, together with curd made of lobbared milk, not cooping them to either. Keep them cooped for about a week or ten days, then let them out when pleasant, cooping them at night and rainy weather. At this age it will do to feed them corn meal, but at first, we consider it bad food for them. They will soon learn to help themselves to insects. In this way we seldom lose more than one to fifteen or twenty, as about that proportion are weak and puny. I consider old turkeys preferable to raise from, as their young are stronger and need less nursing to raise them.—H. BROWN, North Plains, Mich., 1859.

Rural Spirit of the Press.

Feed the Land and it will Feed you.

THE *Homesopad* well observes, "the true economy with land is to treat it as you would a laborer, from whom you wanted the most work. Let it be well fed, and there is much less danger of over feeding, than there is in case of man or animals.—No more should be cultivated than can be stuffed with a full supply of plant food. The sun and atmosphere are all ready to give you eighty bushels of corn to the acre, and it will not cost you a penny more to draw upon them for the necessary amount of heat, light, carbon, and moisture to make this quantity of grain, than to make twenty bushels. Here is an inexhaustible store-house of riches, and a well fed soil is the key to unlock its treasures.—Give to the soil generously and persistently, and it will give unto you 'good measure, pressed down and running over.'"

Value of Vetches.

A. WOOLFORD, of Canada West, bears the following testimony to the value of vetches, one of the most profitable forage crops in use in England:—"Two years ago I imported a small quantity for trial, and I have pleasure in stating that the experiment has been far beyond my most sanguine expectations. I have tried it on all kinds of land, and it has done well on each, but I consider high land the best. Have sown it on a piece of rocky land, where there were not over four inches of soil, and the crop was abundant. I have mowed it three times in one season (upon common clay land) for my horses. I have also cut it once for feed, and left the second growth for seed, which returned twenty bushels per acre. I should also inform you that my cattle have been fed upon vetch straw this winter, and I consider it much superior as fodder, to any other kind of straw."

Corn Culture.

THE *New-England Farmer* gives the following as the mode in which more than one hundred bushels of Indian corn was raised to the acre, in the State of Maine—the northernmost of all the States of the Union. "MR. WILLARD, of Wilton, Franklin Co., Me., says, that in 1853 he grew fifty-five bushels, eight quarts, on half an acre, of merchantable shelled corn, fit for use. It was done after this manner: a piece of gravelly loam was selected, and finely plowed ten inches deep, and manured with six cords of stable manure, in best condition for use, one-half of which was spread and covered by the plow; the other half was placed in the hill. An abundant supply of well-seasoned seed was dropped, and the surplus plants were thinned out so as to leave about one plant to each square foot of land. It was carefully cultivated, and kept entirely clear of grass and weeds."

Root Crops.—Fodder.

In a recent issue of the *Maine Farmer*, the editor remarks:—"We are glad to see a return to the culture of roots, ruta bagas, mangel wurtzels and carrots, among us. Not that they have ever been wholly abandoned, but the culture of them, for the last ten years, has fallen off very much. Double turnips, the turnip, and the mangel wurtzel, are all things. We all know that there is great difference in the nutritive power of the articles which we use, not only for our own food, but for the food of our domestic animals; and we also know, that we, as well as our animals, are so constituted as to require this same variety for the continuance of health and activity. Keep yourself on one single article of concentrated food, and you may perhaps grow fat, but you will also become sick, or languid and spiritless. Sailors know this. When they get into situations where they are obliged to live on one kind of food, they find their health decline and their strength and vital powers to flag, and they finally have to 'give up the ship.' It is, therefore, a duty to cultivate a variety of articles to be used as fodder for our stock, during our long winters. Good hay is the staple crop for this purpose. It is to cattle what bread is to their owner, the staff of their lives. But roots of different kinds make an agreeable and profitable variety. In olden times, when the potato rot was unknown, the potato, being the easiest raised and preserved, was much used for cattle food. The potato rot put a veto on this root as stock food."

Agricultural Matters in Kansas.

THE *Kansas Chief*, noting the advantages presented to the Kansas sheep-breeder, remarks:—"It may not be generally known that Kansas is one of the best countries known for sheep-raising, but such it is, as we have been informed by persons acquainted with the subject. As a grazing country, Kansas is unexcelled. Sheep thrive here with little care, and can find plenty to feed on, summer and winter; and therefore their cost would be comparatively light. With proper attention to sheep-raising, we believe fortunes might speedily be amassed. The wool could be sent to a profitable market, at low rates of freight; or, if the business were entered into upon a scale of great extent, it would no doubt induce the establishment of manufactories of woolen fabrics at home." According to the following statement, which we find in the *Lawrence Republican* of the 7th inst., some portions of the Territory have taken an important position in the export of grain. There is little doubt that very few years will witness Kansas furnishing its full quota of the cereals for the sustenance of Eastern consumers. The *Republican* says:—"One of the largest dealers in grain in this city estimates that the surplus corn in this county, shipped from Lawrence this season, will be nearly 200,000 bushels. The total crop raised in Douglas county last year was from five to six hundred thousand bushels. That is doing well for a county that has been under actual cultivation but about two years. Now that our lands are pre-empted and a much larger surface planted, another year will clear our farmers from debt, and start them on a career of permanent prosperity and wealth." Speaking of present indications as regards growing crops, the same journal remarks:—"Corn in this county looks splendid. The weather has been highly favorable for its growth. Wheat is now being harvested, and the indications of rust have not materially damaged it. A fine crop will be gathered. The prospects for grain in the Territory are generally first rate."

Agricultural Miscellany.

PREMIUM OF \$100 FOR BEST TEN ACRES OF WHEAT!—In order to encourage the production of Wheat, and obtain for dissemination reliable information as to the most successful modes of culture in sections where the mildew prevails—as in Western and Central New York—we hereby offer a Premium of ONE HUNDRED DOLLARS for the Best Ten Acres of Winter Wheat (quantity and quality considered) grown in this State during the ensuing year, on one contiguous piece of land, being a part of the farm owned and cultivated by the competitor. A sample of the grain, and statement of mode of cultivation, &c., (similar to that required by the N. Y. State Agricultural Society on Farm Crops), must be furnished to D. D. T. MOORE, Rochester, on or before the last day of October, 1860, by whom, in conjunction with Gen. RAWSON HARMON of Monroe Co., Hon. T. C. PETERS of Genesee, JOHN JOHNSTON, Esq., of Seneca, and Hon. GEORGE GEDDES of Onondaga, (or other competent and disinterested persons,) the premium will be awarded.

Conditions and Statement.—The land upon which the crop is grown must be in one contiguous piece, measured with chain and compass, and the surveyor make affidavit to his survey. The applicant and one other person who assisted in harvesting and measuring the crop, must make affidavit of the quantity of grain raised, and that the crop grown was in the usual course of cultivation, and must also state the whole quantity of land in the piece of which that intended for premium is a part. The entire crop upon the piece entered for premium to be harvested and measured.

The Statement must embrace also—1. Statement of the previous crop, if any, and how manured. 2. The kind and condition of the soil, whether underdrained or not, and the location of the farm. 3. The quantity of manure on the crop, the manner of its application, the quantity and kind of seed, and where (in what County and State) it was obtained. 4. The time and manner of sowing, harvesting and cleaning the crop; and the actual yield by weight and measure, the statute bushel in grain crops to be used; the market value of the crop, and the place where marketed, if sold. 5. A detailed account of the expense of cultivation. [Competitors are requested to notify us of their intention to compete previous to the first of April next, so that members of the Committee may, if convenient, see the wheat while growing. And if those who enter the arena of competition will furnish us their mode of cultivation as early as July or 1st of August, 1860, it will enable us to disseminate valuable information in time to benefit those who may sow wheat in the autumn of that year.]

WHEAT HARVEST.—The first four days of last week were very favorable for harvesting, and considerable wheat was secured previous to the storm of Thursday night—since which we have had such heavy rains as to check operations, and now (Tuesday noon) the sky is overcast, with a prospect of more rain. If the wet weather continues, and prevails at the West, we fear the wheat harvest will not only be retarded, but more or less damage caused. In a large portion of Michigan, and other sections where the wheat is very fine, the crop is not yet secured, and much depends upon the state of the weather. So far as this region is concerned the wheat crop is as good as we have anticipated and reported—though not matured for cutting as early as we expected, especially white wheat.

THE RURAL IN THE PREMIUM LISTS.—We observe that many County and District Ag. Societies in this and other States offer yearly copies of the RURAL NEW-YORKER as premiums—several Societies offering from one to one hundred copies each the present season. The Schuyler Co. (N. Y.) list, just received, includes some seventy copies, and offered nearly as many last year. As we have never made any effort to have the RURAL recognized and patronized in this manner, the large number of copies being offered by Societies is specially gratifying.

—To save answering frequent inquiries by letter, we would state in this connection that the RURAL is furnished to Ag. Societies at the lowest club rate—\$1.25 per yearly copy.

ADDRESSES AT FAIRS.—A correspondent suggests that it would be well, in naming the times and places of holding Fairs, to also state who is to deliver the address. To prove impracticability, however, it is only necessary to remark that our friend informs us, in the same letter, when and where his County Fair is to be held, but is unable to say who will give the address! And such is the fact in most cases—the time and place of holding the Fair being designated, in almost every instance, months before a speaker is engaged. We could not now name but two or three speakers at Fairs in this State—except our own engagements, which we are of course too modest to chronicle!

A HINT ON CORN CULTURE.—An exchange (the *Amer. Farmer*, we believe,) says:—"But little is to be said about the Corn crop, as it is to be hoped the working is completed. If you must, however, work it in this month, keep the implement as far off from the corn as your work will allow. Cultivate alternate rows. That is, go over your field, leaving every other row untouched, so that every hill of corn will have its roots on one side uncut. Then begin again, going through the rows not worked before; by this time these roots first cut will have recovered in a measure from the damage done them."

BAROMETERS WANTED.—We have occasional inquiries relative to barometers—as to price, where obtainable, &c. A letter now before us, from a subscriber in Essex Co., wishes to know where he can get "a good, cheap and accurate barometer." We have a very good instrument made by J. KENDALL, of New Lebanon, N. Y., who is considered one of the best manufacturers in this country. No doubt Mr. K. will furnish particulars as to price, &c., on application, and we refer those interested to him for such information.

GOOD POTATOES.—We are indebted to Hon. A. B. DICKINSON, of Hornby, Steuben Co., for a barrel of Bermuda potatoes—a sample of his last crop of about twelve thousand bushels. They are much better than we expected—a fine, mealy table potato—good enough for the best folk (like editors!) and far better than most of our city people can obtain at this season. Thanks to the Baron—and our regrets that grasshoppers lessened his crop nearly one half.

OHIO WHEAT CROP.—The Secretary of the Ohio Board of Agriculture has visited the wheat growing counties of that State, and concludes that the loss from all causes will be about 3,500,000 bushels, while the whole crop will exceed thirty millions—three more than in any previous year.

CROPS IN MICHIGAN.—Our letters and exchanges speak in the most encouraging terms of the crop prospects in Michigan. The frost caused but little damage. Wheat is remarkably good, while corn and potatoes are very promising.

ONTARIO CO. AG. SOCIETY.—The Fair of this Society is to be held on the fine grounds in Canandaigua, Sept. 2nd, 3rd and 4th. The Regulations, Premiums, &c., are of the usual progressive and liberal character of the Ontario Society.

HORTICULTURAL.

THE SEASON.

For several weeks we have been enduring a "dry spell" of unusual length and severity. Newly planted trees felt its effects very sorely, and some that were not properly cared for, we fear have perished. Many have we seen withering and dying, that a good forking up of the soil, a few pails of water, followed by a mulching of refuse stuff would have saved. It is strange that people will spend their money for trees and allow them to die before their eyes without an effort to save them. The dry weather affected the *Vegetables Garden* very materially. The peas ripened up without giving half a crop, and the early potatoes are few and small. Corn can endure a great amount of heat and dry weather if the ground is kept mellow. Indeed, stirring the soil is the greatest protection against evil effects from drouth. A good hoeing among the garden vegetables or what is better, a forking is as good as a shower. This it is pretty hard to make people believe, but whoever tries it will be satisfied of its truth. Within the few days past we have been blessed with copious showers, and all nature is revived.

Many varieties of *Cherries* are still on the trees. *Courants* and *Gooseberries* are ripening, as are the *Raspberries*. On these small fruits we shall give a chapter after a little further opportunity for examination. In the *Flower Garden* the *Phloxes* and other *Herbaceous Plants*, are now the most attractive. Next week we will describe the principal varieties in flower.

VINE CULTURE AT HAMMONDSPORT.

While at Hammondsport to-day, and waiting for the shower to pass, a sensible man who had the Rural, lent it to me to read for the time being. It seemed very much like shaking hands with an old friend to take hold of the old familiar sheet.

It's a beautiful drive from Bath, and the best corn I have seen was along the route, several fields being in *taet*, and some showing silk. The wheat along the hillside looked beautiful. It will not be harvested till next week, (the 18th and later.) Other crops, except grass, are looking very well.

But what most struck my fancy, is the tendency to vineyards among the farmers on the north side of the valley. The hills rise rather abruptly to quite a distance, and are being rapidly converted to vineyards. The attempt to raise grapes in this region has been very successful, and it will be but a few years before they can sing or talk of their "vine-clad hills." They are not, as a general thing, beyond the necessary care in the preparation of the land, and will not, of course, succeed as well as they ought or might with a very little more labor in the start. Instead of planting in rows up and down the hill, they should trench them into borders or terraces about 8 feet wide, running round the hill. The fruit will ripen much better, for no part of one row will shade the other; besides it will prevent washing, otherwise a serious difficulty upon these steep hills.

The land already appropriated to the vine in the towns of Urbana and Pulzacy would be quite an item even now. Ultimately all the available land will be used for that purpose, and will add largely to the wealth of these towns. It will be but a few years before the domestic wines will entirely supersede the foreign article. Pie-plant, currant and grape vines can be produced to an unlimited extent—as soon as it will pay.—P.

MAMMOTH RHUBARB.

Messrs. Eds.:—Col. J. F. MORAN, of our village to-day presented me with a stalk and leaf of rhubarb, grown by himself, which would throw MANUS's entirely into the shade, especially if placed over it—the dimensions and weight of which are as follows:—Length of stem, 23 3/4 inches; circumference, 6 1/2 inches; weight of stem, 1 1/2 lbs.; weight of stem and leaf, 3 lbs. 11 oz.; length of leaf, 4 feet; width of same, 3 feet 9 inches; circumference, 24 1/2 feet.—D. M. NORTON, Akron, Erie Co., N. Y., June 24, 1859.

LARGE RHUBARB.—Having noticed an article in your valuable paper headed Large Stalk of Victoria Rhubarb, and asking all to beat it, and as a neighbor of mine, Mr. C. A. DUTTON, has fairly done it, I will give you the dimensions. The length of stalk, exclusive of the leaf, was 26 inches; largest circumference, 7 inches, and weight, 2 pounds and 11 ounces, which exceeds the weight of Mr. FREN's by eleven ounces, leaf and stalk together. But, as we consider the stalk the most valuable part, we have made no account of the leaf. However, I don't see how Mr. MARSH gets so large a circumference of the leaf to so small a diameter. I am sure it can't be by geometry, or else he has taken one more lesson than I have. Perhaps he can explain it. However, I think he will have to try again.—Geo. TOWNSEND, Elma, Erie Co. N. Y., July, 1859.

RHUBARB.—Our friend, F. A. MARSH, speaking of a stalk of rhubarb which weighed fifteen ounces, says, "beat it who can." My neighbor, H. HATLER, brought a stalk into our village market which weighed on my small scales, one pound and eleven ounces, clear of leaf. He has more nearly as large.—A. WILSON, Marcellus, N. Y., June, 1859.

SALT FOR WIRE WORM AND QUACK GRASS.—(O H. J. W. C. W. and others.)—The worm you describe is the wire-worm. Enough salt to kill them would destroy the plants. If salt had been given early in the season, so that its strength might have been expended before the plants were set, enough might have been given to trouble the worms, and destroy some of them. Salt will destroy *Quack Grass*, but it will require a very large dose—enough you would think to prevent the growth of all vegetation for some time.

THE SCALE INSECTS.

One of our subscribers brought us a branch of the *Flowering Currant*, covered with scales, as shown in the engraving. On examining these scales through a glass we found they covered masses of transparent eggs, attached together like clusters of grapes. These we sent to our attentive correspondent, JACOB STAUFFER, of Lancaster, Pa., who with his usual courtesy and promptness furnishes us the following interesting article.

DEAR RURAL:—Yours with the enclosed twigs of a gooseberry bush, (as I judged,) covered with small brown excrescences, or "scales covering masses of transparent eggs," as you state, are the remains of the female scale insects—a species of *Coccida*, an order embracing several genera and numerous species.

The *cocci* are a prolific race, and like the *aphides*, or *plant-lice*, are a source of vexation and annoyance to the horticulturist and arboriculturist. They have become so common that almost every nursery is infested with one species or another.

These insects vary much in form and habit, and seem remarkably discriminate in their choice of food, almost every species being peculiar to some particular plant, so that they usually bear the name of the plant they feed on; for instance, the *coccus cacti*, found on the *cactus opuntia*, or prickly pear tree, in South America, produces the commercial *cochineal*, and with several other species, used for their coloring matter, are cultivated by certain attention to the breeding of these insects.

A dark colored fluid often exudes from some species common with us, and perhaps at the proper season, treated as the cochineal insect is, they might prove a good substitute. I would call attention to that direction.

There is this singular fact that many of these insects, when fully matured, become more and more imperfect, losing all traces of articulations in the body as well as of the limbs, becoming, in fact, inert, and fixed masses of animal matter, motionless, and eventually a dry, senseless scale, under which, however, the numerous eggs are hatched and sheltered until they venture forth to vegetation, and begin their life with the insect-like carcasses over a fresh brood.

The males are much smaller and more active than the females. Fig. 1 and 2 from, beneath one of these scales sent me, are highly magnified—fig. 3, a view of the twig with its scaly granulations upon it. 4, an enlarged scale.

The females have a three-jointed *promucula*, apparently arising from the breast, capable of being greatly extended, which they insert into the bark, &c., of plants—the males appear to be destitute of a mouth of any kind, become winged and fly about. When at rest their single pair of wings are carried horizontally—one covering the other. Fig. 5 and 6—1 illustrates the *Pseudo coccus*, male insect, much like the *c. cacti*. Several species of birds, such as the chickadee and wren, prey upon them. A minute *Ichnumonid* fly also eviposits into the female *cocci*, for a nidus, and thereby many are destroyed, and a check put upon their excessive increase.

Where these insects once gain possession of a plant or young tree, its disfigurement and death is almost certain, through exhaustion, by the myriads of this class of minute vermin, and requires prompt and energetic action, otherwise it is next to impossible to exterminate them.

The recipe of Mr. HARRIS is perhaps the best, which is to make a wash composed of eight parts of water, two of soft-soap, with quick-lime enough added to bring it to the consistency of a thick white-wash. This ought to be laid on early in June, when the insects are young and tender, with a brush covering the surface of the branches and filling the cracks with it.

The apple tree bark-louse noticed in your issue of July 9th, (vol. 10, No. 28,) I judge is similar to the *coccus conchi formis* of GONELIN. Fig. 9 represents some that I found on an apple tree, beautifully striated, covering numerous oval eggs, 9—1 is a section showing a lower ridge. Fig. 8 is a species found on the lilac, of a drab color, and oval shape. In last year's Rural, vol. 9, p. 231, (No. 29, July 7,) you figure the vine scale insect. Fig. 6 is the *coccus vitis*, as I have seen it represented, and is a different species. Fig. 7 is a beautiful pearly species, checked with radiating dark spots, (7—1, the underside and posterior end turned up,) which I found on a grape leaf—a single specimen only—and may belong to a different genus. Fig. 10 is taken from a branch of maple (*Acer dasycarpum* WILM.) an ornamental tree on the S. W. corner of South Queen street, in this city, giving the tree a very unsightly aspect, and will evidently be its destruction, if nothing is done, speedily.

This latter belongs to the woolly tribe of scale insects. Their eggs are so numerous that their bodies are insufficient to cover them, hence they have the faculty of emitting a fine cottony excrement, of a viscid consistency, capable of being drawn out into the finest cobweb-like threads, of a pearly whiteness. The embedded eggs are exceedingly numerous and of an oval shape. My friend, S. S. RAYMOND, wrote an account of this species in the *Farm Journal*, for 1854, and proposed to call it *coccus innumerabilis*. It may

prove a species of *Dorthisia* Bosc, the *Cionops* of LEACH. I have my eye on some close at hand, on the maple referred to, and shall become better acquainted with this insect, as to its transformation, before long. Much more might be said on this subject, but this is already sufficiently lengthy. Ever ready to respond, I am very truly yours, Lancaster, Pa., 1859. JACOB STAUFFER.

DISEASED PEAR TREES.

Messrs. Editors:—In reading (in your paper of Saturday last) the very interesting and instructive proceedings of the *Fruit Growers' Society of Western New York*, I find that Dr. SPENCER, and other members of said Society have been troubled with "a mysterious disease afflicting their pear trees."

Having for a number of years noticed the different phases of said disease, and tried various remedies therefor, I have by the merest accident discovered a certain remedy. It is this:—Carefully examine both body and limbs of your trees, and with a sharp knife as carefully remove the outer bark of the diseased parts, leaving only the fresh inner bark, with but a small portion, if any, of the outer bark remaining thereon. The second or third day thereafter, give the body and limbs a thorough coating of soft soap. Do this in the summer months.

I have never positively ascertained the cause of the disease; yet from having seen the tracks, but not the worm itself, I believe it to be caused by a very small worm, the egg from which it is produced having been deposited in the outer bark, by some insect at present unknown to fruit growers. In its first stages the disease discovers itself by brown or purplish specks showing through the clear and otherwise healthy outer bark.

I have tried the above remedy two summers previous to the present, and with decided success in every instance. GEO. C. BRECHER. Livonia, N. Y., 1859.

AMERICAN BLACK RASPBERRY.—The finest quart of Raspberries we have thus far seen the present season is one of the *American Black*, presented us by ANA BARKER, with the following description:—market, near Rochester. Mr. A. thinks they will prove more profitable than any other sort; for, although injured by the June frosts they are yielding a good crop. The specimens sent us were the largest we have ever seen, as large as *Antwerps* are usually grown.

A fine basket of the same sort came to hand just as we were going to press, from H. H. DOOLITTLE, of Oaks Corners, Ontario County. Mr. D. has made a specialty of this fruit, and his system of propagating and managing the plants was given in the Rural of March 5th. Though far inferior in quality to the *Antwerps*, *Brinkley's Orange*, etc., the hardiness and productiveness of the plants, and the firmness of the berries, makes the *American Black Raspberry* very popular and profitable as a market fruit.

PIE-PLANT WINE.—Some time since we received from the Oneida Community several bottles of wine, made from pie-plant, the native grape, and currants. The labels on the bottles did not correspond with the description given in a note accompanying them, so that we were not able to report as we would have done. One bottle of the pie-plant wine had a strong cherry flavor, and it seemed fully equal to any of our domestic wines. We hope the time is not far distant, when not a single bottle of wine or spirits will be imported. We have soil enough, and can raise fruit enough to make all the wines, and cordials, and syrups we need. There is no use of spending our money for foreign mixtures.

UNION SHADE TREE ASSOCIATION.

The beauty of a village, as every person of taste is aware, does not depend on its showy buildings so much as on its shady trees. Any place properly ornamented with trees is handsome; without them the most costly architecture is bare and unattractive. The citizens of Union Springs, a thriving village on the banks of Cayuga Lake, resolving to profit by these truths, formed an Association, with the following regulations in substance:—Each member pays an admission fee of one dollar, which is applied in procuring and setting out trees in such places as the owners are unable or unwilling to plant—any additional sum from a member is expended in planting trees, at cost, along his own grounds or where he may direct.

The admission fee of the Association amounted in the first place to some forty or fifty dollars—a part of which was from day laborers to be expended in work. The executive committee, after exploring the adjacent country, found a fine natural nursery of maples and other native trees, which they secured at five dollars per hundred. They were dug with the roots, (the roots are commonly cut off in such cases,) and several teams were dispatched for them. Over six hundred trees have been thus procured at a small cost, and have been placed along the streets, and if half of them grow and flourish, they will increase the market value of the lots they adorn, at least ten times the amount of the expenditure. This may not be the best mode, in every particular, of accomplishing so desirable an object; but it may furnish hints for an improved mode of proceeding in other places. It will be perceived that in all such cases, cattle must be excluded from the streets.—Country Gentleman.

Inquiries and Answers.

SILVER FIR AND DECIDUOUS CYPRUS.—Can you inform me through the Rural as to the hardiness of the Scotch Fir and Deciduous Cypress?—A Subscriber. Both are hardy here.

SOD LAND FOR STRAWBERRIES.—Will you, or some one who has had experience, please inform me and the many readers of the Rural the best method of preparing sod ground for strawberries? Should the sod be removed entirely, or spaded under, if the latter, would manuring, previous to being spaded, be beneficial? The soil is a sandy loam, and partly shaded by forest trees.—T. H. TOWSER, Ypsilanti, Mich., 1859.

SPADE THE TURF UNDER DEEP. Work the manure into the soil while digging, so as to have it well mixed. This is better than burying it at the bottom, or spreading it on the surface. If partly shaded with forest trees, we fear the roots will so "draw" upon the soil as to injure the strawberry crop.

THE CROCUS IN AMERICA, AND THE RURAL IN EUROPE.—Permit me to inquire through the columns of your paper whether Crocus roots will bear being left in the ground all winter, or whether they must be dug up and laid away every fall like the *Gladiolus*, &c.? You may perhaps like to know what is thought of your paper on the other side of the Atlantic. Last week I had a letter from my respected mother. When answering some queries relative your paper, she says:—"We get the Rural regularly every week. It is the best got up paper in every way I have seen from America.—J. H. J., Starkey, Yates Co., N. Y., 1859.

CROCUS BULBS, if taken up after the tops have died, must be re-planted in the Autumn. It is best to allow them to remain in the same bed about three years, then take up and re-plant, or they will become too thick and the ground impoverished.

FIELD CULTURE OF SMALL FRUITS.—Considering the failure of the peach, plum, and partially the cherry, should not the small fruits receive more attention? They are quite free from diseases and insects so far, give quick returns, and for a delicious succession of summer fruit, what can we desire better than the improved kinds of strawberries, raspberries, and blackberries offer? With the aid of scaled cans, or bottles, we can prolong their duration, and increase our estimation of their good qualities. Now, will you, or some one who has experience in the matter, give us practical directions about their field culture, particularly raspberries and blackberries? How far apart should the rows or hills be, what varieties should be most depended upon, and would the Red Antwerp raspberry answer very well without protection in winter in this climate? Would it not be well to plant in rows to facilitate a succession of new plants before taking up the old ones? And, lastly, has any one experience in putting them up in bottles or cans for sale?

A word about those *Farm Hand Books of Fowles & Wells*. I confess I rather thoughtlessly practiced the author's suggestion, "putting a mound of ashes around apple trees as a preventive of the borers." I think the author must be a believer in the strongest doses of allopathy, and by way of retaliation, I should like to have him take his own physic, for judging from effects, the remedy is worse than the disease.—H. Y., Seneca Co., N. Y., 1859.

While leaving these inquiries to be answered, in the main, by our readers, we will give a few facts. Raspberries and strawberries are too tender and perishable to ship a great distance to market. Those who live near a good market cannot put them up as a more profitable use than in growing these fruits. Generally, the Red Antwerp would not be injured in this section by the winters, though occasionally the canes are more or less killed. Large growers for market, even around New York city, find it more profitable to lay down the canes in the fall, and cover them with a little earth. The growth in the spring is more vigorous, the crop better, and perfect safety secured against an unfavorable winter. The Dorchester, or High Bush, and the New Rochelle are the two best varieties of blackberries. Which would prove best for field culture we cannot say. We would plant a portion of each. The current is a most profitable crop when well grown. Our people don't begin to know the value of this fruit. The currants sold in our markets are poor things, grown without care or culture, and are not prized, nor do they deserve to be. For the last two seasons the gooseberry caterpillar has been exceedingly destructive to the current here, destroying not only the fruit, but in many cases the plants. The raspberry may be planted for field culture 8 or 8 1/2 feet each way, so as to admit horse culture both ways, or 2 feet apart in the rows, and the rows 3 or 3 1/2 feet apart. A little wider planting is necessary for the blackberry, as it makes a larger growth. Some cultivators set raspberries as wide as five or six feet apart and three plants to each hill. Nothing keeps better than the current in cans or jars, and in the winter no fruit is more delicious. The strawberry and raspberry do not keep as well; they lose both color and flavor. This is our experience.

WASH TO DESTROY INSECTS.—In the *Journal of the Horticultural Society of Paris*, it is stated that an excellent wash for destroying insects is made by boiling 1 1/2 pints of water, 62 grains of red American potash, and the same number of sulphur, and the same of soap. If it is necessary to make it stronger, double the quantity of sulphur and of potash, leaving the soap the same. Immersion for a second kills ants, large caterpillars, and cockchafers. The solution does no harm to plants. This is important, if true, and it can be easily tested. The large white grub of the *Cock-chaffer*, or as it is commonly called here, the *May-Bug*, has been doing a good deal of mischief the last two or three years, particularly to strawberry beds, by destroying the roots. Specimens have been sent us from various sources this summer, and we have heard much complaint and seen many beds almost ruined. The potatoes, too, they have attacked most voraciously. Last summer we assisted H. N. LANGWORTHY in killing about twenty in one hill of potatoes, the tubers being almost entirely eaten up by them.

CHERRIES.—The cherry crop has been much better here this season than for many years previous; indeed, most abundant. To many of our friends are we indebted for fine specimens—among others, ALEXANDER WILSON, for a fine basket of *Eltons*, to ANSON ARNOLD for *Elton* and *Yellow Spanish*, and to HENRY BELL for fine *Yellow Spanish*.

BEEFSTEAK, SALAD DRESSING, &c.

DEAR RURAL:—As it is through your agency that we are favored with so many valuable recipes, I think it but right to acknowledge your benefits in striving to improve and add to the interest of this department, by contributing my "mite" occasionally, so please accept the following for all those who are fond of preparing good things:

FRIED BEEFSTEAK.—Take a nice, tender steak, which is about an inch thick, lay it evenly in a frying-pan, over a quick fire; add salt and a little boiling water; cover it close and boil twenty minutes; then add a large piece of butter, and fry both sides until done. Take on to a hot platter, sift pepper over, pour on the gravy and serve.—This is superior to broiled steak, as it retains its flavor more perfectly, and is much tenderer.

FRICASEED TURKEY.—Cut up a small turkey and rinse in cold water; put it into a stew-pan, with but little water. If the water boils out before the meat is tender, add more. It should be covered closely, and boiled gently until done. Skim off the scum as it rises, and when tender, add 1/2 of a lb. of butter, a large teaspoon of salt, and half a one of pepper. When the butter is melted, dredge in a tablespoon of flour, or rolled crackers, and brown nicely. Turn the pieces, that they may have a fine color, then take them up, put a cup of boiling water into the gravy, then strain it over the turkey and serve.

SALAD DRESSING.—One cup good cider vinegar, a teaspoon of oil, one of made mustard, a salt-spoon of salt, and the yolk of a hard boiled egg rubbed fine; pour over the salad, and send to the table.

BATTER FROED MILK.—Five eggs beaten light; one quart of sweet milk, and one pint flour. Bake ten minutes without a crust, and eat it hot, with butter and sugar for sauce.

LEMON PIE.—The yolks of four eggs well beaten; three tablespoons brown sugar; one of water, and the grated rind and pulp, cut fine, of one lemon. Line a plate with rich pie paste, pour in the mixture, and bake till done. Beat the whites of four eggs light, with four spoonfuls of double refined white sugar, pour upon the top of the pie, and bake three minutes longer, and you will have a truly delicious pie.—CORA W., Lima, N. Y., 1859.

STRAWBERRY SHORT CAKE.

DEAR RURAL:—Herewith please find a recipe for a strawberry short cake, in answer to the inquiry sent by a "Bachelor." I am somewhat interested in that species of human beings, therefore I wish to promote his happiness as far as short cakes are concerned. I can make one as nice as the next one, and if he makes it as I write the recipe, I can dupes of cream; 2 of buttermilk; 1 of soda; two which dissolve one teaspoon of soda; a little shortening and salt. This is the cake. Hull your berries, dissolve sugar in cream, and pour upon them. Eat it, and I guess you will not wish for anything better.—MOLLIE FLAGG, Groves Hill, N. Y., 1859.

"BACHELOR" wishes a recipe for strawberry short cake, and calls upon some of the Manus to favor him. Unfortunately I do not happen to bear that name, consequently I suppose that my recipe will be unappreciated; yet, perhaps, there is some one (with whom LIZZIE is a favorite name,) that may have the benefit of it, so I will send it for insertion. Make a cake the same as for soda biscuit, and bake it whole. Having previously prepared your berries with rich, sweet cream, and sugar, part the cake while warm, butter it on both sides, lay on the berries and put together, and serve warm.—LIZZIE, July 9th, 1859.

A BATCH OF CAKES.

HERE are several recipes, which I hope will prove serviceable to some of the many readers of the Rural. I have tried them, and I know them to be good.

RAILROAD CAKE.—One cup full of flour; 1 do. of sugar; 4 eggs; 1 teaspoonful cream tartar; 1/2 of soda.

MOUNTAIN CAKE.—One lb. of sugar; 1 lb. of flour; 1/2 lb. of butter, 5 eggs; 1 teacup of sour milk; 1 teaspoon of soda; a lemon grated, and added with the juice.

JENNY LIND CAKE.—One cup of butter; 2 of sugar; 5 of flour; whites of ten eggs; 1/2 cup of sweet milk; 2 teaspoons cream tartar; 1 of soda.

TEA CAKE.—Two cups of sugar; 6 tablespoonfuls of melted butter; 1 1/2 cups of sweet milk; 2 teaspoonfuls of cream tartar; 1 of soda; 1 quart of flour; grated peel of a lemon.—VERITAS, Cherry Vale, Pa.

TOMATOES IN A NEW STYLE.—The Harrisburgh (Pa.) Union says:—"As the tomato season will soon be here, the following method of preparing them for the table, we are assured by one who has made the experiment, is superior to anything yet discovered for the preparation of that excellent article.—Take good ripe tomatoes, cut them in slices, and sprinkle over them finely pulverized white sugar, then add claret wine sufficient to cover them. Tomatoes are sometimes prepared in this way with diluted vinegar, but the claret wine imparts to them a richer and more pleasant flavor, more nearly resembling the strawberry than anything else."

PICKLING BEEF.—We would like to know the best way to pickle beef, and how, if there is any way to keep beef good more than one year. Perhaps some of your correspondents can tell us.—S. W. BISSEK, Westfield, Chau. Co., N. Y., 1859.

THE DYING WIFE.

LAY the babe upon my bosom, let me feel his sweet, warm breath,
For a strange chill o'er me passes, and I know that it is death.
I would gaze upon the treasure, scarcely given ere I go—
Feel his rosy dimpled fingers wander o'er my cheek of snow
I am passing through the waters, but a blessed shore appears—
Kneel beside me, husband, dearest, let me kiss away thy tears.
Wrestle with thy grief, as Jacob strove from midnight until day;
It may leave an angel's blessing when it vanishes away.
Lay the babe upon my bosom, 'tis not long he can be there—
Feel how to my heart he nestles, 'tis the pearl I love to wear,
If in after years beside thee, sits another in my chair,
Thou' her voice be sweeter music, and my face than hers less fair;
If a cherub call thee father, far more beautiful than this,
Love thy first-born, oh, my husband, turn not from the motherless
Toll him sometimes of his mother,—you will call him by thy name,—
Shield him from the wilds of sorrow,—if he errs, oh, gently blame.
Lead him sometimes where I'm sleeping, I will answer if he calls,
And my breath will stir his ringlets, when my voice, in blessing, falls,
His soft blue eyes will brighten with a wonder whence it came,—
In his heart, when years pass o'er, he will find his mother's name.
It is said that every mortal walks between two angels here,
One records the ill, but bids it, if, before the midnight drear,
Man repenteth; if uncanceled, then he seals it for the skies,
And the right hand angel weepeth, bowing low with veiled eyes.
I will be his right hand angel, sealing up the good for Heaven,
Striving that the midnight watches find no misdeed unforgiven.
You will not forget me, darling, when I'm sleeping 'neath the sod?
Love the babe upon my bosom, as I love thee,—next to God.

Written for Moore's Rural New-Yorker.

Plain Talks to American Women.—No. 15.

BY MRS. M. P. A. CROZIER.

Employments and Amusements of Children.
To what extent shall children participate in social festivities? In an age when children's parties are as prevalent in the folly of fashion, for display in the ball-room,—when their little hearts become puffed up with vanity at the flatteries and attention they receive,—this is a serious inquiry.—Children are social beings—it will not do to deprive them of the companionship of those of their own age. Now, often, and under what circumstances may their passion for society be indulged? As often, we may say, as is consistent with the development of a stable character, and always under circumstances of the purest morality, and the sweetest simplicity. The natural artlessness of childhood should not be superseded by pride and affectation; its bashfulness should be guarded with the vigilance with which one would guard the costliest pearls.
It is not our opinion that it is wise for the Christian mother to permit her sons and daughters of from eight to fourteen years of age, to contract the habit of attending "parties," as they are called, and commonly conducted. Let her spend but one evening at such a gathering of children herself, and it would seem that she could scarcely fail to be convinced of their unhappy tendency—unhappy, as destructive of that bashfulness and simplicity of which we have spoken,—unhappy, because of their tendency to dissipation, to draw the mind from more noble and intellectual employment, and to blunt the moral sensibilities. The recreations frequently indulged in, while exciting in a high degree, are such as must shock the native modesty of purity.
Under the direction of some watchful, Christian mother, little neighborhood gatherings—gatherings where the poor may be equally welcome with the rich, the ragged with the finely clad, where no pride of aristocracy intrudes—with such an one to control, one who is interested in promoting the happiness of children, an occasional evening spent as children unspoiled by fashion love to spend them, in hearing stories, telling riddles, playing at "blind man's buff," "hide-and-seek," and such like innocent games, eating apples, and cracking nuts, may be as real sunshine to the glad hearts of childhood. Then those royal seasons, the winter holidays, Thanksgiving, Christmas, New-Years, and the birthday of Washington, they may be enjoyed surely, to their fullest extent.
We do not like the tendency of the age to pass so lightly over these time-honored institutions. It is pleasant to think of the olden time, when these festive days brought so great an amount of enjoyment with them. We would have a "Thanksgiving" still the great family-gathering day, when the grandeur of four score should stand like a patriarch among his descendants, blessing them with his presence, and receiving the respect and love due to his gray hairs and great heart—when brother should meet sister, and sister embrace brother,—when little cousins should mingle their affections, and pour out their glees around the ample old fire-place,—when all the new babies should be brought home for the loving eyes of the dear old grandmother to look upon. We would have the "Merry Christmas" ever ring out as heartily as

of old, and the "Christmas Tree" bend its laden branches—laden with the love-gifts of each child to every member of the family—in the brightly illuminated parlor. We would have the New Year ushered in with shouts of happiness, and its frosty air melodious with the ringing of the sleigh-bells, and the soft hum of children gathered cozily under buffalo robes and warm blankets, in the bottom of the family sleigh. Yes, these seasons should bring social gladness to our children's hearts—even drive the care from our own brows, and make us young again.

We have not spoken of the Fourth of July; this, our nation's holiday, the child of its bravely-won independence, should be forever consecrated to the Spirit of Liberty. Let our children, in the name of Freedom, lift their tiny star-spangled banners to the kiss of the breeze, and in such an hour, when their young hearts are patriotic to enthusiasm, tell them of the eclipse upon the escutcheon of their country's glory, and bid them pray the God of Liberty that it may pass.

Family birthday anniversaries, too, we would that they might occupy a more prominent place in the calendar than is usual—might be remembered, and in some pleasant way celebrated, becoming little love-links in the chain of time. How pleasant to see each child anticipating the birthdays of papa and mama, or the loved brothers and sisters, and striving to prepare some delicate gift for their acceptance. How will these mementoes of affection be valued, especially if the work of the giver!

We would say a few words with regard to the purchase of gifts for children. Let them generally be something of permanent value, something that the child can use, or that will afford a pleasure beyond the charm of novelty. A book, a picture, a spy-glass, a microscope, the daguerreotype of some friend, a little carriage, a wheel-barrow, a box of paints, a set of drawing-cards, specimens illustrative of natural history—how many such things might be selected that would be of real use and interest to the child, and afford delight to the whole family! And with regard to the last item named—it is a very pleasant employment for the young to collect such specimens for a home cabinet. How many hours have we spent in wandering along the brook and in other localities, searching among the gravel for curiosities,—how much pleasant time in preparing flowers for our herbarium! Were all the children of every large family interested in this work, what fine cabinets might we behold in private drawing-rooms, and how large an amount of information would be treasured up by the collectors! One child, whose favorite science was botany, might bring a store of rich treasures from the field and the forest; another, preferring mineralogy, might levy tribute upon the rocks and the mountains; a third, in love with the bright-tinted shells of the sea and lake shores, might gather the gifts of the blue waves; and still another, rejoicing in the varied forms of animated existence, add to the store-house stuffed birds, dried insects, &c.

How strong will become the attachment of children to homes thus adorned by their own industry! And if each child should be permitted to acquire a knowledge of some ornamental art, how greatly and how cheaply could this adornment be extended! One, perhaps, learns the art of drawing—in deed, every child should be taught this accomplishment merely, but as a useful one—another painting, and the walls of the sitting-room are bright with pictures and maps executed by young artists; another learns embroidery, and papa's slippers, mama's pin-cushions, the ottomans and window-curtains of the parlor are traced with lovely, ideal creations. Need we say that a home thus rendered attractive by its inmates, and made so because of their interest in it as home, will be the dwelling-place of loving hearts? Would it not seem strange, almost anomalous, to hear in such a place the harsh accents of unkindness?

Another subject to which, perhaps, we may as well refer here as anywhere, is the cultivation of house plants. How greatly they may add to the attractiveness of the family living-room! Though the snow may be driving around the house, and the lawn become gracefully draped in the pure robes it brings, there is summer within, for there are flowers there—and if sweet birds are singing there also, it is all the more delightful. From what we can learn, aquariums are also adapted to afford great pleasure in the family circle. "But," says one, perhaps, "these things require so much care." Grant that they do require care, will not the gratification they bring, the refinement they give to the joys of home, amply repay? Let each child have the charge of a particular department—let the business of one be to take care of the birds, another of the flowers, and so on, and the advantage it will be to them in cultivating thoughtfulness, and in acquainting them with the habits of plants and animals, will be a still further compensation for the small amount of attention required. And here we would add, let each child have its pet. It will tend to cultivate that kindness of disposition which every mother should desire to see developed in her children. Let the little ones love their birds, their lumps, their kittens, their ponies—they will love you none the less for this affection, rather the more, if a general family interest is taken in the pets of each. How many ways there are to make children happy!—One family may not be able to adopt them all, but each may find something adapted to itself, that the little ones may grow up in the sunshine.

Mothers, it is yours to cause the unfolding of the buds of gladness in your dwellings, or to blight them ere they break into blossom. It is yours to make home, home, or cause it to become merely a staying-place—scarcely that—for those whom your affectional natures cling to now, and would forever!

A CRUEL FASHION.—If there is any one fashion more absurd or cruel than another, it is that of making little girl's dresses and skirts to be worn entirely off from the shoulder. One cannot meet a child, whose mother is more fashionable than wise, without feeling distressed for the efforts of the little one to use its arms, and constant shrugging of the shoulders to get one or the other a little liberty. This fashion undoubtedly does much to cause the almost universal deformity of shoulders observable in women.—Selected.

STRIVE AND HOPE.

BY SARAH FAUBETT.

ON! though the shadows of evening hover,
Morning will dawn in its brightness at last;
Clouds may not always the bright sunshine cover,
Storms will be over—the darkness be past.
Strive! though the conflict may seem unavailing;
Hope! though no light in the dread future beams;
Hoping and striving is better than waiting,
Actions are better than rosy-hued dreams.

List! through the dirge that thy spirit has haunted,
Canst thou not hear those soft whispers of love?
Sweet, holy anthems by unseen lips chanted,
Murmurs of music that float from above?
Canst thou not hear them, the gladness, the holy?
Deaf to all music and joy is thy ear;
Only the wild raging winds dying slowly,
Only the requiem now may'st thou hear.

Look! through the clouds of the shadowy even
Canst thou not see that faint flashing of light?
Soon it shall linger with its splendor the heaven,
Gladness and glorious burst on the night!
Look! and thy eyes that the earth mists have darkened
Will open at last, for the veil will depart—
List! and the anthems for which thou hast hearkened
Wearily, vainly, will gladden thy heart.

Then onward! press on in the glorious weal,
On! till the conflict, the struggle are done;
Only by toil may be gained the ideal,
Only by action the victory won!
Toon on! and remember, though all unavailing
Each noble aspiring, each soul yearning seems,
That hoping and striving is better than waiting,
Actions are better than beautiful dreams!
North Danby, Temp. Co., N. Y., 1859.

TO DREAMERS.

Do not dream any longer. The more you indulge in idle reverie the more this mental disease will increase upon you. An uncontrolled imagination, like an enemy within the fortress, breaks down the barriers that reason and the will raise against intruders. Thus the beautiful temple of the mind is left to turn into a barren waste. As "men do not gather grapes of thorns, or figs of thistles," so, from a mind given up to the fickle, uncertain guidance of fancy, we can expect nothing really great or good. The dreamer brings upon himself a lethargy of mind and body. Practical life is disagreeable to him. There is nothing he so recoils from as real, earnest thought. You can induce him to take hold of the plow or avil much more easily than to undertake anything that would call forth earnest and continued mental toil. Thomson, in his Essays, never made a truer statement than that men in general were less inclined to mental than physical labor. Hence they take from the ruins of government and give to fancy, to the world, the labor of thinking to some purpose. This natural aversion to the labor of thought supplies a cause for the great number of works of a superficial character that sue for public favor. The pure gold of thought is a choice article. As "precious bundles are usually done up in small parcels," so it is a pretty safe rule to suppose that when an author becomes noted for the great number of his works, there is considerable waste matter. The imagination, if left unpruned, brings forth more leaves and boughs than fruit.

Day-dreaming affords not even a shadow of good to the mind. The happiness it brings is the very shadow of a shadow. Those who indulge it are ever "Dropping buckets into empty wells,
And growing old in drawing nothing up."
What an employment for a reasonable being! Look among the great crowd of those who have aided in the world's progress. They are all men of action. Hand and brain have been earnestly engaged in the contest. They were thinkers and workers, mostly from the ranks of the poor. They had no leisure to stand with folded hands, and eyes on vacancy, while the battle was raging around them. Action, rightly directed, is the true philosophy of life. Every power of our physical and spiritual nature requires its appropriate exercise. Every faculty unused will bring us into condemnation in the day of final account. We shall be responsible both for what we have done and what we might have done. Say you that this is severe doctrine? Yet remember that over faculty, if rightly used, is the means of unbounded happiness. The more you act the more will you be disposed to act, and the greater delight will you take in exerting your powers. Time that used to drag heavily will seem to fly, and life will be a new thing to you.

None should excuse themselves on the plea of small talents. This is mockery to our Creator and only a feigned humility towards our fellow-men. Observe that those who are the readiest to make this excuse are insincere. Let any one but themselves tell them of their meagre talent, and wounded pride will soon betray their weakness. God only requires that each should act well his part, whatever that part may be. The poem of CARLOS WILCOX Antidote to Despondency bears upon the present subject. It is worth inscribing on memory's tablet, not so much for poetic beauty as for good common sense, and vigorous truth. Here is an extract with which I will close:

"Wake, thou that sleepest in enchanted bowers,
Lest these lost years should haunt thee on the night
When Death is waiting for thy numbered hours
To take their swift and everlasting flight;
Wake ere the twilight charm unnerve thee quite,
And be thy thoughts to work divine addressed;
Do something—do it soon—with all thy might;
An angel's wing would droop if long at rest,
And God himself, inactive, were no longer blest."

"Has immortality of name been given
To them that idle worship bills and groves,
And burn sweet incense to the queen of Heaven?
Did Newton learn from fancy, as it roves,
To measure worlds, and follow where each moves?
Did Howard gain renown that shall not cease,
By wandering wild, that nation's pilgrim loves?
Did Paul gain Heaven's glory and its peace
By musing o'er the bright and tranquil lakes of Greece?"
Butler, Wis., 1859.

APPEARANCE OF LITERARY CELEBRITIES.

A New York correspondent of the Springfield Republican gives the following account of the personal appearance of the leading literary celebrities of our day:

Emerson looks like a refined farmer, meditative and quiet. Longfellow like a good-natured beef-eater. Holmes like a ready-to-laugh little body, wishing only to be "as funny as he can." Everett seems only the graceful gentleman, who has been handsome. Beecher a ruddy, rollicking boy. Bancroft a plain, negative looking man. Whittier the most retiring of Quakers. Bryant a plain, serene looking man, dressed in gray. And thus I might name others. Not one of these gentlemen can be called handsome, unless we except Beecher, who might be a deal handsomer. In this respect they can bear no palm away from very intellectual women, who have always become homely. There is nothing in a dominant intellect, in continuous, far-reaching, wearing thought, to favor the curves of beauty; it consumes a greater quantity of tissue and fluids than it supplies. It dilates the eye, but deepens the lines, sharpens the bones, and often wears the nerves to a torturing quickness. So this is one reason why intellectual women should carry their quantum of ugliness.

Let us look at them as they pass. Mrs. Sigourney, the grand-mother of American "female" literature, in her prime (if we may believe her portrait) was quite handsome. Catharine Beecher is homely. Mrs. Beecher Stowe is so ordinary in looks that she has been taken for Mrs. Stowe's "Biddy." Mrs. C. M. Kirkland is a fat dowager. Mrs. E. F. Ellet looks like a washerwoman. Margaret Fuller was plain. Charlotte Cushman has a face as marked as Daniel Webster's, and quite as strong. So has Elizabeth Blackwell. Harriet Hosmer looks like a man. Mrs. Ann S. Stephens, heavy and coarse.—Mrs. Oakes Smith is considered handsome. Mrs. Julia Ward Howe has been a New York belle.—Francis S. Osgood had a lovely, womanly face. Amelia F. Welby was almost beautiful. Sarah J. Hale, in her young days, quite, unless her picture fits. The Davidson sisters, as well as their gifted mother, possessed beauty. If we cross the ocean, we find Madame de Stael was a fright; but Hannah More was handsome; Elizabeth Fry, glorious; Letitia Longdon, pretty; Mrs. Hemans, wondrously lovely; Mary Howitt, fair and matronly; Mrs. Norton, regally beautiful,—but alas! she who has the largest brain of all, with as great a heart, Elizabeth Barrett Browning, in physique is angular, and though she has magnificent eyes, her face is suggestive of a tomb-stone.

Charlotte Bronte had a look in her eyes better than all beauty of features. But if we look at British men of first class craniums—Shakespeare and Milton were handsome; Dr. Johnson was a monster of ugliness; so were Goldsmith and Pope; Addison was tolerably handsome; and Coleridge, Shelley, Byron, Moore, Campbell, Burns, were all uncommonly so. Sir Walter Scott looked very ordinary in spite of his fine head. Macaulay is homely, Bulwer nearly hideous, although a dandy. Charles Dickens is called handsome, but I must be allowed to differ, and covered with jewelry, he can but look like a simoniac. I might go on indefinitely, but after all, in proportion, is this class any homelier than any other?

"TOO POOR TO LIVE IN THE CITY."

BLESSED is the man who is too poor to live in the city, for he shall see June in its glory. Such mouthfuls of clover-scented air as he gets, no matter whose land the clover grows on; such glorious drinks of oxygen when the sun shines; such elbow-room when he feels like putting his arms a-kimbo; such a sweet, clean smell of rain, when it washes the faces of roses and paints the green leaves over again.

It is about noon by the clock of the year '59, and all the doubtful shadows of the morning are rolled up, and the grumblers are rolled up with them, we hope. "Dull weather for corn," said a country neighbor, this morning, when we ventured to pronounce it fine for wheat. "Dull weather for corn," and so he balanced the books, and went on, looking as if everybody were dead and he chief mourner. We are sorry these early summer months do not suit him. Won't he just please to make a private summer for his own use, and be sure to keep it on his side of the line fence, lest he be sued for trespass? We wouldn't take any home-made summer of his as a gift.

Why cannot people do as Luther said the bird did? "Look," said he, "how that little fellow preaches faith to us all. He takes hold of his twig, tucks his head under his wing, and goes to sleep, leaving God to think for him!"—Chicago Journal.

OUR CHILDREN.

Our children are to fill our places in society—in Church and State, and the manner in which they will fill them depends upon the manner in which we educate them. If we train them up in the Sabbath School, for God and his Church, they will amply repay us for our care; but if they are trained up for the world—in the streets—in the gambling and tippling saloon—in Sabbath breaking, profanity, licentiousness, and intemperance—in idleness—in sin, they will dishonor our names, and repay us by and by with a vengeance!

How fearful our responsibility! When we consider that our son may make a talented, useful, and happy man, respected and beloved by all around him, or he may make a consummate villain, detested by the world as a nuisance and a curse, and that our daughter has a corresponding alternative before her—that in the history of both, in all probability, there is a crisis, or turning point, when it is uncertain which way they will preponderate—and that we necessarily play an important part in tipping the scale, we can but feel that this is a matter not to be trifled with, and that every means possible should be resorted to, in order to secure the right drift, and save those so dear to us. As we would have them honorably act their part upon the stage of life, so let us sedulously aim to qualify them for it.—Morning Star.

We cannot understand anything of which there is not some touch in ourselves.

THE TIME FOR PRAYER.

When is the time for prayer?
With the first beams that light the morning sky,
Ere for the toils of day thou dost prepare,
Lift up thy thoughts on high:
Commend thy loved ones to His watchful care!
Morn is the time for prayer!

And in the noontide hour,
If worn by toil, or sad or sore oppressed,
Then unto God thy spirit's sorrow pour,
And He will give thee rest:
Thy voice shall reach Him through the fields of air—
Noon is the time for prayer!

When the bright sun hath set,—
Whilst eve's bright colors deck the skies,—
When with the loved at home again thou'rt met,—
Then let thy prayer arise
For those who in thy joys and sorrows share—
Eve is the time for prayer!

And when the stars come forth,—
When to the trusting heart sweet hopes are given,
And the deep stillness of the hour gives birth
To the pure dreams of Heaven,—
Kneel to thy God—ask strength life's ills to bear—
Night is the time for prayer!

When is the time for prayer?
In every hour while life is spared to thee—
In crowds or solitude—in joy or care—
Thy thoughts should heavenward flee,
At home—at morn and eve—with loved ones there,
Bend thou the knee in prayer!

A FRAGMENT.

A PALE and attenuated form lay upon a couch of death. The wearied spirit was fast nearing the portals of eternity, yet mental, far more than physical suffering, had bowed that once manly form and chilled the heart whose beatings were about to cease forever. A desolating bereavement had been added to his own protracted illness, the friend whom, during his detention from business, he had honored with the most implicit confidence, had effected his pecuniary ruin, and one change succeeded another, until destitution and actual want followed. Friendless and alone, shrinking as only a sensitive nature can from the rude shock his feelings had received, his once cherished confidence and affection resolved itself, by a fearful re-action, into a stern hatred of man and a fatal distrust of God. And thus, in the prime of manhood, the victim of a hopeless and despairing sorrow was about to pass away—one who might have lived blessed and a blessing to the world. "Oh," said he to one who sought to comfort him in his last hours, "tell me if there is hope—more of its beauties. Help me back to God. Blest Saviour, thou wast deceived and betrayed. Shelter me, and bid mine heart fill human hearts to drive away this bitter cold."

Oh, if there is one sight more sad than any other—one upon which angels must look with wonder, methinks it must be upon the struggles of a crushed and wounded spirit, sinking under a burden of accumulated woe,—one upon whom no human eye looks with pity, and no arm is extended to save. Yet the work angels love, how apt men are to scorn. How many hearts there are shivering in "this bitter cold," that a little kindness and sympathy might comfort and save. There are few trials the heart feels more keenly than a betrayal of confidence or alienation of feeling in those we love. It is hard, when the storms of adversity have bowed the spirit, to meet only the contemptuous smile, the averted glance of the chosen friends of our heart.

And how must Christ regard the indifference of many of his professed followers to the woes of suffering humanity! How unlike the great and compassionate REDEEMER are they who have no pity for the fallen, no word of kindness or look of cheer for those who can no longer echo back their own joyous tones of gladness! A smile—a look—a tone of sympathy—are little things; yet these have lifted many a burden, and saved the heart from breaking. That which is so easy to give, why are not men more prompt to bestow? To what higher honor can we attain, than to walk in the footsteps of Him who came to bind up the broken-hearted and comfort those who mourn? Yet, how prone mankind are to wrap themselves proudly in their own comforts, and neglect the Divine command, "Bear ye one another's burdens, and so fulfill the law of Christ." There is but one Being whose love can meet the demands of our yearning hearts—but one of whom we can say, "I know in whom I have believed, and am persuaded that He is able to keep that which I have committed unto Him." Oh, may more love fill human hearts, to drive away "this bitter cold."
Scherburne, N. Y., 1859. LINA LAM.

An Italian bishop, who had endured much persecution with a calm and unruffled temper, was asked how he attained such a mastery over himself. "By making a right use of my eyes," said he. "I first look up to heaven, as the place whither I am going to live forever. I next look down upon the earth, and consider how small a space of it will soon be all that I occupy or want. I then look around me, and think how many are far more wretched than I am."

Times of Trial.—Do you distrust faith because it is but as a pillar of cloud in the bright day?—Let the night come,—whether it be the night of affliction or the night of persecution; only let the night come—let it even come suddenly, densely, fearfully; and faith then shall be as a pillar of fire.

Defective Education.—A religion that never suffices to govern a man, will never suffice to save him; that which does not sufficiently distinguish him from a wicked world, will never distinguish him from a perishing world.—Howe.

EDUCATIONAL

COMMENCEMENT WEEK IN ROCHESTER.

The Annual Commencement Exercises of the University of Rochester, and the Anniversary of the Rochester Theological Seminary, were celebrated last week. Though the weather was exceedingly warm, the exercises were attended by large, intelligent and appreciative audiences, including many friends of these institutions from abroad. We are unable to give more than a brief synopsis of the most prominent of the very interesting and creditable proceedings of the week.

On Sunday evening, July 16th, the Rev. Dr. HIRCUMBO, of the Union Theological Seminary, preached before the "Judson Society." In the afternoon of the 11th Prof. JAMES B. ANGELL, of Brown University, delivered an address before the "Robinson Rhetorical Society." On Thursday, 14th inst., the Ninth Anniversary of the Theological Seminary was duly honored at the First Baptist Church—the exercises comprising Orations by the Graduating Class, Music, and an Address to the Graduates by the Rev. Dr. ROBINSON. The Graduating class numbered twelve, as follows:—J. R. BELLAMY, Newark, N. Y.; F. J. CATHEN, Va.; M. J. JAMESON, Lyons, N. Y.; CHARLES F. WESTON, Me.; AMMON JONES, O. R. M. KNOTT, Me.; D. M. REEVES, Ala.; E. T. ROBINSON, Rochester, N. Y.; A. H. STROBE, Rochester, N. Y.; N. SHEPARD, Philadelphia; G. A. STARKWEATHER, O.; W. C. WILKINSON, Mich.

The Anniversary Exercises of the Seminary were highly creditable to both Students and Professors, and most encouraging to the friends of the institution and its laudable objects—the proper education and training of intellectually endowed and devout Young Men for the Christian Ministry. Under the charge of Rev. Dr. ROBINSON, and Rev. Professors HOTEKINS, NORTON and ROSENBAUSCH, the Rochester Theological Seminary is attaining a reputation and influence which must give it a prominent position among the best institutions of its class in this country—rendering it eminently worthy the encouragement and support of the denomination it represents, (Baptist,) and the best wishes of the religious community generally.

The Prize Declamations by members of the Sophomore Class of the University, on Monday evening were very commendable—superior to those of any previous class we have heard.

A Discourse commemorative of the late JOHN N. WILBER, President of the Board of Trustees of the University, was delivered by President ANDERSON, on Tuesday afternoon.

Tuesday evening was devoted to the Anniversary of the Delphic and Pythian Societies, connected with the University, when an Oration was delivered by Dr. J. G. HOLLAND, of Springfield, Mass., and a Poem read by Rev. W. C. RICHMOND, of Providence, R. I. Wednesday A. M., the usual Commencement Exercises took place at Corinthian Hall, and our University completed the Academic year by commencing another. The Graduating class numbered twenty-seven members, and its representatives ably performed the tasks assigned them, at once honoring themselves, the class of 1889, and their Alma Mater.

After the delivery of the Orations, the Baccalaureate degree, in course, was conferred as follows: DAVID HAMILTON ROBINSON, Woodport, N. Y.; ILLINOIS CHUTE, Canadigua, N. Y.; EDWARD POWELL GOULD, West Springfield, Pa.; ANTHONY BARKER RABURN, Oakfield, N. Y.; WILLIAM WALLACE SHAW, Louisville, Ky.; FRANCIS EDWARD PIERCE, Grand Rapids, Mich.; ABEL GODARD, Richville, N. Y.; ADONIRAM JUDSON GOULD, West Springfield, Pa.; EUGENE PACKWOOD, Auburn, N. Y.; JOHN PECK COBBY, Nunda, N. Y.; ELMORE WILLIAMS DENISON, St. Louis, Mo.; ALA COLLINS CLARK, Rochester, N. Y.; THOMAS AUGUSTA HALL, Waterford, C. W.; JOHN G. CALDERON CLARKE, Brooklyn, N. Y.; POLASKI ERASTUS SMITH, Tyre, N. Y.; STEPHEN PALMY BARRETT, Kingsville, Ohio; GEORGE WASHINGTON HOLBROOK, Fishkill Plains, N. Y.; WINDLEB SOUTH, Lehigh, N. Y.; ALLEN EDWARD KITCHEN, Waterford, C. W.; FRANCIS ALLEN MACOMBER, Alabama; OSCAR FOLSON, Folsomdale, N. Y.; JOHN WALKER DELONG, Macedon Centre, N. Y.; WILLIAM MACREY, Ottawa City, C. W.; MALCOLM MCKENNA, Toronto, C. W.; DANIEL ELLIOT LENT, Towanda, Pa.; JOHN GREENLIE, Fairport, N. Y.; JOSHUA GASKILL, Royalton, N. Y.

The Degree of Master of Arts was conferred, in course, upon JACOB SRELA, ALONZO J. HOWE, GEO. M. W. CAPPY and GEORGE M. CONROD.

Honorary Degrees. HENRY H. FAY, Newport, R. I.; NATHAN W. AYER, Penn Yan, and JOHN A. AUSTIN, Waterford, Pa., M. A.; WILLIAM GAMMEL, Professor of History and Political Economy at Brown University, LL. D.; Rev. H. G. WESTON, of New York, Rev. DANIEL G. CORRY, of Utica, and Rev. J. D. BACKUS, of Syracuse, D. D.

On the conclusion of the Commencement Exercises, the President, Board, Alumni and invited guests proceeded to Palmer's Hall and participated in the pleasures of the Annual Alumni Dinner, not the least interesting of which was "the feast of reason and flow of soul" which followed the appetizing portion of the banquet. The occasion was altogether most agreeable and entertaining. The handsome introductory remarks of Mr. JAMESON, President of the Alumni Association, and of President ANDERSON, were followed by speech, a parting of the grave and gay, lively and stirring from guests and graduates—the remarks of the representatives of the various classes being alternated by "sandwiches" with those of friends who were not graduates of the University.

Taken altogether, the exercises of Commencement Week were apparently most pleasant, interesting and profitable to all participants, and of such a character as to augment the reputation and usefulness of both the Seminary and University—institutions of which the citizens of Rochester and Western New York (and indeed of the whole State) may well be proud.

THE UNIVERSITY OF ROCHESTER.

(This Institution is a model in its line, and worthily represents the taste, enterprise and liberality of its founders and the citizens of Rochester and Western New York. It is accomplishing so much in behalf of liberal education, and has so many ardent friends among our readers throughout the State, that we are confident the following article from the *Daily Democrat* will be read with peculiar interest.)

We propose to avail ourselves of the interest created by the Literary Festivities of Commencement week, to say a few words respecting the University which is the occasion of them.

While very many of the citizens of Rochester have never failed to understand and acknowledge the great advantages conferred upon the city by the University, nor the University to acknowledge the efforts and sacrifices of its benefactors and friends, yet we are persuaded that if our people at large had a more thorough and exact knowledge of what the University really is—of its objects and aims, of its means of general usefulness, and of its direct advantage to them, it would be productive of very beneficial consequences both to the University and to themselves. Some men are prone to regard our higher institutions of learning as mere exotics—as something apart from and above the common people—as objects proper to engage the attention and command the patronage of the rich, but with which men in humble and moderate circumstances have nothing to do. This view is a mistaken one, and any action or course of conduct based upon it, must be injurious to all concerned. The University should be regarded as established by and for the benefit of the whole people. There is not a citizen of Rochester so humble that he may not and does not receive some benefit, either educational or pecuniary, or both, from the University. On the other hand, the University is chiefly indebted to the practical recognition of this fact on the part of the people at large for its distinguished success.

The University has been in operation about ten years. It has graduated nine classes, and one hundred and sixty-three students—a result which may challenge comparison by any other College in our land. It has an endowment of \$222,000. The Theological Seminary which, though under a distinct charter, yet working so closely and so intimately with the University, that they may be regarded as twin sisters; has an endowment of about \$100,000. Here there is a fund of \$322,000 set apart for the purpose of Academical and Religious education in our midst. The subscribers to this fund number about eight hundred—their subscriptions ranging from \$25 to \$25,000. There are now in all the classes, about two hundred students. Their number has increased from year to year so rapidly and constantly, that we may safely predict that in a very few years our University will rival in the number of its students, as it does now in almost everything else, the oldest and the best of American Colleges. The price of tuition is, for those who pay at all, \$37.50 a year. The city of Rochester is entitled to twelve perpetual free scholarships. These scholars are selected on the ground of merit, and are the children of Rochester. They cannot be taken from any private or select school. This provision made by the University, crowning as it does, our admirable system of Free Common Schools and our High School, makes it practicable for the son of the humblest citizen of Rochester to ascend from the alphabet to the acquisition of the highest liberal education obtainable in our land, without the cost of one dollar for tuition. There are also in the University at the present time, about forty free ministerial scholarships. These scholars are selected, we believe, by virtue of an arrangement by which any person who has subscribed or may subscribe \$1,000 to the funds of the University, may designate any young man intended for the Ministry, as a free scholar, and such young man (of whatever religious persuasion he may be) is then educated free of charge. In this connection we should add, that tuition in the Theological Seminary is all free.

The University of Rochester, like other institutions of the kind, is denominational, but not sectarian. Its Board of Trustees and its Faculty are composed of men of the principal religious denominations among us, and the students are not only permitted, but required to attend such Churches as their parents or guardians desire they should attend. Prayers are said daily at the University, but beyond this, there is no religious exercises enjoined.

We should like, had we space, to make a somewhat extended mention of the University Library, its Geological and Mineralogical collections, its Philosophical Apparatus, and its various means of an able internal working, but we must leave each of these for occasional mention hereafter. We cannot, however, refrain from congratulating our people that the time has come for the erection of the new University Buildings. The beautiful piece of ground, in the Tenth Ward, (eight acres of which were donated by Mr. BOOR, and seventeen more purchased for the purpose,) will soon be crowned with a structure more imposing than anything now existing in Rochester. The plans of the buildings are already drawn, and the work of construction will be pressed rapidly forward.

As we before remarked, eight hundred men have subscribed to the funds of the University. These, of course, are men of liberality and benevolence; and many of them possess large means. They have in their own persons and by their example incited to the highest realization of the blessings of giving. They have given us a pledge of their permanent good will and substantial favor. Many of them live at a distance, but they come up annually, and some of them much oftener, to witness the results of their benefactions, and to connect their interests more intimately and strongly with ours. We need not say to the merchant, the manufacturer, or other intelligent business man, that an institution which brings to our city so many men of benevolence and wealth, and which educates so many young men to go abroad with the attainments and connections formed here, confers immense material benefits upon the city and all its people. There is another advantage which a prosperous and successful University is sure to bring

to a city like this. Rochester is peculiarly situated, and has remarkable adaptations for seats of learning. The highest conditions known to the best city life may be found and enjoyed here, in connection with the peerless attractions and more solid enjoyments of the best rural life. It is a city of Schools and Churches, of productive industry and high culture; and has comparatively none of those vices which are so prevalent and destructive in our large commercial cities. It is but natural, therefore, that many men who have sons to educate, and who have acquired an ample fortune in metropolitan marts, or in prosperous country avocations, should be attracted hither by the educational advantages offered by our University, and by the purer and more elevated enjoyments of our city life. This will give to the advantage of their accumulated means as a productive element, and the still greater advantage of their society, experience and benevolence. We might mention other benefits of like kind, both immediate and incidental, accruing to our city by means of the University, and others of a still higher nature which the mere utilitarian can neither conceive nor comprehend; but the object we aimed at will be accomplished if, by the few practical suggestions we have made, the attention and thoughts of our people shall be turned to the University as an object worthy of their constant solicitude and highest favor. More of the sons of Rochester parents should enter the halls of learning in this University. It has a Faculty equal to any in our country. The sons of the rich can here be educated without leaving the enjoyments or the salutary restraints of home; and the sons of the poor can here, almost without money and without price, receive an education as thorough and extended as can be acquired in this country. What other American city offers opportunities so great?

ORIGIN OF THE PRAIRIES.

PROFESSOR WILBER, State Geologist of Illinois, has recently delivered a series of admirable lectures on his favorite science. We copy from the Genesee Republican the following abstract of his theory on the origin and formation of the prairies:

Prof. Wilber adopts the theory that at one time—very far back in its history—this vast country formed a portion of the bottom ocean—that through the eruptions caused by the internal heat, together with the labor and activity of those master masons, the coral insects, our continent was raised to its present position above the water. To prove this bold proposition he refers to the many indications of salt water presence, the frequent occurrence of shells which legitimately only belong to animals of the sea—the evidence furnished by the rocks of the labor of the zoophytes, unmistakable in its development; the frequent discovery of the remains of monsters of the sea imbedded in our limestone system, the existence upon our surface of huge boulders, the former appendages of polar shores, drifted far away to the south-west, imbedded in huge frames of ice and dropped down at length upon the ocean's bed, whence they arose with our continent. The arguments, if not quite conclusive, are eminently suggestive, and should open the eyes of thinking men to the wondrous mysteries buried deep in the earth upon which we so familiarly tread.

The existence of our prairies is accounted for in this wise. The result of the "drift system" was to give to this part of the country a soil of unparalleled fertility, and arising from this, were the very large grasses, which are peculiar to this soil alone; luxuriant, and undisturbed, they grew to a great height, and fairly wave the surface of the earth with a thick, almost impenetrable covering. In the autumn, when this mass of combustible matter was dry, how easy for a shaft of lightning to send a conflagration from one boundary of the country to the other. The sprouting twigs of sturdier growth would perish by the occurrence of these fires, and hence the treeless appearance of the West. To aid the idea, it is claimed that the Indians, when they did arrive, which is supposed to have been long subsequent to the first period mentioned, regularly burned the prairie grasses, for the purpose of driving the game into more circumscribed quarters so that it might fall an easy prey to their arrows, and to lessen the difficulty of traveling.—*Life Illustrated.*

A SHORT CHAPTER ABOUT MONEY.

It arose in the degree of desire by which one thing was more wanted than another. The most desired commodity was taken in exchange. Barth, in Negritia, was a whole day exchanging to get at some particular article. He found narrow strips of cotton to be money. In South Africa lances are this medium of exchange. They have one advantage—they may be kept without spoiling. That is a requisite. We all want ice in summer, but it would hardly do to make it a medium of exchange. Clapperton speaks of blocks of salt used for money in the interior of Africa; Prescott, the historian, of cocoa beans in Mexico. This money first suggests itself and grows naturally out of the state of things. People don't come together and say let us adopt money. It comes into us. It is also not merely an exchangeable thing, but it is used to value other commodities. It is not a measure of value, taken in the abstract sense, for there are two things to be valued, the money and what it buys. We notice the motive of acquiring it, often a vanity than utility, though the latter is excluded. Barbarous people seek ornaments, but commonly of some lasting material, as the metals. For centuries money was weighed. The Jews, who had no coin, always weighed it. This survives in the names of pounds, ounces, livre, mine, all derived from weight. The first coined money was private money. Bechtler, a German, for a time, carried on private coinage in Rutherford county, North

Carolina. His coins were stamped with his name and the denominations; they circulated freely in Georgia, North and South Carolina and Tennessee.

In addition to these facts stated by Dr. Lieber, we may mention an incident which came under our observation:

A merchant from the South brought to Philadelphia the sum of \$2,700, in Bechtler's coinage—it produced between one and two dollars premium on the whole amount, showing the accuracy of the assay and valuation. Bechtler, on his death, was succeeded by his son. The establishment of the mint at Charlotte superseded these works. The business was conducted by the Bechtlers, from the beginning to the end, with the entire confidence of the community.

Coinage was a necessity from the difficulty of weighing and assaying metals.

Money, a common coin, was developed during the formative period of naturalization, in the middle ages, when the languages arose, and after literature, the law. It is never so difficult to convince people in matters of law, politics or theology, as it is to change their habits. This problem was, in reforms of the currency, to change the money in the minds of market women. Fifty years after the change by the revolution in France, it needed an edict of Louis Philippe to enforce it. Even in our own country, with our convenient dollars and cents, are we not still, in the different States, thinking inconveniently in shillings and pence? Just so with the use of thermometers. People would not be cold in Centigrade, or perspire by Reaumur; they would freeze and thaw only by their accustomed Fahrenheit. Still the tendency to uniformity went on, just as with dress, which had drawn the habits of modern nations to a resemblance, while a Spartan going to Athens was known at once by the difference of his garb, and nobody now-a-days can distinguish a gentleman from St. Petersburg in that way, and thus society would go on till the work of uniformization, if the word can be allowed, shall be completed.—*The Century.*

SLEEPING ROOMS.

The largest part of our rest is taken in sleep. Of course the kind of room in which we sleep is worthy of consideration. HOPKLAND says:—"It must not be forgotten that we spend a considerable portion of our lives in the bed-chamber, and consequently that its healthiness or unhealthiness cannot fail to have a very important influence upon our well being." It should at least be large. That is of prime importance, because during the several hours that we are in bed, we need to breathe a great deal of air, and our health is injured when we are obliged to breathe it several times over. We should at least pay as much attention to the size, situation, temperature and cleanliness of the room we occupy during the hours of repose, as to the parlors or drawing-room, or any other apartment. And yet how different from this is the general practice of families. The smallest room in the house is commonly set apart for the bed and its nightly occupants. The sleeping room should have a good location, so as to be dry. It should be kept clean, and neither too hot nor too cold. And more important still, it should be well ventilated. One bed occupied by two persons is as much as should ever be allowed in a single room; though two beds in a large room are no worse than one in a small room. Both are objectionable.—*Ed. Warren, M. D.*

For Moore's Rural New-Yorker. ARITHMETICAL PROBLEM.

Two persons, A and B, bought 5 bushels of apples for which they paid \$4—A paying 15 times as much as B. Afterwards C gives them 1-5 as much as A paid for 5 of the apples. Now, supposing the (5 bushels) apples to be equally divided between A, B, and C, how much of the money which C paid had A ought to receive?
Charlotte, Eaton Co., Mich., 1880.

Answer in two weeks.

ANSWERS TO ENIGMAS, &c., IN No. 496.

Answer to Chemical Enigma:—Plants receive nourishment from the air as well as from the earth.
Answer to Surveying Question:—Base 33 chains, 66 links, nearly—perpendicular 5 chains, 94 links, nearly.

YOUNG RURALIST.

GAPES IN CHICKENS.

MESSES. EDS.—You will confer a great favor, I think, upon many of your readers, and particularly myself, by communicating through the columns of the *RURALIST* the cause, preventive, and cure of the Gapes in chickens. I am entirely ignorant upon this subject, having just commenced the raising of poultry.
Esopus, N. Y., 1880. C. BOWLEY.

REMARKS.—We have had a good deal of experience with poultry, and only by care to have everything clean, and to provide everything necessary for the young chickens, have we been able to save them from this disease. Even then, some become affected, and in curing we have had but poor success. For the benefit of all our young readers we give a chapter on this disease from *Emmet's Poultry Book*. Preserve it, and you will have the facts on hand at all times.

GAPES.—Of all diseases, real or presumed, to which our domestic fowls are subjected, the most frequent is the gapes, sometimes called pig. It is a very common and troublesome disorder, and often proves fatal. All domestic birds, particularly young fowls, are peculiarly liable to it, and generally in the hot weather of July and August. It is some times considered a catarrhal disease, similar to the influenza in human beings, producing a thickened state of the membrane lining the nostrils, mouth and tongue.

Cause.—This disease is supposed to be produced from filthy, sour diet, and drinking from dirty puddle water, infected with putrid decaying substances, ill-ventilated fowl house confinement, or a spot of ground tenanted year after year by fowls, without attention to cleanliness, or renovation of the soil, etc. At the same time, let it be borne in mind that the "gapes" is an epidemic disease.

The gapes is supposed by some to be caused by a sort of internal worm infesting the wind-pipe; but though this may have, in some instances, been observed, it is by no means uniformly met with in all the disorders accompanied with gaping.

Symptoms.—The name is sufficiently expressive as to the symptoms of this disease; gaping, coughing, and sneezing, dullness and inactivity, ruffled feathers, and loss of appetite.

On the dissection of chickens dying with this disease, it will be found that the wind-pipe contains numerous small red worms about the size of a small cambric needle; on the first glance they would likely be mistaken for blood-vessels. It is supposed that these worms continue to increase in size until the wind-pipe becomes completely filled up, and the chicken suffocated. The disease first shows itself when the chicken is between three and four months old, and not generally after, by causing a sneezing or snuffling through the nostrils, and a frequent scratching of itself at the roots of the bill.

Treatment.—The plan formerly resorted to, of giving remedies internally to remove the worms, is not a good one, as the medicine has to be absorbed, pass into the blood, and act powerfully upon the body of the fowl, before its purpose can be accomplished; its direct application to the worms is therefore preferable. This is readily secured by stripping the vane from a small quill feather, except half an inch from its extremity; this should then be dipped in spirits of turpentine; and the chicken being securely held by an assistant, the feather so prepared is passed neatly down through the small opening of the wind-pipe, which is readily seen at the base of the tongue, and giving it one or two turns will generally bring up and destroy the worms. The turpentine at once kills the worms, and its application excites a fit of coughing, during which those that were left by the feather are expelled. This mode of application requires some dexterity, and at times the irritation proves fatal. We therefore suggest the shutting up of the chicken in a box, with some shavings dipped in spirits of turpentine, when the vapor arising from the extended surface, produces, in most cases, an equally beneficial result. Creosote, used in the same manner, has been found most extraordinarily efficacious.

Prevention.—We know a person, a very large breeder of fowls, who always gives his chickens, at six weeks old, wheat steeped in turpentine.—This is given them once in the morning, when fasting, and as a preventive against, instead of waiting for the arrival of the gapes. Let their first food be coarse corn meal, almost dry; then give cracked corn. As soon as they can swallow whole grains, let them have them unbroken. All poultry-yards, of course, should be supplied with lime, and the chickens should have free access to water. After the gapes appear, the cure is always doubtful; but crushed corn, soaked in very strong alum-water, is a good remedy.

SPRINGS AND TIDES.

MESSES. EDS.—The article in the *Young Ruralist* of June 11th, in regard to the "Supply of Streams," may be correct in some points; but the theory in regard to the same influence governing the sources of streams, and causing the water to flow, that governs the tides, is not founded on good philosophy. The flow of the tides is an *unsteady* or *periodical* motion, and not a steady one as in the case of water issuing from the earth in springs. The same cause cannot produce the same result. Then the idea of the earth's pressing the water up, is, I think, equally wrong philosophy. There is no principle in hydrostatics that I am acquainted with that will warrant the conclusion. The subject is an interesting one, and I should like to have it more thoroughly agitated and discussed, but not to your inconvenience. In other words, I can't insist on others doing the talking and your doing the work unless you say come on. JAMES B. TIDWELL.
Franklin Grove, Ill., 1880.

A MAN'S being is given him wherewith to understand all other beings.

Twenty copies, 30	Twenty copies, 30
Twenty-five copies, 35	Twenty-five copies, 35
Thirty copies, 40	Thirty copies, 40

And an Extra Copy, free, to every person remitting for a club of six or more copies; and Two, free copies for every club of thirty or over. As a new Half Volume commenced July 23, Now is the Time to form Clubs for either Six Months or a Year. All persons who form new clubs to commence with July, or introduce the RURAL in localities where it is not now taken, will be liberally remunerated for their time and attention.

Back numbers from April or January can still be furnished, if desired. We will send Specimen Numbers, Show Bills, &c., to all applicants, and to the addresses of as many non-subscribers as may be forwarded.

DOMESTIC NEWS.

Matters at Washington.

The War Department has adopted a regulation, fixing a tax upon settlers at posts occupied by one or more companies, at ten cents per month for each commissioned officer and enlisted man belonging to the command in each regiment. The fund accruing to it, as above, or as much of it as may be necessary, will be appropriated to the maintenance of the band.

The late Congress appropriated only \$15,000 as a preliminary for taking the next census, for the preparation of blank forms, instructions to Marshals, &c. Ample time will be allowed for the selection of reliable deputies, and such arrangements will be made by the Secretary of the Interior as will secure the prosecution of the work with more promptness and perfectness than heretofore.

There is authority for the assertion that, however desirable the acquisition of Lower California may be to the Administration, no such proposition is now pending between the Government of the United States and Mexico, as has been stated.

The Washington Constitution of the 14th inst., contains a copy of a dispatch from the State Department, recently sent to our Minister at Berlin, on the subject of naturalization.

The citizen of the United States, who is a native of Hanover, and who, when he left his native country, was neither in actual service in the Hanoverian army, nor had he been drafted to serve in it, but who has yet, on his return to Hanover, been deprived of his liberty, and compelled to perform military service. The President and Cabinet concur in the views expressed, taking the ground that the moment a foreigner becomes naturalized, his allegiance to his native country is severed. He is no more responsible for anything he may say or do, or omit to say or do, after assuming his new character, than if he had been born in the United States. Should he return to his native country, he returns as an American citizen, and in no other character. In order to entitle his original government to punish him for an offense, this must have been committed while he was a subject and owed allegiance to that government. The offense must have been complete before his expatriation. It must have been of such a character that he might have been tried and punished for it at the moment of his departure. Our Minister is instructed to demand the release of the naturalized citizen in question.

Judge Rose, the American Consul at Guyana, reached Washington on the 14th inst., and tendered his resignation to the Government. He made a thorough exploration of Sonora, and pronounces it the richest mineral country in the world. Gov. Pescheira is now absent in Sinaloa, and the Indians are devastating all the upper and western portions of Sonora. Murders and robberies are every day committed.

Personal and Political.

Gov. Seymour, late Minister of the United States at St. Petersburg, has arrived in Paris, en route for home.

The New York Herald trots out George Law again for the Presidency.

THIRTEEN of the members of Congress elected to the next House of Representatives have died, viz., Hon. Thos. L. Harris, in the Sixth District of Illinois; Hon. Cyrus Spink, in the Fourteenth District of Ohio; and Hon. Wm. O. Goode, in the Fourth District of Virginia. Messrs. Goode and Harris were representatives in the last Congress.

Hon. Rufus Choate died at Halifax on the afternoon of the 12th inst. Mr. Choate sailed from Boston for Europe a couple of weeks ago, but was obliged to leave the steamer at Halifax, where he remained up to the time of his death. Mr. C. was one of the most distinguished advocates and jurists in the United States. He was a native of Essex, Mass., and 60 years of age. He graduated at Dartmouth College, in 1819, and subsequently studied in the Cambridge Law School and the office of Wm. Wirt at Washington. Success and elevation followed every step of his professional career after his admission to the bar in 1824. He was a year in the Massachusetts House of Representatives and the same period in the Senate. In 1832 he was elected to the United States House of Representatives and served a single term. In 1841 he was chosen to the United States Senate by the Massachusetts Legislature, to fill the vacancy occasioned

by the resignation of Daniel Webster on entering Harrison's Cabinet. At the close of his term in 1845 he returned to Boston, and has since devoted his time to the practice of his profession.

The Kansas Constitutional Convention has adopted the Ohio Constitution, as embodying the leading features which they would prefer to have incorporated in the instrument they have met to frame. The vote stood, for Ohio 23, Indiana 23, Kentucky 1.

The Democratic State Convention of Mississippi assembled at Jackson on the 4th inst. The delegation in attendance was very large. The nominations are:—Governor—John J. Pettus, of Kemper. Secretary of State—Robert Webb, of Pontotoc. Auditor—E. R. Burt, of Natchez. Treasurer—M. T. Haynes, of Yazoo.

The complete official returns of the recent election for Governor of Virginia make Letcher's majority 5,479.

The Anti-Lecompton State Convention of California, met at Sacramento on the 15th ult., and made the following nominations for State officers: Governor—John Curry. Lieutenant-Governor—John Connors. Clerk of Supreme Court—Joseph Powell. State Treasurer—David R. Ashley. Comptroller—Geo. Pierce. Attorney-General—J. C. Steele. State Printer—John O'Meara. Surveyor-General—James S. Long.

News Paragraphs.

The venerable David Smith, D. D., who spoke at the dinner of the Massachusetts Society of Cincinnati, was probably the oldest person in the country who made an address on the 4th inst. He was a lad of nine years when the Declaration of Independence was signed!

At Norwich, Ct., on the 4th, a party of juveniles paraded the streets with a banner, on which was inscribed the following words:—"Young America. Give us liberty, or give us confectionery."

On the hillsides near Monte Cristo, California, the wind catches up the snow drifts and makes "spouts of the feathery crystals thirty to fifty feet high, just as it would of the water at sea, only when the snow reaches the top of the spout it separates and falls over like spray.

The proprietors of the Detroit and Milwaukee Railroad have authorized the erection of a force pump and convenient troughs in a building near their depot in Detroit, for the purpose of accommodating their passengers with gratuitous ablutions, where they may bathe and cleanse themselves with pure and refreshing water, after a long ride in the cars. Dressing rooms are soon to be added.

The remarkable exemption of the city of New Orleans from yellow fever this year thus far, it is believed, is due to the long continued overflow of the Mississippi river. The theory that overflows are preventives of this disease, is strongly defended in the New Orleans Medical Review, and is daily becoming stronger in the public mind.

Zinc is now produced in the lead mines near Mineral Point, Wis.; and it is believed the amount produced in Illinois and Wisconsin will be large. If so, a new source of wealth is opened up in the West.

The legacy of the late William Smith, Esq., to the city of Philadelphia by Elliot Grosse, has been paid over. The bequest is for the purpose of planting shade trees in the streets of the city. From this wise investment there will be realized three hundred dollars a year—enough to pay for planting fifty or sixty trees annually.

The climate of Arizona is slightly warm at this season of the year. On the 11th of June the thermometer at Tubac, in the shade of a cool hall, with the floor sprinkled, stood at 106°, and yet it was said that the "hot season" had not commenced!

At the Fourth of July celebration in Ironton, Missouri, Capt. John Hall, one of Marion's men, was present. He is a native of North Carolina, and will be 99 years of age on the 21st of September next. He supports himself by making brooms and baskets, and has never received a pension, though he fought gallantly during the Revolutionary war, and distinguished himself at the battle of Guilford Court House, N. C., March 15, 1781, where he was Lieutenant of a company.

Mr. NATHANIEL MORSE, of Newburyport, Mass., was fined \$27 in the Police Court of that city, last Saturday, for shooting ten robins. His defence was that the birds visited the cherry trees and parrot of the fruit. There seems to be a disposition in all parts of the Commonwealth to enforce the law for the preservation of useful birds.

Mr. RAREY is now again in London, taming ferocious horses, giving lessons to cavalry officers and rough riders, and occasionally exhibiting his art in public. When he returns to this country he will bring the famous horse Cruiser with him.

A TORNADO in New York City.—The tornado of last evening, (18th inst.,) was the most violent of the season, and lasted for two hours, accompanied by incessant lightning and torrents of rain. Many trees in the city and suburbs were uprooted by the wind or shivered by the lightning. Buildings were unroofed and streets flooded. Many of the railroad tracks in the city and vicinity were made impassable by falling trees. A conductor of one of the horse cars at Williamsburg was struck by lightning and badly injured, and several horses were killed in the streets. A pleasure boat was capsized on the Passaic, near Newark, and two young men drowned. Two young girls were also killed.

THE KANSAS GOLD MINES.—Later advices, to Leavenworth, from the mines, say that prospecting south of the present diggings has resulted in further gold discoveries. Good leads have been struck seven miles below Jackson's, on Clear Creek, and rich discoveries are also reported near Boulder City. Denver City is increasing largely in buildings and population, and there was an active demand for provisions. All the indications point to the re-establishment of confidence and the steady development of the Kansas mines.

AMERICAN INSTITUTE OF INSTRUCTION.—The next Annual Meeting of this body will be held at New Bedford, Mass., August 23d, 24th and 25th, 1859. It is anticipated that the meeting will be of more than usual interest, and a rich programme is promised.

FOREIGN NEWS.

From the Seat of War.

SEVERAL steamers have arrived during the week, and each has brought more or less intelligence from the field of battle. At the battle of Solferino, (a brief account of which was given in last RURAL,) no less than 400,000 men were engaged, and Mr. RAYMOND, of the New York Times, writing from the scene, remarks, "of this number not less than 30,000 were killed or disabled." In a description of the position of the contending forces, Mr. R. says:

"Just back of Castiglione rises a high range of hills. The Austrians had taken position upon these hills, planting cannon upon those nearest to Castiglione, which they could approach, and had stationed their immense army all over the surrounding plain. Napoleon promptly accepted the challenge and commenced the attack as soon as it was light this morning, by placing cannon upon the hills still nearer to Castiglione than those held by the Austrians, and opened a fire upon them on the highest of these—a steep, sharp-backed ridge, which commanded a magnificent view of the entire circuit of the plain, and from that point directed the entire movements of his army during the early portion of the day. The French soon drove the enemy out of the posts they had nearest the town, and followed them into the small villages of the plain below. The first of these was Solferino, where they had a sharp and protracted engagement. The Austrians disputed every inch of the ground, and fought here, as they did throughout the day, with the utmost desperation. They were three times driven out of the town before they would stay out."

The Austrians have abandoned the line of the Mincio and fallen back on Verona, after having burned the bridges at Monzambano, Vallegio and Goito.

A private dispatch from the French headquarters, dated the 3d says:—"This morning at 7 o'clock, the Emperor quitted Volta in order to cross the Mincio, and establish his headquarters at Vallegio. We are only four leagues from Peschiera, the siege of which was begun two days ago by the Sardinians. Cannons were heard night and day in that direction. The Austrian advance post is but a short distance from Villa Franca, which is occupied by the corps of Marshal Niel. It is much doubted that the Austrian army will venture to accept a battle in the condition of demoralization and stupor into which they have fallen since our victory at Solferino."

ROME, July 4.—It is asserted that French troops, amounting to 10,000 men, have disembarked at Lissino Piccolo, an island in the Adriatic, and that the bridge to Cherso, an adjacent island, had been destroyed.

VALEGIO, July 4.—(Official.)—The French army increased by Prince Napoleon's corps, will operate against Verona, whilst part of the Sardinians begin the siege of Peschiera. The Emperor having sent back the wounded, without exchange, and having requested an exchange of prisoners, an Austrian has arrived with the announcement that the Emperor of Austria will also send back, without exchange, the wounded prisoners of the allies, and that his Majesty is equally desirous for the exchange of others.

TURIN, July 4.—(Official.)—On the 29th ult. the Sardinians more closely invested the interior fortifications of Peschiera, situated on the north bank of the Mincio. Our army crossed the river on the 30th, to invest Peschiera, also on the left bank.

BRISTOL, July 4.—The Austrians have withdrawn from the city of Philadelphia by Elliot Grosse, has been paid over. The bequest is for the purpose of planting shade trees in the streets of the city. From this wise investment there will be realized three hundred dollars a year—enough to pay for planting fifty or sixty trees annually.

Kossuth left Parma on the 28th for Napoleon's headquarters. He had an enthusiastic reception at all the places he passed through, from Turin to Parma, and delivered many addresses. The organization of the Hungarian legion advanced rapidly.

Still Later Intelligence.
The steamer City of Washington arrived at New York yesterday P. M., and the telegraph this morning (Tuesday), puts us in possession of the following additional intelligence.

The Paris correspondent of the London Times says, letters from the headquarters of Prince Napoleon state that another great battle is expected on the banks of the Adige, and the Austrians are believed to have 200,000 men in the line. French battalions are organizing at Paris. The Times also says that it is now pretty clearly understood that Prussia will only act on the defensive.

Reliable information had reached Vienna that Garibaldi's men had violated the Tyrol by entering Tonale Pass. Prince Windischgratz had been absent to Berlin to acquaint the Prussian Government of this fact.

A Frankfurt letter announces that the Austrian Government, having been compelled by the battle of Solferino to dispatch to the theatre of war those troops which it had in reserve in the Tyrol, that province being consequently menaced by invasion by Garibaldi's corps, intends to propose to the Diet in virtue of the treaty of Vienna, which requires the German States to guarantee each other's German territory, to send a German army into the Tyrol.

Kossuth has issued a proclamation, calling the Hungarian nation to arms to struggle for liberty, and announces that he will soon be among them. The Invalides Review discusses the possible complications of the war. Prussia, it says, has called out an army of 300,000 men, which will be reinforced by a federal contingent of 150,000 men, and it is with such an enormous display of force that she proposes to offer her mediation to France, and to hasten the conclusion of a peace, but such an armed mediation constitutes a kind of ultimatum. Is not France entitled to reply that the conditions of peace ought to be proposed by all the great powers, conjointly, not by Prussia alone, and that such an armed mediation made by a single power is equivalent to a declaration of war? But when to maintain the Austrian possessions in Italy, a German army of a million men shall be put in motion to attack France, can the Palmerston-Russell administration remain indifferent spectators to a new confederation? The English Ministry will most certainly not allow the new war to begin without first exhausting all the powers of persuasion.

It is stated that the proposals made by Prussia on the extraordinary sitting of the Federal Diet on the 4th, were the following:
1st. The junction of the 9th and 10th corps de armee to the Prussian army.

2d. The appointment to the commander-in-chief of the four non-Prussian and non-Austrian corps de armee.

3d. The placing of all reserve contingence in readiness to march.

GREAT BRITAIN.—In the House of Lords, Lord Brougham called attention to the war rumor, asking if there was any truth in the report that Government intended to reduce the navy estimates. Duke Somerset denied the truth of the report. Earl Hardwick eulogized the late Government for their efforts to strengthen the navy, and gave various statistics to show that even yet it was not what it ought to be. Lord Ellenborough fully recognized the necessity of placing the navy in a proper condition, but trusted that some attention would also be devoted to the army.

In the House of Commons Palmerston announced the intention of the new Ministry to pursue the policy of strict neutrality with reference to foreign affairs. Also announced that a reform bill would be introduced immediately after the meeting of the next session of Parliament.

Milnor Gibson had accepted the Presidency of the Board of Trade, declined by Mr. Cobden.

FRANCE.—A Te Deum was chanted at Notre Dame on Sunday, for the victory at Solferino. The same thanksgiving took place in all the places of worship throughout France.

Naval preparations were never more active at Toulon and Bronte. Another division of the army of Lyons leaves for Italy, and immense quantities of projectiles of all kinds continue to be forwarded.

PRUSSIA.—Prussia is said to have given positive assurance that the recent measures with regard to her military forces are not taken with a view of hostilities, and that France may remain perfectly tranquil on that score.

On the 14th there was an extraordinary sitting of the Federal Diet at Frankfurt, when Prussia presented new and further proposals respecting the establishment, extension and command of the corps of observation on the Rhine.

A Berlin correspondent of the Times says, that the Prussian proposals were in the hands of England and Russia. The writer says, that by the end of the week the Prussian army will be in full march. Two corps de armee will be stationed on the Silesian frontier, in case of an unexpected attack on that part by Russia. On the lower and middle Rhine 140,000 Prussians will be stationed. When these preparations are completed, Prussia will probably make her proposals to France, and will unquestionably be refused. The same correspondent gives an outline of the propositions, which include the erection of Venice into a separate Kingdom, with the Arch-Duke Maximilian as King.

COMMERCIAL.—Broadstuffs.—Richardson, Spence & Co. quote breadstuffs tending downward. Flour was offered at higher prices, but sales quite unimportant. The quotations are 10s 6d @ 11s 6d. The prices of wheat are easier, but without any decided change. Western red was quoted at 8s @ 9s 4d; Southern white 9s @ 10s. All quotations of corn had declined slightly. Mixed 10s @ 11s 4d; yellow 10s @ 11s 4d; white 10s @ 11s 4d. Provisions.—Pork is heavy, with little inquiry. Bacon unchanged. Business moderate.

Clippings from Foreign Journals.

The Vienna correspondent of the London Times asserts that for the last ten years matters have been so terribly managed in Austria, that it will be almost miraculous if the Empire escapes dissolution.

There are now fourteen steamships employed by Scotch Companies in the whale and seal fisheries of the Arctic regions. We believe that none of the American Companies have yet employed steam vessels in fishing operations. So successful have been these Scotch fishing steamers that their number is increasing every year.

MANY of the Austrian prisoners will be dispatched to Algeria, to be employed there on the railways.

It is mentioned that the army in Italy is almost without shoes, and that owing to the scarcity of labor in Paris, the government cannot get them made by contractors. The Mayor of each arrondissement has intimated to all the shoemakers, large and small, that the government will require about 70,000 pairs to be ready in fifteen days. Every shoemaker will have to send in a certain quantity, according to his means, and it is hoped to collect about a million pairs in this way.

Accounts from Scotland state that the drouth during May and part of June, was more severe than during any past year since 1826. The rivers Earn and Tay were nearly dry—the famous Doon, immortalized by Burns, would slide through a measure, and other well known streams and rivers were thoroughly dried up.

The impression existing that the Emperor Francis Joseph is himself responsible for the defeat of his army at Solferino is confirmed. He insisted on giving battle on the 24th, in opposition to the wish of Gen. Hess. The result is very unfortunate for him, and must have a dispiriting effect on the Austrian army.

The North China Herald of April 27th, thinks there is considerable doubt if the proposed embassy from Japan to the United States will take place. The conservative party, who are opposed to all innovations, are determined to prevent the infraction of the law which prohibits Japanese from leaving their country.

WHEAT LOWER THAN CORN.—Says the Chicago Tribune of the 14th inst.:—"Yesterday afternoon, an operator offered to give 1,000 bushels Standard Spring Wheat for the same amount of No. 1 Corn; but he could not find any one to trade with him.—The fact is, that No. 1 Corn was nominally one cent higher than Standard Spring Wheat—rather a singular fact in the grain trade. Since the foregoing was penned, our "Commercial" informs us that subsequent to the above offer being refused, wheat rose to the level of corn, and several thousand bushels were exchanged even."

LARGE DEPOSITS IN THE SAVINGS BANKS.—PROSPERITY OF THE WORKING CLASSES.—The New York Herald says the best evidence that the late financial revolution through which we have passed has not very seriously affected the working classes in that city, is to be found in the amounts deposited in the Savings Banks. In the Savings Banks of New York and Brooklyn, there are upwards of thirty millions of dollars deposited, bearing interest at rates varying from four to six per cent., which have been made since the 1st of January, 1859.

The News Condenser.

- The cholera has made its appearance at St. Petersburg, Russia.
- The public debt of the United States on July 1st was \$65,244,000.
- The Central Park of N. Y. city is the largest city park in the world.
- An upholsterer named Blair, in Albany, is making 1,000 beds for the French army in Italy.
- More than 1,500 hogs were killed by the falling of a pen-building in Cincinnati last week.
- "Thompson's Saloon," a famous Broadway establishment, is closed to be opened no more.
- Brevet Major Eldridge, of the United States Army, died at Washington on Wednesday last.

Weather for the First Half of July.

Another half month of rather singular weather. For a good while the changes have been great and rapid, and the return to the point of another change quick. The country, too, has been visited with numerous storms of wind and rain, usually attended with much lightning and thunder. The mean heat of this half is 70.4, or a little above the average for 23 years.

The last four days of June but one, were very warm; the last was quite cool; the first of July was a little warmer, but some frost was seen in the morning. There was frost also on the 4th and 5th; but not much injury was done. Oats were killed on the 1st in some places. Grapes were very unequally injured by frost. Strawberries and cherries have abounded this year. The high wind of the 2d, however, closed the season of strawberries. Rain has been less than usual for more than a month, and for the last fortnight the earth was athirst for rain; crops were suffering greatly. On the 15th came the long-hoped for rain, and the earth sang aloud for joy. Violent storms and great rains have occurred over much of the country. Mowing has been done for a fortnight, and the wheat harvest begun about a week since. Severe tornado and rain at Mt. Morris at 2 P. M., July 2d, and the same day at evening at Albany and down the Hudson to New York; in Berkshire Co., at 11 in the evening. At New York again the 13th. The rain of the 15th was 1.416 inches, a very great mercy to all.—C. N.

INCREASE OF IMMIGRATION.—The N. Y. Courier & Enquirer says the immigration to that port up to the 13th inst., amounted to 42,778 persons against 40,561 up to the corresponding period of last year. The emigrants seem to be of a better class this year, judging from the number of inmates in the institutions on Ward's Island, 714 against 1,215 last year, and 1,416 the year previous. The arrivals last week numbered 2,775.

Special Notices.

Mosquitoes.—An Antidote for the poison of mosquitoes, bees, wasps, and other annoying insects has been found in Burnett's Kallison, prepared by Messrs. Joseph Burnett & Co. This preparation contains a peculiar property which instantly neutralizes the poison, and allays the inflammation caused by bites and stings of insects.—Boston Journal.

Markets, Commerce, &c.

RURAL NEW-YORKER OFFICE.
Hochester, July 19, 1859.

FLOUR.—Again do we note a reduction in the rates of Flour. On winter wheat varieties the decline is equal to 3 to 5 cents per barrel—on spring 50 to 60 cents. Holders are anxiously looking for customers.
GRAIN.—A large falling off is noticeable in quotations of Wheat, but we must say that the prices given are merely nominal—nothing is doing. Millers are awaiting the appearance of the new crop, and all are expecting (will their expectations be realized?) to purchase very cheap. In Corn we notice a decline in inferior—No. 1 remains at last week's rates. Rice unchanged. No sales of Barley. Fruit Oats are only 30 to 35 cents—poorer grades are firm at 45, an advance of 3 cents per bushel. Buckwheat is down again, and it would be labor to procure our present figures of 50 to 60 cents per bushel.
WOOL.—The transactions of the week are light. While there is an evident tendency to higher prices for coarse grades, superior remains at old quotations. Potatoes are lower. Old are worth only 50 to 55 cents—new 55 to 60 cents per bushel.

HAY.—The indications are an advance. Although we do not alter our table, an occasional load is sold at the rate of \$17.00 per ton, and it is only in cases of very inferior quality, or of clover quite green, that only \$16.00 is obtained. Good hay brings \$16.00 very readily.

Rochester Wholesale Prices.

FLOUR AND GRAIN.	
Flour, winter wheat, 47,000/50	
Flour, spring do., 48,000/50	
Flour, buckwheat, 49,000/50

Tallow, 17,000/50	

Produce and Provision Markets.

NEW YORK, July 18.—Flour—Market heavy and 15 to 20 cents lower. Sales at 47,000/50 for super State; 48,000/50 for extra State; 49,000/50 for super Western; 50,000/50 for extra Western; 51,000/50 for super old; 52,000/50 for extra old; 53,000/50 for super ground; 54,000/50 for extra ground; 55,000/50 for super round; 56,000/50 for extra round; 57,000/50 for super Ohio; 58,000/50 for extra Ohio; 59,000/50 for super; 60,000/50 for extra.

BUFFALO, July 18.—Flour—Inactive and the market

tending downward. Sales at 43 for super; 44 for extra; 45 for super Western; 46 for extra Western; 47 for super old; 48 for extra old; 49 for super ground; 50 for extra ground; 51 for super round; 52 for extra round; 53 for super Ohio; 54 for extra Ohio; 55 for super; 56 for extra.

OSWEGO, July 18.—Flour—Dull.

GRAIN.—Wheat continues dull, with a declining tendency. Corn without material change; sales 5,000 bu. Illinois at 80c.

TORONTO, July 18.—Flour—The still very dull, business

being confined to the retail trade for home consumption. The stock is very light, and it is retarded nominally at 46 to 47c.

GRAIN.—In this market the business of the past few days

has been very restricted in wheat, owing to the meagreness of the supply brought on the market. A good demand continues to prevail, but so limited is the supply offering, that even moderate orders cannot be fulfilled. Prime fall wheat commands \$1.07 to \$1.08 per bushel. In barley, rye and peas so little is doing that they are unquotable.—Globe.

The Cattle Markets.

NEW YORK, July 18.—The current prices for the week are as follows:

Best 1st quality, 10c; 2nd quality, 9c; 3rd quality, 8c; 4th quality, 7c; 5th quality, 6c; 6th quality, 5c; 7th quality, 4c; 8th quality, 3c; 9th quality, 2c; 10th quality, 1c.

MOORE'S RURAL NEW-YORKER

AGRICULTURE RURAL LIFE EXCELSIOR LITERATURE SCIENCE ARTS NEWS

TWO DOLLARS A YEAR.

"PROGRESS AND IMPROVEMENT."

[SINGLE NO. FOUR CENTS.]

VOL. X. NO. 31.

ROCHESTER, N. Y.,—FOR THE WEEK ENDING SATURDAY, JULY 30, 1859.

[WHOLE NO. 499.]

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY

RURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,
With an Able Corps of Assistants and Contributors.

TERMS, IN ADVANCE:

Two Dollars a Year—\$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for \$5; Six, for \$10; Twelve, and one free, for \$20; Twenty, and one free, for \$40; Thirty, and one free, for \$60; Forty, and one free, for \$80; Fifty, and one free, for \$100; and any greater number at same rate—only \$1.35 per copy—with an extra copy for every Ten Subscribers over Thirty. Club papers sent to different Post-offices, if desired. As we pre-pay American postage on papers sent to the British Provinces, our Canadian agents and friends must add 12½ cents per copy to the club rates of the RURAL.—The lowest price of copies sent to Europe, &c., is only \$2.50—includes postage.

WHEAT GROWING.—EVADING THE MIDGE.

It is nearly ten years since a full crop of Wheat has been produced in this State—the prevalence of the midge (mis-called weevil) in those sections which formerly produced the great staple most abundantly, and the consequent partial or entire destruction of the crop, having caused a great change in agricultural operations and materially depreciated the value of farming lands in many localities. Farmers who had mainly cultivated and depended upon the wheat crop for a long series of years, were suddenly confounded by the appearance and ravages of a midge-headed enemy, and knew not what to do to alleviate the calamity. In some districts of Central and Western New York, wheat culture was given up with scarcely an effort to head off a counteract an enemy which seemed more numerous and devouring than the locusts of Egypt, and attention directed to other crops, stock breeding, grazing and dairying—thus inaugurating a comparatively new system of husbandry over a large extent of country. The change was of course somewhat difficult and expensive, so that the profits of the farm were, for a time at least, greatly diminished. In some localities, however, many farmers continued to sow and harvest wheat, though generally with little success until recently and after adopting a change of varieties and other requisites.

The ordeal has been a severe one, but the skies are brightening, and we believe that wheat can again be abundantly and profitably grown in sections where the midge has prevailed and proved so destructive for several years. Indeed we think the experience of wise and prudent cultivators has already demonstrated the correctness of this opinion. Last year many farmers succeeded in evading the midge, and growing excellent and profitable crops of wheat—and their success induced others to sow somewhat extensively last fall, from which a good yield has been obtained the present season. This result has been achieved, mainly, by a change of varieties, time of sowing, and mode of culture. Though the weather has been remarkably favorable for the growth and maturity of the wheat plant this season, the success of our cultivators is in a great measure attributable to their wisdom and foresight in management—for the midge was not destroyed by the June frost, as many suppose, but appeared in myriads at the usual period, ready to attack and destroy the staff of life. The wheat plant escaped only for the reason that it was so far advanced at the period when the insect usually operates as to be invulnerable.

Within the past month we have devoted no little time and attention to the investigation of this subject, visiting various localities in this region for the purpose of examining the growing wheat of different varieties, and ascertaining as to time of sowing and culture. We have seen as fine fields of wheat in various parts of this county as were grown previous to the appearance of the midge. In every instance where early varieties were sown at the proper time, on good, dry and properly prepared soil, we have found the crops good—excepting only where the severe June frost proved injurious. As remarked two weeks ago, we are aware that "one swallow does not make a summer"—that the present season has been remarkably favorable for the growth and maturity of the wheat plant—yet, from information obtained, last season and this, from observation and in-

telligent cultivators, we are satisfied that the former great staple of this section of the Union can still be successfully and profitably cultivated. And yet, confident as we are in this opinion, we do not wish to excite hopes which may not be realized—and would not advise those who have changed from wheat growing to other branches of husbandry in which they are now succeeding, to return at once or fully to the former staple. The soil of a large portion of this State is eminently adapted to the production of wheat, and in some sections—if the enemies of the crop can be evaded—it will probably long prove the most remunerative crop that can be grown. Hence, we believe it advisable for those who own good wheat soil, and are not profitably engaged in other branches, to try wheat culture again—returning to it gradually and on a small scale, until satisfied as to the safety and profit of a full resumption.

The practical question which arises among cultivators is, How can we best evade the midge? Many conjectural and some very plausible theories have hitherto been promulgated on this point, few of which have proved of any great value, being either impracticable or too expensive. The result of careful experiments, by some of our most intelligent, observing and experienced grain growers, however, proves that there are three requisites to successful wheat culture in regions where the midge prevails, and these we will briefly enumerate and discuss.

1. *Varieties.*—The first and most requisite is to secure and sow seed of early and hardy varieties—such as the Mediterranean, Golden Drop, Dayton, &c. Those who have grown these, and experimented with more recently introduced varieties, the past year, have been quite successful. The Mediterranean has improved in quality of late years, and also in productiveness. In some instances, last year, from thirty to forty bushels per acre were produced in this county, the grain being of excellent quality, and we presume (from the fields we have examined) that the yield and quality will both prove good the present season. The Dayton variety was grown in Genesee county last year, and gave good satisfaction—escaping the midge and producing thirty-five bushels per acre. The success of the experiment induced several farmers of Wheatland, in this county, to procure (from Ohio) and sow seed of this variety last fall, the product of which escaped the midge and looked very promising two weeks ago—when nearly ready for harvesting. As we stated in the RURAL of the 16th, (after examining about seventy acres on the farm of Hon. ELISHA HARMON,) "it is a very fine variety—a white bald wheat, with stiff straw, and if it acclimates as well as the Mediterranean will prove invaluable in this region." Other new varieties have been tried on a small scale this year—such as the Boughton Wheat, (seed from Virginia,) by Mr. WAAY, near this city, and the Early May, (seed from Southern Illinois,) by Mr. JAS. WHITE of Wayne county. We hope to hear soon from these and other gentlemen who have experimented with new varieties, and that they will state time of sowing, yield per acre, quality, &c., for the benefit of the public.

2. *Time of Sowing.*—The general opinion among our best farmers is that, whatever seed is used, it must be sown early to escape the midge. Some are of the opinion that the Soule's wheat can be successfully grown—as it has been this past season—by sowing as early as the 1st of September on rich, dry and well prepared soil. It should be remembered, however, that the present season has been more favorable for wheat in this region than any other for perhaps twenty years, and hence that the result this year is not a safe index for ordinary seasons. We should prefer the early varieties, such as those named above, and would sow as early as possible after the 25th of August—say the last week in August or first in September. This is the opinion of our best farmers, and those who have experimented most, and been most successful in wheat culture, since the prevalence of the midge.

3. *Soil and Culture.*—Early varieties and early sowing will prove of little avail without a rich, dry wheat soil and good culture. The great cereal cannot be produced advantageously on poor, wet land in any part of the Union, and especially in sections where the midge prevails. To produce wheat abundantly and profitably the soil must contain the proper elements, and be in the right condition. In many cases underdraining is of the utmost importance, even on farms where it is not considered necessary. No one need expect to grow good wheat, and evade the midge, unless he has a rich, warm and comparatively dry soil, and gives it good culture,—but with these, and attention to the requisites above named, we believe wheat can again be cultivated successfully in Western and Central New York and other midge-infested sections of the country.

EUROPEAN AGRICULTURE.

SORGHO AS A FORAGE PLANT.—The Marquis DE VIGNAY communicates to the *Journal of Practical Agriculture* his experience in feeding sorgho to cattle. He says:—"The sorgho is not a violent poison for cattle; but if the effects observed, not only in my cultivation, but also in that of many of my neighbors, be frequently renewed, we ought necessarily to attribute to this plant a deleterious influence. On a farm which I occupy myself, twenty-five horned cattle have been fed exclusively on sorgho during a month; and from the precise day on which it was introduced in feeding the cattle, the journal of the farm shows a diminution of the profit of the dairy by one-half, and the same decrease was exhibited every month of feeding with sorgho. On the other hand, there was, in respect to one of the cows, a case of wind, that caused its death. Any other kind of food might have produced a similar accident; but what many of my neighbors have asserted is, the sterility of the cow fed on sorgho. If these two facts, sterility on the one hand, and a diminution of half in the production of milk on the other, repeated regularly in consequence of feeding the cows on sorgho, we must conclude from them that this plant is injurious; since it hinders or diminishes all kinds of production by interfering with the secretions, which must necessarily provoke a perturbation in the animal organism; all morbid causes having their origin in suppressions of this nature."

FEEDING COWS IN A STEAM DAIRY.—The great authority on this subject, says the *Gardener's Chronicle*, is Mr. HORSFALL, who has laid the public under great obligations to himself for the publication of his experiments and views on this interesting question. His method of feeding is the following:—In May his cows are turned out on rich pasture near the homestead; towards evening they are housed for the night, when they are supplied with a mess of a steamed mixture, to be afterwards described, and a little hay each morning and evening. During June mown grass is given to them instead of hay, and they are also allowed two feeds of steamed mixture. This treatment is continued till October, when they are again wholly housed. After this they receive steamed food *ad libitum* three times per day. After each meal cabbages are given, from October till December; Kohl Rabi till February; and mangel till grass-time—the supply of each of these varieties of green food being limited to 20 or 25 lbs. per day for each cow; 4 lbs. of mowed hay are also allowed after each meal, or 12 lbs. per day for each cow, and water is placed before them twice a day, of which they partake as much as they feel inclined for. The steamed food consists of "5 lbs. of rape-cake, 2 lbs. of bran, for each cow, mixed with a sufficient quantity of bean-straw, cut straw, and shells of oats, in equal proportions, to supply them three times a day with as much as they will eat. The whole of the materials are moistened and blended together, and, after being well steamed, are given to the animals in a warm state. The attendant is allowed 1 lb. to 1½ lbs. of bean-meal per cow, according to circumstances, which he is charged to give to each cow in proportion to the yield of milk, those in full milk getting 2 lbs. each per day, others but little; it is dry, and mixed with the steamed food on its being dealt out separately." This is certainly high feeding, but it is amply repaid by the results; for while cows fed in the ordinary way seldom produce milk which yields more than 1 oz. to every quart, Mr. HORSFALL's milk gives upwards of 1½ ozs. for every quart. It is also an important part of his system never to allow his cows to fall off in condition. He considers the maintenance of the condition essential to a large yield of milk. There can be no doubt of the soundness of this opinion. A cow low in condition cannot give the same quantity of milk, as much of the nourishment of the food is drawn off to make up the condition of the animal. And when a very lean cow is put on rich food, it is some weeks before the full benefit of the food can be obtained in milk for the reason stated above. In Scotland bran is not very often used as an ingredient in any mixture of food for milk cows; but it will be seen from the foregoing that it forms an important part of Mr. HORSFALL's mixture.

Some time ago we came upon the following extract, we believe from the *Irish Farmers' Gazette*, which gives some valuable hints as to the use of different substances in the feeding of milk cows:—"In reading over the experiments on feeding in Stephens, a difference of opinion exists as to the comparative fattening qualities of linseed cake, bean and other meal; and in the 'Report of the Larn National Agricultural School for 1853,' 1 lb. of beans is said to be equal in fattening qualities to 80 lbs. of turnips, and nearly 3 lbs. of oatmeal.

PORTRAIT OF A PRIZE COTSWOLD.

COTSWOLD SHEEP.—If their appearance in our markets, and the prices paid by butchers form a sufficient basis for correct judgment,—are fast obtaining popularity as a mutton breed among American farmers. The Cotswold is a long-time bred sheep in England. Like the New Leicester, the care and judicious selections of English breeders have done much towards their improvement, and although the size has been somewhat reduced, yet the aptitude to fatten and mature early has been greatly increased. Wethers are often fattened at fourteen months, when they weigh from 15 pounds to 21 pounds per quarter, and at two years from 20 pounds to 30 pounds. The experiments of Mr. LAWES "on the comparative qualities of the various English breeds of sheep," demonstrate that the Cotswolds will lay on fat with greater rapidity, and more in proportion to the amount of food consumed, than any other breed. The following table gives the pith of the results of these accurately conducted experiments:

	Oil-cake.	Hay.	Turnips.
	lbs. oz.	lbs. oz.	lbs.
Cotswold.....	269 12	219 1	2 608
Hampshire.....	204	259 12	3 941
Leicester.....	262 8	251	3 759
Half-bred wethers..	264	251	3 725
do. ewes.....	268	280	3 666
Sussex.....	314	304 8	4 026

In our own country, those who have imported and bred the Cotswold hold them in high estimation, for both mutton and wool. The wool is strong, mellow, and of good color, though rather coarse, six to eight inches in length, and averaging seven to eight pounds the fleece.

A few facts and figures in regard to the estimate placed upon this breed of sheep by both breeders and butchers may prove of interest, hence we extract from the RURAL the following items:

"R. G. COPPIN, of Dutchess Co., gives his preference to the Cotswold over any other breed when looked upon as a wool-producing and mutton sheep.

I tried the bean-meal one season, at the rate of 3 lbs. a day, boiled, for each milk cow, with mangel, turnip and hay. By February one of them was fat, but I may say dry; and the others with about half the quantity of milk they had when commencing. I tried, for two winters, oatmeal, the same quantity in the same way, and each cow gave three times the quantity of milk and butter, and turned out full better the following summer. I tried the same quantity of yellow Indian meal last winter, and I think it good for both milk and butter. I tried bran for three winters, at the rate of 4 lbs. every night for each cow; it was equal to the oatmeal, while using, and my cows turned out better the following summer than on any other feeding. The bran not only keeps them healthy, and gives them a greater relish for their food, but there is some combination of qualities in it beyond what any writer I have seen attributes to it."

The state in which the food is given has also a great effect in the production of both milk and butter. We have observed more than once that the yield of butter and milk is never so great when we give cows boiled turnips, with beans boiled quite soft amongst them, as when they get the boiled turnips and the same weight of beans made into meal and mixed raw with them. Again, there is more milk and no taste of the turnip in it, when the turnips are pulped and mixed with cut straw or chaff and fermented, than if the same weight of turnips are given whole and raw.

He sold in December last five wethers, 21 months old, at \$11 each. The expense of rearing them to that age, including pasture, hay, turnips, and grain, was \$42.13. They produced 40 lbs. of wool at 31½ cents, amounting to \$12.60, making the whole income from them \$82.60 and leaving a clear profit of a fraction over \$8 each."

This account, though very satisfactory, is wanting in one important point—the live weight of the sheep. If we suppose they weighed 200 pounds, then they sold for 7 cents per pound. Or if we suppose their live weight was 175 pounds, which may be nearer the truth for sheep of that age, then they sold for 8 cents per pound. There is also a profit of \$40 in feeding \$42.13 worth of feed.

In the Market Report of the New York Tribune, Feb. 6th, 1858, is an account of the sale at Albany of 45 Cotswold sheep at \$16 a head, the live weight of which was 188 pounds each. Forty of them were from the farm of Wm. HALLOCK, Monroe Co., N. Y. These sheep sold for nearly 8½ cents a pound, live weight. The age is not given, but the live weight would seem to indicate that they were young sheep.

In the RURAL of Jan. 22, 1859, is the following: "Good Sheep and Good Prices.—In the Market Report of the Albany Journal, we read, J. B. CROSBY, brought in eight head, fed by Wm. HALLOCK, of Rush, Monroe Co., N. Y., which averaged 240 lbs. each—one weighed 288 pounds. They were full-blooded Cotswolds, 2 years and 8 months old; purchased by McGRAW at \$25 per head." It was further stated in the Journal "that McGRAW said, any one having any more such sheep could draw on him for \$25 a head for them."

Our engraving gives a good representation of a prize Cotswold Buck, the property of Mr. Geo. HEWES, Ley Gore, Gloucestershire, Eng., and winner of the First Prize of £125 at a meeting of the Royal Agricultural Society some years ago.

ABOUT CORN AND SOME OTHER THINGS.

CAN Indian Corn be cultivated too much? English writers make mention of land being barrowed to excess, until it becomes, to use their phrase, "dead." English agricultural nomenclature, I have often thought, partakes somewhat of the gibberish of their uneducated peasant laborers. In this case I know not exactly what is meant by the word dead, but conjecture that it is intended to denote a finely powdered road dust condition of the soil.

I have this year a field of seven acres, of deep sandy loam, lying contiguous to my door yard, and along the public highway, without stump or other obstacle to cultivation, and which has been for two years past a cow pasture. This spring I covered it well with barnyard manure, plowed it deep with three horses abreast, then, harrowed it thoroughly—crossing the harrowing diagonally in different directions—until a surface tilth was obtained nice for planting, then marked it out—somewhat as a ledger is ruled for straightness—four feet each way, then planted it with corn, using plenty of seed, so that nearly every hill needed thinning to obtain a stand of four plants to each hill; then dropped a tablespoonful of unleached ashes on each hill. President BUCHANAN says that short sentences are best, so I make a period here. As soon as the corn was visible I plastered it at the rate of three barrels to the seven acres, and at the same time dug into every hill that exhibited signs of cut worms, and

pinched them to death. The corn, from the first, gave good promise of excellence, and its position, in sight from the highway, and from the porch of our sitting-room, stimulated me to do what I could in the way of cultivation—besides, I had told the boys, my nephews, and they had told others, that I meant to lead in corn this year. Accordingly I have been through it with a light three-toothed cultivator six times, twice in a row each time, and have hoed it twice, the first hoeing a thorough one, the second was little more than leveling and adjusting the clean, mellow soil around the hill. Within range of my ride, for miles each way, I have not seen field corn half as large. While holding the cultivator in this corn field I occasionally queried, "Can Corn be Cultivated too Much?" I think it can. Amateur gardeners sometimes spoil their land with manure, and amateur farmers may cultivate too much, but I confess I never have seen it done. There is one great benefit derived from frequent and early cultivation, of which I have not read, that is, the decomposition of the sward is very much hastened, and is accomplished in time for the wants of the crop. This I think is a very important item. As long as any rip or tear is perceptible by contact of the cultivator with the sward, I think we may safely continue to cultivate.

While engaged in the cultivation of this field of corn, following a well-trained, and very docile mare, "fat and sleek as a mole"—inhaling the pure breeze as it came laden with the perfume of clover pastures—looking from the eminence on which I stood upon river and road and adjoining fields, where were neighbors similarly engaged—with a deep well of pure cold water conveniently by—and the faces of loved ones ever and anon in sight in the house porches—with an occasional spontaneous outburst of encomium from a passer by, as well as from these aforementioned loved ones, who could perceive that the corn had grown between morn and night—I thought of the din of war, of the strife and dust of commercial life, of the dependence of ill-requited professional labor, and I said there may be happiness in the farmer's life, easily attained, deeply felt.

I began this article with a question, which I have attempted to answer; I wish to end it by asking another. Eloquent casuists have declared that a little pride is not only admissible, but is a positive benefit. It is well for me if this be true—for I confess I have been conscious of a very little pride about this corn. The difficulty is, I cannot find any scripture recognition of pride as a virtue. Now, Friend Moore, when RURAL readers are puzzled they apply to the RURAL for help; will the editors tell us farmers whether we may feel just a very little proud of a good crop?

MILAN, Erie Co., N. Y., July 24, 1859.
REMARKS: It is our private opinion, somewhat publicly expressed, that such moderate pride as our esteemed correspondent evidently possesses, is allowable under the circumstances. Though pride in the abstract may not be recognized as a virtue in scripture, we believe such as springs from a consciousness of the strict performance of one's duty to his soil, his fellow man and his country—as in the careful and superior culture of such indispensable products as corn, wheat, etc.—is just and proper, and may be indulged in with impunity. And, moreover, we believe an editor is justifiable for feeling a moderate degree of pride in having such careful and successful cultivators as P. H. among his correspondents!—Ed.

CEMENT ROOFS—CARBONIZED BRICK, &c.

FRIEND MOORE:—Your paper of July 2d is before me, and I have read the article of P. H., of Milan, O. Sixty-five years have passed over me, and obliterated all ambition to appear as a writer for publication, but as P. H. does not write me, except through your paper, I am compelled to resort to the same channel of communication, relying upon your friendship to correct any error in diction that may occur.

P. H.'s four difficulties I have met with frequently, and I answer that I think the first cost would be about the same as a good roof of other materials. Cement of any earthy material will absorb moisture, will swell and contract by heat and cold—so will the substance to which it is confined, and if they all return to their normal condition, no rupture is effected. Does the mortar between brick expand so as to throw off? But suppose if any difficulty of that kind should arise, a late prepared in which oil is the moistening ingredient, I think the difficulty would be removed. Yet I am aware that a roof would be a severe test, and although I fully believe that it will stand it unscathed, it is problematical; but between the joints of vertical walls I think the question is answered by looking at any brick structure. If this answer is satisfactory, then we can place upon the inside or outside wall an incombustible article that would be indestructible and impenetrable to atmospheric influences, for you understand the brick are to be burned to the consistency of glass. As P. H.'s inquiries extend only to roofing, it may be superfluous to add anything except on that subject; but as the subject is broached, I am tempted to wade in and open another and wider field. For years I have been satisfied that clay should occupy a more important position than I have known assigned to it. Before Joseph WOODBURN, Esq., made the advancement in the ceramic art, clay administered little to the necessities of the human family, but since that epoch it has formed an indispensable necessity and luxury—but its shape or form has been confined to spherical-shaped articles, or to a limited extended surface, like a brick or tile, and the reason given is, that in a flat, extended surface, as desiccation progresses, the edges cannot be brought nearer the centre by any adhesive quality the mass possesses, and therefore cracks occur as the clay parts with its humidity and renders the manufactured article worthless. This difficulty I have surmounted, for I know that I can dry in a perfect level surface any given surface that can be safely handled. When this is accomplished the process of burning is simple, under the control of a skillful manipulator—or else I am wrongly informed. The next question is *cul bono*?—if a sidewalk is desired and you can have brick burned to the consistency of glass, 2, 2½ or 3 inches thick, with perfect edges, 18 by 24 inches, and laid upon a suitable foundation, would not the pedestrian be

accommodated with a level footing?—would it not be vastly less expensive?—would it not be more pleasant to the eyes with an exact curb-stone? If Rochester streets were to be re-paved, and you were to substitute for the bumping, rambling cobblestone, a brick carbonized block 12 inches long, 4 by 4, and set on a firm foundation endwise—the next generation would use them and thank the past—for a good carbonized brick is harder than the hardest stone. If Buffalo or New York needed a wharf that would prevent the ingress and egress of water and rats, and would last as long as the waters laveth shores, then build them of 3 by 4 carbonized brick scantling, 3, 4, 5 or 6 feet long. If a bridge is to span the Niagara, build the piers and abutments of this article on a good foundation, and you are safe,—if the Erie Canal is to be lined, use 2, 2½ or 3 inch thick tile, 18 by 24 inches, and put on your steamboats,—if an arch is to be formed, get your curve and mould your brick to suit, and you may defy time or pressure,—if your fire-proof building is to have a suitable floor, use this article, smooth, and with variegated surface, (if desired,) and it is all right. Your tomb-stone, with raised or depressed letters,—your horse's watering-trough could be made from the same material, and I am mistaken if the track for the wheels of carriages could not be readily, cheaply and durably made, if this article might be employed, that would give the traveler the ease of the railroad, and I believe that the railroad could be built at half its present cost, more durable and vastly quicker,—the fence post, I know, can be made from this article.

Indeed, time would fail me to enumerate the uses to which clay and sand, manufactured as above, might be applied, if they can be burned good. Can this be done? It would require a furnace of 14 or 16 inch thick walls, of a height to suit the article to be burned, and they (the articles) be set in the longest way vertical, and then burn with a heat that is equally disseminated, and increased to the desired temperature. P. H. says that it has not been tested,—true, and my age and situation (away from any grinder) forbid my doing it; neither have I built a fire for to-morrow, but I have the fuel and the means of kindling—so I have the dried clay and sand, but I have no furnace, but I have before me the large platter and the carbonized brick, and I am firmly in the belief that what has been done, can be done. WM. LYMAN.

Moscow, N. Y., July, 1859.

SEEDING TO GRASS.—CROPS, &c., IN IOWA.

EDS. OF RURAL:—Your correspondent of July 9th, complains of being used up in the grass seed line, but gives a clue to the cause of his failure, i. e., he sowed in March, April and September, neither of which is the proper time to sow, although, under favorable circumstances, grass seed will catch sown almost any time in the year, but nevertheless there is a time to sow. Timothy and red top are perennial plants, and the proper time to sow in any climate, is when the seed becomes so ripe that it falls to the earth of its own accord. This time of course will vary in different climates, but occurs in this latitude from the 20th of July to the 15th of August. Turnips may be sown with the timothy; the ground should be thoroughly prepared, and you may reasonably expect a good crop of turnips in the fall and a good crop of hay the next summer. The practice of sowing timothy in the spring or fall with grain crops, in the expressive language of the day, *won't pay*.

While talking about grasses, I would say that the crop of grass is splendid in Iowa. Wheat and oats are not worth bragging about. Perhaps there is some more than half a crop; but the corn crop is emphatically the crop of Iowa, and this promises an abundant yield—in fact, I have not seen as good a prospect for corn but once in nine years. The drooping spirits of the farmers of this country begin to revive. They appear to breathe freer, and look cheerful. The season has been rather wet, and fears were entertained lest we should have another failure, but now the prospect is that we will have enough and to spare. We have been exempt from the late frosts that visited the States further east. The financial crisis, and two successive crop failures, with the Pike's Peak emigration, have well nigh ruined the business of this country, but we are still looking forward to that "good time coming." This is destined to be a great farming country, although it may take a long time to develop its resources. The soil is unsurpassed in richness, but timber is scarce for building and fencing, and in many instances is hauled from ten to fifteen miles. You denizens of the forest would think it a hard case to rise in the morning, the thermometer 20° below zero, and harness your team and drive fifteen miles and back (over an open plain, with the wind fairly howling around you,) to get a load of wood. But timber may be raised on the prairie. Cotton wood seems to be best adapted to the soil, is of quick growth, and like the willow, may be propagated from cuttings; a small twig stuck in the earth without roots, will grow in fifteen years to a large tree that will make a cord of wood. I think by setting them eight or ten feet apart, they would make good posts for a wire fence. The wire could be put through the trees when about four years old; it will then be near four inches in diameter; the wood grows firmly around the wire and makes a substantial fence, and is very cheap and durable. I tried some on a small scale two years ago, and the wire is perfectly tight and the trees growing finely. The trees would have to be trimmed to keep them from getting too shady, and the trimmings would make a large amount of fuel.

At Pleasant, Henry Co., Iowa, July 15, 1859.

How to Grow Large Potatoes.—The *North British Agriculturist* says:—"To improve the size of potatoes, whether planted with small or large, whole, or even cut potatoes, when the plants are only a few inches high, let the shoots be reduced by pulling them up to one or two, or at most three of the strongest. The tubers will, consequently, be fewer and very much larger, also, in measure nearly all fit for market and the table. Every grower will do well to try a few rows by way of experiment, if he disbelieves the truth of this statement."

CULTURE OF POTATOES.—HOEING.

In a late RURAL I notice a caution against hoeing potatoes when the vines are wet with rain or dew, and a case is mentioned of two parts of a lot of potatoes, in which one was hoed three times in wet weather, while the other was hoed but once, in the middle of the day,—the latter giving a large crop, while the former blighted early and yielded few and inferior potatoes. The treatment of both patches was otherwise the same. It is well known, or should be, that beans hoed when wet with dew or rain, will blight wherever the soil touches the wet vines, and the same may be true in regard to potatoes, for aught I know. But in this case the extra hoeing may have injured the vines if done in any state of the weather, especially if much dirt was piled about the roots at the last hoeing. Experience and observation teach that potatoes should be hoed but once, and not at all after the young potatoes have begun to "set." If much earth is piled over them then it destroys or greatly injures the tubers, and in many cases now ones must be formed above the first set. Potatoes, if hoed twice, must be hoed before the setting of young tubers, though it might be even still better to make a good large, broad, (not conical,) hill at first, and let all after cultivation, if any, consist in merely removing weeds from near the plants, without any further attempt at hilling. Let us have the experience of others on this subject.

Honolulu, N. Y., 1859.

W. J. FOWLER.

Inquiries and Answers.

INFORMATION WANTED.—I would like to get a little information to cure a year old colt which has stiff or rather weak legs from birth until the present time. It can run and jump sometimes. Will some one who knows of such a case tell me through the RURAL about it?—J. B. GEMMAN, Hereford, Pa., 1859.

CLEANING WOOL FOR HOME USE.—Can some of the numerous RURAL correspondents give through its columns the mode of cleaning wool for home manufacture? As some of us poor Michigan farmers have to manufacture our own cloth, we wish to know how to cleanse it so the wool carder won't grumble.—A SUBSCRIBER, Wheatland, Hilldale, Co., Mich., 1859.

PLAN FOR A FARM STABLE.—As it is the privilege of your subscribers to make inquiries, I would ask some one to submit a plan for a farmer's stable, large enough for ten or twelve horses, and hay for the winter, with crib, granaries, shelter for wagon, and having the qualities of cheapness, convenience, and durability.—J. W. NUTT, Waynetown, Mont. Co., Ind., 1859.

WHITE GUINEA FOWLS.—Having noticed an account in a late number of the RURAL concerning the White Guinea Hen, as I wish to get some, will you please inform me where I can get them and at what price?—DANIEL MORSE, Lyons, Wayne Co., N. Y.

EDWARD ONION, of Dedham, Mass., we think can give you the information you desire.

THE HEAVES—WINDGALLS, &c.—S. HALL, of Auburn, N. Y., gave a prescription in the RURAL of Sept. 11th, 1858—a sure cure for the heaves. I should like to know, before trying such a complicated medicine, whether any one has tried it and found it good as recommended. I would also like to know the best and surest remedy for windgalls on horses, or whether they can be cured? How should a horse be fed when doctoring for the heaves? Will some one or more of the many readers of the RURAL please answer?—A SUBSCRIBER, Susquehanna, Pa., 1859.

WHAT AILED THE COWS?—In the spring of 1857 my cows were divided into two parts—one half removed to an adjoining farm, the other half remaining. In the spring following (1858) the half remaining had a disease of which I have never before seen the like—both hair and skin, I should think, coming off near the back bone in spots the size of a man's hand—some larger and some smaller. All were affected at the old place—in some cases lasting through the season—while those removed one year before had none. The diseased cows were in good condition, and never did better than that summer. Can you, or any of your numerous correspondents, give the name of this disease, the cause, and cure? By so doing you will confer a favor on a constant reader of the RURAL—Geo. CLARK, Jr., Perth Centre, Fulton Co., N. Y., 1859.

FROM THE DESCRIPTION—with a single exception, the animals doing so well, although diseased—would say your cows were troubled with Mange, one of the most serious affections of the skin in cattle. In this disease the hair comes off entirely, or gets thin on various parts of the body. There are few scabs or sores; but either in consequence of the rubbing, or as an effect of the disease, a thick scurfiness appears, particularly along the back, and in patches on other places. It is usually first seen about the tail, and thence it spreads in every direction. The causes are various; they are occasionally as opposite as it is possible for them to be. Too luxurious food will produce it; it will more certainly follow starvation. Want of cleanliness, although highly censurable, has been oftener accused as the cause of mange than it deserves; but to nothing can it more frequently be traced than to contagion.

The treatment is simple and effectual. The diseased cattle should be removed to some distant stable or shed where there can be no possible communication with the others. The disease, however produced, must be considered and treated as a local one. The scurfiness of the skin must first be got off, by means of a hard brush, or a curry-comb, somewhat lightly applied. To this must follow the application of an ointment which appears to have a specific effect on the mange, and which must be well rubbed in with a soft brush, or what is far better, with the hand, night and morning. The ointment must have sulphur as its basis, aided by turpentine, which somewhat irritates the skin, and disposes it to be acted upon by the sulphur; and, to render it still more efficacious, a small portion of mercury must be added. The following will be a safe and effectual application—there are few cases which will resist its power. Take of flowers of sulphur a pound, common turpentine four ounces, strong mercurial ointment two ounces, and linseed oil a pint. Warm the oil and melt the turpentine in it; when they begin to get cool, add the sulphur, and stir the ingredients well together, and afterwards incorporate the blue ointment with the mass by rubbing them together.

Rural Spirit of the Press.

Brain the Manure for Wet Lands.

UNDER this quaint caption the editor of the *Hometeak* remarks:—"We are asked every day or two what manure will do on certain lands described as holding water a good while, or where it is 'tolerably dry' comes first of June of a good season," or where coarse grass and brakes will come in as soon as it has lain in grass a year or two, and where you can't get half a crop of anything. Under the direction of Boussingault, the Royal and Central Agricultural Society of France addressed a circular to agriculturists, inquiring into the use of gypsum. One of the questions related to its use on wet meadows, and the universal response was that it had no beneficial action. Stable and yard manure is as good as thrown away. If the land dries as early as the first part of June, a dressing of horse and cow manure, rather heating, applied late in May, will help warm up the land and make a crop of corn, but that will be the end of it. Ashes applied in spring, also, are of temporary benefit. Guano or superphosphate must be applied in the hill or on the surface with a knowledge that an unusually wet season will thoroughly neutralize their effects. Tax the brain a little—devise a plan for thoroughly draining the land, and then your manure will tell its story year after year, and the probability is that such land will become the richest and most remunerative of the farm."

How Weeds are Produced.

PROFESSOR BUCKMAN, of England, has recently made some careful investigations as to the amount of weeds contained in seeds sold as clean, and we will state a few of the results obtained, as they cannot fail, we think, to interest our readers:—The Professor found "in a pint of clover seed, 7,000 weed seeds; in a pint of grass seed, 12,600; in broad clover, 30,440; and in two pints of Dutch clover, severally, 25,500 and 70,400 weed seeds. Supposing these samples to be sown, here were seeds enough to stock the land for many years. The farmer often goes to the cheapest market, and gets weeds for corn, and so pays dear for what he considers a cheap bargain."

If this be true in relation to English farming, how much more so must it be in America, where it is well known much less pains are taken in preparing grain for market, as well as in the selection of the seed and the general cultivation of the soil. In purchasing seed grain, turnip seed, grasses, etc., farmers often display a want of judgment and ordinary prudence by selecting such articles as are cheap, or, rather lower-priced, for that is not really cheap that is not genuine; and we can conceive no greater pest in an agricultural neighborhood than a "cheap seed store," in the but too common acceptance of the term.

The fecundity of some weeds is truly astonishing. Professor Buckman has counted over 8,000 seeds in a single plant of black mustard, and in a specimen of charlock, 4,000 seeds. The common stinking camomile produces 46,000; and the seed of a single plant of the common dock produced 1,700 little docks.

Handling Horses While Being Shod.

W. V. PIERCE, Veterinary Surgeon, Ravenna, Ohio, writes thus to the *Ohio Cultivator*:—"Many horses, both young and old, are much spoiled by shoers. Horses sometimes stand quiet and easy, at other times refuse to stand still while one foot is up—they struggle until it is released, and frequently the shoeer beats, speaks sharply, swears, and frightens the horse, so that he must be held by force or abandoned. Another takes the tools and sets his shoes without any trouble. Now for a few of the reasons:

Under certain circumstances the muscles cramp, causing severe pain. Almost at any time a horse's hind leg may be raised so high, or in such a position, as to cause severe cramping, not to be endured. When a horse has had all the muscles relaxed by exercise, and stands and cools quick, an unusual position will most certainly produce cramping, and at the same time makes him irritable. A horse that has stood for some time in the cold, uneasy, and suffering with anxiety to get home, is in a bad condition to stand the bangs, and often painful position of shoeing, and too often forced to stand and endure the pain of severe cramping, pricking, etc., until he will never forget it, and often refuses to enter the shop again.

Some horse-shoers have a habit of raising the foot and leg so high that no common horse can stand it, and thus he will shoe horses half his lifetime before he knows that the fault is in himself. The awkwardness and ill temper of some shoers is sufficient reason to withdraw your patronage, although they may do their work well. The damage done by forcing the horse to stand in pain, and the injury to his disposition, is infinitely more injury than to go ten miles, and spend a day and pay double price to one who has some sympathy, and shoes him without pain. One who exercises some reason, and judgment, and patience, and seems to sympathize with the suffering animal, has little or no trouble, and does no damage.

I once knew a horse that, if he was minus a shoe, would go by himself to a particular smithy, and there stand until the shoe was set. I once owned a horse that was shod three or four years without any trouble—at last he was sent to a shop to be shod, the shoe being a little intoxicated, frightened him, beat and abused him in such a manner, that he ever after feared to approach a blacksmith shop, and if forced to enter one, would tremble with fear. I think I shall be justified in saying that one-half of the horse-shoers are incompetent to the task, saying nothing about their workmanship of setting shoes. I have no doubt but some fancy shoers are the cause of splints, bogs, and curbs, as well as kicking, cringing, pulling at the halter, etc., etc.

Reader, if you are the owner of a good horse, go yourself and see him shod, unless you are well acquainted with the shoeer, and know him to be careful, patient, mild-tempered, and humane. Withdraw your patronage from all reverse characters, before you sustain a loss. Never submit to or employ a shoeer, whose character or intellect is inferior to that of your horse. If you do, you may have him lamed, abused and spoiled.

Agricultural Miscellany.

THE WHEAT CROP of 1859 has generally been harvested in good condition, and the commercial papers are already singing praises thereof, and greatly exaggerating the actual result. Authorities differ full 100,000,000 of bushels in estimating the yield of the crop, proving that most fabulous statistics must be used in some instances, and that recklessness of assertion is not confined to political warfare. No doubt the crop is an abundant one in most wheat-growing sections of the country, yet that the yield is so much greater than that of 1858 as many suppose is an absurdity. It may be a few millions more this year than last, though that is even yet doubtful. An estimate of the comparative yield of the wheat crop of 1858 and 1859—made by Col. JOHNSON, Secretary of N. Y. State Ag. Society, and published in the RURAL of April 9th—gave the estimated product for 1859 at only 158,000,000 bushels, against a total of 180,000,000 in 1858, (a difference of 21,500,000 bushels.) This estimate was, we presume, predicated upon the probable number of acres sown each year, and if so we hardly think the crop of this year will exceed that of last—for, though the season has generally been remarkably favorable, the June frost greatly depreciated the yield in some sections. We are aware that so much guess-work is indulged in annually relative to the wheat crop that it is difficult to approximate the truth, but submit that estimates which put the yield of the crop of 1859 at between two and three hundred millions of bushels are most absurd, and calculated to injure producers and benefit speculators. The prospect is that breadstuffs will rate low enough for awhile in any event, and we protest against making figures lie in order to promote the interests of non-producers.

ILLINOIS STATE AG. SOCIETY.—We are in receipt of a pamphlet containing the Constitution, Rules and Regulations and Premium List for the next (7th) Annual Fair of the Illinois State Ag. Society, to be held at Freeport, Sept. 5th to 9th inclusive. The premiums offered amount to \$16,000, and are well distributed in the various branches of Agriculture, Horticulture, Mechanic Arts, Manufactures, &c. The Society offers \$3,000 as a first premium, and \$2,000 as a second premium, for the first and second best Steam Engines suitable for plowing and other farm work; and the Ill. Central R. R. Company offer \$1,500 additional for the best—making \$6,500 for the Steam Plow. Such inducements ought to bring out the right machine for plowing by steam, and we have faith that they will accomplish the desired object. Illinois is a great State, but the Steam Plow will make it greater—giving it a vast deal more productive and paying land to the acre.

MAPLE SUGAR—Large Lump for one's "Duch"—Vermont is a great State for some things—Morgan horses, sheep (with or without "Cornwall Solsh") and tall men, for instance—but can be beat in the sweetening line. Our "special" friend P. (who, as one of the State Appraisers, is "around" somewhat, and picks up many facts,) says it may be a great thing up there in Vt. for a person to make 1,000 to 7,000 lbs. of sugar in a single season, as stated in a late number of the RURAL—but in our own State, and especially on the famous "John Brown Tract" it would be called rather a poor yield. A single farmer in Denmark, Lewis county, (Judge BLODGETT,) has made, this last season, ten tons of as nice maple sugar as was ever produced in Vermont. The Judge taps about three thousand trees in one bush. Our Vermont friends are not expected to "dry up" on maple sap, but to "try again."

WIND MILLS.—We think it may prove beneficial to some of our readers to state that Mr. THOMAS C. VICE, of this city, is a successful builder of Wind Mills of various sizes and for different purposes. He has erected several mills in Illinois at a cost of over \$5,000 each, which are giving good satisfaction. Mr. V. is now paying attention to the construction of small mills, (for farmers and mechanics,) which cost from \$75 to \$300 each. JNO. B. MURRAY, Esq. of Mt. Morris, says Mr. VICE has just erected a wind mill for him, to be used for raising water and other purposes, which gives entire satisfaction.

MARKING SHEEP.—Mr. A. WILSON, of Marquette, N. Y., writes:—"The mode of marking sheep in this neighborhood is to imprint the initials of the owner's name on the side of the sheep. Boiled linseed oil and lampblack form the composition. The letters are made of soft wood in the following manner:—Take a piece of soft wood 2½ by 4 or 5 inches and 8 inches long; make one end smooth, then mark out the letters and cut away the wood around them about half an inch deep. They must be made in the form of printer's type. Some prefer a set of figures."

THE WEATHER of the past week has been decidedly "catching," with frequent and heavy rains, in this locality. If the wet weather prevailed in other sections of Western New York and the West, the completion of harvesting must have been greatly retarded, and more or less damage caused. It is believed, however, that the wheat crop has mostly been secured in good order, though we hear of some injury from the extra moisture. The rains have been favorable for fruit, corn, grass, &c.

WEATHER OF JUNE 1859 AND OF 1816.—Facts and Teachings.—The cold weather of June 1859 has left its tracks behind, but the warmer last half of the month and of the first half of July have redeemed the evil in good measure. As the Indian corn, which had its tops cut down, grew again from the roots, there is hope of a crop. The trees, which lost their young foliage and appeared as if a fire had passed over them, are putting forth again, and their foliage will be adequate. The effects of frost have been the same in parts of New England. No similar June has occurred since 1816, when this country was nearly a forest, and the cold of that cold summer, as it was long called, was little felt here. Let us see the weather of that June:

1816.—June 5th. Temperature at 12 was 83 deg.; a thunder shower (heavy) reduced the temperature to 69 deg. at 3 P. M., and much lower at evening.

17th. Snow equals very severe; high N. W. wind; snow drifted on the hills; mean heat of the day, 43.4 deg.

18th. Cold driving northwest; no frost; earth frozen, and water frozen; moist earth frozen, so that a ring of it was taken up round the corn, leaving the corn standing.

Mean, 43.6 deg.

26th. Some ice—no frost—windy—earth frozen again; cucumbers and garden vegetables destroyed. Mean, 46.8 deg.

27th. Some warmer—wind lessening. Mean, 48.6 deg.

28th. Severe frost, clear and still. Corn, beans, potatoes, &c., cut down to the ground, and young leaves of the forest frozen. Mean, 41.1 deg.

11th. Severe frost, clear and cold. Heat rose to 70.5 deg. at noon, and the mean was 45.6 deg. In six days after the trees of the hills for miles had the appearance of having been scorched by fire. Subsequently the frost put forth their leaves again; corn grew up from the roots, and potatoes also.

So much for June. Did the corn ripen? In the valleys the corn in its ears was killed by a frost Aug. 29th. Many farmers cut up their corn by the roots and set it up in hocks on the earth. In this position more than half of it ripened and became hard. That which was left uncut, or was merely tipped, ripened very little; the sap seemed to go down into the roots or to evaporate, and the corn shrunk, while in the out crop the sap seemed to flow into the corn and fill it out to maturity in some good degree. Should our corn be late, or suffer from a too early frost, the season of 1816 may be profitable in 1859.—C. D.

HORTICULTURAL

HERBACEOUS PLANTS.

The Spring flowers are past, the trees and shrubs that so delighted us with their beauty and fragrance in the earlier summer months, please us no more, the fine late Annuals, such as the Balsam and Aster are not yet in bloom, and for the Phloxes and Dahlias we must wait a month or so longer.—This season, therefore, gives us an opportunity to examine and appreciate some of the pretty and too much neglected Herbaceous Flowers; as they are now almost the only ornaments of the garden.—First, and most conspicuous among these we find that old favorite family, the

ACONITUM, (Monkshood) or *Turks-cap*, as we called it in our youthful days. There are several varieties, mostly blue, but there are also white and yellow. The flowers grow in spikes which in some sorts are three or four feet long. Among the prettiest sorts, which we notice in flower now, is a *versicolor*, white and blue, a very marked and pretty variety. *Variegatum* is much like *versicolor*, being light blue, edged with white. A small yellow variety called *lucidum*, and a fine white sort, *Alba*.

DELPHINIUM or *Perennial Larkspur*, is another showy and hardy class, composed of many species and varieties. Like the former, they are mostly blue in color, from three to five feet in height, and flower most freely. Indeed, when properly managed the whole plant seems like a wreath of blossoms of the brightest azure colors. Few flowers give as rich a variety of the most delicate and singularly beautiful shades of color, from the slightest tinge to the darkest purple. Among the finest we noticed *Barbottini*, growing five feet in height, with dark blue flowers; *Formosa*, very deep blue; *Sinensis*, light azure blue; *Alba*, white; *Grandiflorum*, double, deep azure blue; *Napellus*, large, dark blue. In addition to these, we noticed as very fine, *Moorei* and *Hybridum*.

CAMPANULA, or *Canterbury Bell*, is one of the oldest and most showy of our border plants.—These are also mostly blue, though some are white, while others have but a delicate shade. There are many varieties, which we will not now describe, but any of our readers ordering half a dozen sorts from a good nurseryman, will not fail to obtain desirable varieties.

DIGITALIS or *Foxglove* is another showy border plant of easy culture, with long, somewhat bell-shaped tubular flowers, of a variety of colors.—*Purpurea*, is a light purple; *Purpurea Alba*, yellowish white; *Variegata*, striped with white.

ANEMONE or *Milfoil*, very pretty and desirable border flowers, particularly the white double variety, as it continues to flower most of the season, throwing up its daisy-like flowers in corymbs, on stems about a foot in height. Next to the white, the *rosea*, or *rubra*, is the best, having the most delicate rose-colored flowers in large trusses.—There are several yellow sorts.

TRADISCANTIA or *Spiderwort*, is very common; indeed, is found in almost every garden. We never thought it very desirable, but we observed this season, in the grounds of ELLWANGER & BARRY, a most beautiful double variety, of a very desirable color, called *rubra pleno*.

YUCCA, *Adam's Needle*.—We have often wondered why the Yucca was not more generally planted. It is always admired, and when exhibited in our horticultural shows, looked upon as a great curiosity—a foreign plant—and yet it can be obtained at almost any nursery for a few shillings, and can be successfully grown and flowered in any cottage garden. The flower-stem grows to the height of from three to five feet, and is covered with large, bell-shaped, creamy-white flowers. *Y. filamentosa* is one of the best for flowering at the north.

THE HOLLYHOCK.—All our readers are familiar with the Hollyhock. It is found in almost every garden, lifting its tall and majestic stems above its more humble companions, defying, apparently, the roughest treatment, yet ever gay, attractive and conspicuous, by the grandeur of its habit and its massive plumes of crimson, white, or yellow hues. Some may be disposed to think that this altogether too common a flower to claim the special notice of the *RURAL* or its readers. Few, however, know how beautiful a flower the Hollyhock becomes under proper care and culture.—Look at the beautiful tall spikes of flowers shown in the engraving, as double and beautiful as the rose. These are far different from the poor, single or semi-double kinds generally seen, and there are few other large and showy flowers that excel them. The much-lauded Dahlia, that has been an especial set with florists for many years, we consider far inferior in grace and beauty.

Although the Hollyhock has been grown in al-

CROWN BOB GOOSEBERRY.

Few of our readers know what a delicious fruit the gooseberry is,—how abundantly it bears,—how valuable it is in the hands of the cook, as well as for the dessert—and, indeed, we had almost forgotten these important facts, it is so long since we have raised a crop, or even more than tasted a few half-formed specimens. The *mildew* is the great, and, indeed, the only enemy of importance to the gooseberry in this country, and could this be overcome it would soon be a very important fruit, equal, we think, to any of our small fruits. In the *RURAL* for February 6th, we gave some facts on this subject, to which we refer our readers. The Ameri-

can seedlings are not subject to mildew, and perhaps our only hope to escape the disease is in this direction; yet we were much delighted at the fine collections of English sorts shown at the last exhibition of the *Genesee Valley Horticultural Society*. We have never seen so good an exhibition in this country, of fine sorts, and they were entirely free from mildew. May we not hope that a brighter era is dawning?

Among the best and hardest varieties on exhibition was the *Crown Bob*, of which we give a drawing, showing the size and form of the fruit, as well as of the leaf and branch.

most all civilized countries for hundreds of years, yet no effort was made for its improvement, and it seemed to be entirely discarded both by professional and amateur florists, prized only by the most humble cottage gardeners, until within a few years. "Here, and there," in the language of an English Journal, "it has found a discerning patron; but, generally speaking, the floral world has been influenced by a Dahlia excitement, from which it is now subsiding, in sober disposition to judge all flowers by their respective merits. The rose is again the queen, and the hollyhock is again at court." This improvement of the hollyhock was not commenced by any celebrated personage, or at the gardens of any of the great horticultural societies. The person entitled to this honor, is a shoemaker in England, a lover of flowers, with whom the hollyhock was a great favorite, and pursuing a course of culture, dictated by his own observation and experience, he succeeded in astonishing the world by producing flowers far more beautiful than had ever before been seen.

To all lovers of flowers we say, obtain a few plants of the very best hollyhocks, from the best nurseryman within your reach. Order the best, regardless of cost, if only two or three plants.—They can be sent a long distance, and we know of nothing prettier for a bed on the lawn, or the border.

LAYERING.

Any of our readers who have fine *Carnations* or *Pinks* that they wish to preserve or increase, can do so very easily by *layering*, and it should be done immediately. Procure a quantity of small hooked pegs; then take a trowel and remove the earth to the depth of an inch or so directly under the shoot to be layered. Take the shoot in one hand, and with the finger and thumb of the other hand remove the leaves from the body of the shoot, and shorten those at the top an inch or so. With a thin, sharp knife, cut through the strongest joint on the body of the shoot, cutting upwards until within a short distance of the next joint, and if the joints are close it may be necessary to cut through more than one. The slit may be from one to two inches in length. Then press the center of the shoot down to the earth, being at the same time careful to keep the slit open and the top in an upright position; take one of the pegs and secure it in this situation. A little clean sand placed around the cut, will aid in the formation of roots. In September or October the shoots thus layered will be rooted sufficiently to separate from the parent plant, when they may be cut away and removed to winter quarters. The operation is pretty plainly illustrated in the engraving.

CHICKWEED.—As I am a continual reader of your valuable and useful paper, I should like to be informed through its columns of an effective remedy against what is called around here the chickweed, which infests our gardens, and very much retards the progress of the plants, it being of that nature that the more you hoe it the more it needs it?—E. B. C., *Ashtabula Co., Ohio*, 1859.

Chickweed is most abundant and troublesome in a cold, damp soil. Drainage and the hoe are the only cures we know of.

DISEASE OF THE CHERRY.

EDS. *RURAL*.—Your article on the *Cherry*, in the last *RURAL*, suggested to me the idea of asking some information in regard to diseases to which the tree is subject in this section. I have been trying to cultivate the improved varieties for the last eight years, and although they grow very vigorously for a year or two, they soon begin to show signs of decay. Spots of gum appear in the trunk, the bark becomes dead, and the tree either dies or is so stunted as to be entirely worthless. On examining the gum spots, I usually find a white worm or grub in them, but whether that causes the disease or not I am unable to determine. The common red, sour cherry is entirely free from this disease, but having tasted the *Elton*, &c., I am unwilling to give them up and fall back on the common, if a remedy can be found for the above mentioned disease. My soil is gravel loam, with gravel subsoil, so that there is no danger of standing water about the roots. If you, or any cultivators of the *Cherry*, can furnish a remedy for this disease, you will confer a great favor on the readers of the *RURAL* in this section.

Smyna, July, 1859. W. COLLINS.

REMARKS.—The evil of which you complain is very common at the South and West. A partial remedy, we believe, has been found in sheathing the trunks with straw or moss. On this subject, however, information is needed. The *Duke* and *Morello* varieties would, no doubt, succeed well with you.

AN EXAMPLE FOR LADIES.

Mrs. F. D. GAGE, of St. Louis, Mo., writes as follows of her success in horticulture to the *Ohio Farmer*. We commend her example to the mothers, and daughters, and wives who read the *RURAL*:

I procured some pear trees of Mr. L. Burtis, of Rochester, N. Y., which I superintended the setting of on a rainy day a year ago last fall. Spring came, and but three out of forty died. Some of them blossomed, but the flowers were removed to prevent fruiting. They grew wonderfully through the summer, and when fall came they were twice their usual height. After the leaves had fallen, I had them pruned, and they commenced growing the past spring more vigorously than ever. Six of them have fruited, one tree having thirteen pears on a single branch, another nine. I think they are the *Flemish Beauty*.

One year ago last May I purchased of Ellwanger & Barry's agent, three varieties of currants, in all, eight roots, and this season they have borne a few clusters of magnificent fruit. Fine gooseberries, two years from setting.

Now, I have said I all through this story, because I was I that did it, and if I, (an old woman, I was going to say, but I'm not old;) if I who am fifty, (and have gray hairs,) can set out pear trees, and gooseberries, and strawberries, and raspberries, what is the use of young women, just entering upon the threshold of life's usefulness, shrinking from such work, and waiting for husbands, or fathers and brothers to do it for them?

Oh! there is a joy in gathering the fruit that one's own hands have planted—in knowing that her work has helped the world so much. I never dropped a seed, or set a slip in the ground, in my life, that prospered, that I was not made happier for the work. And as I sit by my window, to-day, and see my laden little pear trees waving to and fro, I look back upon that hard day's work in the rain with as much complacency as upon any day's work for many years.

I have seen many chapters about pears, and read much discussion on the comparative merits of the dwarfs and standards; and if my dwarfs prosper, (and about half are dwarfs,) they will furnish us fruit each year for four or five years, or until the standards shall come into bearing; then we can afford to let them die, if they must. I have seen pears sell here, in the basket, for ten cents apiece, and my tree, that bears thirteen, would more than pay for itself in one year at that rate, and I am sure I have had pleasure enough in watching the growth, to pay for all my time and

labor—pleasure, heartfelt, innocent and elevating pleasure.

Why should any family that has four rods of ground, do without fruit? One spray of forget-me-nots, left out of the border of the bonnet, or any other little self-denial, worth fifty cents, would purchase the tree, and a few hours stolen from the drowsy god of a summer morning, and a little gymnastic exercise with spade and hoe, are all that is needed. Try it, girls, try it; and my word for it, if there are roses on your cheeks, not a beau will miss the sprig of forget-me-not from your bonnet-rim.

No one need take pains to tell me that my pears are bearing too soon. I have heard so already. Nor do I think they have done anything extraordinary; but well, considering. I saw, by a *McConnellsville* paper, the other day, that Miss C. Thompson had presented, at the Morgan County Horticultural Meeting, a gooseberry measuring four inches. I suppose I planted that bush, for Miss Thompson lives upon "Mount Airy," and we left some of the finest bushes there, five years ago, that I ever saw—either they or their descendants produced the prodigy. We have a bottleful on the parlor mantle, as an ornament, that grew this year from a slip of that old Mount Airy stock. I am glad I planted that bush.

A LATE SEEDLING CHERRY.

We have so many valuable Cherries that there is little use of adding to the list, unless new candidates for public favor excel all varieties now cultivated in some valuable quality.

We now present our readers with an engraving of a Seedling Cherry, grown by MATTHEW G. WARREN, of this city, and supposed to be from seed of the *American Amber*. The flesh is rather firm, juicy, sweet and rich. Color amber in the shade, to very dark red in the most exposed parts. Stem slender, nearly two inches in length. It is valuable for its lateness, being ripe this season about the 25th of July.

GENESEE VALLEY HORT. SOCIETY.

THE June Exhibition of the Genesee Valley Hort. Society was held on the 22d inst. The show was not large, but the attendance of members and citizens interested in Horticulture quite good. The next exhibition will be made August 19th. The following are the reports of Committees:

REPORT OF COMMITTEE ON FLOWERS.

The Committee on Flowers regret to state that their labors were exceedingly light. Although the premium list was arranged to accommodate amateurs, who have but few flowers to show, this class seem slow to accept the advantages offered them. A. Frost & Co., made a fine show of herbaceous plants, roses, hollyhocks, phloxes, &c., and also exhibited several bouquets. C. W. Seeley exhibited verbenas and flowers of hardy shrubs. W. King made a good exhibition of dahlias for the season; also, of pinks, hollyhocks, etc. Selah Matthews presented a fine floral ornament—not for competition. Mrs. E. K. Blythe and Mrs. Alfred Fitch also presented floral ornaments in excellent taste.

The Premiums awarded were as follows:

Best Bouquets—A. Frost & Co.
Best Floral Ornaments—Mrs. E. K. Blythe.
Hardy Shrubs—Best twelve cut Flowers—A. Frost & Co.
Verbenas—Best six to C. W. Seeley, for Blue Delancey, Mrs. Horsford, Madam Viard, Hlawatha, Giant de Battaille, and Brillant de Valise.
Petunias—Best six to A. Frost & Co., for Glory of America, Great Western, Jupiter, Diana, Juno, and Amazon.
Herbaceous Plants—Best twelve cut Flowers, A. Frost & Co.
Dahlias—For a collection of twenty varieties, to Mr. King.
JAMES VICE, Chairman.

REPORT OF FRUIT COMMITTEE.

Gooseberries—Best six sorts, to C. W. Seeley.
Currants—Best two Red Varieties, to A. Frost & Co. for Fine Red Dutch and Victoria. Ditto, Best one quart, to A. Frost & Co. for White Grape.
Raspberries—Best four varieties, to H. E. Hooker & Co.; best quart of Red Raspberries; do., to H. E. Hooker & Co. for Hudson River Red Antwerp.
Fine specimens of New Rochelle Blackberry were shown by S. Matthews.
Early Harvest Apples from J. O. Bloss.
Red Astrachan Apples from E. S. Hayward.
C. P. Bissell and Salter presented a collection of Gooseberries, Currants, Blackberries, and Apples—but they were too late for competition, and have not therefore shared in the awards—the specimens were fine without exception, and showed skill in cultivation which is entitled to commendation.
H. E. HOOKER, Chairman.

RASPBERRIES.—We have seen nothing new or remarkable in the way of Raspberries this season. *Brinckle's Orange* maintains its reputation as the hardest and best of the light sorts. *Red Antwerp*, *Fastolf*, and *Hudson River Red Antwerp* are the best of the red sorts. The *Catawissa* and some of the other new varieties are fruiting well. The *Allen* we have seen in two places and it appears to possess but little merit.

HOP TREES.—Please answer through your paper, either by yourself or some correspondent, if any person in the North part of New York State has ever tried the American Hop Tree, and with what success?—ORRIS HOWELL, *Jerseyville, C. W.*, 1859.

DRYING FRUIT, WASHING RECIPE, &c.

EDS. *RURAL*.—Being acquainted with a valuable method of preserving berries and tomatoes, I forward it for insertion:

DRYING CURRANTS, TOMATOES, &c.—To ten pounds of currants, picked clean from the stems, add a pound of sugar and a little water. Put them into your kettle and let them boil gently a minute or so. When they all seem broken, take them off and dip into plates, pans, &c. There will not appear to be much but juice, but in three or four days, if kept in the sun and wind, and stirred and turned over two or three times a day, this will be a mass of jelly, sufficiently dry to be placed in a separate dish to finish hardening, which will take a few days longer. When dry, so as not to feel wet, put into paper bags and keep in a dry, dark place. They must be examined occasionally, or the millers will get to them and breed worms. This is a better way than preserving fruit in the usual mode, as it will not ferment. When wanted for use, put into a tin dish with boiling water and sugar, stew a short time and serve. I have now currants that were dried in this way ten years ago, and they are, to all appearance, as good as when first dried. The millers have not offered to trouble them since the first year. When I stew dried apples for pies, I stew with it a spoonful or two to a pie. This so much improves the flavor, that we hardly think dried apple pie is fit to eat without it.

Raspberries, blackberries, &c., can be preserved in the same manner. Last year I preserved a great many quarts of blackberries in this way, and had them occasionally all winter and spring, and they are not all used yet. Such fruit is very handy for pies in spring and early summer, when it is so difficult to furnish a variety of palatable food. Raspberries and blackberries should be put away in covered earthen ware or tin, as they cannot be dried so as not to stick to paper. Tomatoes must be skinned by first pouring boiling water on them, then cut in slices and cooked slightly, then spread and dried on tins and plates.

I also send a washing recipe which I think the best of any. To one pound of soap, or its equivalent in soft soap, add two ounces of pulverized borax and one pint of water. Put it into a kettle and keep it hot till dissolved. It must not boil, as it will not be properly combined. When going to wash, wet the clothes in cold water, rub well the soiled parts with the mixture, and pour on hot or boiling water, cover the tub and let them remain till morning, then wring out and boil in clean suds. The clothes, unless badly soiled, will need but little rubbing. Rinse and hang out. Try it, reader, and I hope you will find it as great a blessing as I have.

Moore's Hill, Dearborn Co., Ind., 1859.

REMEDY FOR BURNS.—NO HUMBUG.

Messrs. EDS.:—I have known and heard of so much suffering from burns, for want of the right kind of salve, that I am induced to give, through the *RURAL*, my recipe—one that has been tested thoroughly. From thirty years experience, I believe there can be nothing better, never having known, in one single instance, a burn or scald, when dressed with this and followed up, that did not soon get well. There are no sticking plasters to be removed, causing double suffering—no proud flesh—no stiff joints or contracted cords—but comfort is soon restored. Now, if those that read this will get materials and make the salve, and keep it in the house constantly—we hope they may not have occasion to make a test—it will prove its worth on application. I do not suppose there has a week transpired since we have known its efficacy that we have been without it, and, although we have been so fortunate as not to need it, some of our friends or neighbors have been less favored. Here is the recipe:

Burgundy pitch, 1 ounce; beeswax, ¼ ounce; tallow, 1 lb. Stir while simmering together, then pour from the dregs into earthen or glass to prevent rust. The first dressing not to be removed until the third day—afterwards change dressing every day.
CLARISSA COLVIN.
Henrietta, N. Y., 1859.

ICE CREAM—LEMON CAKE, &c.—Three quarts of milk; 2½ pounds of powdered sugar; 15 yolks, well beaten and strained, mix altogether in a tin pail, (do not use the whites of the eggs at all,) set the pail into a kettle of boiling water, and stir the custard all the time until it is quite thick. After it is cool, add two quarts of rich cream and the flavoring, then freeze. For an adult a large saucerful, a bright silver spoon, and a slice of Lemon Cake, made thus:

One pound of sugar; 14 eggs; ¾ pound of flour; 2 lemons. Beat the sugar and yolks well together, add the juice of the lemons—the whites must be whisked to stand—then sift in the flour, drop in buttered tins, and bake a light brown. Can some one send us a recipe for canning corn, one well tried.—M., *Fort Wayne, Ind.*, 1859.

PACKING EGGS.—Having read in the *RURAL* one recipe for packing eggs, and also an inquiry for another, I send one that I have tried and know to be good. Take the barrel, or tub, and put a layer of Cayuga plaster in the bottom, then take the eggs, set them up on the end—don't have them so they will hit each other—then add more plaster, then another layer of eggs, and so on until the vessel is full. Set them where they will keep dry, and in the spring you will have plenty of fresh eggs on hand. Will some one send a recipe for making Wine Crackers?—M. E. Root, *Danville, N. Y.*, 1859.

A GALLON of strong ley put into a barrel of hard water will make it as soft as rain water.

THE VASE OF WITHERED FLOWERS.

BY LIBBY REAL.

I plucked them from the grassy bank
Beside the meadow's pearly stream,
From 'mongst the grass so dark and dank,
Beneath the sunlight's golden beam.

From their soft petals shook the dew
That weeping left its silken throne,
Took from its bed the violet blue,
The lily, daisy, one by one.

I placed them where the sunshine fell
In many a glorious, pleasing ray,
I thought the flowers I loved so well
Would bloom for me full many a day.

But they, removed from native bed,
Too quickly drooped by slow decay,
No genial soil their nature fed—
They withered soon and passed away.

So flowers, like fairy blossoms grow,
Along the noiseless stream of Time—
We pluck them, yet full well we know
They wither soon in this dark clime.

And flowers of joy we gather there,
The fairest, sweetest blossoms cull,
Soon wither'd by this world's cold air,
To earth their blasted petals fall.

But amaranthine flowers o'er bloom
Beside the crystal stream of Life—
And angel bands those flowers plume
Where golden cups with joys are rife.
Northville, Mich., 1859.

WHAT HAS WOMAN DONE?

In the *RURAL* of July 16th I observed an effusion from "Queechy," which appears to me quite ultra. Men are denounced as "monsters and tyrants."—*Indeed!* are they? By whom, pray, except it be a few, a very small number of misguided females, and of these you will find their exact counterpart in some specimens of the genus *homo*. Yet who of us would say that, as a race, they are tyrannical, egotistical, and mercenary? No one, I trust. We will judge not the many by the few. Our legislation is more generous than "Queechy," for it has granted to woman not only the right to hold, but to control property, not doubting her ability to do so.

"Queechy," with great dignity, advances the idea that "women are incapable of accumulating, or keeping property." I think there is a great mistake in this, for many of our most prosperous men owe their success in business to the careful and well-directed management of the household. All the avenues of business open to women are crowded, proving that she not only can, but will maintain herself when opportunity permits.

Again, "Queechy" inquires, with the greatest simplicity, "What have our race ever done worthy of a monument?" Is it possible one so well-informed as "Queechy" seems to be, is in such lamentable ignorance of the noble deeds and heavenly fortitude of women in the past as well as the present age? Out of pity I will endeavor to illuminate. First let me point to the days of antiquity, to PAULINA, the devoted wife of SENECA, who, when her husband was compelled to kill himself, opened her own veins that her life might ebb with his;—to EPPONINA, who cheerfully shared all the hardships and privations of exile, and made her home in a cave for her husband's sake;—to ANNA and AGRIPPINA, the Roman daughter, Paro, who saved the life of an honored father, daily visiting him in his cell, where "the blood of a pious daughter returned to its source."—to VOLUNTARIA, mother of CORNELIUS, or, more recently, to MADAM ROLAND, and JOSEPHINE, whose behold a strength of mind almost supernatural. Out of the multiplicity in the present age I will mention only a MORGAN, a STOWS, a PHOENIX, ANN H., the wife of the missionary JUDSON, a FLORENCE NIGHTINGALE. Have these done nothing for which a monument could with propriety be raised? Have they done nothing worthy of remark? Such instances of self-denial are not rare, as some may suppose. The world contains many who, in their families, daily perform more noble deeds and build for themselves more lasting monuments than the building of bridges, steamboats, or railroads, for there is the sacred task to mould the minds of the youth of our land—to teach the future "statesmen, orators, and editors," to be mighty in the cause of right—"for just as the twig is bent the tree's inclined."

JULIUS.

Shawangunk, N. Y., 1859.

Written for Moore's Rural New-Yorker.

"SO COMMON."

"What's the use of petting a lilac?" asked my cousin JENNIE, as I bent caressingly over a favorite bush one pleasant June morning.—"no one thinks anything of lilacs in Liberty—they're so common," and the curve of the speaker's red lip expressed sovereign contempt for those so weak minded as to show liking for any flower except some queenly patrician blossom, just from the tropics. She had no respect for the floral "democratic throng"—not she. Straightway the fair spring landscape, smiling before me in its young beauty, faded away, and in its stead was a quiet New England village—one of the fairest jewels on the green old breast of Maine. The dim, misty sea line, the piney woods, the overhanging hills, the verdant meadows, curiously embroidered with flowers—how very fair they were, crowned with the golden diadem of pure May sunshine! Somewhere in this seaside village was an old red farm-house, embowered in clinging vines, and, furthermore, in the front yard two beautiful lilac bushes budded, and blossomed, and filled the balmy air with fragrance through each succeeding spring-time. I have no doubt that the fruit of the Hesperides was very nice in its way; or that the gardens of Armida contained some pe-

culiarly beautiful flowers, but they could scarcely be so lovely to my childish eyes as were those scented thyrses of purple lilacs, with their perennial bloom and beauty.

That ancient dwelling in the pleasant town of Fairhaven is now much changed—the place is changed—the inhabitants are changed—and could I return to my early home, I should doubtless feel like a stranger in a strange land; but if I found sweet, familiar blossoms of the lilac in their olden place by the little gate, a home feeling would come over me, and the flight of years would be forgotten. Those simple flowers wrought such a delight in my childish heart, "such a joy born of beauty," that they are as a living presence to this day, and stand as a type of the simple pleasures of childhood. Through the brief season of their bloom how many hearts they gladdened, how many dim eyes and sad faces brightened at their loveliness. Large clusters of them were carried to the sweet-faced girlish teacher who presided at the white school-house on the corner, and were carefully placed by her taper fingers in the broken pitcher ornamenting the carved and battered desk, and how they strengthened her timid little heart thro' out the weary day! They cheered sick chambers with their sunny presence, bringing to the languid sufferer bright thoughts of the leafy woods, and purple-eyed violets nestling in the cool shadows, and murmuring fountains foaming up from the heart of jeweled moss, and, more than all, bearing sweet messages from a fairer country, even a heavenly. As I thought of what a blessing they had been to me, and how they were blessing myriads of children dwelling by happy hearthstones scattered over our wide country—aye, and grown folks, too, for that matter—I thanked God that they were, indeed, "So Common!"
Cohocton, Steuben Co., N. Y., 1859. LAURA E. W.

FLORENCE NIGHTINGALE.

At first I thought she was a nun, from her black dress and close cap. She was not introduced, and yet Edmund and I looked at each other at the same moment to whisper, "It is Miss Nightingale!" Yes, it was Florence Nightingale, greatest of all now in name and honor among women. I assure you that I was glad not to be obliged to speak just then, for I felt quite dumb as I looked at her wasted figure, and the short, brown hair combed over her forehead like a child's, cut so when her life was despaired of from fever but a short time ago. Her dress, as I have said, was black, made high to the throat, its only ornament being a large enameled brooch which looked to me like the colors of a regiment surmounted with a wreath of laurel, no doubt some grateful offering from our men. To hide the close white cap a little, she had tied a white crape handkerchief over the back of it, only allowing the border of lace to be seen; and this gave a nun-like appearance, which first struck me on her entering the room, otherwise Miss Nightingale is by no means striking in appearance, only her plain black dress, quiet manner and great renown, told so powerfully altogether in that assembly of brilliant dresses and uniforms. She is very slight, and rather above the middle height; her face is long and thin, but this may be from recent illness and great fatigue. She has a very prominent nose, slightly Roman, and small dark eyes, kind, yet penetrating; but her face does not give you at all the idea of great talent. She looks a quiet, persevering, orderly, lady-like woman. I have done my best to give you a true pen-and-ink portrait of this celebrated lady. I suppose there is a hum all over the world of "What is she like?"—Sketches by Mrs. Hornby.

"PLEASE LET ME BE A LITTLE BOY."

"Oh, JOHNNY!" cried a nervous mother, "do have some mercy on my poor head! Can't you play without shouting so?"

Poor Johnny drew up the tape reins with which he was driving two chairs tandem, and called out in a loud, hoarse whisper—"Get up, whoa!" But at length finding little measure in this suppressed amusement, he threw down the reins, and laying his hands on his breast, said, with a long breath, "Oh, mother, it's full of noise in here, and it hurts me to keep it in. Don't all little boys make a noise when they play?"

"Yes, Johnny, I believe they all do," replied the lady.

"Oh, then, mother dear," cried Johnny, in a whining tone, "please let me be a little boy."

We join poor Johnny heartily in this petition. Please, mother, let your sons be little boys while they may. Let them have a free and happy childhood—that when your head is low in the grave they may point back to those days and say—"We were happy children, for there was sunshine where our mother was."

CHILDHOOD.

Let no man smile, in the self-sufficiency of his acquisition, at the perceptions of early, very early childhood. Deep and rapturous are they, as some of those rare old springs of limpid water that bubble in brawling beauty to the earth's service from rocky recesses that never may see the light of day. To childhood all is real—that which appears to be, is. The little hand that, with no mental guiding notion of distance, out-stretches to grasp the moon for its silvery beauty, is but a type of the young mind that has made no moral comparisons. Vividity of conception and absolute faith in all they see, combined with an intuitive and deeply philosophical judgment of gentleness or harshness, make up the early mysteries of human intellect; perception and moral education, acting and reacting in their thousands of after conditions, do all the rest. Happy is that tiny lord of the creation whose first tottering mental steps are guided by kindness. Woe, woe to those who, with so sacred a trust as a human soul, fresh, and unsullied from the hands of its Maker, confided to them, abuse the confidence of nature and betray their God.—Stammerer.

He who gives pleasure, meets with it. Kindness is the bond of friendship, and the hook of love; he who sows not, reaps not.

Written for Moore's Rural New-Yorker.

GOOD NIGHT.

Good night!
For vigil stars are bending now
O'er nature hushed in sleep,
So do not snored loved ones bow
And watch o'er mortals keep?
Put trust that on this trembling heart
A parent waits the angels part.
Good night!
Good night!
My barthened spirit hastes to pour
In Jesus' ear its care and grief,
To plead for strength, and faith—implore
From dread temptation's power relief,
Remembering dear ones, then I'd crave
For you God's richest grace and love.
Good night!

Victor, N. Y., 1859.

THE AUTUMN OF LIFE.

BEFORE my door, in summer's heat,
Proudly the elms their branches spread;
Cool verdure sprang beneath my feet,
And shadows played around my head;
Joyful I passed the sunny hour,
And mocked the sun's meridian power.

But when, with withering hand, the frost
Shrivelled the leaves, and gaunt and bare,
Their naked arms the elm trees tossed,
While Autumn tempests rent the air,
I mourned the summer's glories fled,
And copious tears of sadness shed.

When winter came, and cold and still,
The ice-kings forged his frozen chain,
And over snow-clad vale and hill
Midnight assumed her solemn reign;
Forth looking from my window bars,
Through the stripped limbs I saw the stars.

Thus earthly loves, like summer leaves
Gladden but intercept our view;
But when bereft, the spirit grieves,
And hopes are crushed and comforts few;
Lo! in the depths of sorrow's night
Beams forth from far celestial light.

Written for Moore's Rural New-Yorker.

"A RAINY DAY IN HAYING TIME."

It is raining, raining—clouds settling on the hill-tops—mists floating through the valleys—rain-drops drawing long lines, slantwise, across the features of the landscape, like the graining in steel portraits. How the rain-drops patter on the broad, eaily roofs of the farm buildings—on the arbor, with its roof of leaves and its ceiling of clusters—on the stretched ruffles of the cabbage rows—and on the hoof-worn pasture ledge! How cosy it sounds under the snug farm roof, with the warm and fragrant air of the fresh hay—the chirping of grasshoppers, and the clucking and prating of the feathered dames, anxious about their numerous families! It is raining—raining—raining!

Memories of past haying seasons come flocking across the mind—banishing the present like the dots and crooked paths (on the window pane), which seem to blot out the fields and trees from our sight to-day. Fifteen or twenty years ago there were fewer machines but more hay-makers. And when a rainy day like this came, they claimed it as a holiday, and sat about the barn or leaned against the new made mow, whiling away the time with many a long story. How deeply interesting to me were the "long yarns" told in that ring of merry hay-makers! Many an hour have I sat listening to them, rejoicing that the same cause which compelled them to hang up scythe and rake, also gave me an excuse for "staying home from school."—The rainy patter on the roof seemed all the while reminding them that they were spending their time as profitably as could be expected, since there could be no work for them in the field.

Would that my pen could do justice to the character which my young imagination gave these heroes of my youth. Memory presents them to-day exactly as they seemed to me then. In every band there is a leader, and CHARLES HARRIS, on account of superior merit, held this place among the party which yearly swung their scythes over my father's meadows. The man was not to be found who could turn as smooth and broad a swath in the hay-field—who could outshine him on the training field at "muster" day—or who could tell a better story for a rainy day. In youth he had been remarkably strong and active, and many were the stories he told of his exploits at the foot-race, at leaping, wrestling, and the like—which matches were more in vogue in New England twenty years ago than they are now. He had been, in earlier days, a rafterman on the Merrimac, and this part of his life abounded in rare incidents. He could embellish these interesting epochs with all the skill of a WALTER SCOTT, though I presume he had never read a book through in his life. He was one of those uncultivated, yet gifted spirits, who are all the more lively and entertaining, because their style is natural and informal, and whose stories are the more interesting because their lives have been a wild race through the rough places of the world. He had a very fine little farm of his own on the banks of the Merrimac, but he always finished his own haying while we were "moving around the edge," and was on hand by the time the business commenced with us in earnest. His brother WILLIAM was usually one of our company of hay-makers. Though his match in the field, he could not have entered the lists with him in the story-telling circle of the rainy day. His part, on these interesting occasions, was usually to sit by and listen, now and then aiding his brother with his better memory. They had been raftermen at the same time, and WILLIAM seemed to recall the adventures and accidents of their various "drives," more readily than CHARLES. Very often, when the latter was preparing for a grand effort, his brother would set

him on the right track, by mentioning some incident of their common experience, and then "CHARLES" would start off with such a story as would soon drive all thoughts of school or its requirements from my young head. "Captain BULL" was the familiar name of another of this band of worthies. It was his frequent boast, that though he carried a greater load of years than any of his fellow-laborers, he could still carry as wide a swath as the best of them. The old Captain had been a powerful man in his day, no doubt, but the many days of toil and exposure he had seen, and the many glasses of "Fingley" he had taken, had shown their effects in weakening his strong limbs and quenching the fire of his eye. But as he grew older, and as his other powers failed him, his tongue seemed to gain what these had lost, and as a rainy-day story-teller, his superiority was not to be found. Besides, as he had seen a longer life than the rest, his library of unwritten experience—upon which he relied for the foundation, at least, of his stories—was, consequently, much larger than theirs. But he usually required a good drink of cider, fresh from the cellar, to sharpen his wits before commencing. And did not the cunning old fox know, if he should just hint that "when the boy came back he would tell a wonderful fine story," the cider would come all the sooner? My only wonder is that I did not sometimes, in my haste, leave the tap loose in the barrel, thus meriting the tongueable displeasure of higher powers. But I do not remember that such an accident ever happened.

The memory of these early friends has always been dear to me. The quaint maxims and rules of life learned from them, often contained much sterling common sense, and at the time I treasured them up as sacred. I was always a favorite among them, and never asked a reasonable favor of any of their number, but it was readily granted. In this, however, some of them were not altogether free from selfish motives. They well knew that "little JOE" held almost absolute sway over a well-stocked cellar, and that there were numerous other important favors which it was in his power to bestow.

Alas! Time's changes! The two brothers now sleep side by side in the country grave-yard, where many of the graves are sunken, and the stones leaning, and some of them fallen. My father was with CHARLES the night he died, and I remember how anxious I was to ask about him, but could not, for the death of one who had always been so happy and cheerful himself, and who could do so much to make others so, seemed very strange and solemn to me. The Captain, too, is there at rest, with a head-stone above him bearing his true name, not as familiar to his friends as the other. Most of the rest are there also. Their families have moved away, or are broken up, and when I visit the old place I find few traces of them, save on their tomb-stones or in my own heart. Since then, haying seasons has found me in many places—in New York, Ohio, and among the prairie and oak-openings of the Far West—and though it is not in the usual course of my present occupation, I cannot pass the season by without spending a few days at haying, out of regard for the memory of those who first taught me the mysteries of handling a scythe.

Clarence, N. Y., 1859.

GRAVE AND GAY.

Be content with enough. You may butter your bread until you are unable to eat it.

WHAT tree represents a person who persists in incurring debts? Willow (will owe.)

When ill news comes too late to be serviceable to your neighbor, keep it to yourself.

The first time a woman marries is generally to please another; the second time is invariably to please herself.

Good sense is the father of Wit, Truth his grandfather, and Mirth and Good-humor his boon companions.

A revising barrister having asked a voter the value of a house, the answer was, "That depends upon what sort of a wife there is in it."

The following direction appeared on a letter recently delivered in Auckland, Durham:—"For Elizabeth Jane Spencer, a tall woman, with two little boys."

A snort time ago the following notice was stuck up at a tailor's window, near Manchester:—"Wanted, two apprentices; they will be treated as one of the family!"

VOLTAIRE, on one occasion, when his friends were conversing on the antiquity of the world, observed, "The world is like an old coquette—she disguises her age."

We notice scores of poetical effusions directed to friends who are in heaven. Better give poetry of the heart utterance in words and deeds of kindness to friends upon earth.

A was being told by an acquaintance that Miss Brown (who is rather a broad-featured young lady,) had a benign countenance, he replied, "Perhaps you mean seven-by-nine."

An outside passenger on a coach had his hat blown over a bridge into the stream. "True to nature," said a gentleman who was seated beside him, "a beaver naturally takes to the water."

A TEACHER wishing to explain to a little girl the manner in which a lobster casts its shell when it has outgrown it, said, "What do you do when you have outgrown your clothes? You throw them aside, don't you?" "Oh, no," replied the little one, "we let out the tucks!"

An old divine, cautioning the clergy against engaging in violent controversy, uses the following happy simile:—"If we will be contending, let us contend like the olive and the vine, who shall produce the most and the best fruit; not like the aspen and the elm, which shall make the most noise in the wind."

How many sickly ones wish they were healthy; how many beggar-men wish they were wealthy; how many ugly ones wish they were pretty; how many stupid ones wish they were witty; how many back-sliders wish they were married; how many Benedictine wish they had tarried! Single or double, life's full of trouble—riches are stable, pleasure's a bubble.

Written for Moore's Rural New-Yorker.

HAGAR IN THE WILDERNESS.

BY ELIZABETH BENTON.

The bond-woman's infant lies gasping,
Faint, weary, and ready to die,
O'er his bosom his tiny hands clasping,
Bleated to heaven his dim pleading eye.

The pitiless heavens bend o'er him,
Beats the sun on his shelterless head,
Underneath, all around, and before him,
The sands of the desert are spread.

Unable to comfort or aid him,
His agonized mother weeps nigh,
Not daring to look where she's laid him
For, oh! she can not see him die.

Oh, cruel the master and father,
Who, alone in the desolate wild,
Sent to perish by thirst and by hunger
His handmaid and innocent child.

And did He not promise, that Being
Whom master and mistress adore,
That the seed of the boy yonder dying
Should outnumber the sands on the shore?

No eye sees the tears, unavailing,
The life of her darling to save,
No ear hears her impotent wailing,
Her own hands must follow his grave.

Lonely weeper! no tear ever glitters
Unseen by one pitying eye,
One ear ever open still listens
To suffering humanity's cry.

And lo! from His throne, earthward winging,
A bright plumed angel appears,
Relief for thy sufferings bringing,
Sad mourner, away with thy tears.

And learn that God's goodness abideth
Though sorrow encompass thee round,
Some merciful purpose he hideth,
When thou only seest his frown.

GOODNESS OF GOD.

I AM less and less anxious to make formal vindications of the goodness of God. It needs no advocate. It will take care of itself, in spite of clouds. Men, who have eyes, believe in the sun, and none but the blind can seriously question the Creator's goodness. We hear indeed of men led into doubts on this point by their sufferings; but these doubts have generally a deeper source than the evils of life. Such skepticism is a moral disease; the growth of some open or lurking depravity. It is not created, but brought into light by the pressure of suffering. It is indeed true that a good man, in seasons of peculiar, repeated, pressing calamities, may fall into dejection and perplexity. His faith may tremble for the moment. The passing cloud may hide the sun. But deliberate, habitual questions of God's benevolence argue great moral deficiency. Whoever sees the glory and feels within himself the power of disinterested goodness is quick to recognize it in others, especially in his Creator. He sees in his own love a sign, expression, and communication of Uncreated, Unbounded, All-originating Love. The idea of malignity in the Infinite Creator shocks his moral nature, just as a palpable contradiction offends his reason. He repels it with indignation and horror.—Channing.

MODERN ELIJAH.

It is not well always to look on the shady side of affairs. There are men who come into existence under a shadow, and the shadow has dogged their lives, and all that is bright, and pure, and beautiful, takes the sombre hue of their own fancies. Their religion consists in bemoaning the evils of the world, in lamenting the gradual decadence of good, and in regarding all home evils and foreign complications as "signs of the times." They are the Eljahs, who retire into the wilderness of their own contemplations, saying, "I, even I, only am left," unconscious that all the time there are not only the "seven thousand who have not bowed the knee unto Baal," but that multitudes are everywhere obeying the gospel call. They are the Johnas sitting under the gourds of their own security, amazed that the judgments of God do not descend upon a guilty world. These hypochondriacs are seldom found among the earnest workers, who seek to leave the world better than they found it, but among those who see its evils and sit by with folded hands.

A GLOOMY THING.—Men of the world are sometimes ashamed to pray, and are unwilling to be seen in a praying circle; but they only proclaim their spiritual ignorance and blindness. The following paragraph indicates more wisdom and discernment:—As John Foster approached the close of life, and felt his strength gradually stealing away, he remarked on his increasing weakness, and added, "But I can pray, and that is a glorious thing." Truly a glorious thing; more glorious than an atheist or pantheist can ever pretend to. To look up to an omnipotent Father, to speak to him, to love him; to stretch upward as a babe from the cradle, that he may lift his child in his everlasting arms to the resting-place of his own bosom—this is the portion of the dying Christian. He was overheard thus speaking with himself:—"O, death, where is thy sting? O, grave, where is thy victory? Thanks be to God, who giveth us the victory, through our Lord Jesus Christ." The eye of the terror-crowned was upon him, and thus he defied him.—Family Treasury.

BIBLE PROMISE.—They are like the beams of the sun, which shine as freely in at the window of a poor man's cottage as the rich man's palace.

LOOKING UPWARD.—He who seldom thinks of heaven, is not likely to get there; as the way to hit a mark is to keep the eye fixed upon it.—Horne.

Spice from New Books.

Rural Life in Cuba.

FROM R. H. DANA'S new book, "To Cuba and Back," we derive the following picture:

As we leave Matanzas, we rise on an ascending grade, and the bay and the city lie open before us. The bay is deep on the western shore, under the ridge of the Cumbre, and there the vessels lie at anchor; while the rest of the bay is shallow, and its water, in this state of the sky and light, is of a pale green color. The lighters, with sail and oar, are plying between the quays and the vessels below. All is pretty, and quiet, and warm, but the scene has none of those regal points that so impress themselves upon the imagination and memory in the surroundings of Havana.

I am now to get my first view of the interior of Cuba. I could not have a more favorable day. The air is clear, and not excessively hot. The soft clouds float midway in the serene sky, the sun shines far and bright, and the luxuriance of a perpetual summer covers the face of nature. These strange palm-trees everywhere! I cannot yet feel at home among them. Many of the other trees are like our own, and, though tropical in fact, look to the eye as though they might grow as well in New England as here. But the royal palm looks so intensely and exclusively tropical! It cannot grow beyond this narrow belt of the earth's surface. Its long, thin body, so straight and so smooth, swathed from the foot in a tight bandage of gray canvas, leaving only its deep-green neck, and over that its crest and plumage of deep-green leaves! It gives no shade, and bears no fruit that is valued by man. And it has no beauty to atone for those wants. Yet it has more than beauty—a strange fascination over the eye and the fancy, that will never allow it to be overlooked or forgotten. The palm-tree seems a kind of *lusus naturæ* to the northern eye—an exotic wherever you meet it. It seems to be conscious of its want of usefulness for food or shade, yet has a dignity of its own, a pride of unmixed blood and royal descent—the herald of the soil.

What are those groves and clusters of small growth, looking like Indian corn in a state of transmigration into trees, the stalk turning into a trunk, a thin soft coating half changed to bark, and the ears of corn turning into melons? These are the bananas and plantains, as their bunches of green and yellow fruits plainly enough indicate, when you come nearer. But that sad, weeping tree, its long, yellow-green leaves drooping to the ground! What can that be? It has a green fruit like a melon. There it is again, in groves! I interrupt my neighbor's tenth cigarito, to ask him the name of the tree. It is the coccol! And that soft green melon becomes the hard shell we break with a hammer. Other trees there are, in abundance, of various forms and foliage, but they might have grown in New England or New York, so far as the eye can teach us; but the palm, the coccol, the banana and plantain are the characteristic trees you could not possibly meet with in any other zone.

Thickets—jungle I might call them—abound. It seems as if a bird could hardly get through them; yet they are rich with wild flowers of all forms and colors—the white, the purple, the pink and the blue. The trees are full of birds of all plumage. There is one like our brilliant oriole. I cannot hear their notes for the clatter of the train. Stone fences, neatly laid up, run across the land—not of our cold, bluish-gray granite, the color, as a friend once said, of a miser's eye, but of soft, warm brown and russet, and well overgrown with creepers and fringed with flowers. There are avenues, and here are clumps of the prim orange tree, with its dense and deep-green polished foliage gleaming with golden fruit. Now we come to acres upon acres of the sugar-cane, looking at a distance like fields of overgrown broom-corn. It grows to the height of eight or ten feet, and very thick. An army could be hidden in it. This soil must be deeply and intensely fertile.

There, at the end of an avenue of palms, in a nest of shade trees, is a group of white buildings, with a sea of cane-fields about it, with one high furnace-chimney, pouring out its volume of black smoke. This is a sugar plantation—my first sight of an ingenio; and the chimney is for the steam works of the sugar-house. It is the height of the sugar season, and the untiring engine toils and smokes day and night. Ox-carts, loaded with cane, are moving slowly to the sugar-house from the fields; and about the house, and in the fields, in various attitudes and motions of labor, are the negroes—men, women and children—some cutting the cane, some loading the carts, and some tending the mill and the furnace. It is a busy scene of distant industry, in the afternoon sun of a languid Cuban day.

Now these groups of white one-story buildings become more frequent, sometimes very near each other, all having the same character—the group of white buildings, the mill, with its tall furnace-chimney, and the look of a distillery, and all differing from each other only in the number and extent of the buildings, or in the ornament and comfort of shade trees and avenues about them. Some are approached by broad alleys of the palm, or mango, or orange, and have gardens around them, and stand under clusters and shade-trees; while others glitter in the hot sun, on the flat sea of cane-fields, with only a little oasis of shade trees and fruit trees immediately about the house.

I now begin to feel that I am in Cuba—in the tropical, rich, sugar-growing, slave-tilled Cuba.

The Poetry of Nature.

What is it that imparts to Nature its poetry? It is not in Nature itself; it resides not either in dead or organized matter, in rock, or bird, or flower; "the deep saith it is not in me, and the sea saith it is not in me." It is in the mind that it lives and breathes; external nature is but its storehouse of subjects and models, and it is not until these are called up as images, and invested with "the light that never was on land or sea," that they ceased to be of the earth earthly, and from the ethereal stuff of which the visions of the poet are made. Nay, it is not mainly through that associative faculty to which the sight and

sounds of present nature become suggestive of the images of a nature not present, but seen within the mind, that the landscape pleases, or that we find beauty in its woods or beside its streams, or the impressive and the sublime among its mountains and rocks? Nature is a vast tablet inscribed with signs, each of which has its own significance, and becomes poetry in the mind when read; and geology is simply the key by which myriads of the signs, hitherto undecipherable, can be unlocked and perused, and thus a new province added to the poetical domain. We are told by travelers that the rocks of the wilderness of Sinai are lettered over with strange characters, inscribed during the forty years' wanderings of Israel! They testify, in their very existence, of a remote past, when the cloud of overshadowed tabernacle rose amid the tents of the desert; and who shall dare say whether to the scholar who could dive into their hidden meanings they might not be found charged with the very songs sung of old by Moses and by Miriam, when the sea rolled over the pride of Egypt? To the geologist every rock bears its inscription, engraved in ancient hieroglyphic characters that tell of the Creator's journeyings of old, of the laws which He gave, the tabernacles which He reared, and the marvels which He wrought—of mute prophecies wrapped up in type and symbol—of earth gulfs that opened, and of reptiles that flew—of fiery plagues that devastated the dry land, and of hosts more numerous than that of Pharaoh, that "sank like lead in the mighty waters;" and, having, in some degree, mastered the occult meanings of these strange hieroglyphics, we must be permitted to refer, in asserting the poetry of our science, to the sublime revelations with which they are charged, and the vivid imagery which they conjure up.—*Essays by the late HUGH MILLER.*

Books Received.

THE FRENCH REVOLUTION OF 1789, as viewed in the Light of Republican Institutions. By JOHN S. O. ABBOTT. With One Hundred Engravings. (8vo. pp. 489.) New York: Harper & Bros. Sold in Rochester by D. M. Dewey.

POPULAR TALES FROM THE NORTH. By GEORGE WATKINS DABNEY, D. C. L. With an Introductory Essay on the Origin and Diffusion of Popular Tales. (12mo. pp. 879.) New York: D. Appleton & Co. Rochester: ADAMS & DABNEY.

LYES OF THE QUEENS OF SCOTLAND AND ENGLISH PRINCESSES connected with the Royal Succession of Great Britain. By AGNES STICKLAND, author of "The Lives of the Queens of England." Vol. VIII. (12mo. pp. 379.) New York: Harper & Bros. Rochester: DEWEY.

LOVE ("L'Amour.") From the French of M. J. MICHELET. Translated from the Fourth Paris Edition, by J. W. PALMER, M. D., author of "The New and the Old," "Up and Down the Inward," etc. (16mo. pp. 342.) New York: Rudd and Carleton. Rochester: DEWEY.

TEXT AND HABES: Notes of an Oriental Trip. By CAROLINE PERINE. (12mo. pp. 800.) New York: D. Appleton & Co. Rochester: ADAMS & DABNEY.

M. T. CROOKS DA ORFICIA. Libri Tre. With Marginal Analysis and English Commentary. Edited for the Syndicate of the University Press by the Rev. HUBERT ASHTON HOLDEN, M. A., Vice-Principal of Cottenham College, etc. First American Edition, corrected and enlarged. By CHARLES ANTHON, LL. D., Professor of Greek in Columbia College. (pp. 315.) New York: Harper & Bros. DEWEY.

ELEMENTARY GRAMMAR, ETYMOLOGY AND SYNTAX. Abridged from the Octavo Edition of the "English Language in Elements and Forms." Designed for General Use in Common Schools. By W. D. FOWLER, late Professor of Rhetoric in Amherst College. (16mo. pp. 234.) New York: Harper & Bros. Rochester: DEWEY.

ROMAN ORTHOGRAPHY: A Plea for the Restoration of the True System of Latin Pronunciation. By JOHN F. RICHARDSON, Professor of the Latin Language and Literature in the University of Rochester. (16mo. pp. 177.) New York: Sheldon & Co. Rochester: ADAMS & DABNEY.

THE CHINA MISSION. Embracing a History of the various Missions of all Denominations among the Chinese, with Biographical Sketches of Deceased Missionaries. By WILLIAM DEAN, D. D., Twenty Years a Missionary in China. (12mo. pp. 386.) New York: Sheldon & Co. Rochester: ADAMS & DABNEY.

THE CAVALIER. An Historical Novel. By G. F. E. JAMES, Esq. (16mo. pp. 891.) Philadelphia: T. B. Peterson & Brothers. Rochester: DEWEY.

THE WARS OF THE ROMANS; or, Stories of the Struggle of York and Lancaster. By J. G. EDGAR, author of "History for Boys," "The Boyhood of Great Men," etc. With Illustrations. (16mo. pp. 470.) New York: Harper & Bros. Rochester: DEWEY.

THE POETICAL WORKS OF EDGAR ALLEN POE. With an Original Memoir. (pp. 278.) New York: Rodfield. Rochester: DEWEY.

NAPOLEONIC IDEAS. Des Idées Napoléoniennes, par le Prince Napoléon-Louis Bonaparte. Brussels: 1859. Translated by JAMES A. DORN. (pp. 164.) New York: D. Appleton & Co. Rochester: DEWEY.

NAPOLEON III. THE MAN OF PROPHECY; or, the Revival of the French Empire prophesied and anticipated from the necessity of Prophecy. By G. S. FARRA, B. D., First American from the second English edition. New York: D. Appleton & Co. Rochester: ADAMS & DABNEY.

STRAIGHT FORWARD; or, Walking in the Light. A Story for School Girls of all ages. By LUCY ELLEN GURNEY, author of "Irah Amy," "The Sign of the Cross," "Kitty Maynard," etc. (16mo. pp. 315.) Boston: Henry Hoyt. Rochester: DEWEY.

HANNAH LEE; or, Rest for the Weary. By the Author of "Legend," "Indulgence," "Beauty of the Heart," etc. (16mo. pp. 356.) Boston: Henry Hoyt. Rochester: DEWEY.

HAYDN'S SACRED ORATORIO, THE CREATION. Edited by VINCENT NOVATI. Boston: Oliver Ditson & Co. Rochester: W. S. MACKAY.

MY NATIVE HILLS.

STONE ARROW HEADS—HOW MADE.

THE heads of Indian arrows, spears, javelins, &c., often found in many parts of our continent, have been admired; but the process of forming them conjectured. The Hon. Caleb Lyon, on a recent visit to California, met with a party of Shasta Indians, and ascertained that they still used those weapons, which in most tribes have been superseded by rifles, or at least by iron-pointed arrows and spears. He found a man who could manufacture them, and saw him at work at all parts of the process. The description which Lyon wrote and communicated to the American Ethnological Society, through Dr. E. H. Davis, we copy below:

The Shasta Indian seated himself upon the floor, and laying the stone anvil upon his knee, which was of compact talcose slate, with one blow of his agate chisel he separated the obsidian pebble into two parts, then giving another blow to the fractured side he split off a slab some fourth of an inch in thickness. Holding the piece against the anvil with the thumb and finger of his left hand he commenced a series of continuous blows, every one of which chipped off fragments of the brittle substance. It gradually assumed the required shape. After finishing the base of the arrow head (the whole being only little over an inch in length,) he began striking gentler blows, every one of which I expected would break into pieces. Yet such was their adroit application, his skill and dexterity, that in little over an hour he produced a perfect obsidian arrow head. I then requested him to carve me one from the remains of a broken porter bottle, which (after two failures) he succeeded in doing. He gave as a reason for his ill success, he did not understand the grain of the glass. No sculptor ever handled a chisel with greater precision, or more carefully measured the weight and effect of every blow, than this ingenious Indian, for even among them, arrow-making is a distinct trade or profession, but in which few attain excellence. He understood the capacity of the material he wrought, and before striking the first blow, by surveying the pebble, he could judge of its availability as well as the sculptor judges of the perfectness of a block of Parian. In a moment, all that I had read upon this subject, written by learned and speculative antiquarians of the hardening of copper, for the working of flint axes, spears, chisels, and arrow heads vanished before the simplest mechanical process. I felt that the world had been better served had they driven the pen less and the plow more.—*N. Y. Courier and Enquirer.*

WALKING.

Or all forms of exercise, walking is the most useful, as it brings into play the greatest number of muscles, without unnatural strain upon any. It also leaves free scope to the external senses, while allowing of simultaneous occupation of the mind. Another advantage is that it admits of complete regulation, both in degree and duration, according to the strength, time, or wishes of each individual. Those who have weak lungs or heart must be satisfied with gentle walking, and on level ground. Although conducive to mental activity, it is often advisable to keep the mind free from severe or sustained thought when walking. Hence the advantage of a companion with whom cheerful conversation can be kept up, or observing surrounding objects, whether in town or country, so as to divert the mind from study and care. The pursuits of natural history are good in this way, and hence also the chief hygienic effect of shooting and field sports, excitement and diversion of mind accompanying the actual exercise. Those who are engaged in business, where the dwelling and the place of business are at a distance from their place of residence, ought to walk at least part of the way, both in the morning and afternoon, if confined within doors during the day. Literary and professional men ought to walk more than they generally do. The time is not lost, as the mind will always be revived to work with greater energy. The brain will do as much work in one hour, when there is a free glow of pure oxygenated blood, as in double the time when the nervous system is exhausted and the veins congested with dark blood. Artificial stimulants may quicken thought for a time; but their effect diminishing by habit, the quantity has to be increased, and injury in other ways is done to the system.—*St. Louis.*

SUDDEN WHITENING OF THE HAIR.

A CORRESPONDENT of the Medical Times having asked for authentic instances of hair becoming grey within the space of one night, Mr. D. Parry, staff surgeon at Aldershot, writes the following very remarkable account of a case of which he says he made a memorandum shortly after the occurrence:—On February 19, 1858, the column under General Franks, in the South Oude, was engaged with a rebel force at the village of Chanda, and several prisoners were taken; one of them, a Sepoy of the Bengal army, was brought before the authorities for examination, and I being present had an opportunity of watching from the commencement the fact that I am about to record. Divested of his uniform, and stripped completely naked, he was surrounded by the soldiers, and then first apparently became alive to the dangers of his position; he trembled violently, intense horror and despair were depicted on his countenance, and although he answered the questions addressed to him, he seemed almost stupefied with fear; while under observation, within the space of half an hour, his hair became grey on every portion of his head, it having been, when first seen by us, the glossy jet black of the Bengalee, aged about 24. The attention of the bystanders was first attracted by the sergeant, whose prisoner he was, exclaiming, "He is turning grey," and I, with several other persons, watched its progress. Gradually, but decidedly, the change went on, and a uniform greyish color was completed within the period above named.

MISCELLANEOUS ENIGMA.

I AM composed of 45 letters.
My 23, 5, 21, 38, 43 was the name of an ancient king.
My 26, 12, 41, 8 is a kind of coin.
My 80, 28, 9, 32, 34 is what most people fear.
My 1, 7, 10, 39 grow on my 34, 27, 18, 15 as well as on yours.
My 10, 44 is a word of negation.
My 22, 45, 48, 14 is a mineral.
My 2, 24, 4, 2, 85, 30 was the name of an ancient Persian king.
My 6, 16, 37, 8, 22, 29, 16, 81 is a Southern State.
My 11, 31, 25, 33 is a bad word.
My 18, 40, 17, 36 means splendor, parade.
My 20, 29, 27 is a unit.
My whole is one of "Poor Richard's" maxim.
South Bristol, N. Y., 1859. L. F. J.
Answer in two weeks.

For Moore's Rural New-Yorker.

GEOGRAPHICAL ENIGMA.

I AM composed of 17 letters.
My 1, 8, 12, 8, 11, 6 is a county in Georgia.
My 2, 9, 15, 11, 6, 5 is a city in Europe.
My 3, 5, 4, 7, 15, 14 is an island in Polynesia.
My 4, 11, 12, 8, 9, 9 is a town in Michigan.
My 6, 15, 9, 2, 6, 3, 7, 16 is a county in New Jersey.
My 6, 14, 9, 8 is a river in Africa.
My 7, 6, 13, 6, 9 is a river in Europe.
My 8, 18, 14, 1, 5 is a town in Missouri.
My 9, 11, 6, 13, 11, 6 is a capital in Europe.
My 10, 11, 8, 17, 6, 14, 5 is a gulf in Europe.
My 11, 10, 7 is a gulf on the coast of Asia.
My 13, 5, 9, 3, 11, 6 is a county in Florida.
My 13, 8, 2, 13 is a sea in Asia.
My 14, 16, 8, 2, 2, 6, 13 is an island belonging to Denmark.
My 15, 7, 8, 14, 16, 5, 16, 2 is a lake in South America.
My 16, 11, 10, 10, 8 is a capital in Africa.
My 17, 11, 16, 4, 11, 12 is a volcano in Asia.
My whole was a great American astronomer.
Mount Vernon, Mich. J. MILTON JOHNSTON.
Answer in two weeks.

For Moore's Rural New-Yorker.

CHARADE.

My first is the name of a prophet and priest,
Imprisoned awhile, but shortly revealed;
My second's a bower, and but one of the kind
In the pages of history you ever can find;
My whole is a vine, by man neither planted nor sown,
Although of great size, by an insect was killed.
Wauwatosa, Wis., 1859. A. B.
Answer in two weeks.

ANSWERS TO ENIGMAS, &c., IN No. 437.

Answer to Poetical Enigma:—Gutta Percha—Gutta Percha Cane—Cable—Cotton—Pope.
Answer to Geometrical Problem:—19 1-5 acres, and 12 and 16 chains each.

PLEASURE.

"AND pleasure was so coy a prude,
She fled the more, the more pursued."
PLEASURE assumes every variety of form. To one it seems to exist in hoards of gold; to another in hastily squandering such a prize. One pursues the phantom as it glides through his fancy to the summit of fame, another debases every noble faculty of the soul to the extreme of human degradation, to attain the same object. Pleasure is not found by those who most eagerly seek her. The rich often deny themselves the necessities of life to amass their worshiped gold, or spoil the appetite and stupefy the sensibilities with indulgence. The man of genius reaches the long sought goal, and rests to enjoy the anticipated pleasure, but learns too late, that the "coy prude" has ever been near him till his ambition was gratified, and then left him. The youth throws off all restraint and follows desire through every form of excitement, but never can secure pleasure in his grasp; it is still before him, still beyond him. He only reaches the misery that ever follows in its shadow. Human nature is so arranged that excitement soon loses its effect if long pursued. Strong and unnatural excitement consumes the natural healthy action of the spirits, and leaves them to droop and despond.—Lord Byron, who suffered his noble genius and generous heart to be bound to the slavery of his passions, and spent his lifetime in their gratification, was ever unhappy. Burns, equally eminent for genius, yielded to his strong social impulses, and was intemperate. He has given the most accurate delineations of the pure pleasures of life in his poetry, but he has given an equally prominent example, in his life, of their opposite. Perhaps no poet ever excelled him in picturing "the native feelings strong, the guileless ways," of a manly heart. His poetry was the language of a warm, generous heart, and though remarkable for the bright sunshine which pervades it, its author was far from being happy. He felt that intense anguish which only a noble heart can feel, when it has been carried away by generous impulses.—Others, after spending a lifetime in pursuit of pleasure, with the advantages of talent, wealth and fame, acknowledge their unhappiness, and say they have spent their lifetime in seeking pleasure where it was not to be found. A volume might be filled with such results to pleasure seekers. The history of mankind, thus far, has clearly proved that the road to happiness runs parallel with the Bible rule, "Be temperate in all things." Castle, N. Y., 1859. H. B.

HIGH NOTIONS.

MESSRS. EDITORS:—"CHIPS," in the RURAL of June 4th, was evidently laboring under intense excitement when he wrote that article on "High Notions." A person would naturally be led to think by reading his flowery description of farming that it is one of the most delightful occupations on the face of the earth. "Chips," like many others of his class, has gathered his impressions and opinions by visiting the farm in the summer season, when Nature is clothed in her finest dress, when farming would be a very fine thing, if it consisted only in sitting under shade trees, and taking rides and moonlight strolls with the ladies, &c. These impressions can only be cured by taking a firm grasp on the handles of the plow, and laboring a few weeks in the hay and barley fields. I think if "Chips" was put through a course on the farm one summer, he would be willing to return to his commercial life, and let the farmer's boys work out their destiny in their own way, which many of them will do, in spite of all opposition. Let none of our young men yield themselves to this "old foggy" influence—which is about in our land, and tends to smother the exertions of many that are struggling to choose their own occupation, and prepare to wield an influence that will be beneficial to mankind—to the benighted millions that are now struggling in the darkness of error's night. Niagara Co., N. Y., 1859. W. S.

When Alexander was giving away estates and domains with lavish prodigality, before setting forth on his eastward march, Perdiccas asked him what he reserved for himself. Hope—was his sole reply. And the whole secret of his wondrous career of insatiable conquest, fearless intrepidity and boundless aspiration, lies wrapped up in that sublime answer.

LIST OF NEW ADVERTISEMENTS.

MOORE'S RURAL NEW-YORKER NEWS DEPARTMENT.

ROCHESTER, N. Y., JULY 30, 1859.

TERMS, IN ADVANCE:

One copy, 1 year, \$2.00	One copy, 6 months, \$1.00
Three copies, 1 year, \$5.00	Three copies, 6 months, \$2.50
Six copies, 1 year, \$8.00	Six copies, 6 months, \$4.00
Ten copies, 1 year, \$12.00	Ten copies, 6 months, \$6.00
Twenty copies, 1 year, \$22.00	Twenty copies, 6 months, \$11.00
Thirty-two copies, 1 year, \$32.00	Thirty-two copies, 6 months, \$16.00

And an Extra Copy, free, to every person remitting for a club of six or more copies; and Two free copies for every club of thirty or over. As a new Half Volume commenced July 3d. Now is the time to form Clubs for either Six Months or a Year. All persons who form new clubs to commence with July, or introduce the RURAL in localities where it is not now taken, will be liberally remunerated for their time and attention.

Back numbers from April or January can still be furnished, if desired. We will send Specimen Numbers, Show Bills, &c., to all applicants, and to the addresses of as many non-subscribers as may be forwarded.

DOMESTIC NEWS.

Matters at Washington.

The Secretary of the Interior will transmit by the Pacific steamer of the 5th of August, \$261,000 to Oregon and Washington, to satisfy recently audited claims on account of expenses for restoring and maintaining peaceable and more friendly relations with the Indian tribes. Owing to the inadequate number of Indian agents, and considering the wide extent of country over which the Indians are scattered, it has been found impossible in every case to carry out all treaty obligations in time to impress the Indians favorably by an exhibition of our good faith and prevent dissatisfaction arising from unfulfilled pledges. The present Commissioner of Indian Affairs, will, it is believed, recommend to the consideration of the next Congress, such measures as will lead to the carrying into effect of all our treaty obligations.

The Navy Department has received dates as late as the 28th of May, from our vessels on the Brazil station. All of them were in the river La Plata, off Buenos Ayres, and in view of the unsettled condition of affairs, it was deemed advisable to keep them there.

The Commissioner of Pensions has issued a circular, in which he directs the invalid Pensioners of the army and navy who are subject to biennial examination to present, with the usual vouchers, on the 4th of September and 1st of January next, respectively, the certificates as to their disabilities. The operation of the act of Congress of the 3d of March, 1859, virtually suspends the semi-annual payments of invalid pensions at the commencement of each biennial period, until the certificate of two physicians or surgeons have been presented.

The news of the European peace prospects produced much gratification in the government, official and diplomatic circles.

Advices from Utah to June 24th, states that Judge Eckles had returned to the territory and re-organized the federal courts. The district courts have been established and vigorous efforts were to be made to hold these courts and secure the prisoners without the assistance of the army.

Personal and Political.

COL. JEFFERSON DAVIS is said to be engineering the Presidential prospects of Gen. Pierce, who is reported to be in the race for Charleston.

JUDON GILLIS, of Pa., has been appointed by the President, agent to the Pawnees, with a view to arrange matters so as to prevent future difficulties.

M. LA MOUNTAIN is at Watertown, engaged in re-constructing his balloon, the Atlantic, for an ascension from that place on the 11th of August. Parties from New York are there, and it is said, they propose to place in his hands any amount, not to exceed \$20,000, for the immediate construction of a new balloon for a trans-Atlantic voyage this season.

The total vote polled for Delegates to the present Constitutional Convention in Kansas was 13,355, divided as follows:—Republican, 7,415; Democratic, 5,939;—Republican majority, 1,485. The vote polled on the celebrated Leecompton Constitution, which was the largest ever given, up to that time, in the Territory, was 6,759. Increase since that time, 6,561.

The Bill of Rights reported to the Kansas Constitutional Convention, numbers twenty-three sections. It sets out with the declaration that all political power is inherent to the people; prohibits slavery in the State; proclaims religious toleration; defends the soundness of the writ of *habeas corpus*; protects the freedom of legislative debate; forbids the transportation from the State of any party for any offence committed within the State limits; prohibits imprisonment for debt; insures to naturalized citizens the full privileges accorded to natives; and declares that no citizen of the State shall be held to appear before the Supreme Court of the United States on an appeal from the Supreme Court of the State, but that when appeals are taken on questions of inter-State law, they shall only be through or from the District Courts of the United States.

The correspondent of the New York Times, gives a summary of the report received by the Convention in reference to the amount of damages inflicted during the period of the disturbances in the Territory. The whole amount of losses, for which compensation is claimed, was \$676,000.

News Paragraphs.

The following statement is probably without a parallel:—The Rev. Wm. Williams was for fifty-three years pastor in Northampton, Mass., his son Solomon was fifty-four years pastor in Lebanon—Eliphalet, the son of Solomon, was for more than fifty years pastor in East Hartford—and Solomon, the son of Eliphalet, preached in Northampton for upwards of fifty years! Here are father, son, grandson and great grandson, each pastor for upwards of fifty years of their respective churches, and two of them of the same church.

An ingenious Scotchman has trained a couple of mice to turn a small reel for twisting twine. The laborers run about ten miles a day, and reel from 108 to 120 threads. A half-penny's worth of oatmeal lasts a mouse five weeks, and the clear annual profit of each animal per year is computed at six shillings. This beats the "industrious fleas."

The Washington correspondent of the Tribune says "no instructions have yet been given to Postmasters regarding the pay of themselves and their clerks. If they appropriate from the receipts of their respective offices, as heretofore, their accounts cannot be audited without violation of law, in the absence of an appropriation."

It is rather a curious fact that the late victories in Italy did not affect the French funds so much, as the change in the English ministry. The victory at Magenta, the occupation of Milan, and the brilliant action at Melegnano did not start the Paris three per cents., but the defeat of the Derby Ministry sent them right up. This shows that commercial Europe fully believed the Tory Ministry of the Earl of Derby were sympathizing with Austria.

A PARTY of colored men and Germans, who had almost undermined a store in Philadelphia while digging for an iron pot filled with countless treasure, which, according to a dream had by a female friend, was buried there, were arrested Monday, 11th inst., and, with their divining rods and other conjuring implements, locked up in the station house on a complaint for trespass.

One of the best photographers in Europe took a bank note for 5,000 francs, on the Bank of France, and photographed one so much like it that the Bank's judges, the photographer himself, and in fact all who have seen the two, are unable to distinguish "which from tother." The Bank considers such success rather dangerous.

The oldest preacher in Philadelphia is Rev. Geo. Chandler, pastor of a Presbyterian Church, who, in the course of the forty-six years of his ministry, has married 3,166 couples, and performed funeral services over the remains of 5,000 persons.

The Richmond Enquirer says that during the hot weather the ladies of that city do all their shopping in carriages, and require the dry goods clerks and salesmen to exhibit their goods at the carriage doors, thereby saving to themselves the exertion of alighting and entering the stores. It pronounces this conduct of the ladies barbarous. This is the general custom of shopping in Cuba and other tropical cities.

Messrs. KING, ALLEN and TURENUS are making arrangements for a balloon race, to come off the first week in August, at Providence, New Bedford or Hartford. They will ascend in three separate balloons, and see, first, who can attain the highest altitude; next, who can travel the greatest distance without alighting. What next?

SINCE July 4th it has been unlawful for any person to pass or receive in the State of Arkansas, any bank bill of less denomination than ten dollars.—After the 4th of July, 1860, no bill of a less denomination than twenty dollars can be kept or put in circulation.

The San Francisco Directory for 1859, just published, shows the population of that city to be 76,083, of which 73,328 are whites, 3,150 Chinese, and 1,605 colored.

The importations at New York of foreign Dry Goods, intended for the fall trade, during the week, have been quite heavy, the value of the total entries at the Custom House having been \$4,988,720, against \$1,679,300 same week last year, and \$4,878,697 same week in 1857. The entries since Jan. 1st have been \$57,572,956, against \$27,159,633 same time in 1858, and \$59,946,512 same time in 1857.

THE REVOLUTIONISTS OF SOUTH AMERICA.—A dispatch from New Orleans says that the State of Tamaulipas desires an American force of 3,000 men to aid them in the prosecution of the war. Some Americans had already arrived at Tampico to aid the Liberals. Gen. Demollary had arrived at Tampico. Garcia was at Vera Cruz.

WOMAN'S RIGHTS IN KANSAS.—In the Kansas Constitutional Convention, the yeas and nays were called on the question whether women should have the same control and management of school matters as men—that in all school elections, and the exercises of all the duties of school officers, no distinction should be made between them. The closing vote that settled this point stood 28 for to 21 against.

MONOMISM DECLINING.—A Salt Lake correspondent notices the remarkable fact that the institution of polygamy is becoming unpopular among the Mormons since the accession of the recent large emigration from the States; and that Brigham Young is beset with applications for bills of divorce. In consequence of this state of affairs, the "Prophet" has issued orders to suspend the ceremony of "sealing."

SHOOTING ROBINS.—Henry Ward Beecher says:—"A man that would shoot a robin, except in the fall, when in flocks they are gathered together to caravan the air in their long pilgrimage to southern glades and forests, and then really and conscientiously for food, has in him the blood of a cannibal, and would, if born in Otaheite, have eaten humans, and digested them too."

GEOLOGICAL FORMATION OF PIKE'S PEAK.—An intelligent correspondent of the New York Post, writing from Pike's Peak, says, it is certain that the geology of the region furnishes an argument hostile to its mineral richness. Its prevalent structure is limestone, the latest formation and the parent of the baser metals. Pike's Peak is a mass of gneiss, and the mountain edges are but sparsely veined with that primitive quartz which is the mother of gold and gems.

From the Pacific Side.

By the steamship *W. H. Webb*, and two arrivals overland, we have the following intelligence:

On the 25th ult., forty-three convicts escaped from the State Prison. The prisoners escaped by overpowering the guard. Twelve were captured, and eight shot in the bushes in endeavoring to escape arrest.

The Italians in San Francisco had raised \$5,000 to send to King Victor Emanuel, for the benefit of his needy subjects.

Business was depressed at San Francisco, and there had been two large failures. The prices of leading goods were tending downward. Money market easy. Mining news good. The grain harvest promises to be abundant.

The election of members of Congress is fixed for the 2d of July.

The weather was intensely hot throughout California, parching vegetation. Some parts of the country looked as though they had been burned. The county of Santa Barbara had been visited by the terrible sirocco, forcing the people to shut themselves in doors, killing animals, and literally roasting the fruit on the trees. This occurred on the 17th ult.

The town of Lehama had been destroyed by fire. Loss estimated at \$100,000.

The news from Mexico is interesting. General Marquez had robbed the conductors from Guanaquato to San Blas of \$600,000. A conspiracy had been discovered in the city of Mexico to place Marquez in power, who subsequently declined in favor of Santa Anna at Guadalupe. Miramon had made a complete change in his Cabinet on account of a change in his policy, viz.:—giving liberty to the press and amnesty for political offences, and a partial confiscation of the church property. The church had declared for Marquez, who was at Guadalupe with 2,000 men.

FOREIGN NEWS.

DURING the week two steamers,—the *Africa* and the *New Britain*,—have arrived, each of which has brought very important intelligence from Europe. The first gives some details concerning an Armistice between the contending forces of France, Sardinia and Austria; the latter an account of the interview between the Emperors of France and Austria, and the signing of a Treaty of Peace. The following is the telegram from Napoleon to the Emperor, announcing the fact:

VALLERIO, 11.—Peace is signed between the Emperor of Austria and myself.

THE CONDITIONS OF PEACE ARE:—The Italian Confederation under the honorary Presidency of the Pope.

The Emperor of Austria concedes his rights in Lombardy to the Emperor of the French, who transfers them to the King of Sardinia.

The Emperor of Austria preserves Venice, but it will form an integral part of the Italian Confederation.

The Paris *Moniteur* gives the following explanation of the circumstances attending the armistice between France and Austria. The great neutral powers exchanged communications with the object of offering their mediation to the belligerents, whose first act was to be an armistice, but the endeavor to bring about this result was not successful until some days ago, when the French fleet was about to begin hostilities against Venice, and a new conflict before Verona was imminent. The Emperor of France, faithful to his sentiments of moderation, and anxious to prevent the useless effusion of blood, did not hesitate to assure himself whether the disposition of the Emperor of Austria was conformable to his own. It was a sacred duty for the two Emperors immediately to suspend hostilities which mediation would render objectless. The Emperor having shown similar intentions, the armistice was concluded.

The two Emperors had an interview at Villa France on the morning of the 11th. The Emperor of Austria was accompanied by Generals Hess, Gramme, Kellmer, Kelloustein, Romnig, Cirilotti and others of his Staff.

The Emperor Napoleon has issued the following order of the day:

VALLERIO, July 10.—SOLDIERS:—An armistice was concluded on the 8th inst., between the belligerent parties, to extend to the 15th of August. This truce will permit you to rest after your glorious labors, and to recover, if necessary, new strength to conclude the work which you have so gloriously inaugurated. I am about to return to Paris, and shall leave the provisional command of the army to Marshal Vaillant; but as soon as the hour of combat shall have struck you will see me again in your midst to partake of your dangers.

The *Times* Vienna correspondent says, that it was believed there that the British Government had brought about the armistice. Another authority says that the Prince Regent of Prussia took the initiative in suggesting the armistice. The Vienna *Gazette* says that an autograph letter addressed by the Emperor Napoleon to the Emperor of Austria, led to the negotiations, the result of which was a five weeks' armistice. A Verona telegraph dispatch says that the late armistice was concluded after repeated requests from the French, and after their consent had been obtained to all the conditions asked by Austria.

The London *Daily News* affirms that the just hope and expectations of Italy are deceived. It adds, history will call the Emperor to a strict account for having waged war on false pretenses and signed a mock and selfish peace—a peace that leaves Austria impregnable in Northern Italy; that connects Central Italy to the patronage of the Pope, and to constant menace of military intervention on the part of the Pope's patrols, and that takes no account of the welfare of the people, and substitutes for national independence a Confederation under the lock and key of Austrian garrisons. The Emperor of France has sown the seeds of future wars, and the closer we examine the pretended pacification the more futile and iniquitous it appears.

The *Morning Post* contends that the soul of the treaty agreed upon is the nationality guaranteed under every variety of local government in a confederation of the Italian States. The Emperor of

Austria is to be King of Venice, solely as an integral member of the Confederation. He will rule less than 8,000,000 Italians, and will be controlled by a Confederation ruling not less than 26,000,000. The Pope is shown virtually of his temporal supremacy. He is deprived of the substance, but keeps the shadow.

NAPLES.—Two hundred soldiers, fifty of whom are Swiss, revolted on the 7th at Naples, and left Fort Carmine for the purpose of rousing other troops to revolt, in which they failed. On arriving at Champ De Mars all the Swiss and native troops who remained faithful, met them with a discharge of artillery, and forty insurgents were killed and disabled.

TURKEY.—The Turkish steamers *Silistria* and *Kara* are reported lost. The former with 350 passengers for Constantinople, 77 of whom perished. The Turkish crew assassinated and plundered the Christians during the salvage. The *Kara* had 300 passengers from Constantinople, and has not been heard of. The Persians were said to be actively preparing in contemplation of war with Turkey.

INDIA AND CHINA.—The Calcutta mails of June 2d, and Hong Kong of May 21st, had reached England. The Indian Government has decided to permit all European troops who might desire it, to receive their discharge and a free passage to Great Britain, thus removing all grounds of complaint. It was expected that thousands would avail themselves of the offer. The rebel force was gradually diminishing.

COMMERCIAL.—Breadstuffs.—Richardson, Spence & Co. quote breadstuffs tending downward. Flour was offered at higher prices, but sales quite unimportant. The quotations are 10s6d@18s. The prices of wheat are easier, but without any decided change. Western red was quoted at 7s6d@8s6d; Southern white 9s@10s. All quotations of corn had declined slightly. Mixed 8s10d@9s5d; yellow 8s10d@9s5d; white 7s@7s10d. Provisions.—Pork is heavy, with but little inquiry.

Clippings from Foreign Journals.

The American Minister at Turin is reported by correspondents to have been "hid," or as "hiding himself" ever since the armies began passing thro' there for the war.

SCOTCH journals are trying to make out that Garibaldi is a Caledonian. His father, they say, was a shoemaker at the Auld Big o' Stirling, and his name was Garrow. His son's Christian name was Baldie—a common Christian name in some districts of Scotland. In consequence of some freak or other, the son went to Italy; and the natives of that sunny clime, being unable to pronounce the names of Baldie Garrow, transposed them into the more mellifluous Garibaldi.

A GERMAN, arrested as a spy while the allies were at Brescia, pretended to a council of officers who were examining him, to be a merchant of Milan and to have lost his papers. "Hah," said a French Colonel, suddenly, "come closer; I can't hear you." The accused obeyed. "Now," said the Colonel, "in doing that you stepped off finely with your left foot—arm to the body by instinct—little finger on the stripe of the pantaloons. You are an excellently drilled old soldier, my friend." The man admitted it.

AMONG the obituary notices in the *Leeds Intelligencer* is the following:—"On the 20th inst., aged 45, Mr. Peter Matterson, of Low Dunsford, near Boroughbridge. He and his ancestry have been the owners and occupiers of the farm on which he died for more than eight hundred years. The farm was not entailed, and the owner has always been a Matterson, without adoption."

Tax Italian editors are heard of now-a-days.—The morning after the French occupation of Milan several journals that had been suppressed by the Austrian government, re-appeared. One had been suppressed five years, and in the last number had promised the "conclusion" of a story in the next. True to promise, the next, at the end of five years, took up the story where it had been left off, and concluded it.

OSCAR, the King of Sweden and Norway, whose death is announced in recent foreign arrivals, was a son of the celebrated Bernadotte, alternately Napoleon's friend, rival and opponent. He married a daughter of Eugene Beauharnais, succeeded to his father's throne in 1844, and was 58 years of age. His administration has been marked by a fair degree of liberality and reform. He will be succeeded by his son, who married a Dutch Princess a few years ago, and will take the title of Charles XV.

A DELICATE HINT.—It will be remembered that Marshall Haynau, the brute at whose command innocent women were stripped naked and whipped by the Austrian soldiers, visited England six or seven years since, not long after the commission of the atrocious deed. When he visited the immense brewery of Barclay, Perkins & Co., in London, the workmen suddenly closed around Haynau, flogged him terribly, and would undoubtedly have killed him had he not been suddenly hurried off by some bystanders. Field Marshal Urban, another Austrian officer, has been endeavoring to equal, if not surpass, the illustrious Haynau in deeds of infamy. As soon as the workmen who had administered justice to the latter heard of the former's villainy, they published the following card in the London papers, as a hint of what he might expect did he come in their neighborhood:

"A Card.—The workmen in the employ of Messrs. Barclay, Perkins & Co., present their most earnest compliments to Lieutenant Field Marshal Urban, and entreat, should he favor London with his presence after the war, that they may be honored with a call. Marshal Haynau, it will be in the process of the brewery, took great interest in the process of the brewery, and the workmen will be delighted to renew the attentions which made that celebrated officer's visit an European event."

OUR ARMY MEN SENT BACK FROM THE SEAT OF WAR.—The European governments are not disposed to communicate the secrets of their military science and improvement in weapons of war to the Yankees. We learn from the Richmond *Enquirer* of the 13th, that private letters from the continent of Europe intimate that the American officers who had been permitted by the United States to go to the seat of war in order to gain military insight into war tactics by observation of the contending powers, have been refused passports to travel thither. They consequently returned to England to await further diplomatic consideration of the matter and causes of objection.

The News Condenser.

—Baltimore has a fire alarm and police telegraph in operation.

—Two men died of sun stroke in Cincinnati on Saturday week.

—The city of Cardenas, in Cuba, has ordered a statue of Columbus.

—The New Castle (Pa.) Bank has "gone under" and closed its doors.

—Sixty Americans had a great time at Heidelberg, Germany, on the 4th.

—A silver mine has been discovered in Missouri. It is said to be very rich.

—Thirty-six fires occurred in Philadelphia on the 4th. Rather dear celebrating.

—A distinguished German chemist has discovered that there is sugar in tears.

—The Duchess of Kent, mother of Queen Victoria, is suffering from internal cancer.

—Sixteen mules were killed by one stroke of lightning at Lebanon, Tenn., last week.

—A canal boat, loaded with corn, valued at \$12,000, sunk at Rhinebeck a few days ago.

—Stephen A. Benson has been elected to the third term of the Presidency of Liberia.

—Garibaldi has a son who is a soldier with him, and fights like a lion by his father's side.

—A second crop of oats has been raised this season in the vicinity of Fort Smith, Arkansas.

—Persons at work in the Vermont gold mines are said to be making from \$2 to \$3 per day.

—Princeton College celebrated its one hundred and twelfth anniversary on Wednesday week.

—The longest bit of air line railroad in New England is seven miles—in Indiana, seventy miles.

—France is now said to be more licentious and dissolute than at any time since the first Empire.

—Ex-Mayor Mills, of LaSalle, Ill., who was bitten by a pet dog, died last week of hydrophobia.

—A large cave has been discovered near Bethlehem, Pa. Partial explorations have been made.

—Ripe peaches have made their appearance in the Cincinnati market at ten dollars per bushel.

—Kossuth had, at last advice, succeeded in flooding Hungary with revolutionary proclamations.

—There are 12 cases in Prussia involving the question of the rights of adopted citizens abroad.

—One cent a day will buy food in China sufficient to enable a laboring man to "live comfortably."

—The friends of Temperance are invited to rally at Saratoga Springs on the 2d and 3d of August.

—The Hungarians are moving in all our large cities for co-operation in case of a revolution at home.

—The Journal of Commerce says that June was the dullest month experienced in New York for years.

—Dr. Dick estimates the number of those who have perished directly or indirectly by war, at 14,000,000.

—The Bostonians are getting up a line of steamers to run between that city and Charleston or Savannah.

—Whiteside county, Illinois, advertises some 4,000 lots and parcels of land to be sold for the taxes of 1859.

—Forty-five insurance companies in New York have declared their July dividends—average, eight per cent.

—Enough of the Chinese sugar cane has been raised in Iowa, this season, to make a million gallons of syrup.

—The Washington (D. C.) Star estimates the population of the national capital city at from 75,000 to 80,000.

—General Palfrey, of New Orleans, who was an aide-camp to General Jackson, 1815, is on a visit to Montreal.

—A panther has been seen in the woods near Chittanooga, but the hunters are unable to find his lurking place.

—In the reportorial corps at the Kansas Constitutional Convention, is Mrs. Nichols, the woman's rights lecturer.

—The American Scientific Association commences its next annual session at Springfield, Mass., on the 3d of August.

—A writer in Blackwood says the peculiarity of Louis Napoleon is that he consults every body and follows his own advice.

—There are 15 daily papers, 6 semi-weekly, 11 semi-monthly, 89 monthly, and 108 weekly, printed in the city of New York.

—Among the wounded in the personal staff alongside the Emperor of the French, is Edgar Ney, son of the great marshal.

—The venerable Mrs. Anna Pope, of Spencer, Mass., died Wednesday week, at the great age of one hundred and five years.

—The experiment of growing tobacco in Minnesota has proved quite successful, a heavy crop being anticipated this year.

—A miniature model of Solomon's temple is exhibiting in San Francisco. It is said to be a splendid piece of workmanship.

—It is said that the two religious newspapers in Texas have a more extensive circulation than any other two papers in the State.

—An American gentleman from Boston, whose name is not given, is reported to have entered as a private soldier under Garibaldi.

—A church has been purchased for the deaf and dumb in New York, in which services are to be conducted in the sign language.

—An effort is made at present by the clergy of the Presbyterian Church of Scotland to revive the habit of kneeling at public prayer.

—Horace Greeley, in one of his letters from the plains, says that he is confident that he saw a million of buffaloes one day during his trip.

—During twenty-four hours, from Saturday evening to Sunday evening, five persons were drowned in Milwaukee. Two were children.

—One hundred and forty-one candidates for admission to Harvard College have presented themselves at Cambridge for examination.

—The London Star's Vienna correspondent says there is hardly a regiment in the Austrian army that does not contain an English officer.

—The General Superintendent of Police in New York city has issued an order directing the removal by the police of beggars from the streets.

—Since hostilities commenced not less than forty different pamphlets and books containing Garibaldi's biography have been published in Paris.

—A public meeting was held in Philadelphia on Tuesday week to take measures for preventing the running of cars on the city railroads on the Sabbath.

—Two gentlemen fishing in Juniata Co., Pa., had a narrow escape from wolves a few days since. They were chased by four of the ferocious animals.

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY

RURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and untiring and beautiful in Appearance. Its Conductor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the RURAL an eminently Reliable Guide on all the important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it zealously advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other journal, rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER IN AMERICA.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.
For Terms and other particulars, see last page.

INQUIRIES AND NOTES.

Catarrh in Cattle.

EDS. RURAL:—By your kindness I wish to inquire if you, or any of your numerous readers, can give any information as to the cause, cure, and the name of a complaint among cows and calves, the symptoms of which are as follows:—They cough lightly at present, but it may be more severe after a little time—as was the case last season—and when this increases they are very much distressed in breathing—a quick short breath—very little appetite, and lessening the quantity of milk of the cows. Any information upon the above subject will be very highly esteemed by—A RURAL READER, Ward, Alleg. Co., N. Y., 1859.

CATTLE are subject to several diseases—Catarrh, Bronchitis, Inflammation of the Lungs, etc.—any of which, in different stages, would exhibit the symptoms furnished us by our correspondent. In answering queries of this nature we are often in doubt, from the fact that many of the indications of disorder—those upon which the veterinarian relies for the distinguishing characteristics—are deemed of so little importance that they are not transmitted. Hence we, like many others, are in the pursuit of knowledge under difficulties, and if an opinion is expressed at all, we are compelled to find a basis for such expression in some extraneous matter, as the season, age and condition of the animals, sex, etc. This is our present position, and we pronounce the difficulty Catarrh, for the reason that it is most prevalent at certain periods of the year—Spring and Autumn,—or during wet, cool weather, and because young cattle, and cows after calving, are very liable to its attacks.

Cause.—It is often very difficult to say whence Catarrh arises. Very slight changes in temperature, or in the care of animals, will produce it. If cattle be crowded in the cow-house, and the air be heated to any considerable extent beyond the external temperature, you may be confident of finding it. Where the food is not sufficient to keep up the growth and animal warmth—furnishing full and proper nourishment—it is seldom a herd can be found exempt. In the majority of cases it is the result of mismanagement. The great fault, however, is in the fact that the mischievous character of the disease is underestimated. A cough is a trifling matter, in the consideration of many farmers. This is a grievous error. The breeder should be aware of every beast that coughs, and proper attention for a few days will prove whether it is "only a slight cold," disappearing in a few days, or something that will need close scrutiny and the immediate adoption of a systematic course of treatment. Youatt says "there is no disease of a chronic nature by which cattle are so seriously injured, or which is eventually so fatal to them, as catarrh; yet very few of those whose interest is at stake, pay the slightest attention to it. The cow may cough on from week to week, and no one takes notice of it until the quantity of milk is seriously decreasing, or she is rapidly losing flesh, and then medical treatment is generally unavailing. The disease has now reached the chest, the lungs are seriously affected; and the foundation is laid for confirmed consumption."

Treatment.—When the appetite has not failed, if moisture be observable on the muzzle, and the flanks are quiet, one or two nights' housing, a few mashes, or a dose of phlegm may restore again to health. If, however, the muzzle be dry, the

root of the horn hot, and a heaving is perceptible at the flanks, (light as it may be,) with a distaste for food, the usual mode is to bleed. The authority before quoted remarks:—To bleeding should succeed a dose of Epsom salts, with half an ounce of ginger in it. The latter ingredient will prevent griping, promote perspiration, and excite the rumen to action. Hot, stimulating drinks must be avoided. To the foregoing add warmth, warm mashes, warm drinks, warm gruel, and a well ventilated warm cow-stable. The following drinks will be found useful:

For Cough and Fever.—Emetic tartar, one drachm; powdered digitalis, half a drachm; nitre, three drachms. Mix and give in a quart of tolerably thick gruel.

For Purging.—Epsom salts, one pound; powdered caraway seeds half an ounce. Dissolve in a quart of warm gruel.

Seeding Down to Grass.

HAVING several acres which I wish to seed down to grass this fall—or as soon as such a process would be advisable—will the RURAL, or some of its correspondents, give me a little information as to the proper time, preparation of soil, &c., and oblige—A YOUNG FARMER, Seneca Co., N. Y., 1859.

The best time for "seeding down to grass" is a disputed point. Here, as in all other departments of labor upon the farm, we will find conflicting opinions—Spring and Fall have special advocates. A YOUNG FARMER "wishes to seed this Fall, or as soon as advisable," and we are not aware of any better period than the present,—any time during this month or first of September. Plow deep, turn well and roll with a heavy roller; spread fine, well-rotted manure, evenly and freely, and harrow thoroughly. If the incipient measures be carefully and properly taken, a good crop can be insured for a very minute premium. The smaller the seed the finer should be the manure, and the more necessary that it be well incorporated with the soil. Winter-killed grass fields are rare where all the labor has been skillfully and willingly performed. In the N. Y. State Transactions for 1856, Wm. M. HOLMES, of Greenwich, Washington Co., thus describes a trial of fall seeding to timothy. He "divided a piece of land in the centre, and sowed half of it with seed and oats together, the other half sowed oats alone—and turned it over shallow after the oats were off, and sowed half a bushel of timothy per acre. This was about the 1st of September, and it gave more fall feed than the spring seeding. The next summer, the spring seeding was full of weeds, while the fall seeding was all clear timothy. Equal amounts of land gave:—Spring seeding, 8,840 lbs.; fall, 5,004 lbs.; and the latter was worth \$3 more than the former." Will not some RURAL correspondent give his experience for the benefit of our young friend, as well as for all others who may desire similar information?

—We shall be glad to hear from Hon. A. B. D., of Steuben county, on this subject, (and also in response to the inquiry below,) as the result of his experience must prove of interest and value.

Sulphur-Water for Butter-Making.

I wish to inquire through the columns of your valuable paper what effect water, slightly impregnated with sulphur, will have upon butter in the process of manufacture? I have a spring of this nature on my place which I wish to carry to the house—there being no objection but the above.—IRA K. BALL, New Berlin, 1859.

Nothing that we know of more readily partakes of impurities in the atmosphere than cream or butter. Either kept in a room where there is decaying matter, or strong effluvia of any kind, for twelve hours, will be more or less injured by it. All dairymen know the importance of using the purest water that they can obtain for washing butter. We have never tried water impregnated with sulphur, but we have injured butter by using impure water, and that which we think far less likely to work mischief than sulphur water. Our correspondent can test the matter on a small scale, and any of our readers who have had experience on this point will please give us the result.

THICK OR THIN SOWING.—In a letter to the London Agricultural Gazette, J. J. MASON remarks:—"I am about to 'flag' great part of a field of wheat drilled with 4½ pecks of seed per acre. It is too thick. Had I sown 2 bushels it would have gone down in the grass. The field was wheat in 1857 and beans in 1858. So much for deep cultivation, drainage and cleanliness. A thick crop is not always the result of a thick sowing. Much money is lost by sowing large quantities on highly farmed lands. If I were to catechise a farmer I should say:—How many bushels of crop do you get for one bushel of seed? A Russian nobleman told me to-day he got 2 to 3½ for one. I replied that my crops which he was looking at would most probably yield 40 for one."

THE POTATO.

POTATOES MIXING IN THE HILL.

MESSES. EDITORS:—I have long thought that potatoes might mix in the hill, but the way in which you account for the increase of certain varieties over others, when the seed happens even to be slightly mixed, has shaken my faith somewhat. Then, if it is true, as you state that the tuber, or potato, is not seed, not even a root, or a part of a root, but simply an enlargement of an underground branch, I cannot see how these branches can mix, as you observe, more than the branches above ground. On this subject I am very anxious for more light.—D. A. W., Cathoon Co., Mich., 1859.

Any one who will pull up a potato plant while growing, and examine that portion which lives and grows in the soil, will find that the main stalk passes down from six to ten inches below the surface, growing smaller as it descends. From this stalk an abundance of main roots branch out, connected with which will be many small, fibrous roots, but on none of these will a potato, large or small, be found. From this main branch will also grow out small, smooth, fleshy branches, thicker than the roots, and from these will also spring out other branches of the same character, and on the points of these the potatoes are formed. At first the point is noticed as a little thickened, and it gradually enlarges until the potato is fully grown. The eyes of the potatoes are merely the buds of these enlarged branches.

On this subject Prof. GRAY makes the following remarks:—"The potato plant has three principal forms of branches.—1. Those that bear ordinary leaves, expanded in the air, to digest what they gather from it and what the roots gather from the soil, and convert it into nourishment. 2. After a while a second set of branches at the summit of the plant bears flowers, which form fruit and seed out of a portion of the nourishment which the leaves have prepared. 3. But a larger part of this nourishment, while in a liquid state, is carried down the stem, into a third sort of branches under ground, and accumulated in the form of starch at their extremities, which become tubers, or depositories of prepared solid food; just as in the turnip, carrot, dahlia, &c., it is deposited in the root. The use of the store of food is obvious enough. In the autumn the whole plant dies, except the seeds (if it formed them) and the tubers; and the latter are left disconnected in the ground. Just as that small portion of nourishing matter which is deposited in the seed feeds the embryo when it germinates, so the much larger portion deposited in the tuber nourishes its buds, or eyes, when they likewise grow, the next spring, into new plants. And the great supply enables them to shoot with a greater vigor at the beginning, and to produce a greater amount of vegetation than the seedling plant could do in the same space of time; which vegetation in turn may prepare and store up, in the course of a few weeks or months, the largest quantity of solid nourishing material, in a form most available for food."

Thinking, from the similarity between the upper and lower branches, that we could cause tubers to grow on the stems above ground, by forcing the buds into tubers, we made an experiment which proved quite successful, and which we will endeavor to make plain with the aid of the accompanying engraving. About the first of June, selecting a branch of the *Early June* variety, about eight or ten inches or length, we cut it more than half through, about an inch from the surface of the soil, somewhat similar to a cut for layering. The branch was then laid down and slightly covered with earth for five or six inches of its length, the cut part being left above ground, as also the upper part of the branch. The result was as we anticipated, potatoes were formed from the buds, the lower ones being perfect, while the two above, as shown in the engraving, were only partially changed, the young branch and leaves growing out of the upper end of the potato. The branch at this point was only covered with the slightest sprinkling of earth.

JENNY LIND POTATO.

MESSES. EDITORS:—A correspondent inquires of the Jenny Lind Potato. I planted one acre last season, and harvested over four hundred bushels of good, healthy, sound potatoes. I planted eight different kinds on two acres and a half of ground, and harvested eight hundred and forty bushels, and had no rotten ones from either kind. The Jenny Lind, you see, yielded me far the best crop, but the best of it was they brought the best price in market. They weigh several pounds more to the bushel than any other kind that I raised. They are a good eating potato, and you hear no grumbling from the cook about small ones. All that I know about their being subject to the rot is, that those of my neighbors who planted them failed of a crop from this cause, but they were no worse than other kinds, and I think not quite as bad.—ANDREW CALHOUN, Courtland, N. Y., 1859.

From the description given in the RURAL of the 9th ult., by a Massachusetts correspondent, we have not been led to think very highly of the

POTATOES GROWING ON THE HAULM.

Jenny Lind. It is said to be a seedling of the *Merino*, not a very creditable parentage, and to resemble the *Rohan*, certainly a very bad mark. Then it has another very bad trait—"the vines will be fresh and green until hard frosts in the fall." This is enough in our opinion to condemn it as a table potato. A potato with its top green is immature and watery, and we reject all long-growing, late sorts. They are only good when planted very early, and when the autumns are warm and dry.

PRINCE ALBERT POTATO.

MESSES. EDITORS:—I noticed in the RURAL of June 11th an editorial in which a dreadful expressed to know whence came the name of the Prince Albert potato. In the winter of 1857-58 Messrs. MARSHALL & POMEROY, produce merchants in Mobile, found among an invoice of potatoes a lot which had no name. When publishing their annual catalogue they christened the nameless lot "Prince Albert," and they were shipped to various parts of the country for seed. I have not been able to learn where this firm originally procured the potatoes, nor what was their real name. This information is as I learned it from the lips of a planter who ordered some of the potatoes, and also from a Mobile merchant. I have shown the RURAL to several planters and others, and it has received the highest commendation. It is esteemed of great value by them, giving so fair an idea of farm life at the North, as it does.—G. D. B. MILLER, Marion, Ala., 1859.

This may account for the name, but the dealers, it seems to us, might have very easily ascertained the name of the potato they sold, had they applied to the parties of whom they were procured. They were certainly to blame if they sent out an old variety with a new name, which, if not designed to deceive planters, was very likely to produce this result, causing confusion and loss. But, from the following communication from an intelligent English gardener, it will be seen that there is a variety known in England as the *Prince Albert*:

MESSES. EDITORS:—In a recent number of the RURAL, alluding to the *Fluke* and *Prince Albert* potatoes, you wrongly conjectured them to be one and the same variety. It is now some five years ago that I resided in the South of England, and I well remember that my father brought home some of the *Prince Alberts* from the neighborhood of Slough. On planting them alongside of the *Flukes* the difference in the variety was at once apparent, even to a casual observer. The *Flukes* being quite dark in the color of the foliage, and the *Prince Alberts* being of a much lighter green, a much stronger grower, and equally as productive. We at once concluded it to be quite as good a potato as the *Fluke*, and I think a better producer. If my memory serves me right, the tubers of the *Prince Albert* are not as flat as the *Flukes*, being more round and of a greater length.—JOHN CHARLTON, Rochester, N. Y., 1859.

We have now the variety we procured for *Prince Albert* and the *Fluke* growing side by side, and though we could see no difference in the tubers, there seems to be quite a difference in the foliage, in color and general appearance, much as described by our correspondent. We shall watch them until digging time, and then shall be prepared to express a somewhat positive opinion in regard to their identity.

THE APIARIANS.

Mr. KINSEY concludes his second article in reference to that sham Convention as follows:—"I feel that I was forced into this, my first and last one, and in future shall make no reply to any attacks which may be made on my articles, excepting when I am convinced that I have advocated something that is wrong, and then I will make use of the same columns, in making my acknowledgments and correcting my mistake, that first published the error to the world." I cannot of course tell what impelling power "forced" Mr. K. to the attack. I am sure I had said nothing to him until I was censured, personally and publicly. Long-tested, and reliable principles in bee-culture were attacked, and ruinous recommendations were advocated instead. Did Mr. K. suppose that I would sit tamely by and tacitly acknowledge that he was right? It is rather too late for him to shift to the shoulders of any one else the origin of this controversy. It seems he is not going to reply to any further remarks unless "convinced" that he is in error. I can assure him it is unnecessary even then, for he has made so many palpable blunders, that no one would be any better satisfied after he had acknowledged his mistake. Everyone would have to test the matter for himself. This is one of the advantages growing out of such discussion—people get interested, and investigate for themselves—it is the only way to get rid of the numerous presumptuous conceits in bee-culture.—How much better he has made things by writing his second article—quite clear—transparent as mud at least! Let us review a little. I wish to be fair in this matter, as he says I accused him of what he did not say, in order to prove something to suit my purpose.

Mr. K. says, in his first article, "that they (the bees) deposit their honey in the top of the hive, and that after cold weather sets in they collect in the upper part of the hive, where they have previously provided and placed their food." In his last, he continues:—"In this I claim that I am right, that the expression I then made use of was correct, and that Mr. Q. is wrong. We both admit that capped honey is in the top of the hive, but Mr. Q., by his manner of quoting, makes me say that they cluster upon the capped honey," &c. If any other conclusion can be drawn from it I cannot see it. "Capped honey is in the top of the hive," yet the bees do not cluster on it, although they collect there at the beginning of cold weather. I would really like to know what they did cluster upon? It may be that "the top" and "upper part," does not mean the same place with him, any more than that honey and food of

the bee, means the same thing. See how he proves that. "I am perfectly aware that with the bee, food does not mean honey alone." Then, assuming the matter as proved, he strikes out into a complaint, that I, either "intentionally or ignorantly, misinterpret an English sentence so perfectly clear and plain as the one selected." I suppose I shall have to plead guilty to a dull apprehension. I have tried my best to comprehend how his being "perfectly aware" of this, proves it—that food of the mature bee in winter, is anything else than honey. I have never discovered any evidence of it, and I have not the least idea that Mr. K. can bring any proof of it, further than mere opinion, and that, I shall object to.

As regards transgressing the laws of God it is unnecessary to say any thing further on that point. It is a question aside from the real one at issue, and besides it would be ungenerous to do so, as he says he is "by no means a stickler for having every thing in its natural state." This is satisfactory.

Respecting the entrance of the hive being designed to be at the bottom, Mr. K. says:—"The evidence will be found in the answers of the great majority of bee-keepers, when asked their opinion on the subject, as well as in their practice in using hives of this construction." Suppose all these men have used such hives, and no others, as did their fathers—does it prove anything further than that the makers of them designed the entrance at the bottom? All the numerous experiments of Mr. K. that prove this "very point, that have been witnessed by honorables, divines, doctors, lawyers, and magistrates, who are ready to bear testimony to the result," prove only the facts. These men being doctors, lawyers, &c., does not qualify them, on that account, to judge in regard to a bee hive. I am perfectly willing to admit the result of his experiments, as far as the work of the bees is concerned. But I deny that there is ground for any such conclusion. It being "proof positive" to Mr. K., only shows that some folks are very easily satisfied! This strong proof that the entrance was designed at the bottom, is as follows:—

"When openings have been made in the hive at different heights from the bottom, and covered with wire screen, the bees have invariably closed them up with bee-glue, even going to the chamber, &c. I therefore regard the evidence as complete, that God designed the entrance should be at the bottom." Yes, and the same kind of evidence proves just as strong that the entrance was designed at the top! Just make a hole through the bottom-board, and cover it with wire screen; then let the hive down close, and soon after the hive is filled it will be glued to the bottom, and the wire screen covered completely air tight! I wonder that Mr. K.'s extensive experience did not discover this, and save himself from a ridiculous position. The merest tyro in bee-culture can testify to the fact, that whenever his hive bottom has rested on the bottom-board, and was full through the season of collecting propolis, that it was invariably glued fast. It requires but little observation to show that all inequalities of the hive—corners, cracks too small for a passage, (whether top or bottom,) will be sealed up; also, a chip, gravel stone, block of wood, or even a "snail" will have the edges of his shell fastened to the board! I have not intended to say that the bottom of the hive was not a proper place for the entrance. What I objected to, was the proof of Mr. K. that God designed it there.

In regard to the direction that a bee would take on passing the entrance into the hive when that is about the middle, he thinks all "intelligent bee-keepers would answer, promptly and decidedly, upwards. Even Mr. Q., himself, should be so present, would, I am confident, if he answered at all, faintly articulate the word upward." Here, as usual, Mr. K. is wrong again. I happen to have some facts bearing directly on this very point, where the bees themselves have decided it. This last spring, in moving the bees to one of my apiaries away from home, the loose covers of two of the movable frame hives were slipped off far enough to allow the bees to pass, and were left so carelessly. Here was an opportunity for the bees to choose which place they would enter—top or bottom. Those going in at the top must of necessity go downward—I think even Mr. K., were he present, would faintly articulate "they do go downward." The result has been in this matter, that nineteen in twenty, if not ninety-nine in a hundred, prefer to enter the top, as it is probably easier to carry a load down than up. They have worked thus through the summer so far, and are as prosperous as others. To test this thing a little further since seeing Mr. K.'s article, I have given some new swarms their choice of entrance, which is the same as the old stocks. Do these facts prove anything? I think if Mr. K. had the chance, where the bee, acting from instinct, proved as much for him, he would be apt to make use of it. I can satisfy any one who chooses to stop and see me at St. Johnsville, on the N. Y. Central Railroad, that these things are as stated.

Relative to placing stocks in the house for winter bottom up, Mr. K. says his "future success will probably decide the correctness of his theories on this point." How long would he like to have me try it to prove a success? I have done it twenty years, and begin to doubt if bees can be wintered in the common hive so successfully any other way. With the way he recommends, I was soon satisfied, having combs completely spoiled by moulding. Having had this experience, I hope Mr. K. will excuse me if I doubt his ever having wintered ten stocks in the manner described by him, without mouldy combs, while I can show him eight hundred wintered as I recommend, without a spot as large as my hand on any one of them.

In conclusion, I would advise teachers in apian science to be cautious how they jump at conclusions. Let close and patient observation, prove the correctness of their practice or theories. It is as much trouble to disprove a false theory, promulgated through ignorance, as to establish a correct one in the first place. There is no longer any necessity for ignorance in these things. With the aid of the movable combs, we can go at once into the interior of bee hives, and prove or disprove many points which before were only guessed at.

St. Johnsville, N. Y., 1859.

M. QUINCY.

WHEAT CULTURE.—MISSOURI WHEAT.

JOHN JOHNSTON, Esq., of Seneca county, favors us with the following interesting article, in reply to a recent letter of inquiry,—and also one on the Winter Feeding of Stock, which we shall give in a future number. As the time of sowing wheat is deemed an important point in sections where the midge prevails—many of our most experienced farmers considering early sowing necessary—we shall be glad to receive Mr. Johnston's views on the subject, (as alluded to below,) and also those of other successful cultivators in this region.

NEAR GENEVA, N. Y., 28th July, 1859.

MR. EDITOR:—Your favor of the 25th was duly received. In regard to my Missouri wheat, it was sown on or about the 18th of September. (I don't approve of very early sowing, and may give you my reasons at some future time.) I was made to believe that it was in full ear on the 26th of May, and so published; but when I viewed it myself, on the 28th, it was not in full ear, though much of it was. I sowed a little less than a bushel—say from a pint to a quart less. The yield was 80½ bushels by measure and 81 by weight—80 lbs. to the bushel. It has a very stiff straw; will require and will stand high mowing,—as all wheat with stiff straw that ever I was acquainted with needs rich land and high culture to make paying crops. The Soule's wheat requires the same, although I think the Missouri wheat is stiffer in the straw. It is called an amber-colored wheat, but it is what I would have called a red wheat—not bearded, but considerable spikes on the chaff. The kernel is not quite as large as the Soule's when plump, yet it has a plump kernel and is said to make extra flour. I shall try one bushel in flour. The 20½ bushels I will sow, and if I can recommend it next season will sell for seed. It came nearly a week earlier in ear than the Mediterranean, but was no earlier ripe; yet that don't matter, if it only gets in ear early, so that the chaff becomes a little hard before the midge is ready, and then they cannot sting it. I am in great hopes it may prove a valuable acquisition to this country.

My Soule's wheat is very fine this season, and must give an excellent return. When threshed, I will probably inform you. The whole field (23 acres) was very highly manured with cattle and sheep manure, but the Missouri wheat had rather the worst chance.

The two last seasons previous to this our wheat crops were late, and I suffered a good deal from midge; they were the only two years I suffered much from that insect, as I never had less than an average of 25 bushels per acre, (and always Soule's.) But these two years I have not, nor ever had, any fear of raising paying crops of wheat, independent of the midge, in ordinary seasons, as I never take over six crops of grain after manuring until I manure again, and often not over four crops between manurings. Then my manure is rich; I generally feed 30 tons of oil cake meal every winter, and have done so for nearly twenty winters past—and some seasons as high as 45 tons—besides considerable corn, buckwheat and oats.

It is just as vain to think that land can continue to raise wheat year after year unless it is highly fed, as to think you can get full work out of oxen or horses that have nothing but a straw stack to feed upon. I know if it had not been for rich manure, plenty of plaster, lime, and high feeding of cattle and sheep, I could never have paid for my land, built all the buildings, underdrained the whole farm, (the wood lot of 26 acres excepted.) I believe that but for this mode of management I would have been obliged to enter the poor-house when I became unable to labor.

JOHN JOHNSTON.

AGRICULTURAL SOCIETIES AND PREMIUMS.

MESSRS. EDITORS:—I am pleased to learn (by the RURAL of July 23d) that several Agricultural Societies have manifested their appreciation of the RURAL, by ordering copies of it to distribute among their exhibitors as premiums. And I hope all other Agricultural Societies will imitate this laudable example. This is just as it should be.—The RURAL is justly acknowledged to be the best Agricultural and Family Paper in America.—Therefore, it is not only suitable and valuable to offer as a premium, but is far better than cash.—All efforts to introduce it will add much to the public welfare, and when it is once introduced it will require no effort to "keep it before the people," for whoever once reads it will not do without it for five times its cost. I have often thought that the objects of Agricultural Societies, and the interest of their exhibitors and community generally, would be far better promoted by paying their premiums in appropriate Agricultural Books and Journals than in money. Some persons may suggest that they can as well subscribe for such papers and purchase such works themselves, independent of Agricultural Societies, which is all true; yet there are thousands who have but few if any such works or journals, and will neglect to obtain them until they do it by the earnest solicitation of some other parties. But when these persons do perchance obtain and read them, they will invariably appreciate and highly prize them, and would not be deprived of them for thrice their cost. And I am confident that there are few libraries but what would be improved by the addition of some Agricultural work. Give us more RURALS and other Agricultural reading, and give us officers and managers of Agricultural Societies who duly appreciate such works and journals and will exert themselves to introduce them.

Allow me to suggest to Agricultural and other Societies to procure copies of the best works on Agricultural, Horticultural, Pomology, Horses, Cattle, Sheep, Poultry, &c., and make out a list of the same, and their prices, in order that members who are entitled to premiums may select such as they prefer and give their orders to the amount of their premiums, so that it would only be necessary for the Society to purchase such works as were ordered. Every Agricultural Society should keep a complete library of such works; also, Stud Books and Herd Books, the two latter being necessary for the use of the Examining Committee on the thorough-bred Horses and Cattle, in enabling them to decide correctly as to the correctness and authenticity of pedigrees.

Monroe County, N. Y., 1859.

SUBSCRIBER.

ABOUT PLOWING—ANSWER TO CRITICISMS.

EDS. RURAL:—It is curious to note the exceptions of your Michigan and Glens Falls correspondents, to my article on Plowing. I should not have been surprised if the former, being used (probably) to the prairies, considered figure 1st rather steep; but how any one hailing from Warren county should think so, is more than I can imagine. I have never been in J. H.'s neighborhood, but those who have inform me that they get all their grain upon sleds, and gather their apples by letting them roll down to the bottom of the orchards, where they are all scooped up at once. A vehicle there on wheels, is said to be a great curiosity to the natives. Your Michigan correspondent thinks that a plowman should be able to guide any horse team with accuracy. Now, I have seen teams so ill-matched and unmanageable, that I defy any one to plow well and guide them at the same time. I should like to see him drive a fractious, high-spirited span of four year old colts among those stumps he speaks of. I maintain that, in order to plow well, a good plow, a sharp point, a well-trained team, a skillful plowman, combined with patience and good judgment, are all necessary, and neither of them the ultimatum.

As for figure 1st, which troubles J. H. so much, I plead in abatement, that I drew it with the Green Mountains in my eye, on the one hand, and had the rugged and steep hillsides of Warren county in my thoughts, on the other. Under such circumstances, is it strange that figure 1st looks up considerable? I never plowed a hill quite as steep, but if J. H. wishes to try, I will depart from my usual course, and theorize as suggested, for him. I think he might do it by using a high, rangy horse on the lower side, and a short-legged Canada pony on the other, having the harness so adjusted that the horses could shift sides with expedition and ease. Rigged out in this manner, I have no doubt but he might plow that hill to a charm. But he need not make that acknowledgment he speaks of. I shall be satisfied if he thinks I am about middling. I am afraid J. H. read my article, as children sometimes do books, by looking at the pictures, since figure 1st filled his eye so completely, that he thought of nothing else. But enough, gentlemen. As the bills say, this is "positively my last appearance" on the subject of plowing.

E. K. F.

Cambridge Valley, N. Y., 1859.

DRAINING AND SUBSOIL PLOW.

This implement above represented has been used to some extent in Cayuga and other counties, and given very general satisfaction so far as we are aware. The manufacturers furnish the following in regard to its operation and advantages, both as a Ditching and Subsoil Plow:

"The depth may be regulated by raising the movable beam up the stiff, upright cast iron stem, a slot being made in the beam to meet the change of place by the circular movement. A similar provision is made for raising or depressing the handles, except the stem is of wood. If this plow were intended for subsoiling only, there need be but one continuous and fixed beam, and the handles need not vary in height. When used for ditching, it loosens up the subsoil, and obviates the use of the pick. In many places the subsoil is so hard that two-thirds or three-fourths of the whole labor is required to loosen it if done by hand. Hence the great saving by the use of horse labor. This plow is drawn by two horses, attached to the ends of a main whipple-tree about seven feet long, so that one may walk on each side. From one to three times passing will loosen up five or six inches of earth, which is then thrown out by hand with narrow shovels, constructed for this purpose. The same process is then repeated. The earth being thrown out on both sides alike, is easily returned to the ditch after the tile is laid, by means of a common plow, the horses being attached to the long whipple-tree as before. One pair of horses will thus fill in about one mile in a day. Drains which have cost thirty to thirty-five cents per rod when dug wholly by hand, have been completed with the assistance of this implement, ready for the tile, at a cost of ten to twelve cents." [For price and other particulars, see advertisement.]

RAISING TURKEYS—ONCE MORE.

MESSRS. EDS.:—Having noticed the articles in the RURAL of July 18th, in regard to raising turkeys, in which the writers did not mention some things which I think might be of use to those who wish to succeed, I will now give my method. As soon as the turkeys are hatched, I feed each of them one grain of pepper, and put them into coops that are arranged so that I can clean them out every day. I then feed them on corn meal, and for drink I give them sour milk. I have the coops constructed so that the young turkeys are mostly in the shade until they are about four weeks old—then I let them out in the day-time, and shut them nights. This year I have forty turkeys, and have lost but one. I prefer setting the eggs under the old turkeys rather than hens, because they will rumble in the fields more and give the young turkeys an opportunity to catch bugs, flies and grasshoppers, which are of great benefit to them. I think one of the most important things in raising turkeys is to keep them from the sun until they are about four weeks old, as I have seen them stand in the hot sun until they would begin to gasp and drop their wings, and finally die. My experience teaches me three things—young turkeys must be kept clean, dry and from the sun.

A. D. THOMPSON.

Niagara County, N. Y., 1859.

Rural Spirit of the Press.

The Farmer's Creed.

THE following is from the New Jersey "Free Zealant," German:

I believe in small and well cultivated farms.
I believe that the soil wants nourishment, as well as man does; consequently, it needs manure.
I believe in good crops, not exhausting the soil, but enriching it as well as the proprietor.
I believe that everything ought to be tested to the bottom; therefore, I believe in deep plowing.
I believe that all the lime, gypsum, bone dust and guano in the world cannot render a farm profitable, unless combined with intelligence, care and industry.

I believe in good fences, good barns, good farm houses, good cattle, good orchards, and plenty of children to gather the fruit.

I believe in a clean kitchen, and a neat woman in it; in a clean dairy, and a clean conscience.

I believe that farmers, who do not improve their soil; farms, which grow poorer every year; cattle, that look like so many skeletons; farmers' sons, who are bent, by all means, upon growing into clerks and merchants; farmers, finally, who are ashamed of their station, and attempt to drown this feeling in liquor—all these I believe to be worth nothing.

On Butter Making.

THE following remarks on butter making are from "Our Farm of Four Acres and the Money We Made by it."—"In some parts of the country the butter made by the farmers' wives for sale is not washed at all; they say it washes all the taste away. They remove it from the churn, and taking it in the hands, dash it repeatedly on the board; that is what they call 'smiting' it. The butter so made is always strong, and of two colors, as a portion of the buttermilk remains in it; and if any of it were put in a cup, and that placed in hot water for the purpose of clarifying, there would, when it was melted, be found large deposits of buttermilk at the bottom of the cup. Good butter tried thus, yields scarcely any residuum. Besides, this 'smiting' is a most disgusting process to witness. In warm weather it adheres to the hands of the 'smitter,' who puffs and blows over it as if it were hard work. Indeed I once heard a strong looking girl, daughter of a small farmer in Kent, say, that she was never well, for 'smiting' the butter was such dreadful hard work that it gave her a pain in her side. After this 'smiting' is over, it is then put on a butter-print and pressed with the hand till it is considered to have received the impression. It is then, through a small hole in the handle, blown off the print with the mouth. I don't think I shall ever eat butter again which appears on the table with the figures of cows, flowers, &c., stamped on it. I should always think of the process it had gone through for the sake of looking pretty."

The Willow and Willow Ware.

THE Boston Commercial Bulletin furnishes the following statistics relative to the growth of the Willow in this country, and the importations, both crude and manufactured, etc., which may prove of value as showing the demand existing for its production:—"The willow used in making willow ware in this country, was formerly imported almost entirely. At present a large portion, estimated by some at one-half the quantity consumed, is grown in the United States, and chiefly, as we understand, in Pennsylvania, Ohio and Kentucky. A manufacturer of willow ware in Ripon, Wis., grows the Welsh willow on four acres of land, near that town, and this is perhaps the only place in that State where it is cultivated. The present is the second year he has cut his willow, and from his four acres he obtained six tons, four of which he sold in St. Louis at \$100 a ton. The importation last year of willow, unmanufactured, was valued at \$35,141, of which \$21,192 was from France, and \$11,708 from Belgium. The manufactures of willow imported the same year were valued at \$112,725, of which \$63,402 was from Bremen, \$34,126 from France, \$6,280 from Hamburg, and \$2,929 from England. Most of both these imports are received at New York. The imports of the previous year were larger, viz:—\$175,484 of manufactures of willow, and \$41,773 unmanufactured; and were, respectively, in about the same proportion from the several countries as in the last year."

STEAM PLOWING—Successful Trial.—FAWKE'S Steam Plow was tried a few days since at Oxford Park, near Philadelphia, in the presence of a number of practical farmers and mechanics. From the reports we have seen, it is evident the trial was very satisfactory, indicating the complete success of the invention. A Committee appointed in behalf of the Pa. State Ag. Society make a gratifying report, in which they say the engine, of 20 horse power, is adapted to either wood or coal, and when the latter is used consumes about half a ton a day. All doubts of the success of the machine were speedily removed when it was put in operation. "The plows, eight in number, which were suspended by chains in a frame attached to the rear of the machine, about eighteen inches above the ground, by means of a slight adjustment of a crank, were dropped to their proper position for action; and at the sound of the whistle the plow moved forward in the most graceful manner, performing its work with ease, and to the admiration and perfect satisfaction of the most skeptical. The soil, which was made to yield to the united action of the eight mold boards, each turning a furrow slice of fourteen inches in width and six inches in depth, moving at the rate of four miles an hour, (or four acres an hour), presented the appearance, in viewing it from the rear, of the undulations of a wave, hiding the plows entirely from view. The effect was most pleasing, and elicited the admiration of all. The experiment was made upon a tough timothy sod, which had not been plowed for some seven years previously. The grade was of about seven degrees, which tested the powers of the machine to perform on inclined surfaces. One of the Committee, familiar with prairie plowing, affirms that he has never seen level prairie turned as beautifully by horse power as the uneven timothy sod was by the steam plow." The Committee further state that the machine is adapted to uneven surfaces—that it was propelled rapidly over several gullies, one of which was 15 inches deep, while others were very abrupt, without any apparent detriment, and also moved in a circle several times, of a diameter of about twenty-five feet, and passed across the ground just plowed, without any difficulty, showing its adaptiveness for agricultural purposes, not only as a field plow but as a means of propulsion for mowing and reaping machines.

Agricultural Miscellany.

SEED WHEAT.—New Varieties, &c.—Those of our readers in this State, and other midge-infested regions, who purpose sowing wheat the present autumn, will naturally look for plump, clean seed of the best and most productive early and hardy varieties. This is a matter of great importance, and should receive early and careful attention. Such as cannot obtain suitable seed in their own localities, should at once look elsewhere, so as to secure a supply of a desirable variety in season—for, even if the midge should not prevail another year, (as some believe it will not,) it is the part of wisdom to prepare for the enemy by using proper precaution to selecting seed and sowing it early. It is always wise to use the best and purest seed obtainable, and certainly those farmers of Western and Central New York who purpose entering upon wheat culture again should take special pains to start right—remembering that the procuring of proper seed, and sowing it at the right time in good, well-prepared soil is all-important. The varieties recently introduced from the South and Southwest are worthy of particular attention. We have noticed several, and shall be glad to receive and publish the results of any satisfactory experiments with these and other new varieties, so that our readers may be correctly advised. If the midge continues to prevail, we must have early varieties, and these will naturally come from the South. The question as to which are the best varieties is very essential, and remains to be determined. In deciding it every one should have regard to the public welfare.

WHEAT GROWING IN CENTRAL NEW YORK.—We are glad to learn that the farmers of Central New York have come to be encouraged relative to wheat culture, and to know that some of the best of them concur in the views we have expressed as to what is requisite to success. In a recent letter the Hon. Geo. GRUBBS, of Farmington, Onondaga County, writes us as follows:—"I have read the slips enclosed in your letter, (including article entitled 'Wheat Culture—Evidencing the Midge,') and find our views alike in regard to raising wheat. Last year we raised on ten acres of land (having over a dozen large apple trees and two other large shade trees on it,) 410 bushels of Mediterranean wheat,—which variety has become equal in quality to the old red chaff bald, but has less grain in a head. If Mediterranean wheat is sown on rich, dry land by Sept. 10th, in an ordinary season, we may expect 25 bushels to the acre. The other varieties you name, I have not seen. Spring wheat (China Ten.) is promising very fine crops here, and I think is to take the place of the Barley crop, which can no longer be raised here at less than \$1 per bushel."

A PREMIUM APPRECIATED.—Ketchum's Combined Machine.—In connection with an article published elsewhere, Mr. I. W. BIGGINS, of Wayne county, thus acknowledges a premium awarded him last year:—"If it will not be stretching this article too long, I would like to tender my grateful acknowledgments for that fine present of a Combined Reaper and Mower of the manufacture of R. L. HOWARD, of Buffalo, for my humble efforts in behalf of the RURAL NEW-YORKER. And perhaps it may not be doing injustice to manufacturers, vendors and purchasers, to say that Ketchum's Combined Machine is the thing, after all. My Machine is off on duty almost every day, excepting Sundays. In neighborhoods where other machines are plenty we have had pressing invitations to mow and reap, but can't attend to half the calls. Long live the RURAL NEW-YORKER, its Editor and his co-workers."

PEOPLE'S COLLEGE.—Mr. President BROWN announces that the annual meeting of the Trustees of this Institution will be held at Havana, on Wednesday next, Aug. 10th. Rev. ASA D. SMITH, D. D. is to deliver an address before the corporation of the College and other friends of the Institution; and it is expected that Gov. MORGAN, Ex-Gov. HUNT, Hon. BRADSTOCK BROOKS, Hon. GEORGE SMITH and Hon. JAS. S. WADSWORTH will be present and deliver addresses. The Building Committee have caused three stories of the main edifice of the College building, above the basement story, to be erected, and a commencement to be made on the fourth.—The building is to go up and be roofed this season.

SPRING BARLEY SOWN IN THE FALL.—Under date of July 4th, Mr. JOHN JOHNSTON, of Hess Road, Niagara county, N. Y., writes:—"It may be of some use to your readers to learn that, at least in one instance, Spring Barley, sown in the fall, has grown and ripened as well as winter barley. My brother-in-law, DAVID BAILLY, of the town of Porter, in this county, had not enough seed of the winter kind to finish sowing all the ground he had prepared last fall, so he took his spring barley to finish with, and now it is all ready to cut and no difference perceptible."

PLANTS UPON ONE ACRE.—Counting plants one foot apart each way, we shall have 45,560 upon an acre, because an acre contains that number of superficial feet. Take the figures in the first column of the following table as the distance apart, and an acre will contain the number of plants in the second column:

1½ feet	16,760	8 feet	1,210	22 feet	90
2 feet	10,890	8 feet	680	23 feet	88
2½ feet	6,940	10 feet	423	24 feet	84
3 feet	4,840	12 feet	300	25 feet	80
3½ feet	3,380	14 feet	216	26 feet	76
4 feet	2,420	16 feet	150	27 feet	72
4½ feet	1,760	20 feet	105		

NEW HARROW AND SEED SOWER.—MR. W. S. HUNTER, of Cortland county, N. Y., informs the Tribune that he has invented and patented a Revolving Harrow and Broadcast Sower—the two may be used in combination or separate. He says, when detached, the sower does its work with surpassing ease and excellence, and the revolving harrow being so constructed as to adjust itself to any irregularities of ground, commends itself to the farmer as no other can. Thoroughly pulverizing the soil, it completes its work at once, better than others in three times going over the ground. It has been in use all the Spring in his vicinity, and given entire satisfaction.

A BEE-KEEPING LOCALITY.—MR. WM. H. EMMONS who resides in the southeast part of Eliga, in this county, says that in his neighborhood—within a circumference of two miles—thirty-six persons keep bees. Quite a number of these have from twenty to thirty swarms each, and Mr. E. himself has seventy-six. He thinks fall half the farmers in the district named are bee-keepers, and that it is rare that so large a proportion of inhabitants of any town are bee-culturists.

ANOTHER GOOD COW.—In reply to the statement of Mr. SAMSON, of Le Roy, (in RURAL of June 25th),—who reported that his cow gave an average of 61 lbs. of milk per day for one week. Mr. J. H. WILLIAMS, of Gates, near this city, informs us that he has a native cow which gave, for one week in June past, an average of 65 lbs. of milk per day.

THE MAINE STATE FAIR is to be held Sept. 20th to 23d inclusive—a week later than the period first designated by the Trustees. (We shall publish a revised list of State and County Fairs in a week or two.)

AN EXTENSIVE PEAR ORCHARD.

YIELD OF BLACK RASPBERRIES.—Mr. DOOLITTLE of Oakes, Cal., informs us that he sold 7,500 quarts of Raspberries from $4\frac{1}{2}$ acres of land, at 10 cents a quart, making \$450. This was exclusive of those used at home. A thousand quarts is estimated was destroyed by frequent heavy rain.

HARTFORD PROLIFIC GRAPE

PEACHES, SUMMER APPLES, &c.

Scions can be obtained of any of our nurserymen, at about \$1 a hundred sticks, each stick having from six to eight good buds. They should be packed in moss, and would keep in good order for a week or more, though it would be well to have them sent in small quantities every two or three days.

3. The Apple you send us is a large specimen of

CULTURE OF RASPBERRIES.

THE FAMILY OF CURRANTS.

The varieties of the *Ribes Nigrum*, or European Black Currant, have a peculiar musky odor, unpleasant to most persons, but which is lost when made into jelly or preserves. The *Ribes floridum*, or American Black Currant, possesses also a disagreeable odor.

AN EDITOR'S FARM.

Well, what of it. Hain't an editor as much right to be a bad farmer as anybody else; and to grow weeds that scatter their seeds over the adjoining fields? Indeed, has he not a better excuse to give for such a course than most men? while he sits at his table and fights the weeds with pen and paper, is it at all strange that they should take revenge by invading his garden? Thus, we don't know when an editor would be in a better frame of mind to write an article on the advantages of clean culture and the folly of growing weeds than when his own soil was impoverished, his soul harrowed, and his temper spoiled by these persisting nuisances. But, we volunteer no defence of friend THOMAS, as we have no doubt he will show the thing all right; perhaps he is merely giving a practical exemplification of the evils of bad culture.

SKEWERS FOR VINES.

The vines of which I am so very selectious, are
"Honolulu Nectarine Squash." My first plant-
ing was out off by the great frost of the 5th of
Nov, but fearing some mishap, I had not planted
my seeds at one time. The next day after the
frost I filled the same ground with plants from my
seed bed—and if they are not too late to mature, I
trust I shall be able to present you with a fine
crop next fall.

I. W. BARCOE.
New York, N. Y., July, 1859.

Cooking Salt Fish.— Dress the fish thoroughly, then soak in a pan of sour milk from twelve to twenty-four hours, after which rinse with cold water and place in a dripping-pan to bake. When nearly done pour on half a pint of sweet cream, and bake until nicely browned.

B. M.

Alden, N. Y., July, 1859.

CAKES, COOKIES, &c.

Canadice, Ont. Co., N. Y., June, 1859.

PIE PLANT AND GOOSEBERRY PIE. — CRISSEY'S

PRESERVING GREEN CORN—CALF'S HEAD JELLY.—All some of the RURAL readers give a recipe that can be depended on for preserving green corn? I tried one last year, but found it all moonshine. So, how to make "calf's head jelly."—M. K., *Wilkesboro, Ohio*, 1859

SHRUBBERRY CAKE.—One pound of flour; three-
fourths pound sugar; half a pound of butter; five
eggs; a little rose water or essence of lemon.—
W. *Chapman*, 1828.

OUR IDOL.

Cross the door lightly,
Bribe the breath,
Our little earth angel
Is talking with death.
Gently he woos her,
She wishes to stay,
His arms are about her—
He bears her away.

Music comes floating
Down from the dome
Angels are chanting
The sweet welcome home.
Come, stricken weeper!
Come to the bed,
Gaze on the sleeper—
Our idol is dead!

Smooth out the rinkles
Close the blue eye—
No wonder such beauty
Was claimed in the sky;
Cross the hands gently
O'er the white breast,
So like a wild spirit
Strayed from the blest!

Bear her out softly,
This idol of ours,
Let her grave slumbers
Be 'mid the sweet flowers.

Written for Moore's Rural New-Yorker.

Plain Talks to American Women.—No. 16.

BY MRS. M. P. A. CROZIER.

BIBLE TEACHING.—We have occasionally alluded to this in former "Talks"—in the present we wish to consider it more at large.

Every mother whose heart is warm with the love of God, and who rightly appreciates His Word, will naturally desire that her children's souls be also imbued with Divine grace, and that they also should reverence the Sacred Volume. O, the depth, the tenderness, of a Christian mother's prayers for the conversion of her offspring! How can she who possesses a bright and abiding hope of immortality—how can she bear the thought that those so near to her heart should be lost—lost forever? And if one who has given no evidence of preparation for eternity is prostrated by disease that brings him near the gates of the tomb, what agony is hers lest the spark of life should be quenched—his lamp go out in obscure darkness! How does her heart upbraid her then if she has been unfaithful to his soul! How can she say "it is well," when the drops of life are trembling in the vase that totters on the brink of ruin? She fears to speak then, perchance, of the subject that most agonizes her, lest it prove too great a shock, and she fears to delay, lest the moments of probation pass. God pity—God help in such an hour! Mothers, then, whose darlings are in health, be faithful now! Teach your little ones the Gospel while their hearts are tender and their intellects regally wear the crown of reason. Commit the treasures of the Sacred Scriptures to the keeping of their hearts, so that if, perchance, the sun of the mind burn dimly in that eventide, as in the "eventide" of the "age to come," "it shall be light."

We know not whose was first the beautiful thought to gather the family circle around the fireside at morning and at eve, to listen to the words of the Most High, and kneel for His blessing, but what has shed a holier radiance upon the hearth-stones of home, than the fires kindled from Heaven upon a Christian altar there? How delightful the hour of sacred worship! How pleasant to hear a whole family, from the aged grandfather who bends over the old large-print Bible, to the little one who can scarcely lip the words of life,—read from the Precious Volume!—how beautiful to see them bend, all in silent waiting upon the Lord, save one, till the first words of the "Our Father which art in Heaven" break from the lips of him who leads, when all softly join in the holy prayer of Jesus, and as the echo of the "Amen" dies away, rise from their knees a God-blessed household! It would almost seem that spirits would grow into Christianity under such an influence, as naturally as spring flowers grow into beauty under the genial skies of May! Exercises of this character should not be very lengthy. Children, when very weary, will hardly be interested. Short Bible readings, accompanied by familiar explanations and practical remarks, and short, simple, expressive prayers, are best. If too much is read, but little is retained in memory, and the impression produced is less deep than where a few verses are slowly pronounced, and fully understood and appreciated.

Another very pleasant way of imbuing the mind with Scripture precepts, is to have each member of the family select and commit to memory for each morning, a text to be repeated and remarked upon at the breakfast table; and the texts thus selected may be mottoes for the day. How many lessons of wisdom would thus be treasured up, and how great might be their practical bearing! For instance, suppose the mother had selected for her morning text the following:—"If your patience possess ye your souls!" How careful would she be through the day, that amid all her trials, the blessed spirit of patience govern her! Suppose the father has repeated the text,—"Withhold not good from them to whom it is due, when it is in the power of thy hand to do it." Recognizing the authority of the Bible, will he be likely, during the day, when he has the money in his pocket, to turn away without payment the claimant of an honest debt? And will not the children, seeing the cheerful obedience of the parents to the Sacred Word, readily follow the example? Suppose one child has chosen—"Children, obey your parents in the Lord, for this is right;" another—"Love your enemies;" a third—"Swear not at all," and a fourth—"Thou shalt love the Lord

thy God with all thy heart," &c. Suppose that these passages have been familiarly explained and illustrated, who shall say what influence they may not have during the day in guarding their young hearts from sin? The course of which we have spoken may be pursued, or some one subject may be selected; and each member of the family learn some text bearing upon that subject, thus bringing together, perhaps, the concurrent testimony of several Bible witnesses, and presenting it in a clearer light than any single one would be likely to do; and through the day all the different members of the family might be striving to exhibit in their lives the same gospel principle—might watch over and correct each other if they saw any deviation therefrom.

These are some of the ways in which Scripture lessons may be engrafted upon the mind. A watchful mother, whose own heart is influenced thereby, will often find occasions, in the administration of family government, for impressing upon the consciences of her children the authority of the Word of God. There is something there adapted to every circumstance of human life. No course of human action so complicated that the Bible does not furnish a clue to its untangling! None so deep and hidden, that the Bible does not ferret out the motive that prompted it. It "is quick and powerful, sharper than any two-edged sword, piercing even to the dividing asunder of soul and spirit, of the joints and marrow, and is a discerner of the thoughts and intents of the heart." How appropriate, then, that the mother often apply this probe, not only to her own spirit, but to those of her offspring, that she may discover and lay open any festering wrong that may have hidden itself beneath the garb of formality or outward piety, but is still there, poisoning the soundness of the soul, and endangering its existence. Selfishness, the monster evil of the age, may be lying in the inmost recesses of the heart, drinking at its life-fountains, and yet so silent be its workings that the outer world shall not suspect its presence, and the heart itself, "deceitful above all things," only fancy the presence of some agent adapted to produce sensations of pleasure, which, in its ignorance of true bliss, it falsely denominates happiness.

One child, perhaps, is fond of engaging in acts of benevolence, and trips away lightly through the storm, all comfortably clad as she is, to carry some blessing to the poor, but all the while her little heart is puffed up with self-righteousness, and as she goes she flatters herself that she is very good, and wonders who among her friends are observing her, and praising her charity. Let the mother be watchful to discern a case like this, and apply for a remedy texts like the following:—"Take heed that ye do not your alms before men, to be seen of them; otherwise ye have no reward of your Father which is in Heaven."

Too large a share of the responsibility of religious education should not be thrown upon the Church and the Sunday-school. These are important auxiliaries to home instruction, but ought not, indeed cannot, supersede it. If a child's attention is directed to religion and the Bible only upon the first day of the week, it will be no marvel if he come to consider Christianity only a Sunday concern, and that if he only observes that day with propriety, and attends to its assigned duties, it will not matter greatly if he is not very watchful of his conduct during the remainder of the week. Perhaps this is one reason why we have so many "Sunday Christians"—men and women who go to Church regularly, and attend to the sacraments, wear a solemn countenance during what they consider holy time, but whose every-day lives are no attestation of the purity of gospel principles. We should realize more than we do, that all time is holy, and should be consecrated to God—that he has given us no license to sin on any day, but requires that "whatsoever we do, whether we eat or drink," be done to His glory. Feeling deeply this truth, we shall not reserve all the work of religious instruction to one day in the seven, but each day shall bear its own burden, and teach its own lessons of truth and duty.

We can but refer to an institution to which our own heart owes, perhaps, many of its early religious impressions, and which we consider may be greatly promotive of the interests of which we speak, viz., the "Maternal Association." It is long since we accepted it as our duty to become disconnected in a manner from the religious society under whose fostering care flourished the only organization of this kind with which we were ever associated, yet we still look back with interest to the Society which monthly met for the consideration of maternal duties, and social prayer for the children under its watch-care, and quarterly gathered a large proportion of those children for religious instruction. We could desire that every circle of Christian mothers might adopt some such plan of concerted effort for the more full understanding of their responsibilities and duties, as such, and for the influencing of the minds of their children towards her whose "ways are pleasantness," and whose "paths are peace."

In a time when skepticism is as prevalent as it now is, it may seem a little old-fashioned to insist so strongly as we do upon the religious instruction—Bible instruction—of children; but God forbid that we should ever love less the Old Book that has strengthened so many for the stern conflicts of life—that has hung over the dark "valley of the shadow of death" a bow of promise bright with the radiance of immortality! God forbid we should ever love it less!

HEALTH PROMOTED BY FAMILY MUSIC.—Music, like paintings and statuary, refines, and elevates, and sanctifies. Song is the language of gladness, and it is the utterance of devotion. But coming lower down, it is physically beneficial; it rouses the circulation, wakes up bodily energies, and diffuses life and animation around. Does a lazy man ever sing? Does a milk-and-water character ever strike a stirring note? Never. Song is the outlet of mental and physical activity, and increases both by its exercise. No child has completed a religious education, who has not been taught to sing the songs of Zion. No part of our religious worship is sweeter than this. In David's day it was a practice and a study.

AUGUST.

BY CLARA AUGUSTA.

Blow-nuzz and green the trees—
The wild vine hangs its flowers
Out on the hill's rock towers,
And in the faint-tipped breeze,
The poplar's tender leaves
Tremble and rouse to life!
And from the dell-copse's shade,
The cuckoo's song
Floats beauty rife.

Pearl tints the morning skies—
Crimson dyes all the clouds
Like mighty christening shrouds,
They spread their draperies:
And o'er the fragrant leaves
The sunshine weaves its veil
Of gold and amber light,
And threads of glistening white
And shadows pale.

August! the founts are low,
The pastures cry for rain;
The cattle plod the plain
Seeking the clover blow;
And where the streamlets flow
O'er the rocks cool and gray,
The little snow-white lambs
Come with their nimble feet
To drink at set of day.

The forest throbs in pain,
Summer is flushed to death—
The last of her rich breath
Streams o'er the ripening grain;
And where the flowers have lain
Sad Autumn's feet come slow:
White with the harvest moon
She sweeps her frosty robe,
And buries Summer's glow!

THE AUTOBIOGRAPHY OF A MAPLE TREE.

The subjoined was found upon the trunk of a huge maple, soon after it fell. Doubtless its authorship could be traced to the departed spirit of the tree. I believe Isaiah, chapter 65, and final clause of verse 12, suggests the mechanical ability of a tree to write. Waiving all desire to pursue the conjecture further, I submit the subject of the same to the reader.

R., Ja.

"Two hundred years ago—if the fibrous circles composing me indicate my age—I was a tender twig in this vicinity. Born amid forest flowers, my insignificance at first was without humiliation; but when deprived of their companionship, and witnessing the giant forms of my kin about me, I became envious. A wise maple warned me against cultivating this habit, and dropped a leaf bearing the instructive hint, 'as the twig is bent the tree is inclined.' A sad experience had given him wisdom and sympathy, for I learned in after years that his gaunt and crooked form was the result of early misdoings. As long as he lived he exercised a beneficial influence over me, and died expressing his satisfaction at my comely appearance, which he very justly attributed to wholesome restraint imparted in youth. I was honored in being permitted to exemplify, even to the last of a numerous family reared by Mother Earth hereabouts, the benefits derived from judicious training.

"When a sapling, shut in by the boughs of my ancestors, the occurrences above and around me were a succession of mysteries. The thick gloom with its myriad twinkling specks, and the dazzling brightness following it; both often preceded by a tinge of beauty resting on everything above, sent a thrill of delight, not unmingled with timidity, through every fibre of my system. The withering blight descending in the darkness upon the foliage, depriving it of the hue of life though rendered beautiful in death, and reducing to skeletons the tenderest twig and hardest tree alike, was a sad mystery. So was the renewal of our foliage its pleasing contrast. But how strangely terrible was that mysterious quiet leading swift destruction into our midst. Whole forests twisting and writhing raged in angry commotion. Branches of a century's growth were tossed as leaves. The defiant oak and graceful elm fell with a terrific crash, fearfully sighing as they descended, while the fiery, zig-zag stream from above intensified the prevailing terror. At such times my littleness was safety, though I observed that many of my superiors, grown up in apparent discretion, yielded with bowed form and survived this power.

"Mature tree-hood acquainted me with the origin of these mysteries, and the night with its stars, the day with its morning and evening glories, the tempests and lightnings, were often repeated in all their grandeur. Then were my branches mingled with the loftiest of my species, sharing with them the crystal drops of the summer's night, that glistening died in the morning's rays, accompanying the earliest notes of the feathered songsters with the music of our leaves, and marking the many changes effected and threatened by the different enemies of our race. But I witnessed the death of all my companions. Many of them perished in this now naked meadow, but yesterday within the circuit of my shadows. Here fell one whose lungs were devoured by insects, inducing premature decay. There fell another—his heart laid bare by the lightning's stroke. Yonder, where my evening shadows faded away, died the patriarch of the forest, of old age. Just beneath me fell an aged relative in conflict with a tempest. But the greater proportion perished by that greatest enemy of our race, the axe. I was so destroyed. Old age was a feeble plea, and availed me nothing. Generosity—for I had shed many drops of blood that were transformed by the aid of fire into lumps of delicious sweetness—was forgotten, and my graceful appearance, that had spared me in earlier days, now appealed in vain. Had the united protest of the feathered family, that found a welcome

home among my branches, prevailed, I should have numbered many more shadows. Or, had the woodchuck that was once seen at my roots weeping, reappeared in his sorrowful mood, my destroyer might have been moved with pity. But my death was not without consolation, for it carried with it a humiliating revenge. A post-mortem examination, commenced in a saw-mill and continued in a cabinet shop, revealed the fact of my utility after death. Will it be thus with the rich tree-hater, my destroyer? Let him think of this another winter, as he warms himself before my blazing limbs."

BENJAMIN FRANKLIN'S INTEGRITY.

But few have it in their power to do so much good or evil as printers. We know they all glory in Dr. Franklin as a father, and are wont to mention his name with veneration. Happy would it be for them if they would read the following, with a resolution to imitate it:

"Soon after his establishment in Philadelphia, Franklin was offered a piece to publish in his newspaper; being very busy, he begged the gentleman to leave it for consideration. The next day the author called, and asked his opinion of it. Franklin replied:

"Why, sir, I am sorry to say I think it highly scurrilous and defamatory. Being at a loss, on account of my poverty, whether to reject it or not, I thought I would put it to this issue:—At night, when my work was done, I bought a two penny loaf, on which, with a mug of cold water, I supped heartily, and then wrapping myself in my great coat, slept very soundly on the floor till morning, when another loaf and a mug of water afforded me a breakfast. Now, sir, since I can live comfortably in this manner, why should I prostitute my press to personal hatred and party passion, for a more luxurious living?"

One cannot read this anecdote of our American Sage without thinking of Socrates' reply to King Archelaus, who had pressed him to give up preaching in the dirty streets of Athens, and come and live with him in his splendid Court:

"Meal, please your Majesty, is a half-penny a peck at Athens, and water I can get for nothing."—*Printers' News Letter.*

SALMAGUNDI.

A CRUEL INSINUATION.

When man fell from his high estate
As Eve in sin the apple ate,
Quoth Adam, "Woman's curse is great;
'Tis written in the book of fate,
For evermore in sin ye ate."

DEARER, YET DEARER, ART THOU, LOVE, TO ME.

DEAR LAURA! when you were a flitting young miss,
And I was your dutiful ain,
Your smiles could exalt to the summit of bliss,
Your frowns would overwhelm me with pain;
You were dear to me then, love; but now you're my wife,
It is strange the fond tie should be nearer,
For when I am paying your bills, on my life,
You seem to get dearer and dearer!

LABOR.—It is only by labor that thought can be made healthy only, by thought that labor can be made happy, and the two cannot be separated with impunity.

A truly grateful heart may not be able to tell its gratitude, but it can feel, and love, and act. An envious man repines as much at the manner in which his neighbors live as if he maintained them.

A wronged creditor, a neglected wife, a slandered neighbor, and a guilty conscience, are four things whose presence gives great pain.

LIFE may be merry as well as useful. Every person that owns a mouth has always a good opening for a laugh.

WOMEN and young men are very apt to tell what secrets they know, from the vanity of having been trusted.

POLITENESS is like an air-cushion—there may be nothing solid in it, but it eases jolts wonderfully.

THE taste of beauty, and the relish of what is decent, just, and amiable, perfects the character of a gentleman.

By the use of eye-glasses, you may see as much as is to be seen; by the use of another kind of glasses, you may see twice as much.

FEROCITY is sometimes assumed as well as a gentleness. There are as many sheep in wolves' clothing as there are wolves in sheep's.

"WHY don't you ask your sweetheart to marry you?" "I have asked her." "What did she say?" "Oh, I've the refusal of her."

A MAN has no more right to say an uncivil thing than to act one; no more right to say a rude thing to another than to knock him down.

A PRETTY girl and a wild horse are liable to do much mischief; for the one runs away with a fellow's body, and the other runs away with his heart.

VIOLENCE and folly may feel the edge of wit, but virtue is invulnerable; aquafortis dissolves the baser metals, but has no power to dissolve or corrode gold.

PHILOSOPHERS say that shutting the eyes makes the sense of hearing more acute. Perhaps this accounts for the habit some people have of always closing their eyes during sermon-time.

It is a beautiful custom in some Oriental lands to leave untouched the fruits that are shaken from the trees by the wind; these being regarded as sacred to the poor and the stranger.

ECONOMY is the parent of integrity, of liberty, and of ease, and the sister of temperance, of cheerfulness and health; and profuseness is a cruel and crafty demon that generally involves her followers in dependence and debt—that is, fetters them with "irons into their souls."

"How do you feel with such a shocking coat on?" said a young dandy to old Roger. "I feel," said old Roger, looking at him steadily with one eye half closed, as if taking aim at his victim—"I feel, young man, as if I had a coat on which I had paid for—a luxury of feeling which I think you have never experienced."

A HYMN FOR A TROUBLED HEART.

O, Thou who comfortest the sad,
And bids the broken-hearted live,
Send down that sweet relief to me
Which is in thine own power to give

I grope in darkness and despair,
My heart is troubled and afraid;
And often unbelief shuts out
The grace by which I should be saved.

Dear Saviour! I do not desire
These clouds removed against Thy will,
But only Faith to see through all,
And seeing through to see Thee still.

Written for Moore's Rural New-Yorker.

FORGIVE THE LIVING.

We forgive those who have wronged us in thought, word, or deed, when they are laid to their final rest—we speak kindly, tenderly, even lovingly,—if we speak at all,—removing the veil which has hitherto obscured so much of their life's harmony and sweetness, at the same time drawing it over those faults and foibles, temptations and failures, which are strewn so thickly in our own pathway, written so indelibly in our heart's history. We never seek to penetrate this veil, nor even wish to. And why? They have passed from earth forever. Their bodies are mouldering in the cold and silent tomb. This is sufficient. It seems to forbid all entertainment, much more expression, of anger but good will and kindly sympathy for the dead. But is this *real, true-hearted, benevolent* forgiveness? No! it is not worthy of the name. Forgive the living—those who mingle with you in the daily walks and avocations of life; they whose lives you may cheer, beautify, yea, ennoble if you will. Forgive a light, an angry word, let it not rattle in thy bosom till a fire be kindled, which, if nourished, will burn thine inmost soul—unfitting thee to go out among thy fellow-men lest they imbibe the unrest and angry turbulence of thy spirit—unfitting thee for all high, holy, heaven-born aspirations—unfitting thee for life, death, and a blessed immortality. Forgive, though a wound be made causing all thy future in this world to be covered with a heavy pall. Forgive! taking for thy example the meek and lowly Jesus, then shall be gathered in the "crown of thy rejoicing" jewels whose lustre and brilliancy exceeds all mortal thought. "For if ye forgive men their trespasses, your Heavenly Father will also forgive you."—*ADDIE E. WALKER.*

Ypsilanti, Mich., 1859.

AN ELOQUENT EXTRACT.—"Generation after generation," says a fine writer, "have felt as we now feel, and their lives were as active as our own. They passed like a vapor, while nature wore the same aspect of beauty as when her Creator commanded her to be. The heavens shall be as bright over our graves as they now are around our paths. The world will have the same attractions for our offspring yet unborn, that she had once for our children. Yet a little while, and all will have happened. The throbbing heart will be stilled and we shall be at rest. Our funeral will wind its way, and prayers will be said, and then we shall be left alone in silence and darkness for the worms. And it may be but a short time we shall be spoken of, for the things of life will creep in, and our names will soon be forgotten. Days will continue to move on, and laughter and song will be heard in the room in which we died; and the eye that mourned for us will be dried, and gladden again with joy; and even our children will cease to think of us, and will not remember to list our names."

THE PARISH MINISTER.—The author of Adam Bede, in sketching the rector of a parish says, he was not much of a preacher. He preached short moral sermons. But then he acted pretty much up to what he said. He didn't set up for being so different from other folks one day, and then be as like 'em as two peas the next; and he made folks love and respect him. Mrs. Poyser used to say, he was like a good meal o' victuals, your were better for him without thinking on it.

"ALL YOUR NEED."—Why was the "Bread of life" hungry, but that he might feed the hungry with the bread of life? Why was "Rest" itself weary, but to give the weary rest? Why was the "Prince of peace" in trouble, but that the troubled might have peace? None but the Image of God could restore us to God's image. None but the Prince of Peace could bring the God of Peace and the peace of God to poor sinners.—*Old Author.*

LIFE'S DUTIES.—It must doubtless be the design of our Heavenly Father, that all this toil for the supply of our physical necessities—this incessant occupation amid the things that perish—shall be no obstruction, but rather a help, to our spiritual life. The weight of a clock seems a heavy drag on the delicate movements of its machinery; but, so far from arresting or impeding those movements, it is indispensable to their steadiness, balance and accuracy.

ALMSGIVING NOT CHARITY.—It is difficult to be wisely charitable—to do good without multiplying the sources of the evil. We know that to give alms is nothing, unless we give thought also; and that, therefore, it is written, not "Blessed is he that feedeth the poor," but "Blessed is he that considereth the poor;" and we know that a little thought and a little kindness are worth more than a great deal of money.

THE mistake of idolatry is that it took the grosser part of humanity to represent God—that part which was common to themselves and animals.

A DEFECT AND THE REMEDY.

The design of our Common School System is to present all with the opportunity of acquiring an understanding of the rudiments of science—of principles sufficient, at least, for the common affairs of life—yet it appears that from some cause about one-third of those reported as entitled are deprived of that opportunity.

Comparatively,—with the abstract report in the Governor's Message,—our district is a fair sample of the State. It numbers 230 children of legal school age, but the teachers' lists for the last year contain only 145 different names of pupils. The list for the winter term of 100 days, shows an average attendance of 67 days for each, and for the summer term of 120 days an average of 54. The statistics in the report show an aggregate cost of common schools in the State, for the last year, equal to \$3 06 for every child reported as entitled to share in the provision, and of \$4 50 for every one accepting it. The total cost for the year, beside the district taxes, is \$1 56 each for the whole number, and \$2 31 each for all attending school. The amount of public money appropriated for the pay of teachers equals \$1 10 each for all entitled, and \$1 62 for each attending school. The aggregate of rate-bills equals \$0 31 each for all, and \$0 46 each for those who have attended school during the year.

Let it be assumed—as it is true—that it would cost but a trifle more, if any, to educate all the children in the State than it does the two-thirds that attend school, the report shows a loss, resulting from mismanagement, of one-third the cost, amounting to \$1,264,816 26 annually; which, beside the public good involved, has a pecuniary value worth an effort to save,—to discover the fault and a remedy.

These facts are proof of fault in carrying out the intent of the system, by the loss on the capital invested, and by the burdens thereby laid on those laboring for the advantages, without directly benefiting the indifferent. An imperfection becomes a necessity only when known to defy every practical remedy. The first defect is—lack of inducement to cause a full and regular attendance of all entitled to the privilege. The remedy proposed is a law to apportion the teachers' money by the ratio of an average number of days' attendance,—during the legal terms of the year,—in proportion to the number of pupils on the school list. This, of course, will not increase the aggregate of expense in the State, but it will augment the share of the district where the inhabitants are most successful in filling the school. It will also incite a spirit of emulation among districts, and create a personal interest, resulting in public good by a more extended diffusion of knowledge,—the object of the system.

The next important mistake in law is that which prevents people from conducting their own affairs in their own way,—which lays unequal burdens upon social equals,—which deprives the inhabitants of a district of power to enforce a tax on themselves, however just, right and profitable they may judge it to be in order to pay for service which the law requires and the district needs. The philosophy of taxation is to make property pay public expense, while equity demands that taxes for any object be assessed in proportion to the value of property and the advantages expected to property holders, in the application. What social object takes precedence of education? Is it any advantage to property holders to have ignorant and uncultivated youths turned loose in community? Is it not better that society be composed of intelligent and well-informed members? The advantages of the system are justly apportioned to the residents in the district, but the tax for the service of trustees is not equitably assessed, unless—based on a sort of self-valuation—it is supposed they can afford to give time and energy for honors that are all easy, and instead of "a dollar a day and roast beef," are content to work for nothing and "eat themselves."

Marcellus Falls, N. Y., 1859.

READING ALoud.—There is no treat so great, truly regards the Springfield Republican, as to hear good reading of any kind. Not one gentleman in a hundred can read so as to please the ear, and send the words with gentle force to the heart and the understanding. An indistinct utterance, whines, drones, nasal twangs, guttural notes, hesitations, and other vices of elocution are almost universal. Why it is, no one can say, unless it be that either the pulpit, or the nursery, or the Sunday School, gives the style in these days. Many a lady can sing Italian songs with considerable execution, but cannot read English passably. Yet reading is far the most valuable accomplishment of the two. In most drawing-rooms, if a thing is to be read, it is discovered that nobody can read; one has weak lungs, another gets hoarse, another has an abominable sing-song, evidently a tradition of the way in which Watt's hymns were sung, when he was too young to understand them; another rumbles like a broad-wheel wagon; another has a way of reading which seems to proclaim that what is read is of no consequence, and had better not be attended to.

The Connecticut Common School Journal, in an article on *Foolish Economy*, says:—"When you hear a man uttering his aversion to spending money to educate 'other folks' young ones,' you may safely conclude that his father was a man not very liberal in the education of his own; for the educated are invariably the most earnest champions of education."

The attempt to govern by loud speaking, stamping, thumping upon desks, or using an unnecessary amount of words, is vain. Subjection to wholesome laws, properly administered, is as much a part of essential education, as the knowledge acquired from books and teachers.

CUT-AND-DRIED TEACHERS.

CONCERNING plans of teaching, nobody has any right to impose his plan of teaching on his neighbor. There is no method that may call itself the method of education. There is only one set of right principles, but there may be ten thousand plans. Every teacher must work for himself, as every man of the world works for himself. There is, for all men in society, only one set of right principles, yet you shall see a thousand men in one town all obeying them, although all, in conduct, absolutely differ from one another. They will present among themselves the widest contrast, and yet every one may be prospering, and making friends. In the school, as in the world, a man must be himself if he would have more than a spurious success; he must be modeled upon nobody. The school-master should read books of education, and he may study hard to reason out for himself by their aid, if he can, what are right principles to go upon. A principle that he approves, he must adopt; but, another man's plan that he approves, he must assimilate to the nature of his own mind and of his own school before he can adopt it. Even his school he must so manage that it shall admit of great variety of plan within itself, and suffer him so to work in it as to appeal in the most effective way to the mind of each one of his scholars.

No man can be a good teacher who is a cut-and-dried man without any particular character. His individuality must be strongly marked. He should be, of course, a man of unimpeachable integrity, detesting what is base or mean, and, beyond everything, hating a lie. He should have pleasure in his work, be fond of children, and not think of looking down upon them, but put faith—and that is a main point which many teachers refuse to uphold—put faith in the spirit of childhood. He must honor a child or he cannot educate it, though he may cram many facts into its head. It is essential also to the constitution of a good teacher, that, whatever his character may be, he shall not be slow. Children are not so constituted as to be able to endure slowness patiently. He must also not be destitute of imagination, for he will have quick imaginations to develop and to satisfy.

The most learned teacher ought incessantly to read and think, so that he may be on each topic as full minded as he should be when he proposes to give lessons to a child. The good teacher must be devoted to his work; if he want pleasure and excitement, he must find them in the school-room and the study. For it is only when his teaching gives great pleasure to himself, that it can give any pleasure whatever to his pupils.—*Missouri Educator.*

INDUSTRY AND GENIUS.—There are many teachers who profess to show the nearest way to excellence; and many expedients have been invented by which the oil of study might be saved. But let no man be seduced to idleness by specious promises. Excellence is never granted to man but as the reward of labor. It argues, indeed, no small strength of mind to persevere in habits of industry without the pleasure of perceiving those advances which, like the hand of a clock, whilst they make hourly approaches to their point, yet proceed so slowly as to escape observation. There is one precept, however, in which I shall only be opposed by the vain, the ignorant, and the idle. I am not afraid that I shall repeat it too often. You must have no dependence on your own genius. If you have great talents industry will improve them; if you have but moderate abilities, industry will supply their deficiency. Nothing is denied to well-directed labor; nothing is to be obtained without it.

I WILL.—How many times have we heard both parents and teachers say, such a child must have his will broken—he is too headstrong. Is the will ever broken? It may be made to bend, but never, it is never broken. "If John was not so willful, he would do well enough," say the parent and teacher, when every success that crowns his endeavors is the fruit of the will. Guide this heaven-born gift, aid the child in placing this firm, strong lever beneath good and noble purposes, and much will be accomplished. When the Will joins hands with Reason and Religion, its power will be for good. Strong will is the great characteristic of all those who have achieved power, either for good or evil, in the world's history. The will is the most prompt and decisive faculty of the mind, and impels to immediate action. It is necessary for the teacher to possess this firmness of purpose, that he may cultivate the same in his pupils. If they find a will to meet each duty faithfully, they will be inspired with the same feeling in their duties.—*S. L. L.*

EDUCATE THE PERCEPTIVE FACULTIES.—Too much time is devoted to words—to little things. Every primary school should be supplied with objects as well as with books. In most schools the mind of the child is most carefully guarded against all ideas of the external world. Not one primary school in ten contains anything to develop the perceptive faculties. We seem to be ignorant of the fact that it is by exercising the senses that the germs of intellect are aroused. The child has mind; that mind becomes active as it cognizes qualities of matter. We do not say that matter causes mental activity, but that the senses form the medium through which mind is aroused, and that the senses can only be exercised by contact with material things.—*Wis. Journal of Education.*

THE most difficult department of learning is to unlearn. Drawing a mistake or prejudice out of the head is as painful as drawing a tooth, and the patient never thanks the operator. No man likes to admit that his favorite opinion, perhaps the only child of his mind, is an illegitimate one. Sluggish intellects are ever the most obstinate, for that which it has cost so much to acquire, it costs so much to give up; and the older we get the more closely we cling to errors.

It is a pretty saying of an old writer, that men like books, begin and end with blank leaves—infancy and senility.

The pen, in the hand that knows how to use it, is the most powerful weapon in the world.

THE HUMAN HAND.

ISSUING from the wrist is that wonderful organ, the human hand. "In a French book, intended," says Sir Charles Bell, "to teach young people philosophy, the pupil asks why the fingers are not of equal length? The master makes the scholar grasp a ball of ivory, to show him that the points of the fingers are then equal! It would have been better had he closed the fingers upon the palm, and then have asked whether or not they corresponded. This difference in the length of the fingers serves a thousand purposes, as in holding a rod, a switch, a sword, a hammer, a pen, a pencil, or engraving tool, in all which, a secure hold, and freedom of motion are admirably combined."

On the length, strength, and perfectly free movements of the thumb, depends, moreover, the power of the human hand. To the thumb, indeed, has been given a special name ("pollex," from a Latin verb, meaning to be able, strong, mighty,) because of its strength—a strength that is necessary to the power of the hand, being equal to that of all the fingers. Without the fleshy ball of the thumb, the power of the fingers would be of no avail, and accordingly the large ball formed by the muscles of the thumb, is the special work of the human hand, particularly that of a clever workman. The loss of the thumb almost amounts to the loss of the hand. Conscripits, unwilling to serve in the army of France, have been known to disable themselves effectually by cutting off the thumb of the right hand. The loss of both thumbs would reduce a man to a miserable dependence. Nor should we overlook another peculiarity. Were the tips of the fingers and the thumbs bony instead of being covered with flesh, many things we readily do would be absolutely impossible. We now take up what is small, soft, and round, as a millet seed, or even a particle of human hair, so exquisitely prehensile are the human fingers.

The nails are often of special service—perhaps always in works of art which require nicety of execution. Their substance is just what is needed; they are easily kept at the precise length which answers every purpose; had they been placed on the tips of the fingers, they would have been a loss of power, but their position ensures their highest efficiency. An interchange of power for velocity which takes place in the arm adapts the hand and fingers to a thousand arts, requiring quick or lively motions. In setting up the type of this page, there have been movements on the part of the compositor, of surprising rapidity to an ordinary observer, and the execution of performers on the piano forte, as well as on many wind instruments, is often astonishing; these are among the many instances of the advantage gained by this sacrifice of force for velocity of movement.—*Cassell's Popular Natural History.*

SINGING OF BIRDS.

THE singing of most birds seems entirely a spontaneous effusion, producing no lassitude in muscle, or relaxation of the parts of action. In certain seasons and weather, the nightingale sings all day and the most part of the night; and we never observe that the powers of song are weaker, or that the notes become harsh and untunable, after all these hours of practice.

The song thrush, in a mild, moist April, will commence his tune early in the morning, pipe unceasingly through the day, yet at the close of eve, when he retires to rest, there is no obvious decay in his musical powers, or any sensible effort required to continue his harmony to the last.

Birds of one species sing in general very like each other, with different degrees of execution. Some countries may produce finer songsters, but without great variation in the notes. In the thrush, however, it is remarkable that there seems to be regular notes, each individual piping a voluntary of his own. Their voices may always be distinguished amid the choristers of the copse, yet some one performer will more particularly attract attention by a peculiar modulation of tone; and should several stations of these birds be visited the same morning, few or none probably would be found to persevere in the same round of notes; whatever is uttered seems the effusion of the moment. At times a strain will break out perfectly unlike any preceding utterance, and we may wait a long time without noticing any repetition of it. Harsh, strained, and tense as the notes of this birds are, yet they are pleasing from their variety.

The voice of the blackbird is infinitely more mellow, but has much less variety, compass, or execution; and he, too, commences his carols with the morning light, persevering from hour to hour without effort, or any sensible faltering of voice.

The cuckoo warbles us throughout some long May morning with the unceasing monotony of its song; and though there are others as vociferous, yet it is the only bird I know that seems to suffer from the use of the organs of voice. Little exertion as the few notes it makes use of seems to require, yet by the middle or end of June, it loses its utterance, becomes hoarse, and ceases from any further essay.—*Journal of a Naturalist.*

CONTRIVENCY.—Those who have the true creed, and that faith in it which is derived from charity, and who therefore feel certain that it is true, will not be angry and complain if others do not treat them with the respect which they deserve: they will not complain if they are treated as impostors and deluded enthusiasts; for their own honor and glory are not the objects for which they are seeking. They are satisfied, let their success be great or small, with doing what they can for the benefit of others, and leave the rest to Him with whom is the residue of the spirit.

He only is independent who can maintain himself by his own exertions.

THE MOON'S SURFACE.

PROFESSOR PHILLIPS, of England, in the course of some recent remarks before the British Association, on the lunar mountains, remarked that daily experience showed that the more the telescopic power was increased the less circular appeared the lunar crater, and the less smooth the surface of the moon. All was sharp and irritated—a perfect representation of its past history. On the much mooted question as to there being traces of the action of water on the surface of the moon, as now presented to us, the professor said that one time he believed there was no trace of water to be seen, but he confessed that more recent observations, particularly those made with Lord Rosse's telescope, shook his belief in that opinion. Professor Phillips also commented upon the continually growing exactness with which the telescope was applied to the delineation of lunar scenery, which, to inferior instruments, appearing smooth and even, revealed itself to more powerful scrutiny as altogether uneven, mostly rugged land, deeply cut by chasms, and soaring into angular pinnacles. The so-called seas, under this scrutiny, appear desolate of water, and their surface, under low angles of incident light, becomes roughened with little points and minute craters.

For Moore's Rural New-Yorker.

MISCELLANEOUS ENIGMA.

I AM composed of 31 letters.
My 25, 26, 27, 28, 29 is something small.
My 22, 23, 24 is a conjunction.
My 13, 20, 24, 26, 27 belongs to man, beast and tree.
My 18, 23, 29, 30, 31 some people marry for.
My 23, 25, 26, 27 is dreaded by all lazy people.
My 29, 4, 16, 20, 21 is a friend to every intelligent reader.
My 1, 20, 7, 11, 8, 31 some men possess.
My 9, 5, 3 is a useful animal.
My 16 is an interjection.
My whole is a good motto.

CHEMICAL ENIGMA.

DEDICATED TO MISS A. M. DISHOP.

I AM composed of 50 letters.
My 29, 7, 20, 34, 11, 38 is a very useful vegetable acid.
My 19, 33, 5, 18, 10 is produced by the union of charcoal and iron.
My 9, 41, 47, 7, 27, 11, 45, 46 is the cause of chemical action.
My 30, 81, 10, 46, 9, 40, 26, 43, 40, 50, 47 explains how matter unites.
My 27, 7, 87, 44, 24 was an ingredient of the celebrated "Greek fire."
My 15, 5, 17, 25, 22, 4, 16, 6 is the lightest known substance.
My 8, 1, 23, 11, 35, 50 is a metal extracted from common salt.
My 17, 7, 9, 47, 14, 26, 32, 13 is capable of converting starch into sugar.
My 42, 2, 23, 4, 33, 6 compose at least one-half of the globe.
My 12, 9, 10, 7, 43, 50 is softer than wax, and yet is a metal.
My 41, 40, 21, 39, 43, 50 is the most useful metal known.
Youngstown, N. Y., 1859.

ARITHMETICAL PROBLEM.

FOUR notes have each a different number of pennies which form an arithmetical progression; each has the value of four different United States coin. How many pennies have each?
Watertown, Jeff. Co., N. Y., 1859.
Answer in two weeks.

ANSWERS TO ENIGMAS, &c., IN No. 498.

Answer to Miscellaneous Enigma:—Procrastination is the thief of time.
Answer to Geographical Enigma:—Friedrich Heinrich Alexander Von Humboldt.
Answer to Arithmetical Problem:—48 1/2 cents.

TRIMMING MELON VINES.

EDS. RURAL:—Having heard it remarked by one of my neighbors that the size and quality of melons might be much improved by diligently attending to the trimming of the vines, I have adopted the plan this season, by way of experiment. It is very likely that comparatively few readers of the RURAL have ever heard of, much less practiced, anything of the kind; but no one can fail to have observed that melon vines left to themselves, not only completely cover the ground all around the hills, but even overrun themselves, to a great extent. Now is it not reasonable to suppose that, if these extra vines and branches had been removed when they first began to run, the additional amount of nutriment thus left for the remaining vines, would have enabled them to mature more and larger melons, and of superior flavor? If this method of culture be adopted, I think that it should be commenced as soon as the vining commences, and be faithfully followed through the season.

As this is merely an experiment with myself, and I a new subscriber, and inasmuch as most of my neighbors "never heard of such a thing as trimming vines," it would be quite gratifying to hear from "AN OLD GARDENER" on the subject, or from some one who knows, from much experience, what the inevitable result must be.

There are no experiences given in the RURAL that I read with more interest than those concerning Watermelons and Strawberries. Everybody should cultivate them, and eat them, too.
Clyde, O., July, 1859.
WM. M. RUSSELL.

As an "OLD GARDENER" is appealed to be will say that he has practiced pruning or pinching melon vines for a great many years. If a vine is growing in rich soil, especially if it is strong and a little damp, or the season should be wet, a great growth will be attained, and kept up until quite late in the season, perhaps until frost. The consequence is a great many melons are formed that never ripen, some of them, when frost kills the plant, will be as large as eggs, others half grown, and so on. Now, this growth of vine and fruit is useless, or nearly so, for the women sometimes use a few in making mangoes. Where the ground is sandy and not too rich, the vine does not make so strong a growth, and ripens pretty much all the fruit that is formed. It is in strong soil, therefore, that the pruning is most necessary. As soon as the main branches of the vine have set as much fruit as you think will ripen well, just stop them, as gardeners say—that is, pinch off the ends. Previous to this, the side shoots will have made a good growth and formed some small melons. Let these remain untouched for about a week or ten days longer, and the principal growth will be thrown into them. Then stop the side shoots in the same way as the main. If the vine seems to grow rampant, so as to be crowded with branches, it is well to reduce the number by cutting away some of them.

A vine treated in this way will give fruit of a very large size, of the very best flavor, and all will be ripened. In fact, a melon vine needs treating very much like a grape vine, only with this difference that a melon vine is much more affected by the soil in which it grows than a grape vine. The roots of the grape vine go a long way in search of food, and as they live a number of years, they are very successful in finding what they want if it is anywhere near. If there is an old bone buried the roots will find it and fasten on it, go through it if it happens to be hollow, and suck out its juices as fast as it decays, until all is gone. But the melon lives only for a few short months, and if the soil is poor in the hill and immediately around it, the roots never get strength enough to go far in search of food, and they will remain half starved, with perhaps abundance of food within a foot or two, just as a child or an animal that could not walk might starve with a good dinner almost within reach. There is nothing like giving a plant a good, strong, healthy start at first, and then it gets so strong that it can do something towards taking care of itself, but when a plant or a boy makes a bad start in the world, it is pretty hard to make them go right. Solomon was right when he said, "train up a child in the way he should go," and it is just as important to train a young plant right; for unless trained both are apt to injure themselves, and destroy their usefulness by foolish and bad practices.

WELL-TRAINED TOMATO PLANT.

TOMATO VINES are much improved by a little of the same kind of training. Cut away the small branches that will not bear fruit early enough to ripen, and as soon as the other branches have on them all the fruit that they will probably ripen, pinch off the ends. This will check the growth of the plant, throw the strength into the fruit, and cause it to be fine and ripen early. To-day, (July 27th,) I have ripe tomatoes on plants treated in this way, while others grown in the ordinary manner are only a mass of branches, leaves, flowers and green fruit. But, a tomato plant to be treated in this manner, must be fastened up to a trellis, the side of a building, or some such thing. A very easy and pretty way is to place four or five branches or bushes around a tomato plant, something in the manner of pea sticks, and the plant will run up among the sticks where the fruit will be well exposed to the sun, and ripen early.

By-the-by, Mr. Editor, I wish you would give your young readers another view of that beautifully trained tomato plant, which you gave the old folks a year or two ago, as it is a beautiful model to work after.

OLD GARDENER.

REMARKS.—The OLD GARDENER is a great talker, when he gets started, but he talks well and wisely. We wish our young readers could only hear him talk in the garden, and see how nicely everything grows, as by magic, under his care. As requested, we give the engraving of the tomato plant which we trained and pruned, and from which we picked over one hundred and twenty ripe tomatoes.

A GOOD CHARACTER.—Young man, one of the first things you have to consider is to build up a character. Allow us to tell you one thing about it, which we have learned from observation. It must be built like a pyramid, to be firm and lasting—broad at the base. Then the foundation must be good, or even a pyramid would crack and fall to pieces. Get a reputation from early boyhood, for truth, honesty and industry, obedience to parents and teachers, and above all, piety. By and by your character will be as firm as a pyramid; a host of calumniators could not overthrow it. But if youth and early life is bad, to build a character on such a beginning, would be almost as difficult as to build and poise a pyramid on its apex.

CONTENTS OF THIS NUMBER.

AGRICULTURAL.	
Inquiries and Notes—Cattle in Cattle: Seeding Down to Grass; Sulphur Water for Butter-making; Thick or Thin Sowings; The Potato; Potatoes Mixing in the Hill; Jenny Lind Potatoes; Potatoes Growing on the Haulm; (Illustrated); Price of Potatoes; The Potato; Wheat Culture—Missouri Wheat; Ag. Industrial Societies and Premiums; About Horses—Auction to Cattle; Draining and Sub-irrigation; (Illustrated); Steam Plowing—Successful Trial.	251

SPECIAL OFFERS.	
The Toilet Companion—Joseph Burnett & Co. Beauty—Joseph Burnett & Co.	259

ROCHESTER, N. Y., AUGUST 6, 1859.

TERMS, IN ADVANCE:

One copy, 1 year, \$2.00	One copy, 6 mos., \$1.00
Three copies, 1 year, 5.00	Three copies, 6 mos., 3.00
Six copies, 1 year, 9.00	Six copies, 6 mos., 5.00
Twelve copies, 1 year, 17.00	Twelve copies, 6 mos., 9.00
Twenty copies, 1 year, 29.00	Twenty copies, 6 mos., 15.00
Thirty copies, 1 year, 39.00	Thirty copies, 6 mos., 20.00

And an Extra Copy, free, to every person remitting for a club of six or more copies; and Two free copies for every club of thirty or over. As a new Half Volume commenced July 2d, now is your time to form Clubs for either Six Months or a Year. All persons who form new clubs to commence with July, or introduce the RURAL in localities where it is not now taken, will be liberally remunerated for their time and attention.

Back numbers from April or January can still be furnished, if desired. We will send Specimen Numbers, Show Bills, &c., to all applicants, and to the address of as many non-subscribers as may be furnished.

DOMESTIC NEWS.

Matters at Washington.

Advices received here from Nicaragua give assurance of a fair prospect of satisfactory settlement of the transit difficulties, and speak in confident terms of the ability of Gen. Juarez to secure the rejection of the Lamar-Seeladen treaty, objected to by our Government.

The balance in the treasury on the 25th was nearly \$5,000,000. The receipts for the week ending on that day were \$2,250,000. The drafts paid amounted to \$1,160,000, and the drafts issued to \$2,114,000.

A letter from Supt. Johnson has been received at the Indian Bureau, in which, speaking of the difficulty between the Pawnee Indians and citizens of Nebraska, he says:—"No white person was killed, but the whites have killed two Indians and wounded one. The Indians made no resistance when approached by the citizens, who were more culpable in producing the difficulty than the Indians. The newspaper accounts are greatly exaggerated."

Information has been received at the Department of State to the effect that the proper steps have been taken by the Chinese Government to carry into effect the arrangements made by Ex-Minister Reed, for the payment of the various claims of American citizens, amounting to about \$170,000.

The steamship Tennessee brings from Garza of Tampulapa, a request for 3,000 Americans, to prosecute the civil war in Mexico, but it is not understood that he acts under the authority of the Constitutional Government. The expedition is to be fitted out at Tampico, where Gen. Degollado now is, and is to operate south under the State authority.

A letter from Dr. Forney, Superintendent of Indian Affairs for Utah, states that two of the children spared from the Mountain Meadows were have been detained by the U. S. District

FOREIGN NEWS.

There have been four arrivals of foreign steamships during the week—the *Ocean Queen*, *Anglo Saxon*, *Europa* and *Kangaroo*—and the news brought by them we condense as follows:

Great Britain.—In the House of Commons on the 13th, the bill abolishing Church rates was debated, and passed to a second reading by a vote of 262 to 193, amidst loud cheers.

The Duke of New Castle stated that the government did not intend renewing alliances, by which the Hudson's Bay Co., held their North American Territories.

Lord Somerset said that the expediency of entering into arrangements for arming the Ocean Mail Steamers, had been under consideration, but as the Committee of Naval Affairs, in 1852, reported against such a measure, on the ground of expense, nothing had been done. A general survey, however, had been recently ordered, of the steam brigs and other vessels, at the mouths of the rivers, in order to ascertain how far they might be rendered available for defensive purposes.

On the 15th, in both Houses, reference was made to the treaty of peace. Lord Derby pointedly inquired if the King of Sardinia was a party to the treaty, for it was understood that the Emperor of the French was his ally, and not the principal in the quarrel. Lord John Russell, in the House of Commons, said he did not know whether the parties to the treaty of Vienna had been consulted, but so far as England was concerned no particulars beyond those published had been furnished. Lord Cowley had called on the French government for the details of the peace. Walewski told him he could afford him no information until the Emperor arrived in Paris, which it was expected he would on the 15th.

Sir James Graham inquired if the Government was aware that a powerful French fleet was stationed at Cherbourg and Brest, with gun boats for landing troops. Lord John Russell replied that France had made no extraordinary preparations, and consequently no explanation had been demanded.

The English government has fully determined on laying a cable direct to Gibraltar and thence to Malta.

The Chancellor of the Exchequer has introduced his budget. He stated that the total revenue received during the past financial year, was \$25,477,000, while the expenditures were \$24,863,000, leaving a surplus of over \$610,000. He estimated the revenue for the current year at \$24,340,000, and the expenditures at \$29,207,000, leaving a gross deficiency of \$4,867,000. To meet this deficiency the Government preferred direct to indirect taxation, and instead of increasing the existing duties or imposing new ones, they propose to add 4d to the income tax on incomes of over £150, and 1/2d on incomes of between £100 and £150 per annum, making the former 3d and the latter 6 1/2d. The debate which ensued was generally favorable to the scheme proposed, and the consideration of the budget in detail was postponed to the 21st of July.

FRANCE.—The statement of the Bank of France for the month of July, shows a decrease in cash of over 11,000,000 francs. The *Norde* says the treaty of peace, although arranged in principle at Villa Franca, will be definitely drawn up at Zurich, and will then be officially communicated to the Courts of Europe—the adhesion of these Courts being indispensable to the organic and internal stipulations which form part of the public law of Europe.

A Conference to settle the affairs of Italy has just been arranged at St. Cloud, and the early part of next month is spoken of as the time at which the representatives interested will assemble, but the place of their doing so is not yet mentioned. The same correspondent learns, on very high authority, that both Emperors are convinced that the bases for peace which they so hastily agreed upon, are in many respects impracticable.

The Peace Congress, it was settled, would meet at Zurich in about ten days. M. Bourguenay would represent France, and Count Collaredo would perform the same office on the part of Austria.

Letters from Paris assert that much discontent prevails there in regard to the terms of peace, and the small results of the war. Although the peace itself gave general satisfaction, the *Siecle*, the organ of the French Liberals, is dissatisfied, and says France will have everything to begin in a few years, if the minutest Austrian influence is suffered an abode in Italy. It calls for an expulsion of the petty Italian Princes, the confederates of Austria.

The Emperor arrived at St. Cloud on Sunday morning, July 17th.

The announcement of peace is said to have already caused signs of commercial improvement in France.

AUSTRIA.—The Emperor of Austria has ordered an immediate cessation of the recruiting just commenced.

It was rumored that the Emperor and Empress of the French would visit Vienna.

The French army were reported to have commenced their counter-march two days before the armistice, and a war tax was imposed on Piedmont amounting to one-tenth of all the taxes on property, customs, taxes, &c.

It was said that Garibaldi was about to issue a proclamation, and it was considered doubtful if he would lay down arms. Up to the 11th the formation of the Hungarian Legions had proceeded prosperously—five thousand men having joined.

ITALY.—Strong indications of discontent at the terms of the peace were visible in some parts of Italy. At Florence great agitation prevailed, and the Provincial government had issued a proclamation which describes the peace of Villa Franca as betraying the finest hopes, and says that the Tuscan government participated in the sentiments of the Tuscan people on the subject, and declares that Tuscany will not be replaced under the yoke and influence of Austria, against her will and rights.

SARDINIA.—The *Times* correspondent at Turin says that peace has produced the greatest exasperation and dejection in that Capital. The Emperor Napoleon is accused of being a traitor to Italy, and his portraits have been withdrawn from the shop windows, to prevent their being broken.

By the *Times* correspondent of the *Daily News* the Piedmontese are described as being a prey to grief and stupor in consequence of the peace, which leaves Sardinia without a fortified frontier.

The *Opinions* of Turin does not conceal the dissatisfaction with which it sees Venice remain in the hands of Austria.

LATVIA.—A Ministry has been formed. The Minister of War and President of the Council is Gen. Dabormei, and the Minister of the Interior is Signor Rutazzi.

The government of Lombardy has cautioned editors against using invectives in regard to recent events, and recommends them to assume sentiments of moderation, under the pain of suppression or suspension.

SWITZERLAND.—The Federal Council have resolved to disband the troops in the Canton Thurgau, where a guard for Austrian vessels will alone remain. They have also resolved on enforcing severe measures to prevent the enrollment of the Swiss for foreign military service. An order has been issued to disband the troops called out during the war, and repealing the measure against the exportation of arms, ammunition, &c.

PRUSSIA.—The Prussian *Gazette* says, that in consequence of the treaty of peace, orders have been transmitted to the troops on the march, to halt at the respective places where they may happen to be; also, that the proposal made by the Prussian Ambassador to the Federal Diet, in regard to the Federal troops, had, under present circumstances, been withdrawn by the Prussian government.

NAPLES.—Additional details of the recent partial mutiny of the Swiss troops are received. A party of troops mounted in the barracks, killing the Colonel and several officers of the 4th regiment, and afterwards repaired to the Royal Palace, but were driven back by the Chasseurs and Hussars on duty, to the Campagna Mare, where they were surrounded. The Commander-in-Chief of the Swiss called on them to surrender. They replied by a discharge of fire-arms, wounding the General and about twenty privates. Orders were then given to fire on the mutineers, when 75 were killed and 238 wounded.

COMMERCIAL.—*Brussels.*—The weather has been favorable for the crops, and the harvest prospects are excellent. Flour was very dull, and French was offered at 10s@10s6d per cwt. Wheat dull but southerly unchanged, though parcels were pressing on the market. Western red 10s@10s6d; White 9s@9s6d; Southern white 10s@10s6d; Corn dull and nominal. Mixed and yellow 8s@8s6d; White 7s@7s6d. *Provisions.*—Byland, tinned &c., Richardson, Speece &c., James McGeary and others, quote pure and slightly lower, but quotations nominal. Lord Quay.

Clippings from Foreign Journals.

Miss Florence Nightingale is so extremely ill that the worst results are apprehended. Her strength is diminishing sadly. She has been removed from Highgate to London, but is now confined to her room.

In London there are only nine chartered Banks besides the Bank of England. Not one of these is allowed to issue notes payable on demand. Their united deposits are about £40,000,000 sterling, or two hundred million dollars.

COUNT ARRE. the new Prime Minister of Sardinia, appointed to fill the vacancy caused by the resignation of Count Cavour, is a young man of not very prominent position in Sardinian politics, but one who has had some little diplomatic experience, having been sent by Cavour to Paris last spring as Envoy. He is a warm admirer of Louis Napoleon, and will be governed by his influence.

The London papers, of late date, record the death of Lieutenant General Proctor, who played such an important part in the last war with Great Britain, having commanded the 82d regiment at the battle of Fort Erie, and subsequently shared in the campaign along the Niagara frontier. He was colonel of the 97th regiment. He died a few weeks since at his seat in Wales, suddenly, from disease of the heart. He had been sixty years in the army. In July, 1814, he commanded the 82d before Fort Erie from September 2d, and throughout the successive operations of the campaign, on the Niagara frontier. He received the brevet promotion of lieutenant colonel for his conduct in repelling the attack on the batteries and position before Fort Erie, on the 17th of September, 1814.

Lord Palmerston stated in the British House of Commons, on the 4th ult., that no reform measure could be introduced into the British Parliament at present.

A Paris letter in the *Independence*, of Brussels, gives the following account of the circumstances which preceded the armistice:—"The Emperor of Austria having caused a demand to be made in the French camp, if it were not possible to obtain the remains of Prince Windischgratz, who was killed at Solferino, the Emperor Napoleon caused them to be sought for—and they were recognized partly by his uniform, and partly by some letters from his newly married wife, which he had about him. The corpse was placed in an artillery wagon, and conveyed, accompanied by an officer of the staff and an escort, to the Austrian headquarters. The officer expressed to the Emperor the condolence of the Emperor of the French; and his Austrian Majesty (who was just recovering from a somewhat severe indisposition) begged, not without emotion, the officer to convey his thanks to the Emperor Napoleon, and to express his sorrow at the death of so many brave men in the French army. This led to some remarks on the cruel necessities of war, and from what was said the Emperor Francis Joseph was able to perceive that those necessities were regretted as much by his opponent as by himself. The Emperor Francis Joseph afterwards sent the son of Gen. Urban with a flag of truce to the French camp, as is known, and the Emperor Napoleon, by an autograph letter, proposed a suspension of arms."

RARRY has been very successful in London in taming a vicious horse, the "King of Oude." The *Asian* says the audience fairly trembled when he unlocked the iron pole, gave it to the groom, and, with not even a stick in his hand, stood in the ring with that screaming savage of a horse, and then fairly outmaneuvered him by his weird-like tact.

The News Condenser.

- The Ohio is very low.
- Yellow fever is prevalent in Havana.
- Blackberries are abundant in Kentucky.
- A late Phila's Express brought \$3,000 in gold.
- Street Railroads are to be constructed in Cleveland.
- Gen. Paaz, of Venezuela, has returned to New York.

- From the 16th to the 21st ult., inclusive, there were 81 deaths by sunstroke at Cincinnati, being about one-fourth the entire number of cases.
- A suit has been instituted in Kentucky for the recovery of over 40,000 acres of land in Harrison, Bourbon, Nicholas, and other counties.
- The people of Southern Kansas are holding meetings in favor of a railroad from the mouth of Kansas river to the southern boundary of Kansas.
- The Hamburg papers notice the arrival of 500 tons of Cincinnati pork, to provision the garrisons of Mayence, Ehrenbreitstein, Rastadt, and Ulm.
- The imports at Baltimore for the quarter ending on the 1st were \$2,935,000; exports \$2,215,000; tonnage entering and arriving 815,000; number vessels 1,063.
- A sturgeon weighing over 300 lbs was caught by the revolution of the wheels of the Isaac Newton, and thrown up into the wheel house where it was found.
- The total vote of Virginia in the late election, was only about 150,000. The vote of Ohio, which, some years ago, was a county of Virginia, is about 400,000.
- A day swim over the Detroit river from Detroit to the Canada side on Saturday week. The distance is half a mile, and the current three or four miles an hour.

THERE'S WORK ENOUGH TO DO.

This blackbird early leaves its nest
To meet the smiling morn,
And gather from its nest
From o'pland, wood, and lawn,
The busy bee that wings its way
Mid scenes of varied hue,
And every flower would seem to say—
"There's work enough to do."

The cowslip and the spreading vine,
The daisy in the grass,
The snowdrop and the gillyflower,
Preach sermons as we pass.
The ant, within its cavern deep,
Would bid us labor too;
And writes upon his tiny heap—
"There's work enough to do."

The planets, at their Maker's will,
Move onward in their cars,
Nor nature's wheel is ever still—
Progressive as the stars!
The leaves that flutter in the air
And Summer's breezes woo,
One solemn truth to man declare—
"There's work enough to do."

Who, then, can sleep, when all around
Is active, fresh, and free?
Shall man—creation's lord—be found
Less busy than the bee?
Our courts and alleys are the field,
If men would search them through,
That best the sweets of labor yield,
And "work enough to do."

To have a heart for those who weep,
The selfish drunkard win;
To rescue all the children, deep
In ignorance and sin;
To help the poor, the hungry feed,
To give him coat and shoe;
To see that all can write and read—
"There's work enough to do."

The time is short—the world is wide,
And much has to be done;
The wondrous earth, and all its pride,
Will vanish with the sun.
The monarchs fly on lightning's wings,
And life's uncertain, too;
We've none to waste on foolish things—
"There's work enough to do."

Entered according to Act of Congress, in the year 1880, by D. D. T. Moore, in the Office of the Clerk of the District Court for the Northern District of the State of New York.

ROSAMOND; OR, THE YOUTHFUL ERROR.

A TALE OF RIVERSIDE.

BY MRS. MARY J. HOLMES.

[Continued from page 252, last number.]

Chapter X.—The Story.

"Mr. home," began Miss Porter, "is, as you know, in Florida. I am an only child, as were both my parents, so that I have no living no nearer relative than a great uncle, a superannuated clergyman, who superintends my affairs, and who in case I die before he does, which is very probable, will be heir to my possessions."

"It is now nearly ten years since my father started for Europe, and I went to an adjoining State to visit a widow lady, whom I had met in New Orleans the winter previous. It is not necessary that I should use real names, consequently I will call her Mrs. Le Vre. She was spending the summer on her plantation, at what she called her country seat. It was a large, old-fashioned, wooden building, many miles from any neighbors, and here she lived alone—for her only son, a lad twelve years of age, was at some northern school. At first I was very lonely, for the secluded life we led at Holly Grove was hardly in accordance with the taste of a young girl. Still I did not mind it as much as some, for I cared but little for gentlemen's society, and had frequently declared that I should never marry."

"Towards the last of July, Mrs. Le Vre's brother came to visit her. He was a handsome, boyish-looking youth, six months older than myself, just out of college, full of life and very fond of pretty girls, particularly if they chanced to be wealthy."

"That's a little like Ben," said Rosamond, and Miss Porter continued.

"From the first, Mrs. Le Vre seemed determined to make a match between us, for her brother was poor, and she fancied it would be a fine idea to have the Porter estate come into the Dunlap family. So she threw us constantly together, talked of me to him and of him to me, until I really began to believe I liked him. He, on the contrary, cared for nothing but my money. Still he deemed it advisable to assume a show of affection, and one night talked to me of love quite eloquently. I had been to a dinner party that day and worn all my diamonds. He had never seen them before, and they must have inflamed his avarice, for I afterwards heard him tell his sister that he never should have proposed if I had not looked so beautifully that night. 'I was irresistible in my diamonds,' he said."

Miss Porter paused a moment to witness the effect of her last words, but Rosamond was looking over her shoulder at a wrinkle she had just discovered in the wall, and did not heed them. Still she was listening, and she said, "Yes, go on. You were looking beautifully that night. Did you consent to marry him?"

"Unhappily, I did," returned Miss Porter, "for I had made myself believe that I loved him. I wished that he was older, to be sure, but he said we would wait until he was of age. This plan, however, did not suit his ambitious sister. She knew I intended asking my father's approval, and from what she had heard of him she feared he would never consent to my marrying a poor stu-

dent, and she urged an immediate union. But I persisted in writing to my father, who answered immediately, forbidding me to think of young Dunlap, ordering me to go immediately home, and saying he always intended me for John Caswell, a neighbor of ours, a millionaire, a doer, a fool, whom I hated as I did poison."

"Not long after the receipt of this letter I was surprised by the sudden appearance of Uncle Ben, who had come at my father's request to take me home. This roused me at once. My father was a tyrant, I said, and I would let him know I could do as I pleased. In my excitement, I fancied I could not exist a moment without Richard Dunlap, while he declared that life would be a blank for him if passed away from me. At this opportune moment Mrs. Le Vre suggested that we be married immediately, that very night. Uncle Ben, fortunately, was a clergyman, and could officiate as well as any other. In justice to Richard I will say that he hesitated longer than I did, but he was persuaded at last, as was Uncle Ben, and with no other witness than Mrs. Le Vre and a white woman who lived with her as half waiting-maid and half companion, we were married."

Rosamond was interested now, and forgetting to remove her dress, she threw a crimson shawl around her shoulders, and sitting down upon the bed, exclaimed: "Married! You married! Why, then, are you called Porter?"

"Listen and you shall know," returned the lady, a dark look settling down upon her face.

"Scarcely was the ceremony over, when I began to regret it, not because I disliked Richard, but because I dreaded my father's displeasure, for he had a most savage, revengeful temper, and his daughter possessed the same." This was bitterly spoken, and she continued. "Hardly an hour after we were married, a negro brought a letter to Richard from an eccentric old man for whom he had been named. In it the old man said he had made his namesake his heir, provided he did not marry until he was twenty-five."

"I know just how *frivolous* you are," he wrote, "and I know, too, how unsuitable and unhappy most early marriages are, so my boy, if you want Sunnyside, wait till you are twenty-five before you take an extra rib. I hate to be bothered with letters, and if you don't answer this, I shall conclude that you accept my terms."

"Mrs. Le Vre at once suggested that, as the old gentleman had already had two fits of apoplexy, and would undoubtedly soon have the third, our marriage should for a time be kept a secret."

"But he didn't consent," cried Rosamond.

"Yes, he did," answered Miss Porter, "and though I, too, said it would be best, I began to distrust him from that moment, to think that he preferred money to myself. Uncle Ben, promised secrecy and went back alone, and then commenced a life of wretchedness, which makes me shudder even to recall it. With the exception of my own servant, who dared not tell if I bade her be silent, the blacks knew nothing of our marriage, and though we lived together as man and wife, so skillfully did Mrs. Le Vre and Esther, her white domestic, manage the matter, that for a time our secret was safely kept. A few of the negroes discovered it ere I left; but as they always lived in that out-of-the-way place, it never followed me, and to this day no human being in Florida, save Uncle Ben, knows of the marriage."

"I am very impulsive, and the excitement being over, my affection began to cool. Richard could have kept it alive had he tried, but he did not. On the contrary he was much alone, and when with me was always tormenting me with conscientious scruples about deceiving 'the old man.'"

"Oh, I like him for that," cried Rosamond, "I like him for that. Why didn't you let him tell?"

"Because," returned Miss Porter, "I had fears that father would disinherit me, and if Richard lost Sunnyside, we should be poor indeed."

A shadow passed over Rosamond's face, and she said involuntarily, "I could be happy with Mr. Brown if we were poor."

Marie started and answered quickly, "What has Mr. Brown to do with my story?"

"Nothing, nothing," returned Rosamond, "only I was thinking that if you loved Richard as well as I do Mr. Brown, you would not have cared for money."

"But I didn't," returned Marie. "I was mistaken. 'Twas a mere childish fancy. I never loved him. I hate him now."

She spoke vehemently, and when Rosamond said mournfully, "Hate your husband?" she replied, "Yes, more than hate, or I had never come to tell you this; but listen, from indifference we came to coldness, from coldness to recrimination, from that to harsh words, from harsh words to quarrels—and from quarrels to blows!"

She uttered the last word slowly, while Rosamond exclaimed, "Not blows, Miss Porter! No man would strike a woman. I almost hate him, now."

The proud lip curled scornfully, a gleam of satisfaction shot from the keen black eyes, and Marie went on. "He would say, 'no day says I was the most to blame, that I aggravated him beyond human endurance, but he provoked me to it. Think of his swearing at me, Rosamond, calling me a *she-devil* and all that. Think, too, of his telling me to my face that he was driven into the marriage wholly by his sister, that he regretted it more than I, and to crown all, think of his boxing my ears!—he, a poor, insignificant Northern puppy, boxing me—a Porter, and a Southern heiress!"

She was terribly excited, and Rosamond, gazing at her face, distorted with malignant passion, began to fancy that the greater wrong might perhaps have lain with her.

After a moment's pause, Marie began again. "When we had been three months man and wife, he wrote to the old man, confessing his marriage, and saying sundry things not wholly complimentary to his bride; but I intercepted it, read it, tore it up, and hunted him with it. I believe I called him a *low-down Yankee*, or something like that, and then it was he struck me. The blow sunk deep into my soul. It was an insult, an unpardonable insult, and could not be forgiven. My Southern blood was all on fire, and had I been a man, he should have paid for that blow. I feel

it yet; the smart has never for a moment left me, but burns upon my face just as hatred for him burns upon my heart!"

"Oh, Miss Porter," cried Rosamond, as the former ground her teeth together, "don't look so terribly. You frightened me. He struck you, but he asked your pardon, sure?"

"Yes, he pretended to, but I spit at him and bade him leave me forever. His sister tried to interfere, but she made the matter worse, and as my father was on the eve of embarking for America, I determined to go home, and when he came, tell him the whole and ask him to seek satisfaction from one who had dared to strike his daughter. Richard made a show of trying to keep me, said we had better live together, and all that, while his sister called us two silly children who needed whipping. But I did not heed it. I went home to Uncle Ben and waited for my father, who never came. He died upon the sea, and I was heir of all his vast possessions. Then Richard made overtures for reconciliation, but I spurned them all. You've heard of *woman-haters*, Rosamond—I am a *man-hater*. I loathe the whole sex, Uncle Ben, excepted. My marriage was of course a secret in Florida. My servant, who knew of it, died soon after my father, and as Uncle Ben kept his own counsel, more than one sought my hand, but I turned my back upon them all."

"Four or five years ago he wrote me a letter. He was then master of Sunnyside, for the old man left it to him after all. He was lonely there, he said, and he asked a reconciliation. Had he never struck me, I might have gone, for his letter was kindly enough, but the blow was a barrier between us, so I refused to listen, and exulted over the thought of his living there alone all his days with the secret on his mind."

"The sweetest morsel of all in the cup of revenge was, however, for a time withheld, but it came at last, Rosamond. It came at last. He loved a beautiful young girl, and loved her all the more that he could not marry her."

She drew nearer to Rosamond, who, though still unsuspecting, trembled from head to foot with an undefinable emotion of coming evil.

"I saw her, Rosamond; saw this young girl with his name upon her lips when waking, saw her, too, with his name upon her lips when sleeping, and all this while she did not dream that I, the so-called Marie Porter, was his wife, the barrier which kept him from saying the words her little heart longed so to hear."

There were livid spots on Rosamond's neck, livid spots upon her face, and still she did not move from her seat, though her clammy hand clutched nervously her bridal dress. A horrid suspicion had flashed upon her, but with a mighty effort she threw it off as injustice to Mr. Brown, and mentally crying, "It cannot be," she faintly whispered, "Go on."

"The summer I met her," said Miss Porter, "I was at Cartersville, a little out-of-the-way place on a lake."

"You're telling me true?" interrupted Rosamond, joy thrilling in her tones.

"Yes, true," returned Miss Porter. "Then bless you, bless you for those last words," rejoined Rosamond, burying her face in her companion's lap. "A terrible fear for a moment came over me that it might be I. But it isn't. I met you at the Springs. Oh, if it had been me, I should most surely die."

"But she did not, the young girl," resumed Miss Porter. "She had a brave, strong heart, and she bore up wonderfully. She felt that he had cruelly deceived her, and that helped her to bear the blow. Besides, she was glad she knew of it in time, for had he married her she would not have been his wife, you know."

Rosamond shuddered and replied, "I know, but my heart would have broken all the same. It aches so now for her. But go on, how did she find it out. Who could have strength to tell her?"

There was a pause, and each could hear the beating of the other's heart. The November wind had risen within the last half hour, and now howled dimly past the window, seeming to Rosamond like the wail that young girl must have uttered when she first learned how her trust had been betrayed. The clock struck four! Rosamond counted each stroke, and thought, "One hour more and he will be here." Marie counted each stroke, and thought, "One hour more, and I must be gone."

"Rosamond," she began again, "what I now have to confess is an act of which I have repented bitterly, and never more than since I sat within this room. But it was not premeditated, and believe me, Rosamond, it was not done for any malice I bore to that young girl, for I pitied her so much, oh, so much, and her hand wandered caressingly over the bright hair lying on her lap."

"We went out one afternoon, two ladies, a gentleman and myself, in a small sail-boat upon the lake. I planned the excursion and thought I should enjoy it, but we had not been out long when my old affection of the heart began to trouble me. I grew faint, and begged of them to put me on the land. They complied with my request, and set me down upon a point higher up than that from which we had embarked, and near to a dilapidated cabin where lived a weird old hag, who earned a scanty livelihood by fortune-telling. I told her I was sick, and sat down by her door where I could watch the movements of the party. Suddenly a terrific thunder-storm arose, the wind blew a hurricane, and though the boat rode the billows bravely for a time, it capsized at length, and its precious freight disappeared beneath the foaming waves. For a moment horror chilled my blood; then, as the lightning which leaped from the cloud overhanging the graves of my late companions, a maddening thought flashed upon my mind."

"But the girl—hasten to that part," said Rosamond, lifting up her head, while Miss Porter went back to her chair.

"I shall come to her soon enough," returned Miss Porter, continuing her story. "No living being, save the old woman at my side, knew of my escape, and I could bribe her easily. Fortunately I carried the most of my money about my person, and I said to her, 'There are reasons why, for a time at least, I wish to be considered dead. Here

are twenty dollars now, and the same shall be paid you every month that you are silent. No human creature must know that I am living.' I saw by the kindling of her eye at sight of the gold that I was safe, and when the night shadows were falling I stole from her cabin, and taking a circuitous route to avoid observation, I reached the railway station in time for the evening train."

"Three days later in a distant city I read of the sad catastrophe—read that all had been found but one, a Miss Porter, from Florida, and as I read I thought 'he will see that, too.' He did see it. Before going to Cartersville I sent to Sunnyside a girl who was under peculiar obligations to me, and one whom I could trust. She secured the place. She was employed at last about the person of that young girl, who had lived at Sunnyside since she was a child, a friendless orphan."

There was a quick, gasping moan as if the soul were parting from the body, and Rosamond fell upon her face, which the pillows concealed from view, while Miss Porter hurriedly proceeded.

"There is but little more to tell. I wrote to the girl who took her own letters from the office. I told her all, and from her hand the bridal day was fixed. The obstacle was removed—not *insanity*, but a *living wife*. Need I say more?"

She paused, but from the bed where she lay, motionless figure lay, there came no sound, and she said again, "Speak, Rosamond. Curse me, if you will, for saving you from an unlawful marriage."

Still there was no sound, save the low sighing of the wind, which seemed to have taken a fresh note of sadness as if bewailing the unutterable desolation of the young girl, who lay so still and lifeless that Marie Porter's heart quickened with fear, and drawing near she touched the little hand resting on the pillow. It was cold—rigid—as was also the face which she turned to the light.

"It is death!" she cried, and a wild shriek rang through the house, bringing at once the servants, headed by Mrs. Peters.

"What is it?" cried the latter, as she saw the helpless figure and beautiful upturned face.

"It's death, madam, death, and it's coming on me, too," answered Miss Porter, clasping her hands over her heart, which throbbed as it never had done before, and which at last prostrated her upon the lounge.

But no one heeded her, save the girl Marie. The rest gave their attention to Rosamond, who lay so long in the death-like stupor that others than Miss Porter believed her dead.

The clock struck five! and echoing from the Granby hills the engine-whistle came. Then a slight tremor ran through her frame, and Mrs. Peters whispered joyfully, "There's life—there's hope."

Along the highway the returning traveler came with rapid tread, but beneath the sycamore no Rosamond was waiting.

"She is hiding from me," he said, but his search for her was vain, and he rapidly hastened on.

All about the house was still. There was no Rosamond waiting in the door—nor in the hall—nor in the parlor—nor on the stairs—but from her chamber came the buzz of voices, and he entered unannounced, recoiling backward when he saw the face upon the pillow and knew that it was Rosamond's. Every particle of color had left it; there were dark circles beneath the eyes, and a look about the mouth as if the concentrated agony of years had fallen suddenly upon her.

"What is it?" he asked, and at the sound of his voice, the brown eyes he had been wont to call so beautiful unclosed, but their sunny brightness was all gone, and he shuddered at their dim, meaningless expression.

She seemed to know him, and stretching her arms towards him as a child does towards its mother when danger threatens, she laid her head upon his bosom with a piteous wail the only really audible sound she had yet uttered.

"Rosamond, darling—what has come upon you?" he said, "and why are you in your bridal dress?"

At that word she started, and moving away from him, moaned sadly, "It was cruel—oh, so cruel to deceive me, when I loved and trusted him so much."

"Won't somebody tell me what this means?" he demanded, and Mrs. Peters replied, "We do not know. There's been a strange woman here, and she was with Rosamond when it happened."

"Woman? What woman? And where is she now?" he asked, and Mrs. Peters replied, "She was faint—dying, she said, and Marie took her into another chamber."

Mechanically he started for that chamber—hearing nothing—seeing nothing—thinking nothing for the nameless terror which had fallen upon him. He did not suspect the real truth. He merely had a vague presentiment that some one who knew nothing of the drowning had come there to save his Rosamond from what they supposed to be an unlawful marriage, and when at last he stood face to face with his living wife, when he knew the grave had given up its dead, he dropped to the floor as drops the giant oak when felled by the lightning's power!

Marie Porter, even had she been cruelly wronged, was avenged—fully, amply avenged, and covering her face with her hands, she moaned, "I have killed them both, and there's nothing left for me now but to die!" [Concluded next week.]

IMPORTANT TO EVERY ONE.—Exercise for the body, occupation for the mind—these are the grand constituents of health and happiness, the cardinal points upon which everything turns.

Motion seems to be a great preserving principle of nature, to which even inanimate things are subject; for the winds, waves, the earth itself, are restless, and the waving of trees, shrubs, and flowers is known to be an essential part of their economy. A fixed rule of taking several hours' exercise every day, if possible in the open air, if not, under cover, will be almost certain to secure an exemption from disease, as well as from the attacks of low spirits, or *ennui*, that monster who is ever waylaying the rich and indolent.

He that is good will infallibly become better, and he that is bad, will certainly become worse; for vice, virtue and time are three things that never stand still.—*Colton*.

KENTUCKY SEED WHEATS.

MAY WHEAT.

HILL WHEAT. WHITE KENTUCKY WHEAT. We are storing some of our receipts of the best grown and purest samples of the above varieties of Wheat grown in Kentucky and Tennessee, for the use of farmers as seed. We think we propose to sell at prices very low, and to pay the extra expenses incurred by so doing, in addition to the current value of the seeds for sowing purposes. "May Wheat" is probably the earliest known in Kentucky, ripens late to 10th of June, has succeeded perfectly in the State the present season, heads smooth, kernels short, plump, heavy, and bright amber color, and composes one-half the stock from which is manufactured the justly celebrated St. Louis Double Extra.

"Hill Wheat" resembles the May in color and qualities—heads rounded, kernels nearly as long as Mediterranean, and plump.

"Mediterranean and White" are too well known to require description, but from several experiments we are well convinced of the use of Kentucky or Tennessee seed will hasten the crop several days. (C. H. & C.)

STRAWBERRIES.

WILSON'S ALBANY SEEDLING.
The Best and Greatest Bearing Strawberry Known. This fine fruit has yielded with the subscriber this season, two bushels to the square rod, or over 300 bushels to this acre.

For sale in any quantity, at \$5 per 1,000; \$3 for 500; 75 cents for 100, and 50 cents for 50. They can be set any time before the first of October; yet it is better to set them in August, or by the fore part of September. Address—T. BUCHANAN, Jr., Utica, July, 1880. 409-31

JUST PUBLISHED, STRAIGHT FORWARD.

OR, WALKING IN THE LIGHT.

BY LUCY M. GILLEN, OF NEW YORK, author of "The Ready Work." The juvenile religious literature of our country is more largely indebted to our lady writers than to any and all other sources. They have been called the educators of the nation, and well do they deserve an exalted place in the best affections of the people. They have richly earned it. Miss Gilken's is no stranger at the firesides of American homes. Her name is a household word alike in the palaces of the rich and the cottages of poverty. Tens of thousands have hung with delight upon the words of this gifted lady in the half score of volumes she has produced for the world, and thousands more will catch the words of interest that have dropped from the pen of this ready writer in the book now announced. STRAIGHT FORWARD is no ordinary work, as it is the product of no ordinary mind. It is a book for girls, and no mother should fail to place it in the hands of her daughter. With some it may cost an effort to secure it, but its power will disarm temptation, while the deep and tender spirit of Christianity which pervades the work, adds a double charm to its value. Complete in one volume, 84 pages. Price 75 cents. Send pre-paid receipt of the price in stamps. HENRY HOYT, 9 Cornhill, Boston. 409-41

INGHAM UNIVERSITY.—Annual Term commences September 21st—third Wednesday. For applications, direct simply "Ingham University, Le Roy, N. Y." Institution will proceed with few changes as heretofore, Mrs. STANTON and Mrs. INGHAM still interested and assisting in its progress.

Terms per annum for Board and Tuition, \$150. Few Extra Privileges at request. SAM'L HANSON COX, Chancellor. Le Roy, N. Y., July 5, 1880. 409-41

WILSON'S ALBANY SEEDLING!

BEST AND MOST PROLIFIC STRAWBERRY!

Yield's Over 300 Bushels Per Acre! This unrivaled Berry has this year, on my grounds, exceeded all previous ones in size, quality and productive ness. Numerous specimens, from 4 to 4 1/2 inches in circumference, some still larger. Having marked the earliest and best of this fruit, and for nearly two weeks I can select, strong, selected, from 4 to 4 1/2 inches in circumference, packed and delivered in Albany, \$10 for 1,000; \$6 for 500; \$1.50 for 100; \$1 for 50. Descriptive circular sent to applicants including stamp. NO TRAVELING AGENTS. W. B. RICHARDSON, Riverview, Albany, N. Y. 409-41

SUNDAY SCHOOL BOOKS AND PAPERS.

VOL. X. NO. 33.]

ROCHESTER, N. Y.,—FOR THE WEEK ENDING SATURDAY, AUGUST 13, 1859.

[WHOLE NO. 501.

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
RURAL, LITERARY AND FAMILY NEWSPAPER.
CONDUCTED BY D. D. T. MOORE,
With an Able Corps of Assistants and Contributors.

TERMS, IN ADVANCE:
Two Dollars a Year—\$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for \$5; Six, and one free to club agent, for \$10; Ten, and one free, for \$15; Fifteen, and one free, for \$20; Twenty, and one free, for \$25; Thirty, and one free, for \$35; Forty, and one free, for \$40; Fifty, and one free, for \$45; and any greater number at same rate—only \$1.25 per copy—with an extra copy for every Ten Subscribers over Thirty. Club papers sent to different Post-offices, if desired. As we pre-pay American postage on papers sent to the British Provinces, our Canadian agents and friends must add 12½ cents per copy to the club rates of the RURAL.—The lowest price of copies sent to Europe, &c., is only \$2.50—including postage.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

THE SEASON AND CROPS.

For several weeks the weather has been warm, with frequent, often heavy showers. Wheat, rye and barley has been harvested in good condition, for although the rains have been so frequent we have had enough of fair sunshine to enable the farmer to secure these crops without injury.—Bright sunshine and clouds and rains have followed each other in quick succession—the day which commenced clear, with a prospect of a "dry spell," would meet with a change before noon, and the rain descend with the greatest impetuosity, causing the farmer to conclude that all work for the day was over—but in an hour all would be bright, the moisture soon evaporated by the sun and wind, and work be resumed with increased energy. We hear of no complaints of injury—no one even whispers of grown wheat.

Oats, we perceive, are rapidly ripening, and the crop will be at least fair, while many fields that we have noticed in our travels will give more than an ordinary yield. The Bean is becoming a favorite crop in many sections, and it is not uncommon to see fields of ten or even twenty acres. When ripened early, so as to be secured before the fall rains, they are quite profitable, but they are easily injured, and few lots entirely escape that are harvested during a wet time in the fall. Most farmers we find have suffered in this respect. As we have been personally applied to for information, we will give a few facts. It is necessary to have the crop secured before there is danger of frost, and if the beans are fully formed it is sometimes wise to house them without waiting for further ripening. When the season, however, is favorable, they should be allowed to remain until the latest pods are turned to a yellow color. Then pull them up, lay in small heaps to dry, and thresh as soon as dry enough. This is all well, and can be done very easily if the weather is warm and dry. If, however, cold rains should be the order of the day, the harvesting will be much more difficult. The practice of some is to collect them in stacks around stakes, with the roots in the centre. Here, if sufficiently ripened, and the weather is not too wet, they will cure without a great loss; but in very unfavorable seasons, we have seen them damaged materially, especially if the stacks are made large, or are allowed to rest on the soil.—Place a few inches of straw on the ground to make the stack upon, and make it largest at the top.—This sheds the water and facilitates the drying. After the rain has ceased, in some cases it will be advisable to re-stack them, for the same reason that the farmer often finds it to his advantage to fork over and re-stack his hay, but this would not be frequently necessary. Those who have plenty of barn room often carry them directly from the field to the barn, where they occupy every available space for drying, and in a short time become sufficiently dry for threshing. If any of our readers know of a better method of curing, they could not do better than communicate the fact through the RURAL, as this is where many fail, and almost all suffer more or less.

Corn, in most places, is looking tolerably well, some fields exceeding fine, though we do not anticipate more than an average crop. Much of that late planted is quite short, though pretty stout, of fine color, with a good show of ears. Potatoes never looked better. Some have ex-

pressed fears that the wet weather will induce rot, but of this we observe not the slightest sign. The tops never looked more healthy and vigorous, and we confidently anticipate an abundant crop of healthy tubers. Two, or even three weeks of dry weather would not result in injury. What would be the result of continued rains, of course we cannot say, but we see no cause for mournful forebodings. Thus far, all is well.

Everything but the grass crop has given, or promises to give, an abundant harvest. On this point great caution will be necessary, or many of our farmers will find themselves unprepared for the coming winter. To purchase hay at present prices, or at the prices which will be likely to rule the coming winter, will be an unprofitable operation. The profits of a good wheat or oat crop may be rapidly dispersed in the purchase of feed for cattle. Care in housing straw, stalks, and all coarse fodder is now more than ever necessary, and we notice many vacant spots on almost every farm where, even at this late day, we would put in a little turnip seed. If the weather should continue moist a fine crop may be secured, that will be a great help to the cattle and the farmer's pocket in the winter.

WHEAT GROWING.—THE OTHER SIDE.

Ens. RURAL:—The opinion is getting to be very general among farmers that they can grow wheat again as well as ever. The assertion of a worthy farmer, a few days ago, that "we can raise wheat as well now as we could twenty years ago—that we might as well raise wheat as rye—and that there was no good reason why we could not raise wheat," is becoming the general opinion of a large proportion of the farmers of this section. Last year what little wheat there was sown in this vicinity did very well. This induced farmers to sow more last fall, which has made a heavy growth, and where not injured by the June frost is well filled; and now, wheat having escaped the midge two seasons, farmers think the insects have left, and that we have nothing more to fear from their ravages.

But let us see if there is no other reason for this exemption from the midge. Has the season nothing to do with it? It may be remembered that for several years we had very late, backward springs—that wheat was very late, not being ready to harvest until nearly or quite the first of August—and that in every one of these late seasons the midge has been very destructive—while the last and present seasons have been much earlier, so that wheat has been harvested some two or three weeks earlier than it had for several years before. Now, in my opinion, this explains the reason of the midge not troubling the wheat last and this year.

It is some fifteen years since I moved from the eastern part of the State into this county. The midge had been very destructive for some years before I left, so that I had some opportunity to see how they worked. On coming to this section I found the wheat crop several weeks earlier than it usually was at the east, so that I believed that the midge would never be very troublesome in Western New York, for that reason—although I could not altogether divest my mind of the fear that the same weather and season that was necessary to bring forward and perfect the wheat crop, might bring out the midge in season to destroy it. As time wore on and the midge began to appear in this section, I found that reasons were not wanting for both opinions. The midge first made its appearance here in a few late heads, near the fences, but increased in numbers and destructiveness year after year, until nearly all the wheat sown was destroyed, not even excepting the Mediterranean. At the same time the seasons were gradually growing later and later, until about the time the midge was the worst their backwardness was the subject of general comment by all classes. Then also I noticed that as the insects increased in numbers they made their appearance earlier in the season each year, until only by sowing early varieties and having forward seasons, can we reasonably expect to escape their ravages.

Another thing I have noticed is, that the midge, in common with other insect depredators, is not as troublesome some years as others. For instance, in some sections in the eastern part of the State, where they have prevailed more or less for the last twenty-five years, there have been periods of two or three years when the midge has done little or no damage. Then farmers would take courage, thinking they had left the country entirely, and sow large fields of wheat only to see them completely destroyed, there being in many instances not grain enough left to pay for harvesting.—Now, Messrs. Editors, I think there is reason to fear that sooner or later this will be the case here—that farmers, thinking they are not going to be troubled any more with this pest, will sow wheat

as largely as ever, only sooner or later to meet with heavy losses and bitter disappointments.

Orleans Co., N. Y., July, 1859.

F. REMARKS.—Having discussed the proposition whether wheat can again be successfully grown in this and other midge-infested sections, and perhaps leaned to the bright, hopeful side, we are glad to receive and publish arguments from practical and experienced cultivators who take a different view of the subject. As no picture is perfect without both light and shade, so few questions can be properly understood unless both sides are presented—and a full discussion, pro and con, is the best way to arrive at just and truthful conclusions. Our correspondent, F., takes the dark side of the question, and his reasons and conclusions are worthy of consideration. Caution is the parent of safety, and it is well to look at this matter in all its bearings, and not venture too much upon an uncertainty. In common with many of the most observing farmers of this region we are of the opinion that wheat culture can be safely resumed in this State, yet would not advise farmers to "sow wheat as largely as ever," but rather to exercise caution in returning to the former great staple. As we said two weeks ago—after expressing the opinion that wheat could still be successfully and profitably cultivated in this section—"we do not wish to excite hopes which may not be realized, and would not advise those who have changed from wheat growing to other branches of husbandry in which they are now succeeding, to return at once or fully to the former staple. The soil of a large portion of this State is eminently adapted to the production of wheat, and in some sections—if the enemies of the crop can be evaded—it will probably long prove the most remunerative crop that can be grown. Hence, we believe it advisable for those who own good wheat soil, and are not profitably engaged in other branches, to try wheat culture again—returning to it gradually and on a small scale, until satisfied as to the safety and profit of a full resumption." It must be remembered, that in order to succeed in wheat culture—against both the midge and late, unfavorable springs—the soil should be rich, warm and well cultivated, and the seed of early varieties and sown early.

SEEDING TO GRASS.

H. J. D., of Hector, N. Y., says,—"I feel pretty well used up in the grass seed line." He is evidently losing confidence. May I be permitted to say to him that I have confidence, although I feel a reluctance in presenting my mode, for it will be odd and unusual, and likely to receive more sneers and kicks than coppers. I have been a cultivator for eleven years, on a moderate scale—a novice in the beginning. The first two years I sowed Timothy in March, or first of April, on winter wheat. It proved pretty much a failure, and since then I have sowed no Timothy seed in the spring. About that time I got an idea from an agricultural work, of brining clover seed; I tried it, and for five years past have sowed no clover or Timothy seed without brining it. My mode of preparing it is, to spread my seed on a smooth floor three or four inches thick, sprinkle on strong brine of common salt, and with a common shovel work it over, add brine and work it till all is saturated; spread it to three or four inches depth, leave it for six or twelve hours, or any such time, then add a little more brine; then on a bushel of seed would mix from 12 quarts to 1½ bushel of plaster, putting on the plaster with a sieve, a few quarts at a time, and shovel each parcel till the seed does not adhere in lumps. You then have nearly twice the bulk and about double the weight of your dry seed. All the time lost in preparing is doubly gained in sowing. I sow it in the same manner that I do wheat, except in the width of cast; I go three times where I would twice with wheat, and sow it as evenly as wheat can be sown.

In no instance do I sow over four quarts of timothy or clover to the acre. I would sow clover on winter grain about the middle of April; with spring barley, after put in and harrowed, and before the roller; with oats not at all. Oat stubble may be seeded successfully with Timothy, if sown the last of August or first of Sept., immediately after a rain, and harrowed. If too dry to sow early, wait and sow about the 20th of November; it will not then vegetate till spring. The freezings and thawings and washings will get it into the ground about right, and it will come out right and grow safely in the spring, and you will have a fair crop of grass to mow the first season, though two or three weeks later than usual. The next year, if your ground is right, your grass will be tall, if you have not put on the ground that 8 or 12 quarts of seed to the acre. Sowing Timothy seed about the last of September or first of October is unsafe; it will vegetate, but its growth will be too small for a hard winter's freezing and thawing.

Hennetta, N. Y., July, 1859.

HOUSE BUILDING.—No. V.

THE durability of the side walls of a building always depends, to a certain extent, upon the protection they receive from the projection of the roof; and to support such projection is the chief practical office of the cornice, which is otherwise merely decorative. Each of the several kinds of wood cornices known by the names of bracket, modillion, box, drapery or verge-board, has its own way of performing this practical duty. Unquestionably, the most bold and ornamental is the bracket, which is simply, in principle, a brace from the side of the building to the outer end of the rafter, or a triangular piece of plank fastened to the side of the building, and which sustains the rest of the cornice.

FIG. 1.—BRACKET CORNICE.

Fig. 1 illustrates one of the first kind, which answers a very good purpose for small buildings where the projection is from one and a half to two feet. Such brackets may be made at the rate of from fifteen to twenty per day by a good mechanic, and used to a good advantage in renewing cornices on old buildings. One and one-fourth inch flooring laid on top of the brackets upside down, serves the double purpose of roof boards and soffit or plancher.

FIG. 2.—BRACKET CORNICES.

Fig. 2 shows one of the second kind, which is better adapted to cornices of a greater projection, as it gives support to the entire soffit. The upper corner is pierced and the lower side cut away to make it light, yet not weak, and the curve, which should not exceed one-fourth of a circle, (or half a gothic arch,) appears very graceful, particularly when seen from a distance. The lower member or foot should terminate against the building, and not finish with a "quirk," sled-runner fashion, as if it was designed to slide down the side of the building. A portion of the upper part of the brackets should run into the building and fasten to the studs, or bond timber, and the rest of the cornice be built upon them, instead of being suspended dangling from the soffit. It seems that that style of bracket which not only looks as if it supported the projection, but really does so, and gracefully, and which is susceptible of any degree of ornamentation, must be the type of the best bracket that can ever be invented; and if so what can the conglomeration of curves, O. G.'s and fillets, hollows, rounds and bonds, loaded down with drops, balls and pendants, devised by American architects and Yankee "inventive geniuses," and pinned up under their cornices with acorn stems, be but absurdities, giving substantial (or unsubstantial, rather,) evidence

that this principle is seldom understood, and still more seldom allowed to govern?

The modillion, which is another style of visible cornice support, is, or seems to be, timbers projecting through or from the wall. They are the best when made of solid timber, laid into the wall or fastened to the studding, the first few inches left full size, and the outer end tapered in some ornamental shape, as shown in Fig. III.

FIG. 3.—MODILLION CORNICE.

The box cornice, which is simply the covering up of a skeleton work with thin boards, in imitation of some Grecian or other model, is not as good as the others, as it does not admit of a projection sufficient to protect itself from a driving storm, to say nothing of the side walls of the building.

FIG. 4.—VERGE-BOARDS.

The verge-board, or drapery, is a device for strengthening the gable cornice, and when used on small gables, or dormer windows, is very appropriate and can be made quite ornamental at a small expense. Fig. IV illustrates different patterns, those at C. D. where the eaves are curved. This can be cheaply done where a cornice similar to the one shown in Fig. I is used—the upper part of the bracket being cut to the proper curve. It is hardly possible to make a good looking cornice without a fascia and crown moulding. For the latter a simple quarter-round cove, or O. G., with fillets above and below is better than a compound moulding, as something that is bold and shows itself plainly is better than a combination of intricate work, too small to be seen without the aid of ladder or spy-glass.

Eave-gutters may be made in the roof over the plate, in the cornice, or hung up under the ends of the shingles. The first is the best and cheapest; the second looks the best, and the last is worst of all, being unsightly and troublesome.

Valleys can be made tight and durable by using separate sheets of roofing tin bent into the angle and laid one above the other with a lap of about two inches,—commence at the bottom and nail the two upper corners only. Shingle down on this from each way, leaving a space of three or four inches, which, if kept well painted, will last as long as the rest of the roof.

Pompey, Onondaga Co., N. Y., 1859.

"ABOUT HORSES."

Messrs. Eds.:—On perusing the RURAL of July 23d, my attention was arrested by the article "About Horses," and it was read with much pleasure. Not that I fully endorse the writer's views or the editor's comments, but from the fact that the article in question indicates that some stock growers in this vicinity are waking up to a subject of great importance to agriculturists generally in Western New York—a subject justly entitled to a space in the columns of all agricultural journals. And I beg leave to offer for discussion the following proposition, viz:—What kind of Stallion, crossed with the mares of Western New York will produce the fastest trotters, best roadsters, most stylish and valuable carriage horses, and most useful stage, cart and farm horses. I have meditated much on this subject, and it occurs to me that the mares of this country are comprised of such a variety of breeds, style and other qualities, that there is a kind of stallion from which may be produced all of the different kinds of horses enumerated in the above question. There is no question of greater importance to Western New York—none so little understood and appreciated, and none on

which there is such a diversity of opinion, and on which community are so liable to err and be misled—as what kind of stallion is the best to breed the mares in this vicinity. And this subject can be introduced and properly discussed, and a proper criterion established, in no better way, than through the pages of the *Rural* and other agricultural journals.

I am not an owner or breeder of horses at present, hence have no axe to grind, and am not induced by partiality or favoritism in making these suggestions; but for twenty-five years I have paid much attention to breeding, raising, breaking, training and marketing horses, and am pretty well posted on the horses of this country and their uses generally—and I hope to see this subject discussed on its merits fairly and impartially. I am confident that the question as here presented will be more beneficial than whether it is more profitable to breed large horses than small ones, as intimated in the remarks of yourself and your correspondent. It would doubtless be bad policy to run entirely into either or both extremes; and I would suggest that very large horses, for heavy drays and very heavy work, can best be obtained by crossing with full blood English Draft or Clydesdale Stallions, and as but few of this class of horses are required for the work and markets of this country, they would be an exception to the subject submitted for discussion—because this class of large horses, and fast trotters suitable for the road, and the small, light horse or pony, cannot all be successfully produced from the same stock. Small horses are increasing, as your correspondent remarks, and a portion of the mares of that class will doubtless be kept for breeding. From these the demand for small horses will be fully supplied without breeding from small stallions of any class or breed.

And now, what kind of stallion shall all the mares that are now bred from, and such mares as will probably be bred from in this vicinity for the next ten or fifteen years, be bred to produce the classes of horses mentioned in my question? This article is much longer than I intended, but I hope you will not be prevented from publishing it on that account.

RURAL READER.

Monroe County, N. Y., 1859.

TABLE-LANDS OF EAST TENNESSEE:

LOCATION, SOIL, CLIMATE, FERTILITY, FARMING, &c.

EDS. *RURAL NEW-YORKER*:—Will a farmer's letter from the Table-Lands of the Cumberland Mountains be acceptable to your readers? I have seen your excellent paper through the kindness of a friend, and as I, together with my son, his family and others, removed here from Long Island in February last, only, I retain my attachment to the Empire State.

These Table-Lands are approached from the East Tennessee and Virginia Railroad and the Tennessee River, by the daily stage from Loudon, and you reach the Table, on the eastern brow or declivity, in a distance of nineteen miles from the river—finding a wide-spread, undulating surface, (with never-failing streams of pure water,) carpeted with a nutritious grass, upon which stock will feed and fatten without grain or shelter throughout the entire year. I have never found in the United States, a place so well adapted to stock-raising as this range. The timber is of moderate size—though larger in other counties than in this (Cumberland)—and at convenient distances apart. Cumberland is a new county, and this town (Crossville) is the county seat. You will find Crossville on old maps, in the north part of Bledsoe county.

The settler, soon after arriving, will purchase and mark his stock, and turn it out on the range, and prepare his land for grain by girdling the trees, or denuding them, as it is called. One man will deaden from one to three acres in a day. In November the grass is burned, and one horse, with a simple plow, breaks up the ground, and a good crop of corn is raised the next year. After that any kind of grain may be raised, with all kinds of vegetables. The soil is usually a brown loam, with some sand and clay intermixed, for twelve miles around us, where there is no limestone foundation; but upon the limestone formation the soil has a reddish color. These table lands are, in general, productive, and when manured, yield bountifully. I have no doubt that we shall be able to raise 100 bushels of corn to the acre, with proper attention. I never had such a fine vegetable garden in old Massachusetts, where I manured my farms liberally, as I have here without manure. These lands are yet but sparsely inhabited, as they were considered too remote from the seaboard markets till the railroads were completed in various directions.

Most of the old settlers or "natives" here would not be considered good farmers in your State. The truth is, they have been able to live with so little work, that they have not acquired the habits of industry and economy requisite to a northern farmer. They are not slow to improve, however, and are ready to adopt our improvements and modes of husbandry as soon as introduced, and to give up their mistaken notions upon evidence of better. I have one fact from good authority. An Ohio farmer moved here a few years ago, and rented a farm for a short term, with a view of purchasing, after testing the qualities of the soil. He commenced plowing a field deep with his mould-board plow. The owner remonstrated, stating that his field would be ruined by turning the top under, and ordered him to desist. The Buckeye replied that he wished to pursue his own course, and as heretofore the surface only had been cultivated, he wished to reach that which had been undisturbed—and he persevered. The owner brought a suit for damages, and, strange to say, he recovered a verdict for damages, before the Justices. The case was appealed, but before the trial came on in the higher court, the wheat was harvested and weighed 67 lbs. to the bushel! This evidence was so satisfactory that the suit was withdrawn, and the lessee closed the contract and purchased the farm. Another neighbor pursued the same course of deep plowing, and his wheat weighed 69 lbs. to the bushel. I have placed specimens of this wheat in the office of the Home-steed Company, No. 146 Broadway, New York, and specimens of the different kinds of grass

which I found this year spontaneously growing in the fields around me.

This Table has an elevation of about 2,000 feet above tide-water, is above the region of agues and bilious disorders, and unsurpassed in point of health by any other section. The air is pure and invigorating. The thermometer was at 87° the hottest day that we have had this season. A neighbor, who has kept the daily record for the last twelve years, had never seen it above 85° before. The winters are mild—from the middle of December to the middle of February—and I am told that I may possibly collect ice from two to three inches thick, for my ice-house, by preparing an artificial pond, which water shall be kept still. Much has been said in some of the papers about this land in other parts of the State, which, if applied to these Table-Lands, would be derogatory to their character. What I have herein said, is not to apply to any other place.

We want mechanics of all kinds, and farmers, to come on and settle with us. By industry and economy they may be confident of success. Lands are now to be bought from \$1.25 to \$10 per acre, according to location, almost every acre of which may be tilled. Of grapes, fruits, &c., I may write another time, if acceptable.

WILLARD DAY.

Crossville, Cumberland Co., Tenn., July 20, 1859.

LEACHED ASHES FOR WALKS.

EXPERIENCE is said to be the best teacher, and so it is. From careful experiments with different materials for walks, I am prepared to say that leached ashes are superior to all substances used for that purpose, unless it be flagging stone; and to them the purchase and cost of construction are formidable objections. Then, to fit them to a serpentine or winding walk, which is the only proper form for lawns and pleasure grounds, is a difficult and expensive task, besides they are too heavy and clumsy in appearance. Plank are alike objectionable. Brick cannot be recommended. Gravel or sand will not pack, and is, therefore, good for nothing. Ashes pack the best of all substances suitable for walks of which I have any knowledge; and often in a few weeks' use, if the weather is rainy, become nearly as hard as adamant. It does not wash like gravel, but retains its place and shape with remarkable tenacity. For carriage roads or drive ways it has no equal.

My mode of construction is this:—I first sink the walk some ten or twelve inches below the surface and fill with ashes, treading it firm with the feet. I raise it slightly in the centre, which gives the walk a convex form, and enables it to shed off the water falling upon it. I then, if my ashes were sufficiently damp to pack well, give it a coating of clean sand, such as is used for house plaster, from one-fourth to one-half an inch in depth, and call it finished.

The following are some of the advantages that pertain to this kind of walk. 1st, No thistles or weeds can grow in it. 2d, It is easily and cheaply made. 3d, It is cool and grateful to the feet in a feverish day. 4th, It is very durable, being (if convex) nearly impervious to water and never heaves with frost.

It is now three years since I made my drive way and walks, after the above plan; hence, I speak confidently, and can recommend to others the course I have adopted. I have to add that no sand or foreign substance should be mixed with the ashes, as it would seriously injure their packing qualities.

S. B. ROCKWELL.

"Spring Side," Middlebury, Vt., 1859.

MISTRUST OF PROVIDENCE.

COL. MOORE:—It is somewhat singular that farmers, who rely upon the firmest and most stable means of subsistence, should be the most distrustful. The untimely June frost which visited us, made more long faces among farmers than any other class of people. It is a fact that many exhibit the spirit of Cain, the first farmer of whom we have any knowledge. Through his jealousy and mistrust of Providence, he afflicted Eve, by causing the death of her beloved ABEL. What is the use of putting on such a solemn visage on account of the crops or the weather? Shall we make mouths at the Almighty, or call to account the great Jehovah? Are we not exalted above all men, in being honored by a partnership with the Most High? The Great God of Nature is the silent, though active partner, of every farmer who tills a rod of earth. He furnishes the capital, and we do the labor. He sends the sunshine and shower. He is, after all we may do by the aid of science and machinery, the Great Prime Mover in all the operations of Agriculture. He sent the frost for the best of reasons. He gave us a little too warm a May, and as a consequence, to balance it, we have had a little too cold a June. Is not this right? Does not this square the matter? With a hot May, June and July in conjunction, or succession, with no modification, where would have been your grain or grass? What man or beast could endure it, either?

Our philosophy is that we must have so much heat and so much cold throughout the year—that the whole is nicely calculated and meted out as it seemeth good in the sight of Him from whom proceedeth every good and perfect gift. If corn and other things have been checked, it was only that they might put more rapidly forward at the end of the course. We have only been rounding the dangerous curve of Spring, to pass more rapidly forward upon the level of a beautiful and glorious Summer. No one need regret that he has his money invested in land, when he thinks of the failures incident to mercantile life, or remembers the yawning gulf where the Central America went down. We have the promise of seed-time and harvest. One we have had eminently propitious, and we shall have the other in proportion, as sure as results follow causes, or as day succeeds night. Nature is yet to display her mightiest powers, and in due time we shall reap if we wait not.

H. K. F.

Cambridge Valley, N. Y., 1859.

TO CURE DISTEMPER IN HORSES.—Give one dessert spoonful of powdered gum myrrh once a day for a week, in bran or meal, and you will have a sure cure.—M. K., *Willow Copse, O.*, 1859.

CLEANSING WOOL FOR HOME USE.

EDS. *RURAL*:—A "Michigan Subscriber" wishes to be informed concerning the manner of "cleansing" wool for home use. I will give him our way, and can say that, in the article of *cleansed wool and fine roots*, we yield the palm to none. But for the means employed. Take the fleeces, one at a time, unroll, and carefully remove all large, loose dirt; make a suds (not too strong, however, as such would have a tendency to make the wool harsh,) of soft soap and rain water, hot as convenient for the hands. Fill a tub half full, or more, then put in the wool, press and squeeze, being careful to tangle as little as possible. Repeat the process through a second suds, and do not rinse nor wring, but squeeze out as before, and spread on boards a little inclined, so that the water can pass off rapidly. When dry employ as many girls as convenient to "pick" it—for as much depends on the proper picking of wool as cleansing—in order to insure nice, white roots, and also to prevent the "carder from grumbling." All foreign substances must be removed. This being done, if the carder performs his part as well, and the spinning and weaving are equal, you will have cloth good enough, I came near saying, for our President; but as it might, after all, be too home-made for his Majesty, I will take that back, and simply say, good enough for a "poor Michigander," at least.

We Western New-Yorkers long since abandoned cloth-making, our ladies being decidedly too delicate for such laborious employment. Some few still adhere to the custom of spinning "stocking yarn," and if the "old fashioned way" of making fullcloth was still practiced, we should see fewer farmers going about in tattered garments, for this "cotton wool stuff" will not stand the wear and tear of every day life.—A. M. BISHOP, *Portillon, N. Y.*, 1859.

FRIEND MOORE:—I have perused your columns ever since the *Rural* was published with a good deal of thought, and must say the New-Yorker is a welcome guest. It appears that "A Subscriber" in Wheatland, Hillsdale Co., Mich., wants to know how to cleanse wool. I wish there were more seeking the same information. Here is the recipe:—Two pails of rain water; one of urine; one pint of salt—heat all to scalding heat. Put in the wool, stir with a stick and let it remain for about thirty minutes. Take it out with a stick and lay on a board to drain. Have the board so arranged on the side of the tub or kettle that the liquor will run back in the same. After the first kettle full is taken out add more water, urine, and salt, to keep up the strength of the liquor, and proceed as before. The longer the liquor is used the better.—Soft soap, or lye from ashes, will answer in the place of urine, or may be used with them. The liquor must be strong enough to dissolve the gum or oil on the wool, so as to rinse off clean. It is of no benefit to pick it. Being engaged in the business for a term of years, I know how the operator is censured.—ASA FOOT, JR., *Sherburne, Chenango Co., N. Y.*, 1859.

FAILURE OF HAY IN NORTHERN OHIO.

It is a singular circumstance to me, that the failure of the hay crop in this section of the country appears to be from the change of grasses. Our timothy meadows have not failed so much from being short and stunted, as from thinning out. As you walk the road many meadows appear to have a good growth, and so they have of scattering spears; but on a nearer approach, and looking from the top of the fence, you discover an unusual quantity of white clover. The whole country, meadows, pastures and door yards, appears to have nearly double the usual quantity of white clover. We look to the *Rural* to learn the extent of this usurpation of the place of the timothy by the white clover, as also the why and wherefore.

I think P., in the *Rural* of the 23d, could not have been aware of our facility for wine-making in the West, or he would not have put off his congratulations to the time of raising pie plant, currants and grapes. Any Western or Eastern city can turn out more wine, and at lower rates, than could be manufactured from currants and grapes, if they were not only grown but gathered and in the manufacturers' vats. The winebibbers of this day have not the discriminating taste of the ancestors of Sancho Panza.

M. A.

Toledo, Ohio, July, 1859.

ARE PEACH LEAVES POISONOUS?

MESSES. EDS:—Is it generally understood by farmers that peach leaves will kill cattle? Some two weeks since I threw two peach trees that had been broken down by the wind, into a small pasture lot where I had two calves. Both eat of the leaves, but one I noticed partook much more freely than the other. The third day after the peach trees were thrown into the lot the calf that I noticed eating of the leaves most freely showed signs of sickness, want of appetite, dullness of the eyes, &c. The man who had the care of them said it had not eaten well for two or three days, (since eating the peach leaves.) I caught it and administered a piece of salt pork. The next morning it was entirely helpless, unable to rise or stand after assisted up, but for two days longer it retained the power of holding up its head and drinking, afterwards it lost this power and was fed by a bottle. It remained in this state for four days and died.—Occasionally it would eject from its nose a green fluid, resembling the juice of peach leaves. On opening it after death, the leaves of the manifold were found coated with a downy substance resembling that on the under side of the peach leaf. I present these statements to you, to give my own experience, and also to elicit facts that may be in the possession of your readers.

GUICE, Monroe Co., N. Y., 1859.

WM. R. BOOTH.

CHEESE-MARKING.—Can some *Rural* correspondent tell us how to make cheese successfully from a few cows say from two to four? So far as I can judge, not one woman in twenty in this town knows how to make a cheese of any kind. We shall be greatly obliged for the process in full through the columns of the *Rural*.—H. B., *Roanoke, Huntington Co., Ind.*, 1859.

Rural Spirit of the Press.

Training Oxen.

At a recent meeting of the Concord (Mass.) Farmers' Club, CHARLES A. HUBBARD read an Essay upon Working Oxen, from which the following extract, giving his mode of "Training," is taken: A word on training oxen. I have found that by far the best time to train steers is when they are calves, say the first winter. Oxen that are trained when quite young, are much more pliable and obedient, and this adds much to their value. Steers that run until they are three or four years old, are dangerous animals to encounter. They are always running away with the cart or sled whenever there is a chance for them, and often serious injury is the result. I would not recommend working steers hard, while young, as it prevents their growth; there is a difference between working them and merely training them. I have observed that very little attention is paid by our farmers to train their steers to back, but as they become able to draw a considerable load forward, they are often unmercifully beaten on the head and face, because they will not back a cart or sled with as large a load as they can draw forward, forgetting that much pains has been taken to teach them to draw forward, but none to teach them to push backward. To remedy the occasion of this thumping, as soon as I have taught my steers to be handy, as it is called, and to draw forward, I place them on a cart where the land is a little descending; in this situation they will soon learn to back it. Then I place them on level land, and exercise them there. Then I teach them to back a cart up land that is a little rising, the cart having no load in, as yet. When I have taught them to stand up to the tongue as they ought, and back an empty cart, I next either put a small load in the cart, or take them to where the land rises faster, which answers the same purpose; thus in a few days they can be taught to back well, to know how to do it, and by a little use afterwards, they will never forget. This may appear of little consequence to some, but when it is remembered how frequently we want to back a load, when we are at work with our cattle, and how convenient it is to have our cattle back well, why should we not teach them for the time when we want them thus to lay out their strength? Besides, it often saves blows and vexations, which is considerable when one is in a hurry. I never consider a pair of oxen well broke until they will back with ease any reasonable load, and I would give a very considerable sum more for a yoke of oxen thus tutored than for a yoke not thus trained.

Facts about Cattle.

The following items are from a recent issue of the *New York Tribune*:

It is a fact that all domestic animals can be improved in size and value. One hundred and fifty years ago, the average weight of cattle at the Smithfield market was not over 370 pounds, and that of sheep 28 pounds. Now the average weight of the former is over 800 pounds, and of the latter 60 pounds.

The average weight of cattle, properly termed beeves, in the New York market, is about 700 lbs., and sheep 50 lbs.

The average live weight of the heaviest drove of beeves, 109 in number, ever brought to this market, was 2,067 pounds, weighed from dry feeding in Illinois, last spring.

The mode of selling cattle in New York is at so much per pound for the estimated weight of meat contained in the four quarters. The estimation is made upon the live weight of cattle as follows:

A drover in buying a lot of grass-fed, common stock in Illinois, should never calculate to get an estimate of over one-half here of the live weight there. That is, if the drove average 12 cwt., they will make 6 cwt. of meat each.

Medium beeves may be estimated at 54 or 55 lbs. per cwt. Good beeves at 56 or 57 lbs. Extra good, large and very fat, from 57 to 62 lbs. per cwt.

In the Boston market, the weight is generally estimated upon "five quarters," that is, the product estimated upon an average, 64 lbs. per cwt.

In New York, not one bullock in ten thousand goes upon the scales to determine his price to the butcher.

White Specks in Butter.

In the issue of the *New England Farmer* for July 16th, "An Old Farmer" replies to an article on this subject, as follows:—"I never manufactured or sold churns, but have used them more than forty years; I have had white specks in my butter but it was not caused by uneven churning, or by scraping down the cream while churning. The cream should be put down as soon as it thickens, and before the buttermilk appears, or you lose the cream, but it will not cause white specks in the butter; dried cream is the cause of white specks. It is dried in summer by a current of air blowing across the pans. Since I altered my milk-room, and put on a blind to prevent the wind from blowing directly across the pans, I have got rid of the dried cream. If your cream is dried, you can soak it in the cream-pot and prevent the specks in the butter; it should be soaked twenty-four hours before churning, and stirred well, and if thick, some milk added to soak it; but if you churn it as soon as skimmed, in any churn, you will have white specks in the butter."

Another writer upon the same subject, remarks: "The white specks in butter are caused by getting milk in with the cream when skimming, which is suffered to lie still until it becomes hard like cheese; to prevent this, stir the cream thoroughly after skimming it off the milk; this will generally prevent there being specks in the butter. If the cream is strained after skimming it off, there will never be specks. If my theory be correct, it will be seen that the idea of cream making stripes or specks in butter is incorrect. Good butter-makers rarely have stripes or specks in their butter; if they do, they attribute the cause to the neglect of duty in not taking proper care of the cream, and properly working the butter."

Nest Eggs for 1859.—Lay up the old eggs that do not hatch, on the plate or beam of some out-building in a cool, dry place until next spring, when they will become dried up, no danger of bursting, and you will have the real hen's egg for a nest egg.—C. O. BAUNDICE, *South Soles, N. Y.*

Agricultural Miscellany.

THE WEATHER of the past two weeks has generally proved favorable for the growing crops, though there has been a superabundance of rain. The frequent and heavy rains have delayed the closing of harvest labors somewhat, yet we hear of little damage from this cause. Spring crops are progressing finely. Potatoes in this region promise a remarkable yield, and more are planted than ever before. With a favorable fall the prospect is that Indian corn will prove a good crop—though that planted on green sward is late for the season.

SOULES' WHEAT.—Several farmers in this vicinity have just harvested very fine crops of white wheat. Mr. E. S. HAYWARD, of Brighton, has shown us an excellent sample of Soules' wheat, from a field which produced over 80 bushels to the acre. JAS. SHERMAN, Esq., of Irondequoit, had a field of nearly twenty acres of Soules'—grown on the bank of Lake Ontario—which entirely escaped the mildew, and did fair when we saw it (just before harvest,) to yield from 25 to 30 bushels to the acre. In one case where a farmer sowed two acres of Soules' quite late, and merely to get a crop of straw, the yield is the best he has had for many years—nearly 40 bushels to the acre. This is encouraging, yet we would not advise the sowing of Soules' wheat this fall, as a general rule—doubling its safety, except on the best soil, and with a favorable season.

YIELD OF WHEAT.—Disappointment.—A correspondent of the Rochester Union says that the farmers of Lima, Livingston county, were sure, before harvest, of from 20 to 25 bushels of Wheat per acre. But when they came to thresh the wheat, to their surprise they found a yield of 30 to 40 bushels per acre! For contrast, we observe statements from papers published in Virginia, Tennessee, and other sections of the South and Southwest averring that, on threshing, the yield of wheat is in many instances only one-fourth to one-half what was anticipated! Taking the country through, we think the latter and real kind of disappointment is far more general than the agreeable one experienced by our Livingston Co. farmers. It is now said that, notwithstanding the assertions of the commercial papers to the contrary, the wheat crop of Illinois and the Northwest is below an average.

WINTER BARLEY.—We have received several heads of very superior winter barley grown by Mr. SANFORD A. SMITH, of Wheatland—as sample of a field of sixteen acres. It is four-rowed, large, and very prolific, Mr. S. having found as many as 99 kernels in a single head.

Speaking of winter barley, we may add that the crop is becoming a favorite with many farmers in this region. The yield is generally good this season, and many rank the crop among the most reliable and profitable produced in localities favorable to its growth. An excellent farmer, and President of an Ag. Society, recently informed us that he could depend upon from 40 to 50 bushels per acre, which he considered better than 25 to 30 bushels of wheat, to say nothing of the risk of the latter in districts where the mildew prevails. On the contrary, a shrewd farmer at our elbow, (an ardent supporter of an Ag. Society, and a Major also,) thinks barley is more tender than wheat, and requires as rich soil and equally good culture—though undoubtedly mildew proof. In his opinion, also, barley does not rank among the Christian grains! Who shall decide when officials disagree!

CHANGES AMONG OUR EXCHANGES.—The *American Farmers' Magazine* (formerly *Plough, Loom and Anvil*), established by JOHN S. SKINNER, and published for some years past by Prof. J. A. NASH, of New York, has been discontinued for want of support. The editor states that his loss has not been less than \$5,000, and that the Magazine "dies of a collapse in the money drawer." While we regret this result of Prof. N.'s efforts, it is not surprising—experience and observation having convinced us that rural monthlies cannot be profitably sustained without great exertion and expense in sections where Agricultural weeklies are published.

The *South Countryman*, an able agricultural monthly, edited by Rev. O. W. HOWARD, has been merged in *The Southern Cultivator*, Augusta, Ga., both editors uniting their efforts "to produce a Southern Agricultural Monthly of unrivalled interest and value." Success to the union!—for united (married) they stand, whereas if divided, at least one would fail.

REAL ESTATE ADVANCING.—The prospect of again growing wheat successfully in Western New York is already affecting the price of farming lands. As an instance, we learn that the property known as the "Babage Farm," consisting of two hundred acres, in Stafford, Genesee county, was sold a few days since at \$100 per acre—the purchaser being Hon. TRACY PARKER, a shrewd business man, who would not be likely to invest without a good prospect of "realizing" in the shape of profit. We trust the long-expected "good time coming" for our farming interests is at last arriving.

PREMIUM OF \$100 FOR BEST TEN ACRES OF WHEAT!—In order to encourage the production of Wheat, and obtain for dissemination reliable information as to the most successful modes of culture in sections where the mildew prevails—as in Western and Central New York—we hereby offer a Premium of ONE HUNDRED DOLLARS for the Best Ten Acres of Winter Wheat (quantity and quality considered) grown in this State during the ensuing year, on one contiguous piece of land, being a part of the farm owned and cultivated by the competitor. A sample of the grain, and statement of mode of cultivation, &c., (similar to that required by the N. Y. State Agricultural Society on Farm Crops,) must be furnished to D. D. T. MOORE, Rochester, on or before the 1st day of October, 1860, by whom, in conjunction with Gen. LAWRENCE HARRISON of Monroe Co., Hon. T. C. PETERS of Genesee, JOHN JOHNSON, Esq., of Seneca, and Hon. GEORGE GRADIS of Onondaga, (or other competent and disinterested persons,) the premium will be awarded.—[For particulars as to conditions, statement required, &c., see *Rural* of July 23d.]

J. J. THOMAS' FARM.—A very erroneous statement having lately appeared in the *Rural New-Yorker* in relation to the farm now occupied by our fellow citizen, J. J. THOMAS, with a view to detract from his reputation as a successful cultivator as well as writer, we hereby certify that the statement alluded to is entirely false, and that his residence is one of the most beautiful in this part of the country, and his farm a very neat and productive one in a high state of cultivation; and that during the short time he has occupied it, it has undergone great improvements, among which are some miles of the draining.

EDWARD KLEMDORF.

LEAH HOOKER.

WM. H. CHASE.

UNION SPRINGS, August 5, 1859.
Remarks.—In cheerfully giving place to the above, we beg to distinctly inform its authors that their emphatic assertion that the extract relative to J. J. THOMAS' farm was published "with a view to detract from his reputation as a successful cultivator as well as writer," is not only "very erroneous," but "entirely false." On the contrary, it was copied and commented upon by our Horticultural editor (who is a personal friend of Mr. THOMAS,) with the kindest intentions—for the purpose of leading a paragraph which was going the rounds of the press, rather than of injuring our esteemed friend.

HORTICULTURAL VISITS.

In no way can knowledge be better gained than by visiting the gardens of good cultivators at this season of the year. On this subject we give a valuable article from a lady correspondent in another column. Those who intend to visit Rochester to look at our fine gardens and superb nurseries should do so during August, or the early part of September. Persons of horticultural taste, or in pursuit of knowledge on this subject, would be well repaid for a visit, even should they have to travel a thousand miles for its accomplishment. The present is comparatively a season of leisure, and our nurserymen will be happy to wait upon visitors, show them their grounds, and trees, and plants, and give all needed information, but the latter part of September they will be preparing for fall business, and will not have a moment to devote to friends who may call. Many go away disappointed because they make their visits at unseasonable times. And this is done through a mistaken idea that if trees are needed for the orchard, or plants for the garden, personal attendance is necessary at the time of taking up; while the fact is, this is the very worst time that could be chosen for making a selection of trees. Visit the nurseries now, examine the trees, and fruits, and flowers, ask all the questions you think necessary, obtain catalogues, make out your orders with care, leave them with the nurserymen with which you propose to deal, and, our word for it, you will be much better served—obtain better trees and more suitable varieties—than though you had given the matter your personal attention during the busy of fall business.

The *Summer Pears* are now ripening, and perhaps you will be invited to test their quality. The *Beurre Giffard* is in its prime, and the *Osband's Summer* will be in eating in a few days. The *Ros-ticeer* and the *Tyson* will be right for testing by about the first of September, which will be as soon as some of our friends will be able to make us a visit. Then you can see acres of dwarf pear trees, and hundreds of different varieties, loaded down with fruit, from the little *Sacred* to the monstrous *Cuttliff*. Here you can examine their habits, see the way in which they are cultivated, pruned and trained, and give a very good guess as to your ability to grow pears and the prospects as to profit. The *Dwarf Apple Trees* deservedly attract a good deal of attention. About as large as a good lilac bush, and bearing from a peck to one or more bushels of apples, they are curious, beautiful and valuable.

Those who have been discouraged about growing *Plums*, and have considered the curculio invincible, will be very much encouraged by observing every tree, and scores of varieties, that they never before heard of, bearing enormous crops of the most luscious fruit, and ripening in succession from the first of August until the last of summer. The *Small Fruits* are gone, with the exception of the *Blackberries*, and these are now gradually ripening, giving a good picking every day. We believe everybody in this section is better pleased with the *New Rochelle* than ever before. It is giving an excellent crop. In the *FLORAL DEPARTMENT*, some fine roses may yet be seen, and the later and more beautiful varieties of the *Phlox* family may soon be seen in all their glory. This is a class of flowers deserving far more attention than they receive from amateurs. They are hardy, herbaceous plants, need no protection, and by a proper selection of varieties will give blooms from May to October. The later sorts, however, are the finest.

It is curious sometimes to observe how people open their eyes with astonishment when they see for the first time a good collection of *Hollyhocks*.—The nurseries have very fine varieties in flower, well worth looking at. The late flowering *Herbaceous Plants*, such as the *Antirrhinum Delphinium*, &c., and the *Breeding Plants*, such as *Verbena* and *Pelonia*, never were to be seen to better advantage. The *Dahlia* show a few flowers, and will improve every day until frost.

Filling up every spare corner are the *Annuals*, bright as the brightest—the *Ten Week Stock*, the *Balsam*, the *Phlox Drummondii*, the *Aster* and a score of others which we will not name. In conclusion we say, visit our gardens and nurseries, all good gardens in your neighborhood, make notes of what you see desirable, resolve to have a good garden next season, and take the necessary means to carry out your resolution.

MY GARDEN.

Masses. Editors.—I am delighted with my first summer's experience in gardening. Of course, I did not expect to do much the first year, for I could not grow strawberries or raspberries, or many of the nice things that I have provided for next year. But, in the vegetable line I have beaten many that have had far more experience. This is the first year that I have had possession of my garden, which was one that had been neglected, and the soil had become so poor that the former owner told me last year he did not even get his seed back, and discouraged me from making any outlay. It contained a few large apple trees in pretty fair condition, mostly early sorts, and one *Baldwin* tree, and some grape vines, the lot being half an acre. In it were many old, half-dead peach trees. The ground had been plowed for several years, and was in a rough, uneven state. The first thing I did was to get all the ashes I could and scatter over the surface—only about a couple of loads. Then I purchased twelve loads of stable manure, costing, delivered, eight dollars. I then had all the useless trees taken up, spread the manure over the surface, and had the whole garden spaded up, which cost me about nine dollars more. Now, for the result. I sowed *Early Kent*, *Prince*

BEURRE GIFFARD PEAR.

Among the new pears recommended for general cultivation at the last meeting of the *American Pomological Society*, was the *Beurre Giffard*, a good engraving of which we now give our readers. This pear differs very materially in size, and somewhat in form, and on the quince root we have seen specimens much larger than that shown in the engraving, which is about medium, or perhaps a little below medium size.

The *Beurre Giffard* is now ripe (Aug. 9th) and we have never before tasted more delicious specimens, nor have we seen a more abundant crop. This variety must now rank as one of our best summer pears. It has fully indicated the wisdom of the *American Pomological Society* in recommending it for general cultivation, as the reports we receive from widely distant localities, are all very favorable. It is a French variety, and was first fruited in this country about 1850.

The tree is a moderate grower, and therefore

planters must not feel disappointed that it does not keep pace with the *Vicar of Winkfield*, *Duchesse d'Angoulême* and other strong growers. It is distinct in wood and foliage, the young shoots being long and slender, the bark reddish, the leaves small, with very long, slender leaf-stalks. It succeeds well, both on pear and quince stocks.

Fruit medium size, occasionally large, acute-pyriform. Stalk, usually about an inch long, sometimes one and a half inches, pretty stout, and inserted without any depression, except in rare cases. Calyx—closed, segments long and stiff, in a narrow basin. Skin—greenish yellow in the shade, sprinkled with carmine dots; sunny side red, varying from light to dark, and mottled with dark spots and stripes. Flesh—white, tender and juicy, with a sprightly, vinous flavor, and somewhat of an spicy perfume. It is greatly improved, as all summer pears are, by being gathered before ripe.

Albert, *Tall Sugar*, and two or three other sorts of peas, and some lettuce, first. The lettuce did well, and furnished all we needed for my family, which is large, and the peas came on in succession from the middle of June and continued for about a month to furnish a mess nearly every day. On the fourth of July I commenced digging *Early June* potatoes, then followed *Mountain June* and *Buckeye*. I have probably dug about a bushel a week ever since, and shall have enough early sorts to last me until about the first of October, and then I shall probably have thirty bushels of *Medicines*, *Peach Blows* and *Mercers*, for winter use. I had forgotten radishes. The first sowing did not amount to much, being hard and hot, but I sowed another lot about the middle of June, and in a few weeks they were very fine. Summer squashes I have in abundance, and also *Early Basking*, *Long Blood*, and *White Sugar Buds*, as well as that excellent little summer carrot, *Early Short Horn*. *Tomatoes* are beginning to ripen, and I have picked a dozen or so, and shall soon have abundance. I have the *Vegetable Egg*, almost as large as my head, but hardly know what to do with them, but shall try by-and-by. *Sweet Corn* I think might be picked now, but I prefer to wait a week, and as I have four patches, planted at different times, I think I shall have corn until frost, and this is a great luxury.

Cucumbers have not done very well. The soil was pretty hard for them, and the weather cold and changeable the early part of the season; and water and muskmelons are about in the same condition. Another season I would have small glass frames made some two feet in diameter, and keep the plants in these until they became large and the weather warm. This, I have no doubt, would give good melons early.

I had forgotten *Beans*, of which I have had abundance, and in a week or so can commence on *Limas*, and the *Celery* is almost fit to earth up. Now, I have attended to this myself, nights and mornings, with the exception of a little help from two small boys, and a man hired three days, and I can say that a vegetable garden affords not only great pleasure, but if well attended, great profit.

My *Early Harvest Apples* have been exceeding fine, the *Baldwin* tree is loaded, and after a good deal of pruning and labor I think the vines will reward me with a bushel or two of ripe *Isabellas*.

A VERY YOUNG GARDENER.

VISIT YOUR NEIGHBORS' GARDENS.

In Spring, in Summer, and in Autumn, visit your neighbors' gardens. In Spring, see how they prepare their ground for different crops; what kinds of seeds they plant; what precautions they use against destructive worms and insects; what new varieties of fruit trees, vines, bushes, &c., they are planting, and what situations they choose for them, whether moist or dry, shaded or sunny; mark the comparative hardiness of previously planted trees, vines and shrubs, as indicated by the way they have borne the preceding winter, taking into account differences of exposure; and look about for anything new, curious,

or interesting, in the way of flowering plants, shrubs, &c.

In Summer, observe your neighbors' modes of cultivation; take notice of any peculiarities in their treatment of particular vegetables, fruits, and flowers, and compare their methods and the results obtained with your own efforts and success. Don't imagine that there is nothing worth looking at, except in grand, imposing establishments; you may often see a finer patch of potatoes, cabbages, or onions, in the humble, unpretending garden of your nearest Irish neighbor, and gain from the proprietor more useful hints concerning their cultivation, than would be afforded by a visit to the most complete garden collection within your reach. Small cultivators, or persons who raise but few kinds of vegetables, are quite apt to produce them in greater perfection than more extensive or ambitious cultivators.

Go to your neighbors' gardens in Autumn to witness the quality and abundance of their later fruits and vegetables, their pears, grapes, turnips, potatoes, winter squashes, &c., &c., not forgetting to take a look at their late-blooming flowers. Ask the owner's leave to take seeds of desirable varieties that you do not possess, and which they have to spare, giving them, in return, rare seeds from your own garden. It is better for you, better for you both, than to run the risk of being imposed upon by the trash sent out by ignorant or unprincipled seedsmen. Be sure to learn your neighbors' methods of putting up their winter fruit, and remember to make inquiries in late winter or early spring as to the keeping qualities of different kinds.

Give special heed to all accounts of adverse experience in cultivation. It may save you time, trouble, and disappointment in future. Enthusiastic amateurs, coming into possession of new varieties of plants which they are anxious to increase, are very likely to commit mistakes, a history of which will be useful to their neighbors. As an example, a garden in this neighborhood contains a few bushes of the *Lawton* or *New Rochelle* blackberry, planted a year ago last spring. In the fond hope (as the novelists say,) that the plants might be propagated by layering, the zealous owner, last fall, bent down several canes, and covered a portion of each with earth, leaving two or three inches at the end exposed. In February, the buried part of the canes was separated from the other, as was supposed proper. It was curious, in Spring, to see the fruit buds on the end of the layers swell into blossom, and then the whole, flower and stalk, gradually dry up and die. As the great June frost destroyed most of the fruit that set on the bushes, the owner gained his experience at a small cost of berries. South Livonia, N. Y., 1850.

ONTARIO GRAPE.—Last week we had an opportunity to taste the *Ontario Grape*—only a single berry or so—grown in the house of Bissell & Satter. In appearance and flavor it was very much like the *Isabella*. This we cannot consider a test of its quality or merits in any respect. The present Autumn we hope to test many of the new grapes.

TIME OF SETTING STRAWBERRY PLANTS.

FRIEND MOORE:—We are frequently asked "When is the best time to set Strawberry plants?" It is policy for vendors of plants to recommend Spring planting—as good, strong plants at this time, if left in their place, will make from three to a dozen in the remaining part of the season that will do well for spring planting—but all the good plants that get well-rooted in this month (August) will bear a fine crop of berries next summer, whereas the same plants, if set next spring, will not give one-twentieth the quantity of fruit they would, if set in July or August. I am speaking particularly of the *Wilson Seedling*. With these I have had a little experience and would recommend to plant in this month, if you want to realize on your investment by next summer.

My plants of this variety that were set between rows of corn, in July and August of last summer, gave a beautiful crop of large and delicious berries in June of this year. Some single plants having over 150 berries. The plants which were set in the spring of 1858 did not average more than three or four to a plant, and inferior at that. Thus my experience prompts me to advise all who want to gain time, to plant now if they can, in preference to planting next spring; though it is quite as well to plant in spring if you are not ready this summer. I. W. BRIGGS, Macedon, Wayne Co., N. Y., August, 1859.

THE TOMATO AS FOOD.—Dr. Bennett, a professor of some celebrity, considers the tomato an invaluable article of diet, and ascribes to it very important medical properties:—"1st, That the tomato is one of the most powerful aperients of the liver and other organs; where calomel is indicated, it is probably one of the most effective and the least harmful remedial agents known to the profession. 2d, That a chemical extract will be obtained from it that will supersede the use of calomel in the cure of disease. 3d, That he has successfully treated diarrhea with this article alone. 4th, That when used as an article of diet it is almost sovereign for dyspepsia and indigestion. 5th, That it should be constantly used for daily food—either cooked, raw, or in the form of catsup, it is the most healthy article now in use."

HARDY SHRUBS IN WISCONSIN.—Seeing notices of hardy shrubs, &c., I will state my experience with one or more. The *Forsthia Viridisima* I have had three years. It grows fast in the summer, but every winter the blossom buds are killed; and last winter a good share of the bush was killed.—*Spiraea*, "*Prunifolia*" and "*Opulacea*" do well. *Disydra* killed. *Quince* bushes all winter killed. Crop of strawberries and raspberries very light. Blackberry crop will be very small compared with last year.—A. H. RAYMOND, Oshkosh, Wis., July, 1859.

"FIRST PREMIUM" PICKLED PEACHES.—To four pounds of fruit add one pound of sugar; equal parts of good cider vinegar and water, sufficient to cover the fruit. Wipe the peaches, insert a clove in each, and put them in a jar with a few blades of mace. Boil the sugar, water and vinegar together; pour over the peaches while hot, and let them stand two days, closely covered. Repeat the process of heating two or three times. If the fruit is not sufficiently cooked, put it in the kettle the last time of heating, when sufficiently soft, skim out, boil the liquor until there is just sufficient to cover the peaches. When cold, put in jars, and they will keep in any place. This specimen has stood in a warm upper room two years.—Mrs. RICE, Henrietta, N. Y., 1859.

REMARKS.—The foregoing recipe was furnished one of the "Tasting Committee" of the Monroe County Agricultural Society, in accordance with the rules and regulations in such case made and provided, and handed, with several similar matters, to the *RURAL* for publication some time since. As the names of other parties contributing specimens of their skill in the culinary department at the Annual Fair, are not attached to the various recipes in our possession, we have withheld them, in the hope that we might be enabled to render equal and exact justice to all interested. The peaches were declared "very fine," and, as the title indicates, were awarded the First Premium.—Eps.

RASPBERRY, STRAWBERRY, CURRANT, OR ORANGE EFFRAVESCING DRAGHTS.—Take one quart of the juice of either of the above fruits; filter it, and boil it into a syrup with one pound of powdered loaf sugar. To this add one ounce and a half of tartaric acid. When cold put it into a bottle and keep it well corked. When required for use, fill a half pint tumbler three parts full of water, and add two tablespoonfuls of the syrup. Then stir in briskly a small teaspoonful of carbonate of soda, and a very delicious drink will be formed. The color may be improved by adding a very small portion of cochineal to the syrup at the time of boiling.—*Scientific American*.

NEURALGIA.—This painful malady baffles the doctors. A member of the family of the editor of the *Detroit Advertiser*, impatient and despairing, recently tried a novel remedy; and found immediate relief from a poultice of bruised horse-radish. The remedy is simple. It can do no harm to try it.

FRIED CUCUMBERS.—Take large cucumbers, (just before they begin to turn yellow;) pare and slit lengthwise; place them in clear water and boil till tender; take them out, dip in a thick batter, and fry in butter till brown. Serve hot, and you will have a dish equal to oysters.—M. K., Willow Copse, O., 1859.

If your flat-irons are rough rub them well with fine salt, and it will make them smooth.

Horticultural Advertisements.

FRUIT AND ORNAMENTAL TREES, PLANTS, &c.

A. FROST & CO., Proprietors of the Genesee Valley Nurseries, Rochester, N. Y., publish the following Catalogues to represent their stock, which occupies Three Hundred Acres.

All parties who may desire to purchase Fruit, Ornamental Trees, or Plants, will consult their interest by examining the following Catalogues, which are furnished on application. Prompt attention is given to all communications.

No. 1. Descriptive Catalogue of Fruit.

No. 2. Descriptive Catalogue of Ornamental Trees, Shrubs, &c.

No. 3. Descriptive Catalogue of Dahlias, Green-house and Bedding Plants, &c.

No. 4. Wholesale Catalogue for Nurserymen, Dealers, and others who purchase in large quantities.

ELLWANGER & BARRY, Mount Hope Nurseries, Rochester, N. Y.

501

Plants carefully packed and forwarded at any moment.

For full and detailed information respecting the stock, prices, terms, &c., we refer to the following catalogues, which will be sent gratis, pre-paid, to all who inclose one stamp for each.

No. 1. Descriptive Catalogue of Fruit.

No. 2. Descriptive Catalogue of Ornamental Trees, Shrubs, &c.

No. 3. Descriptive Catalogue of Dahlias, Green-house and Bedding Plants, &c.

THE CHILD-ANGEL.

BY IDA FAIRFIELD.

Six times had the pale moon waxed and waned,
Serene on her heavenly way,
And the earth had soared half round the sun,
While the angel dwelt in clay.

A beautiful spirit, pure and bright,
Endowed to be a beautiful form,
With dark eyes gleaming like stars of night,
And soft lips, rosy and warm.

Had nestled close on a Mother's breast,
Veiling his wings of light,
In the rounded grace of his waxen arms,
And shoulders of matchless white.

Had smiled in love at the fond caress,
Gladdening his parent's hearts,
And filling his home with that holy joy,
Which innocence ever imparts.

Had daily and hourly in beauty grown,
Linking all hearts to his own,
With a love, immortal, as spirits are,
Who dwell by Jehovah's throne.

But the time of his sojourn quickly fled,
With the set of the April sun,
The mandate came, "Return unto Me,
Thy mission on earth is done."

And death was sent to open the door—
The darksome door of the grave—
Through which the angel-child returned
To Heaven, and to Him who gave.

Through the valley lone, and the shadow dark,
His path he in triumph trod,
For he bore the hearts he had won on earth
Safe up to the throne of God.
Independence, N. Y., 1859.

THE MORNING AND EVENING HOURS.

ONE was wafted on the wings of the night, radiant with beauty, her brilliant plumage spangled with glistening dew-drops! Slowly—majestically—she seated herself upon her emerald throne, and the gentle breezes, as they danced playfully by, touched her robe and its silken folds floated lightly in the air. Above her arched an azure canopy, adorned with light, airy clouds, pencilled with gorgeous hues and lined with silver. Pure-robed flowers greeted her and scattered drops of perfume along her pathway. Then from the east the sun appeared, casting a bright halo of light over the earth and bathing it in a sea of gold. Then the children of earth arose from their night couches and hailed the new hour; the husbandman went forth to his labors in the field, and the merchant to his counting-room. The weary child of poverty awoke from brightest dreams of wealth and sighed, for Fancy had conducted him through the flowery vales and by the rippling streams of Dream Land, and there had he found all his fondest hopes realized, his brightest visions fulfilled; but the morning hour with her dewy fingers opened his weary eyes and led him out from the fairy domains into this world of reality. Wearily he engages in the labors of the day, cheered by no ministering angel save the voice of Hope, which points upward—onward! Toil on tired wanderer! Soon will thy weary pilgrimage cease, and thou wilt be called to thy home above the sky! There sorrow shall not chase the sunlight from thy heart, but white-robed angels shall welcome thee home to Heaven.

The rosy hour had flown through the pearly gates of Paradise, her pinions laden with many an unkind act, wrong deed and unappreciated blessing. But she became weary of her burden ere she reached the throne of God and sank to rest 'neath the Ocean of the Past. Yet, ere her form was covered by the dark waters, the recording angel caught the sins which she bore and laid them in all their guilt before God, then traced them in the book of Remembrance and blotted the soiled page with a tear. Never more may we behold the beauties of that morning hour, for she has passed from earth away. Did she not carry with her the wrong acts and thoughts of our hearts? And does not each morning hour ascend Heaven-ward laden with the burden of our sins?

Another came, and brought with it sweet rest for the tired wanderer. It banished care from his brow and sorrow from his heart; and, as he thought of the little cottage amongst the trees, it gave new strength to his fainting soul and cheered his heart. Gloriously sang the bright stars together and the sunset clouds lay piled against the western sky in beautiful confusion, ever changeable, their light ever growing dim, and dimmer. Fit emblem of life with its ever varying clouds, now bright and beautiful, now dark and lowering, then fading away and to be seen no more forever. In this dusky evening hour did the lonely one bow her head in prayer to the God of Israel, and implore His divine aid to guide her—the light of His love to radiate her heart. When the hour passed away, it bore to Heaven the pleading of the worn wanderer and placed it laden with Faith at the Savior's feet, and he sent an angel of mercy down to our earth and poured a healing balm into her wounded spirit, and she knew that God had listened to the voice of her petition.

A dying one greeted the evening hour and as the pale rays of the moon rested upon her wan features, a smile played about her fever-tinted lips and she uttered the words "going home!" A fit time, art thou, gentle twilight hour, in which for a white-robed angel to take its flight to Heaven.

The gay and joyous school-girl feels her heart grow sadder at this hour, and in her soul the purest and holiest feelings gather home. Remembrance glides the past, and all the bright scenes of "long ago" are before her. The birds have warbled their good-night songs, and in the broad-spreading branches of the forest trees have gone to rest. No thought of wrong enters the heart, naught save the affections which twice about it and blossom

there. Many a joy, many a sorrow, did the gentle hour bring to the children of earth, then departed to dwell forever among the ruins of the past. Thus the sisters journey on—one fresh and glittering with dew-gems—the beauty of the other only enhanced by a soft, hazy, veil thrown about her. One awakes from slumber the sons of earth, the other enfolds them in her gentle embrace, and leads them "through the green meadows and beside the still fountains," of Dream Land. They are two angels of mercy sent to speak "peace" to the weary ones of earth and lift their hearts from its toils and sorrows to Him who is ever ready to listen to their petitions. Morning, and evening! Heaven-sent messengers, to bear our orisons up to the throne of God!

Thus the sisters journey onward,
With the earth they'll pass away,
One doth open the gates of morning,
And the other, shuts the day!

Brighton, N. Y., 1859. MINNIE LOUISA.

PUBLIC WOMEN.

How can a lady who is striving in any measure after perfection of character, voluntarily make herself the "observed of all observers," to a crowd of curious gazers, who stare at her with unflinching curiosity, scrutinizing her person from head to foot, and criticizing her every feature, every expression, every gesture, word and act? Not merely the actors and speakers, but the singers and popular readers of the present day are, to me, I must confess, objects of disagreeable contemplation, lauded and patronized, as they are, by respectable people. I cannot help regarding them—where I know nothing of them except their profession—with a sentiment very nearly allied to that which rises spontaneously in the mind when we look on one who has gone astray from the path of virtue. They certainly have departed from that sphere wherein they were intended to serve God, and bless mankind.

Is there a pure-hearted, pure-minded person,—one whose natural instincts are allowed to speak with their own voice,—that will gainsay this? Does not all natural sense of propriety, all refinement of taste, revolt from the sight, from even the idea, of a woman thus signaling herself? Can we avoid looking upon such a character as one who has overstepped the boundary of true womanhood? And could we choose such companionship with any expectation that it would aid us to rise in the scale of moral excellence? If the tendency, then, is not upward, must it not necessarily be downward? Is there one, in all the crowd, in whose presence such a woman stands, that will not feel, instinctively, that she occupies a lower level in his, or her estimation, than if she had been found engaged in those duties, which, by general consent, belong more appropriately to her own sex? Can she long retain in such a situation that modesty and purity of character which is woman's crowning charm? If these things are so, then let all who have any influence, (and who has none?) discountenance this evil to the utmost extent of their power.

Connecticut, July, 1859.

AMUSEMENT AS A PART OF EDUCATION.

THAT which is recreation and diversion to the man is nothing else than an accumulation of fatigue for a child. In order to aid his physical formation, greater reliance should be placed upon amusements of his own choice than upon exercises, motions, and even plays, prescribed to him after a preconceived plan. At an early age, one duty cannot afford relaxation after another duty. On the contrary, when an amusement is imposed upon a child, it becomes a new fatigue for him. Recreation and play are, no doubt, most necessary for him, but only on condition that they must be of his own accord, free from that contention of mind which is caused by doing a thing by compulsion, or for the sake of obedience. Amusement without perfect freedom of choice, is void of pleasure, and it is not only pleasure which gives the charm to amusement, but which by a natural reaction of the moral and physical elements, renders it salutary. Have we not seen, thousands of times, how warmly children contend among themselves in their plays? "I won't play any more," says the one who thinks himself aggrieved. He thinks that he has a right to say so. The same child would never think of saying, "I won't study any more." Compel him to play at "hide and seek," and at the end of a quarter of an hour he is tired of it; but had he chosen this play, he would not be tired of it at the end of four hours.

Parents who pretend to make the physical alternate continually with the moral and intellectual education, by arranging, after their own idea, the exercises of the one and of the other, and who, holding the child by the hand, compel him to go round a prescribed circle, condemn him also to slavery as tedious as it is useless. Let us always remember, that in order to obtain a good physical education, amusements and plays are of the greatest importance; and secondly, that these cannot be of any profit, but on two conditions, the one being as essential as the other, viz., pure air and perfect freedom.

HAPPINESS OF CHILDREN.—Children may teach us one blessed, one enviable art—the art of being easily happy. Kind nature has given to them that useful power of accommodation to circumstances which compensates for many external disadvantages, and it is only by injudicious management that it is lost. Give him but a moderate portion of food and kindness, and the peasant's child is happier than the duke's; free from artificial wants, unsatiated by indulgence, all nature ministers to his pleasure; he can carve out felicity from a bit of hazel twig, or fish for it successfully in a puddle. I love to hear the boisterous joy of a troop of ragged urchins, whose cheap playthings are nothing more than mud, snow, sticks, or oyster-shells; or to watch the quiet enjoyment of a half-clad, half-washed fellow of four or five years old, who sits, with a large, rusty knife, and a lump of bread and bacon, at his father's door, and might move the envy of an alderman.—Sam Slick.

SATURDAY EVENING AT TWILIGHT.

Beside my window now the light is fading,
And one by one the shadows slowly come;
And still amid the dimness and the shading,
Are busy footsteps, hasting to their home;
Beneath each cottage roof doth welcome wait,
And tender forms are leaning on the gate.

The week is ended, and though men are weary,
Yet there is gladness 'mid the lines of care;
While tuneful voices of the happy-hearted
Mingle their soft notes with the humming air!
How blessed will be the meeting of each circle,
Once more united for their evening prayer.

In this dim light the heart is turned to praise,
And fitted for the coming morning chime;
While all the anthems sweet which nature raises,
Waken to memories of some olden time;
Waken to voices of the old time calling—
Calling the long departed to another clime.

I know not why this darkness round me staying,
Should bring back loved ones that have passed away;
Or why these tears adorn my cheeks are straying,
Or wakens in my heart this mournful lay;
My dead for years have pressed an earthy pillow,
Yet oft they come to soothe my fevered way.

Oh! in such hours as these the fetters sever
That bind us to the clay, so full of rust;
And we, thus launched upon life's crystal river,
Wash from our lips and lives the wayside dust;
Ere long from out this dimness we'll be gathered
Unto the hearth-stone where is all our trust.

The shadows by my window now are deepened,
And wander in my room with noiseless tread;
And darkness, like a veil, is wrapped around me—
I feel its hand upon my aching head;
So calm and still, I'll kneel unto my praying,
While bending o'er me are the quiet dead.

Choice Miscellany.

BEAUTY AND UTILITY.

HOWEVER philosophers may attempt to account for it—however they may theorize and speculate about the matter—the fact still remains that every one is pleased with whatever is beautiful. The child, as soon as he can exercise the sense of vision, reaches out toward the red taper. As he grows older, he is pleased with images however rudely carved or colored. Every bird that sings above his head fills him with ecstasy, and he involuntarily stretches up eager to grasp it.

Since we find this to be the case with the savage as well as the civilized man, it becomes us to inquire what was the design of the Author of Nature in bestowing upon us this characteristic quality; and it will require but a few moments serious thought to convince us that it was given for some great and good purpose. The world is full of beauty, and could man but keep free from the gross things of the earth, which now so occupy his time and attention, and have his mind and vision clear to observe the glorious objects that lie stretched at his feet—which hang above his head—which float in the air and surround him on every side—he would never ask what object was to be accomplished by this delicate organization of the human soul.

There is, perhaps, scarcely any other study that tends more to elevate, refine and purify the mind, than a study of the things that Nature has so profusely thrown in our way. And no danger need be apprehended from a too careful scrutiny of their peculiar properties and distinguishing characteristics; for new beauties will continually burst upon the view and surprise us at every step.

Yet many people seem to have so lost all relish for these things, in which they once took the greatest delight—to have become so materialized as no longer to find any pleasure in them. Some even appear to think it a wicked waste of time to cultivate flowers, and adorn their premises with shrubs and trees, or to show any taste in the construction of their houses and in the arrangement of their gardens and fields. They have risen above such things—have become men and put away childish matters; never seeming to think that, perchance, these were the very things designed to help make them such children as are of the Kingdom of Heaven. Who can look up into the blue sky in the still hours of night, and contemplate the steady, ceaseless and unwearied march of the sublime host spread out to his view, without feeling a desire to rise above and be free from the petty strifes and conflicts with selfishness to which he is liable every hour? Or who can behold a flower, growing far away in the wilderness, or on the desert, without feeling his heart lifted with thankfulness to Him who has everywhere put something to please and cheer us, and teach a lesson of meekness and trust? But it may be said that Beauty and Utility cannot well subsist together—are almost antagonistic. The falsity of this opinion may be easily tested. Did any one ever imagine that the sky displayed the starry firmament any less beautifully because it is blue, rather than black?—or that the grasses and grains of the fields, and the clothing of the trees, accomplish any less useful ends because they remain for a long time a green, rather than of some less pleasant color?

And, in regard to the works of art, who will say that a house, built with neatness and taste, is any less comfortable and convenient than one constructed in utter disregard of all rule? The fact is, a building, or its furniture, or any other work of art, not only gives more pleasure to every one who beholds it, when made with due regard to proportion in all its parts, but also is far less liable to be carelessly injured, and when accidentally damaged, is much more likely to be repaired and saved from further harm than one that has no symmetry or beauty to be marred. We place rude, unpainted seats and benches in our district school-houses, with the expectation that they will be whittled and soon spoiled, and we are not disappointed. Now, if we should provide neat and

tasteful furniture for the school room, not only would the different articles be agreeable objects of sight to all the inmates, but would also be much less injured, while, at the same time, many would be saved from forming the bad habit—of which now almost every boy is guilty—that of defacing and mutilating almost everything that knife and pencil can effect.

And then what attractions has a home where everything is arranged to please and to improve! How many youth might be prevented from taking their first steps toward ruin in the street-school, and other places of resort for evening amusement, were their houses made as inviting as a little expenditure of time and money would make them! And what a refuge from the cares and perplexities of daily life is such a place! Come, look in with us upon a happy family group of the olden time, gathered about the large fire place to pass the long winter's evening. Here is one little company sewing and knitting, another shelling corn, while one, chosen for the purpose, is reading for the benefit of all. Now and then, as the reading proceeds and the narrative opens up scenes of thrilling interest, see the work drop from the hands of this one and that one; and again, as they look into the glowing coils, what wonderful thoughts arise! What strange and almost bewildering visions appear before the excited imagination!

But the cheerful and healthful fire-place is almost wholly banished in our Northern States, even from the houses of our farmers. Yet there are many advantages offered us which our forefathers could not afford to enjoy. Works of Art and Nature, both ornamental and useful, appropriate for the interior of the house and for the premises, are now brought within the reach of the great mass of our people.

You may easily adorn your walls with maps, and diagrams, and portraits—portraits of the great and good, the story of whose deeds and noble examples, after being once recounted, shall be repeated every time these silent preachers come in view. And trees, tall and straight, may be set out, the sight of which shall teach the rising generations to be upright—to stretch forth their hands with unwearied importunity toward heaven, whence cometh all blessing, and to be deeply rooted and grounded in that which is right, and true, and good. And flowers may be cultivated, the free and constant yielding of whose fragrance shall teach them what silent, yet speaking power there is in disinterested actions, and how beautiful and useful is a life of good deeds, which must ascend as a sweet smelling savor before the throne of God.

Thus may be left a homestead to which your descendants will ever revert with delight, as the spot of all the earth most dear—that about which cluster the most holy recollections.

Oberlin, Ohio, 1859. E. P. S.

HOME.

HOME: it is a little word; it has its own interests, its own laws, its own difficulties and sorrows, its own blessings and joys. It is the sanctuary of the heart, where the affections are cherished in the tenderest relations, where heart is joined to heart, and love triumphs over all selfish calculations. It is the training school of the tender plants, which in after years are to yield flowers and fruits to parental care. It is the fountain whence come the streams which beautify and enliven social life.

If any man should have a home, it is the man of business. He is the true working-man of the community. The mechanic has his fixed hours, and when these have run their course, he may, ere the day closes, dismiss all anxiety as his labors end, and seek the home circle. Comparatively little has been the tax on his mind, and not much more on his physical system, as he learns to take all easy. But the man of business is under a constant pressure. His is not a ten-hour system, with an interval of rest; but he is driven onward and onward early and late, without the calculation of hours. He must be employed. In the earnestness of competition—in the complexity of modern modes of business—in the fluctuations which frequently occur—in the solicitude dependence on the fidelity and integrity of others—he has no leisure moments during the day. With a mind incessantly under exciting engagements, and a body without its appropriate nutriment, he may well pant for home, and hail the moment when he may escape from his toils to seek its quiet, and its affection and confidence.—Joaquin Ferris.

AUTHORSHIP.

THE chief difficulty with an author is to get him to begin. He will think about it, talk about it, smoke over it, sleep over it, read on it. But he usually dislikes to commit himself on paper. Once let him get his pen at work, and if only the title is written, it will, in a great measure, work itself free and clear. With some men, to write the first sentence is half the battle, especially if before this be done, a sharp outline, a well defined plan, the simpler the better, lie clearly in the mind. This ought always to be the case. Be it a book, an article for a review, a poem, or a sermon, let these preliminaries be all clearly settled, and the introductory sentence once written, and with nine men out of ten, all the rest will follow and flow softly and evenly as a river. Indeed, most persons will write far better the more rapidly they compose, if they have a clear plan in their minds. To write thus with the blood boiling, then lay aside the manuscript and correct it six weeks afterwards, with a cool and dispassionate judgment, will generally produce the best things a man can write on any subject.

WASHINGTON ON VICES AND AMUSEMENTS.—"Let vice and immortality of every kind be discouraged as much as possible in your brigade; and as a chaplain is allowed to each regiment, see that the men regularly attend divine worship. Gaming of every kind is expressly forbid, as the production of evil, and the cause of many gallant and brave officers' ruin. Games of exercise and for amusement may not only be permitted, but encouraged."

Max may give good advice, but they cannot give the sense to profit by it.

"WHOM, NOT HAVING SEEN, WE LOVE."

It is easy to love when eye meets eye,
And the glance reveals the heart,
When the flush on the cheek can the soul bespeak,
And the lips in gladness part;
There's a thrilling of bliss in the loving kiss,
And a spell in a kindly tone,
And the spirit bath chains of tenderness
To fetter and bind its own.

But a holier spell and a deeper joy
From a purer fountain flow,
When the soul sends higher its income fire,
And rests no more below;
When the heart goes up to the gate of heaven,
And bows before the throne,
And striking its harp for sins forgiven,
Calls the Savior all its own.

Though we gaze not now on the lovely brow
That felt for us the thorn;
Though afar from home we pilgrims roam,
And our feet with toil are worn;
Though we never have pressed that pierced hand,
It is stretched out lives above;
And we own His care, in grateful prayer,
"Whom, not having seen, we love."

We have felt him near, for many a year,
When at eve we bent the knee
That merry breath, that glorious faith,
Dear Savior, came from thee.
When we stood beside the dying bed,
And watched the loved one go,
In the darkening hour, we felt His power,
And it hushed the waves of woe.

And still, as we climb the hills of time,
And the lamp of earth grows dim,
We are hastening on from faith to sight,
We are pressing near to him;
And away from idols of earthly mould,
Enraptured we gaze above,
And long to be where his arms enfold,
"Whom, not having seen we love."

DEVOTION.

If we know that an individual holds communion with God, that fact tends to give us confidence in him. Something within us tells us that the praying person is one who will not injure us, and one whom we can safely trust. It was upon this principle that an infidel who was traveling, and who was overtaken by night-fall in a lonely and dangerous place, confessed that he was relieved of his fears of being assassinated, when the owner of the cabin where he had taken shelter led the family in prayer before retiring to rest. The infidel slept soundly after such a manifestation of Christianity. A cabin roofed and walled by prayer could not be an unsafe place, he thought. We have authority for another pleasing incident, illustrating the same point. In exercising hospitality to a clergyman who arrived at a dwelling late in the evening, the heads of the house surrendered to him their own chamber. Their little daughter, three years of age, was asleep in the crib, and they concluded not to disturb her. Quite early in the morning she awoke, and looking toward the bed usually occupied by her parents, saw a stranger there. At first she was startled, and covered her head with the counterpane. Soon, however, she peeped out and said, "Man, do you pray to God?" "Yes," was the answer, "I love God, and pray to him every day." This satisfied the little inquirer; she smiled, turned over, and dropped asleep.

THE FULLNESS OF CHRIST.

THE happiness we derive from creatures is like a beggar's garment—it is made up of pieces and patches, and is worth very little after all. But the blessedness we derive from the Saviour is single and complete. In him all fullness dwells. He is coeval with every period. He is answerable to every condition. He is a physician to heal, a counsellor to plead, a king to govern, a friend to sympathize, a father to provide. He is a foundation to sustain, a root to enliven, a fountain to refresh. He is the shadow from the heat, the bread of life, the morning star, the sun of righteousness; *all, and in all*. No creature can be a substitute for Him, but He can supply the place of every creature. He is all my salvation, and all my desire; my hope, my life, my glory, and joy.

Whom have I in heaven but Thee? and there is none upon earth that I desire besides Thee. My flesh and my heart faileth, but Thou art the strength of my heart and my portion forever. I cannot be exposed, I cannot be friendless, I cannot be poor, I cannot be fearful, I cannot be sorrowful, with Thee.

WORTH OF CHRISTIANITY.—We live in the midst of blessings till we are utterly insensible of their greatness, and the source whence they flow. We speak of our civilization, our arts, our freedom, our law, and forget how large a share is due to Christianity. Blot Christianity out of the pages of man's history, and what would his laws have been? What is civilization? Christianity is mixed up with our very being and our daily life; there is no familiar object around us which does not wear a different aspect because the light of Christian love is on it—not a law which does not owe its greatness to Christianity—not a custom which cannot be traced in all its holy, healthful parts to the Gospel.—Sir Allen Park.

THE BIBLE THE KEY TO THE HEART.—If I had a lock of very complicated construction, and there was only one key that would unlock it, I should feel very sure that key was made by one who understood the construction of that lock. So when I find that, notwithstanding all the windings and mysteries of iniquity in the human heart, the Bible, and the Bible only, is adapted to it throughout, and is able to penetrate its most secret recesses, I am constrained to believe that the Bible was made by Him who "alone knoweth the hearts of the children of men."—Webster.

The Reviewer.

THE NEW AMERICAN CYCLOPEDIA. A Popular Dictionary of General Knowledge. Edited by GEORGE L. HAYES and CHARLES A. DANA. Vol. VI. 600 pp. Education. [pp. 712.] New York: D. Appleton & Co.

The Sixth Volume of this great National Work has been issued in a style equal to either of its predecessors, in all respects, and is on sale by subscription agents throughout the country.

In noticing one of the early volumes of this Cyclopaedia we remarked that the publishers had undertaken "a gigantic enterprise—one which, if successful, as it has far surpassed so far, will furnish along-sought desideratum, and establish for its originators an honorable, wide and lasting reputation." Herculean as was the task, however, the editors and publishers have acquitted themselves most nobly in producing and presenting the first six volumes, and each successive issue of the work increases our admiration of the enterprise and manner in which it is being conducted toward completion. The present volume treats upon many highly interesting and important subjects, and the list of contributors comprises quite an array of names distinguished for talent and scholarship. One of the best features of the work is that it contains biographies of eminent men, both living and deceased, and in the volume before us this feature is prominent. Among the most noteworthy articles are those on Credit Mobilier, Cuba, Dam, Damascus Blades, Dance of Death, Denmark, Dartmouth College, Deaf and Dumb, Dentistry, Dictionary, Distillery, Diving Bell, Divorce, Dwarf, Echo, Eclipse, Ecuador, Edinburgh Review, Education, &c., &c. We again commend the Cyclopaedia to all who desire the most valuable work issued from the American Press for many years. Sold in Rochester by D. M. Dawar, Subscription Agent.

ELEMENTARY GRAMMAR, ETYMOLOGY AND SYNTAX. Adapted from the Octavo Edition of the "English Language in its Elements and Forms." Designed for General Use in Common Schools. By W. C. FOWLER, late Professor of Rhetoric in Amherst College. [16mo. pp. 224.] New York: Harper & Bros.

This large work, of which this is an abridgement, designed for Common Schools, had a very favorable reputation, and the abridgement has the chief characteristics of the former. To those who adopt the general views of English Grammar, of which "Brown's Grammar" is both substance and model, this School Grammar will be acceptable. Some particulars may give it higher value to some teachers, as the "Ancient or Strong Conjugation," and the "Modern or Weak Conjugation." There is no Subjunctive Potential Mode, as "if I might study algebra, I should know." Prof. Fowler has given up the old and absurd spelling (mode) for Mode, which last alone has meaning or propriety. The teacher will find also what all know but the grammars, that you singular as well as plural; that when he says to John, for his fine recitation, "You have done well," he speaks genuine English; and that the subjunctive, "if you are and if he is," is true English form of speech, as well as "if he loves." But, when the teacher reads on page 75, "of the modern verb 'to love,'" and asks how *love* is modern, and *am* is ancient, the answer is not in the book. The lovers of the "good old ways" of English Grammar will approve and may well use this work. Rochester—Dawar.

COUNTRY LIFE: A Handbook of Agriculture, Horticulture and Landscape Gardening. By E. MOORE COPELAND. Boston: John P. Jewett & Co.

This is a beautifully printed and finely illustrated book of over 900 pages. It is, unquestionably, got up with a good deal of labor, but an author who undertakes to teach Agriculture, Horticulture and Landscape Gardening in one work, we think attempts too much. He must depend upon standard authorities for his facts, and become a compiler—the merit of the work being shown in the care and judgment with which selections are made. A cursory examination of the volume leads us to think the author has performed his work exceedingly well, and we notice many valuable things that have not before come under our observation. It gives a mass of valuable information in a very convenient form, and we commend it to those of our readers whose libraries are not furnished with standard works on the subjects treated of in its pages. For sale by the booksellers generally.

M. T. CICERO'S DE OFFICIIS. Libri Tres. With Marginal Analysis and English Commentary. Edited for the Syndics of the University Press by the Rev. HENRY ASTOR, BISHOP, M. A., Vice-Principal of Cheltenham College, &c. First American Edition, corrected and enlarged. By CHARLES ARTHUR, LL. D., Professor of Greek in Columbia College. [pp. 815.] New York: Harper & Bros.

This is the famous work of Cicero on Moral Philosophy or Duty, issued from the University Press in England, as edited by a distinguished English Scholar and Vice-Principal of Cheltenham College. The object was to give to the student the most correct copy of the original, with a running Commentary in English. Rev. Dr. ARTHUR, so widely known by his learned notes and commentaries on several of the Latin Classics, has given us the First American Edition of the above named work, enriched by his own corrections, additions and emendations. The difficulties in the original are chiefly removed, at least in this, as it has been well called *variorum* Edition. Rochester—Dawar.

FRANKLIN; or, The Son Jacinto in the Seas of India, China and Japan. By WILLIAM MAXWELL WOOD, M. D., U. S. N. [pp. 545.] New York: Harper & Brothers.

ALTHOUGH we are but midway between "Tide and Flood" in our perusal of this very interesting book, we cannot refrain from calling the attention of that class of readers who delight in Travels, Descriptions of the World Abroad, etc., to this last production of Dr. Wood. Those who have followed him in his "Wandering Sketches in South America and Polynesia," have watched him as he applied "A Shoulder to the Wheel of Progress,"—will not need our commendation of his writings— terse, vigorous and graphic as they always are. The typography is in the usual good style of the firm announced as publishers. For sale by Dawar.

SHAKERS. Compendium of the Origin, History, Principles, Rules and Regulations of Government, and Doctrines of the United Society of Shakers in Christ's Second Appearing. With Biographies of Ann Lee, William Lee, Jas. Whitaker, J. Hackett, J. Meacham, and Lucy Wright. By F. W. EVANS. [pp. 189.] New York: D. Appleton & Co.

We are indebted to friend D. C. BRAINARD, of the Society of Shakers, New Lebanon, N. Y., for a copy of this work. It is, as its title implies, a Compendium of Shakerism, comprising, in a condensed form, much information respecting that remarkable sect, and such as has heretofore been spread through five or six volumes. The volume will prove interesting and valuable to all who desire information concerning the Shakers, their history, doctrines, &c.

THE MAGAZINE for August have been received and are usually interesting and attractive. The *Atlantic*, *Harper's Monthly*, *The Knickerbocker*, and *Godley's Lady's Book* are especially rich and readable this month, while others are well sustained. Most of the magazines commenced new volumes with July, and generally under very favorable auspices.

Books Received.

PERSONAL RECOLLECTIONS OF THE AMERICAN REVOLUTION. A private Journal. Prepared from Authentic Domestic Records. Together with Reminiscences of Washington and Lafayette. Edited by SIDNEY BARCLAY. [16mo. pp. 351.] New York: Budd & Carleton. Rochester—D. M. Dawar.

THE LIFE OF GEN. GARIBOLDI. Written by himself. With Sketches of his Companions in Arms. Translated by his Friend and Adviser, THEODORE DWIGHT, author of "A Tour in Italy in 1821," "The Roman Republic in 1849," &c. Embellished with a fine Engraved Portrait on Steel. [16mo.—pp. 320.] New York: A. S. Barnes & Burr. Rochester: E. Darrow & Brothers.

THE ROMAN QUESTION. By E. ABOUT. Translated from the French by H. C. COOPER. [16mo. pp. 219.] New York: D. Appleton & Co. Rochester—ADAMS & DAWAR.

THE EARNEST CHRISTIAN. Memoirs, Letters, and Journals of HARRIET MARIA JAMES, wife of the late Rev. MARK K. JAMES. Compiled and Edited by Mrs. H. A. GILBERT. [pp. 314.] New York: Robert Carter & Bros. Rochester—ADAMS & DAWAR.

THE BIBLE IN THE LEVANT; or the Life and Letters of the Rev. O. N. HUNTER, Agent of the American Bible Society in the Levant. By SAMUEL LEXNAUS PRIMA. [pp. 386.] Boston: Gould & Lincoln. Rochester—Dawar.

THE EXPLOITS AND TRIUMPHS, IN EUROPE, OF PAUL MORPHE, the Chees Ombroph; including an Historical Account of China, Burghaphical Sketches of Famous Players, and various information and anecdote relating to the Noble Game of Chess. By Paul Morphe's Late Secretary. [16mo.—pp. 293.] New York: D. Appleton & Co. Rochester—Dawar.

TWO TIM TRUMPERT; or, Heads and Tails for the Wise and Wagish. A New American Edition, with Alterations and Additions. [pp. 362.] New York: D. Appleton & Co. Rochester—Dawar.

ELLEN MORDAUNT; or, The Fruits of True Religion. [pp. 802.] Philadelphia: American Sunday School Union. Rochester—ADAMS & DAWAR.

LIZZIE CLARK; or The Last Penny. (A small Juvenile, published and sold as above.)

POEMS. By ANNE WHITNEY. [pp. 161.] New York: D. Appleton & Co. Rochester—ADAMS & DAWAR.

Spice from New Books.

Washington.

In the year of our Lord 1790, I stood upon the door-step of the counting-house, of which I was then but the youngest clerk, when the companion beside me hurriedly said, "There he comes!—There comes Washington!" I looked up Pearl street, and saw approaching, with stately tread and open brow, the Father of my country. His hat was off, for the day was sultry, and he was accompanied by Colonel Page and James Madison. Never have I forgotten, nor shall I to my dying day forget, the serene, the benign, the godlike expression of the countenance of that man of men. His lofty mien and commanding figure, set off to advantage by an elegant dress, consisting of a blue coat, buff small-clothes, silver knee and shoe buckles and white vest; his powdered locks, and powerful, vigorous look, (for he was then in the prime and strength of his manhood,) have never faded from my mind during the many years which, with all their chances and changes, have rolled between.—*Personal Recollections of the American Revolution.*

La Fayette's Visit.

The most delightful recollections of my earliest childhood are those of the visit of General De La Fayette to America. The splendid pageant of his entrance into this city is indelibly imprinted on my memory; as is also the being held on men's shoulders in the Park, after viewing, in all its pompous length, the procession, to behold the benevolent and beaming countenance of one whom I had been taught to revere. Afterwards, too, the honor that I felt in being taken by the hand by this great and brave man, my heart beating proudly the while beneath the ribbon badge which I wore, stamped with his features, and with the words, "Welcome to the Nation's Guest." Oh, happy day for me! thrice happy and glorious to him!—*Id.*

The Old House.

THERE was one article in the house which had belonged to the Washington family, and only one. It was an old mirror. It fitted over the mantel-piece underneath the wainscoting, and was never removed. Well do I remember, when a mere child, being told this by an old servant, and how I gazed upon it with veneration, because it had often reflected the face and form of the beloved Washington. It was held as a relic of him. Many a weary night when I have lain sleepless on my bed, the wind whistling mournfully without, a lonely feeling would creep over me as I looked upon the wainscotted walls of The Great Room, the old blue tiles of the large fire-place, and the deep embrasured windows, and felt the stillness so profound within that I could almost hear the beating of my own heart. Then the terrors of a fearful imagination would be exercised, as the words of my mother seemed to whisper me again: "When vain fears disturb thee, remember the good man who once lay where thou liest, and be thankful.—The dark vision will be dispelled."—*Id.*

Loneliness of Great Cities.

THE vastness of the crowd the more solitary the individual, the more lonely the heart. "No one," says a recent writer, "is known in London; it is the realm of the incognito, and the anonymous. It is not a place, but a region, or a State. There is no such thing as local opinion in the metropolis;—mutual personal knowledge there is none; neighborhood, good repute, bad fame, there is none. No house knows the next door. How is a man to show what he is, when he is but a grain of sand out of a mass, without relations to others, without a place, without history, without distinctiveness? Crowds pour along the streets; and although each has his own character written on high, they are one and all the same to men below."—*Id.*

This is true, though of course in a less degree, with every great city, especially to the young and unfriended stranger. All at once he passes from the midst of a friendly neighborhood—where every one knows another, where the eye of every one is on his brother, and where the slightest incident of weal or woe affecting any of its members, is the theme of interested converse around each cottage hearth—to almost an absolute solitude. In fact, in those vast wildernesses of streets, and lanes, and noisome courts and alleys, of which the lower parts of our great cities consist, while the worst vices of social life are generated to the utmost, society, in the true sense of the word, can scarcely be said to exist. There are few or no ties of mutual knowledge, common interest and friendly neighborhood, such as bind the inhabitants of a countryside or of a small town together, and which make a parish not a district merely, but a living, organized society.—*North British Review.*

SCENES IN AND AROUND JERUSALEM.

THE VALLEY OF JERUSALEM.

How any sane man can doubt Bible history, while there exists such abundant and enduring evidence of its truth, we cannot comprehend—while Jerusalem, with its magnificent temple and massive walls lies in ruins—while the Jordan still rolls its floods to mingle with the dark waters of the Dead Sea, and the Lake of Galilee mirrors on its transparent surface sky and cloud, as it did when the Redeemer fed the famishing thousands upon its shores and walked upon its bosom—while Bethany, and Nazareth, and Olivet, and Calvary, still proclaim the death and triumph of Israel's God.

The Valley of Jehoshaphat, called in the Bible and Josephus, the Valley of Kedron, commences on the north-west of Jerusalem in two gentle depressions, and encompassing the city on the north and east, terminates in another similar valley on the south and west. It is now called the Valley of Jehoshaphat by Jews, Christians and Mohammedans. In this valley is the Fountain of En-rogel, and its present appearance is shown in the engraving, which was sketched on the spot by Mrs. SARAH BARCLAY JOHNSON, and published in her work, "The Hadji in Syria."

Written for Moore's Rural New-Yorker.

ONE HUNDRED YEARS AGO.

THE year 1789 belongs to a most important era in the world's history. Great events were then transpiring,—events which have changed the destiny of nations and of races,—but the importance of which was, of course, far less understood then than now. As there may be a natural and laudable curiosity to know what our great-grandfathers and our great-great-grandfathers were doing and talking about one hundred years ago, I purpose presenting a slight sketch of the most important events of the year 1789, reviewing, also, enough of the history of preceding years, to render the narrative intelligible.

Then, as now, war was raging fiercely in Europe. The peridy of one bold, bad man, FREDERICK OF Prussia,—sometimes called FREDERICK the Great,—had drawn upon him the vengeance of the neighboring nations. The occasion was this. Prussia had some ancient pretensions to the Austrian province of Silesia, and the accession of the young and apparently helpless MARIA THERESA to the Austrian throne, in 1740, seemed to FREDERICK to present a good opportunity to assert those pretensions and take possession of the coveted territory. It is true, that by a treaty known as the "Pragmatic Sanction," Prussia had united with the other great powers in guaranteeing the integrity of the Austrian Empire, and at the accession of the young Queen, FREDERICK had been foremost in his professions of friendship. But in spite of the plainest rules of common honesty, and the obligations of recent treaties, FREDERICK sent an army into Silesia, and formally annexed it to his dominions. Immediately France and Bavaria, whom shame had hitherto restrained, incited by this successful villainy, hastened to join in dismembering the Empire, and to share in the spoils. But it was not the purpose of FREDERICK to allow others to obtain part or parcel in the dismemberment of Austria, and after a fierce conflict the treaty of Aix-la-Chapelle was concluded in 1748, Prussia retaining Silesia, and France and Bavaria gaining nothing.

But the peace was only a hollow truce. The Empress Queen of Austria could not thus easily forget the great wrong which she had suffered. Eight long years she spent in preparations for a coming struggle with the spoilers of her throne. Eight years she spent in organizing a combination of States, such as never before or since has united in attacking a State so comparatively small as Prussia. At length, in 1756, when all preparations were made, FREDERICK found himself at war not only with Austria, but with France, Russia, Saxony and Sweden. It seemed that Prussia could not stand against such a combination for a single campaign. A population of less than five million was attacked by nations numbering over one hundred million. Such was the beginning of the long and bloody "Seven Years War"—memorable alike in Europe, in India, and the memory of which is still perpetuated in our own country by many a tale of French and Indian atrocities along our then Western Frontier.

It is not our purpose to trace the history of all the brilliant achievements of FREDERICK in that contest, in which he maintained, with some reverses, his position, and by his ability and vigor proved himself the greatest military chieftain of the age. The war was raging most fiercely just about an hundred years from the summer of 1859.

The earliest mention of En-rogel occurs in the book of Joshua, where it is twice mentioned (xv. 7, and xviii. 16) as a landmark of division between Judah and Benjamin. In the Septuagint it is called *fountain* in each of these places, as it is also by Josephus; and in 2 Sam. xvii. 17, where it is next mentioned as the lurking-place of Zadoc and Abiathar, until they could receive tidings of the state of matters in Jerusalem, in order to bear them to David while fleeing from Absalom. The next and only other mention of En-rogel is in connection with the rebellion of King David's other rebel son. For it was doubtless just here, upon some one or other of the large rocks still remaining between the Mount of Offence and Hill of Evil Council, that the evil-counseled "Adonijah slew sheep and oxen and fat cattle, by the stone of Zabeleth, which is by En-rogel," and called his accomplices to eat. But alas! when the state of matters in the city became known, "all the guests of Adonijah were afraid, and made an end of eating, and rose up and went every man his own way; and Adonijah feared because of Solomon, and arose and went and caught hold of—the horns of the altar—instead of the sceptre!"

For three years had the military genius of FREDERICK sustained him against the powerful combination. Soon the combination began to break—first Russia withdrew from the contest, then France, and Austria was left to maintain the conflict alone. Though stronger and wealthier than Prussia, she could scarcely hope to conquer, and at last, in 1763, peace was again declared—FREDERICK still retaining Silesia, which not all his enemies combined could wrest from him.

In the meantime, France and England had been at war, not only in Europe but wherever the spirit of mercantile enterprise or territorial aggrandizement brought them together. The middle of the Eighteenth Century found them striving for India, and for the supremacy of the North American Continent. The vast Empire which the genius of DUPLEX had founded, and almost consolidated in India for France, was quickly overthrown by the military genius of CLIVE, then a young man in the service of the East India Company, and before the year 1759 England had driven the French from India, though she had yet scarcely laid the foundation of her present East Indian Empire.

In America the French had been for many years building a long string of military posts, from Quebec to New Orleans, in order to prevent the progress of English power west of the Alleghanies, and with the Indians were harassing our western frontier and menacing the very existence of the infant Colonies of England in the New World. In 1755 Gen. BRADDOCK was sent out to repulse the French, and if possible, to destroy their chain of forts. In the contest which followed, GEORGE WASHINGTON, a young Virginia Colonel, first began to distinguish himself as the military leader of the American people. It was not, however, till 1759, that the pretensions of the French to the Canadas were destroyed, in the decisive capture of Quebec by WOTZ, and English supremacy in America was established, though still leaving to France the vast and indefinite territory of Louisiana.

During the few years preceding 1789, and while most of these events were taking place, WILLIAM PITT was at the summit of power in England, and those brilliant victories of English arms in the East and in the West, had made him almost the idol of the English people. But these victories had laid the foundation of the vast national debt, which, comparatively small then, was yet hard to be borne. A few more years, and an absurd attempt to tax the American Colonies, as the easiest way to dispose of this indebtedness, resulted in stripping England of the most valuable empire which she had founded.

How strange are the events of history! Who would have surmised that the brilliant successes of English arms about the middle of the Eighteenth Century, were, in a few years, to result in her own humiliation, not only by engendering an oppression which should drive the Colonies to Revolution, but still more, in the "Seven Years War," which, by uniting the Colonies and developing their strength and military powers, could alone render such revolution possible or effective. HENRICHS, N. Y., July, 1859. W. J. F.

MUSIC.—There is something very wonderful in music. Words are wonderful enough; but music is even more wonderful. It speaks not to our thoughts as words do—it speaks straight to our hearts and spirits, to the very core and root of our souls. Music soothes us, stirs us up; it puts noble feelings into us; it melts us to tears, we know not how; it is a language by itself, just as perfect in its way as speech, as words; just as divine, just as blessed.—*Kinglet's Sermons.*

THERE is this difference between happiness and wisdom; he that thinks himself the happiest man really is so; but he that thinks himself the wisest is generally the greatest fool.

YOUNG RURALIST.

"A FEW WORDS ABOUT DOGS."

MESSES. EDITOR.—Noticing in the YOUNG RURALIST's department in a late issue of your valuable paper, a rather destroying article on dogs, I deem it my privilege to claim a corner in the RURAL, through which I may exercise my feeble influence in averting an entire annihilation of the canine race. W. H. H. P. seems to cherish a mortal antipathy against the whole race of dogs, and assuming the spirit of a dog-exterminator of 1857, declares himself ready to enter upon a campaign of universal extermination. Now, I have sound reasons for cherishing very different regards for the canine race, and while willing to admit that there are some really worse than worthless, I cannot divine the propriety of condemning the whole family as a public nuisance. Because "Old Franchise" will toss up her head and kick the milk-maid over every time she approaches her for the purpose of milking, may not the maid with equal propriety shower about "Old Brooks" epithets of resentment, who always adjusts herself in a proper position and patiently waits the process?

The dog is certainly a noble animal, and well adapted to the services of man, and particularly the farmer. The services which he can render him are many, and amply repay the expense of keeping him. He may be taught to act the part of "Cow-boy" with much more faithfulness than most of such human officials. And the office he fills during the night, in many cases, renders him decidedly valuable. The owner under whose supervision the dog is reared, is responsible for that dog's demeanor, as any dog may be taught to know what is right for him, and what is not—to a sufficient degree, at least, to render him harmless, and at the same time useful. Those "yelping curs," which assail my friend at every house, in "duplicates," have evidently been spoiled in bringing up, and therefore do not think it wrong to publicly attack their common enemy, and vindicate their glorious rights of speech, as become American citizens. Or there may be some peculiarity about him, that excites their special animosity. He should consider these things before he makes any rash move, and if he finds then he has cause to "gird on the armor," and "wage a war of extermination," let me entreat him to spare those venerable specimens, who have been the pride of the household, and the cherished and confiding playmates of the merry little ones. W. C. M. Podunk, Genoa, N. Y., July 15, 1859.

QUESTIONS FOR DISCUSSION.

EDS. RURAL:—Having seen a letter from a YOUNG RURALIST requesting some one familiar with debating societies, to send a few questions which would promote discussions, I send the following, upon the most of which I have heard good debates:

- Resolved, That the Indian is more worthy our consideration than the negro.
- Resolved, That fictitious works are dangerous to the morals of the young.
- Resolved, That the accession of Territory to the United States is desirable.
- Resolved, That foreigners should be deprived of the right of suffrage.
- Resolved, That American literature at the present day is more beneficial than English literature.
- Resolved, That farming is the most ennobling of all occupations.
- Resolved, That poverty is better than riches.
- Resolved, That our army and navy should be increased.
- Resolved, That the annexation of Cuba to the United States is desirable.
- Resolved, That small farms are more profitable than large ones.
- Resolved, That the United States is destined to have a downfall.
- Resolved, That the raising of stock is more profitable than that of grain.
- Resolved, That the female mind is as capacious as that of the other sex.

A. J. WHEELER.

PRESERVATION OF BIRDS.

EDS. RURAL:—I see attention called to the preservation of birds, in a late number of the RURAL. Notwithstanding the fact that many boys and men do kill birds, my attention has been called to the fact that cats are at this season of the year very destructive to the young birds. One cat kills regularly from one to five each day. Whole nests are suddenly depopulated just as the young are about to fly; and since, in my opinion, cats are, at best, a nuisance, let every one that is guilty of this crime be killed.

Robins have been very troublesome this year. I infer from this fact, the late frosts destroyed many insects upon which they lived. My plan to drive them from ripening fruit, is to place the image of a man in the midst, and once or twice a day to fire several charges from a pistol near it. This scares them away and has proved effectual. West Bloomfield, N. Y. MARK D. WILSON.

A PARAGRAPH FOR BOYS.—It is one of the besetting sins of the young men in this extravagant age, to endeavor to get rid of work by seeking for easy and lazy employment, and the consequence is, that many of them turn out worthless vagabonds. Boys, avoid this whirlpool as you would a plague spot; banish from you the dangerous desire to live without work. Labor is honorable, dignified; it is the parent of health, wealth and happiness; look upon it as an invaluable blessing, and never as a burden or curse. Shun idleness and sloth; pursue some honest calling, and be not ashamed to be useful.

MAKE good use of time, if thou lovest eternity; yesterday cannot be recalled—to-morrow cannot be secured—to-day only is thine, which, if once lost, is lost forever.

TERMS, IN ADVANCE:

One copy, 1 year, \$2.00
 Three copies, 1 year, \$5.00
 Six copies, 1 year, \$9.00
 Twelve copies, 1 year, \$17.00
 Twenty-four copies, 1 year, \$32.00
 Forty-eight copies, 1 year, \$62.00
 One copy, 6 months, \$1.00
 Three copies, 6 months, \$2.50
 Six copies, 6 months, \$4.50
 Twelve copies, 6 months, \$8.50
 Twenty-four copies, 6 months, \$16.00
 Forty-eight copies, 6 months, \$30.00

And an Extra Copy, free, to every person remitting for a club of six or more copies; and two free copies for every club of thirty or over. As a new Fall Volume commenced July 24, now is the time to form clubs for either six months or a year. All persons who form new clubs to commence with July, or introduce the Rural in localities where it is not now taken, will be liberally remunerated for their time and attention.

Back numbers from April or January can still be furnished, if desired. We will send Specimen Numbers, Show Bills, &c., to all applicants, and to the address of as many non-subscribers as may be forwarded.

DOMESTIC NEWS.

Matters at Washington.

The Indian Bureau has been officially informed that the Indians of New Mexico show strong indications of hostility. One of the U. S. Deputy Surveyors had been forced to abandon his survey by a band of Apaches. The Opat Indians were committing great ravages in Northern Sonora—shooting men and ravishing women. The troops seem to be afraid to attack them. An American citizen belonging in Arizona, is in jail in Magdalena for no offence, and fears are entertained that he would be murdered. It is utterly impossible for an American to travel now in Sonora without being massacred and robbed of everything. It is the intention of the government to establish posts on the frontier of the Apache country.

The States mentions the reception of important private dispatches from Northern Mexico, stating that it is expected within the next ninety days 3,000 American troops will be organized on the Rio Grande, properly armed and equipped, for the purpose of marching on the city of Mexico, and exterminating the whole Miramon faction.

The President called a meeting of the Cabinet on the 10th inst., to consider the dispatches from Minister McLane, in relation to the Treaty with the Constitutional Government of Mexico. It is reliably ascertained that several months ago the Miramon government invited France and England to assume the protectorate of Mexico, but they have given no response to the proposition.

The receipts into the Treasury for the quarter ending with June, exclusive of the trust funds, were \$23,128,452, including \$14,251,000 from customs, \$443,376, for public lands, \$800,200 from Treasury notes issued under the act of Congress of 1867. The expenditures during the same period were \$26,212,000 including \$10,006,000 in payment of Treasury notes, and \$1,584,000 interest on public debt including Treasury notes.

Much speculation is indulged as to the action of our government on Mr. McLane's recent dispatches, but as these have been kept perfectly secret, nothing is known outside of the Administration, except the fact that instructions are on the way to our Minister by a special messenger. By advice just received here, it appears that Juarez declines signing a treaty without the approval of the Mexican Congress, and one cannot be called until the Liberals obtain possession of the city of Mexico. This, however, is not the only difficulty. A conspiracy was discovered in the Capital on the 11th ult., a plan of which was to assassinate the Governor, and take possession of the Government.

The construction of the Washington National Monument, after a suspension of several years, is about to be resumed. Systems to raise funds for the prosecution of the work have been put in operation, and it is proposed to request the Post Masters throughout the country to give aid to the enterprise by placing boxes within their respective offices for the reception of contributions, and forwarding the returns to Washington. A few cents a month from the 30,000 post-offices, would suffice in a few years to raise the shaft to its intended height.

Personal and Political.

Hon. RICHARD RUSH, died in Philadelphia, last week, aged 79. He was the son of the celebrated Benj. Rush, who was a member of the Continental Congress, and who signed the Declaration of Independence. He was Minister to England under President Monroe; Secretary of the Treasury under President Adams; Special Agent to England under President Jackson; and Minister to France under President Polk.

The telegraph announced the death of the Hon. Horace Mann, on the afternoon of the 2d inst., at Yellow Springs, Ohio, his recent residence, and the scene of his latest labors. Mr. Mann was born at Franklin, Massachusetts, in 1796. He graduated at Brown University in 1819, and studied law at Litchfield, Connecticut. He entered upon the practice of his profession at Dedham, and while there was elected to the State Legislature. He removed to Boston in 1836, where he was elected to the State Senate, chosen President of the Massachusetts Board of Education, and was then elected a Member of Congress, serving from 1845 to 1853. Education, however, was the special object which

enlisted all his sympathies and powers. At the close of his Congressional term, he engaged in the establishment of Antioch College, at Yellow Springs. He became its President and also President of the Northwestern Christian University at Indianapolis, and the close of his life was fittingly spent in labors calculated to stimulate educational progress and Christian knowledge.

Hon. JOHN GAYLE, Judge of the United States District Court for Alabama, died on the 21st ult. The deceased was twice Governor of Alabama, and represented the Mobile district one term in the Congress of the United States. He was appointed in 1849, by President Taylor, Judge of the United States District Court for the District of Alabama, which position he continued to occupy up to the time of his death.

The Republican Convention at Leavenworth, Kansas, on the 3d inst., nominated Marcus J. Parrott for delegate to Congress.

A DISPATCH from Louisville, says "the Congressmen elected are as follows:—First District, Barnett, dem.; 2d district, Peyton, dem.; 3d district, Bristow, opp.; 4th district, Anderson, opp.; 5th district, Brown, dem.; 6th district, Gerrard, dem.; 7th district, Mallory, opp.; 8th district, Simms, dem., probably; 9th district, Moore, dem., probably; 10th district, Stevens, dem. The returns received thus far indicate the election of Magoffin, dem., for Governor, and that the State Legislature, on joint ballot, will have a small democratic majority."

LATER.—The returns indicate the election of Moore to Congress, in the 9th district, and Adams in the 6th district. Both are opposition candidates. The vote is close and doubtful.

ALABAMA has elected an entire Democratic delegation to Congress, as follows:—1st district, Jas. A. Stallworth; 2d, Jas. L. Pugh; 3d, David Clifton; 4th, Sydenham Moore; 5th, Geo. S. Houston; 6th, W. R. W. Cobb; 7th, J. L. M. Curry. Pugh and Clifton are new members. All the others were members of the last Congress. A. B. Moore, dem., is re-elected Governor by a large majority.

In Tennessee, Harris, dem., is elected Governor by about 6,000. The opposition have elected Congressmen in the 2d, 3d, 4th, 5th and 8th districts, and probably the 1st, and the democratic candidates are chosen in the 6th, 7th and 10th. The 9th district is still doubtful. The Legislature is democratic.

News Paragraphs.

In New York there has been formed a Young Men's Early Rising Association, all the members of which are pledged to be up at a certain hour.—It originated with about half a dozen men, who, having kept up this habit for some years, were surprised at its beneficial effects, and at the success in life of their associates.

TRIMBLE county, Ky., it is supposed, furnishes more blackberries than any place of its size in the world. The picking and forwarding to the Cincinnati market has been reduced to a system, and it is found that the receipts of a season, which lasts about six weeks, are not less than \$25,000. Pickers average from \$1.20 to \$2.50 per day.

THE eye of Napoleon III. is sharp, and it ranges over the wide world. A splendid spanking pair of night-black horses, lately owned by Mr. Sanderson, of Somerville, N. J., have just been sold to his Imperial Highness for \$4,000, and left for the royal stables last week. For the last ten years these steeds have taken all the prizes for carriage horses in the State.

THE Detroit Free Press says every one agrees upon two facts relative to the wool crop of Michigan this year, that it is larger and better than it has ever been before.

A STEAM Japanese junk had arrived at Macao, in China, the machinery of which had been bought of the Americans and mounted in a Japanese port. The chief engineer was an American. A young prince was on board, who intends to follow the sea. Cholera had been raging frightfully in the northern part of Japan.

THERE has been a marriage in India, at which America assisted. We copy it briefly from a Calcutta paper:—"May 10th, at Kuppurbhala, by the Rev. J. S. Woodside, A. M., of the American Mission, His Highness the Rajah Randhir Singh Alowalia, to the eldest daughter of the late Robert Hodges, Esq., of Kuppurbhala."

THE St. Paul Pioneer says that upwards of two hundred cars arrived in a month in that city from the Selkirk settlement in British North America, and that the amount of trade which the St. Paul merchants will realize therefrom, will not be far from \$200,000.

MR. BROWLAW writes from Paris to the Evening Post, that it is now quite probable that a day will soon be fixed for Louis Napoleon's coronation, the Pope coming to Paris to officiate.

THE Springfield Republican contains an amusing account of Mr. Mason's Court Introductions at Paris. It is said that on one occasion last Spring, thirty of our countrymen were paraded in at once. Arrayed in Court dresses, they stood like servants in livery, in semi-circle; the Emperor enters the reception chamber; Mr. Mason bows, flourishes his hand, and says, "My countrymen, your Majesty;" all bow; Emperor nods and turns to some one else; countrymen exeunt!

Mrs. MARGARET FULLER, mother of the celebrated and lamented Margaret Fuller Ossoli, died in Wayland, Mass., Sunday week, aged 70. She was a woman of rare virtues.

THE Patent Office having obtained seeds of the cork tree from Europe, sent several packages last year to California, which possesses a climate similar to France and Spain, where it flourishes. These seeds were planted at Sonora, and about 87 per cent. of them have come up, and give promise of becoming stately trees.

PROVIDING FOR A RAINY DAY.—The New Orleans Picayune states, on the authority of Mexican correspondents, that the secret of Miramon's singular procedure in the matter of the late conducta, was that he had in it himself the handsome sum of \$300,000, which he was sending abroad for investment. He feared, that if the conducta should pass through Vera Cruz, and this fact by any accident become known, that the money would be seized and confiscated.

PEANUT RAILROAD ACCIDENT.—On the evening of the 2d inst., the trestle bridge of the Northern Railroad, one mile south of Schaghticoke, Reasdale Co., N. Y., fell under the pressure of a passenger train, carrying with it, into the water below, the tender, baggage and two passenger cars. The tender sank first, the baggage car followed, the first passenger car pitched downward and into the baggage car, and the second passenger car ran half its length underneath the first passenger car—the latter half remaining on the bank unbroken. The baggage car was broken into fragments, and three of the four persons in it killed. There were forty passengers in the first passenger car, four of whom were killed, and all but one or two more or less injured. The car was broken to fragments. There were but eight persons in the second passenger car, most of whom were injured, but none killed. The Albany Coroner's jury, have rendered a verdict that the bridge was rotten and unsafe, and known to be so; and that the Superintendent and Directors should be held responsible.

END OF THE PAWNEE WAR.—The St. Joseph (Mo.) Journal states that the Pawnee war, which broke out about two or three weeks ago, and threatened to give a good deal of trouble, has been ended.—The militia, under Gov. Black, of Nebraska, went in pursuit of the savages to chastise them for their depredations on the Western settlements. The Indians, about 1,000 strong, were overtaken at Shell Creek, Nebraska. The whites did not number, all told, more than 250. These were commanded by Gov. Black in person, assisted by Major West, United States Marshal, and Lieut. Robinson, with about twenty or thirty regulars of Fort Kearney; the remainder were all volunteers. The Americans had one mounted cannon, and, on overtaking the Indians, three charges were made before the savages surrendered. A number of the Indians were killed and wounded. None of the Americans were killed, and but few slightly wounded. On the third charge, the Indians ran up a flag of truce and immediately surrendered, grounded arms, and gave up all their stock, provisions, ammunition, &c.

OPERATIONS OF THE UNITED STATES MINT.—The gold coinage of the United States mint in Philadelphia for the month of July, was \$117,788, being in double eagles, half eagles and dollars. The silver coinage was \$43,000, being in dollars and quarter dollars. Of cents \$30,000 were coined. The whole number of pieces coined was 3,101,202, of the aggregate value of \$190,788. The gold deposits of the month were \$152,920, of which \$117,527.50 were from California, and \$41,692.50 were from other sources. The silver deposits were \$59,770. Total deposits for the month, \$218,990.

PROBABLE DESTRUCTION OF ST. ANTHONY FALLS.—The Minneapolis Journal says that during the recent flood, at least one hundred feet of the rock has given way. The reaction of the current is rapidly wasting the bed of sand, and the result is manifested by the frequent falls of large masses of the overhanging stratum of rock. As it entirely disappears some twelve hundred feet above the present crest of the fall, we can readily conceive of the entire extinction of the magnificent fall. One hundred and fifty feet has fallen within the limit of a single week.

VACCINATION OF CATTLE.—The Medical Times says that in Holland there are assurance offices for cattle's lives. One company has all its assured cattle vaccinated, as a preservation against contagious pneumonia. Another company inoculates only when the disease has invaded the animals' stalls. The third company does not vaccinate at all. It has been calculated that the first company has lost 6 per cent. of cattle; the second 11 per cent.; and the third 40 per cent.

SHEEP DOLL, DECIDEDLY.—The New York Evening Post, of the 3d inst., says:—Eighteen thousand sheep, an unprecedented number, have been received here this week. The extreme drouth has parched the grass and induced their owners to send them to market. The lambs are, many of them, not in good condition, and sell at a dollar a head. The market is so dull that many drovers have taken their sheep to Long Island, distributing them among the farmers.

STATE CONVENTION OF SABBATH SCHOOL TEACHERS.—The Sabbath School Teachers of this State, and all others friendly to the cause, are invited to convene in Oswego, on the 30th of August. Each Evangelical Sabbath School is requested to send from two to five delegates to the Convention.

FOREIGN NEWS.

THE steamship *Nova Scotia* arrived at Quebec on the 8th inst., and we gather the following details of intelligence:

GREAT BRITAIN.—Sir De Lacy Evans moved a resolution, that in view of the relations between the great military powers from the continent, a commission be appointed to inquire into the national defences of England, and report what improvements may be made therein. Sidney Herbert said the government would consent to the substance of the resolution, but not to the motion alone. The government were about to appoint a commission, the names of which would be a guarantee for the earnestness of its endeavors to place the great arsenals of the country in a state to resist all attack. It would be too extensive an inquiry for a commission to consider what course was necessary for the defence of the country. They would only inquire what permanent fortifications were requisite for the defence of the dockyards and arsenals. Sir De Lacy Evans' resolution was negatived.

FRANCE.—It was vaguely rumored in Paris on the 25th that Napoleon would visit London. The *Daily News* believes that although the scheme of an Italian confederation may not have been formally struck off the programme, it is not now insisted on by its author, and that little more will be heard of it.

It is said that the Emperor will make his public entree into Paris on Sunday, August 14th, at the head of part of the army of Italy. The troops will halt on the following day for the usual fete Napoleon. After the 17th, the Emperor proceeds with the Empress to the Pyrenees.

It was reported that 200,000 men are to be discharged from the army on renewable furlough, the advantage being that the Government would have

them still on hand, while their cost can be diverted to other purposes.

Accounts from the wine regions are unfavorable. The grapes had been injured by the excessive heat, and prices tend upward.

The *Monitor*, the government organ, says that Denmark has ceded the Island of St. Thomas to the United States.

ROMA.—Great numbers of addresses were being signed in the Romagna against the return of the clerical government, and in favor of union with Sardinia. The country had resolved upon keeping up public order, and of repulsing every attack by the Swiss troops in the service of the Pope; also that regular voting should take place in expressing the wishes of the country.

Letters from Rome assert that the principles of an Italian Confederation had been accepted by the Pope. A majority of the Cardinals in conference, voted in favor of the Pope accepting the Presidency.

SARDINIA.—The *La Nord* says:—One of the first acts of the new Ministry will be to put an end to the present Dictatorship, to convoke the Chambers, and present an Electoral bill applicable to Lombardy. A dissolution will afterwards take place. In order to effect in the new Chambers the complete fusion of Piedmont and Lombardy, the King will preside, and the Parliament will sit alternate years at Turin and Milan.

Turin journals say that the Sardinian army, reinforced by recruitments in Lombardy, is to be raised to 100,000 men.

ITALY.—In regard to Garibaldi's position, it is said that he was on the 16th summoned to Brescia by Gen. Dilla Marmora, with whom he had a long and confidential interview; that he had a force of 12,000 men, which continued to increase; and that he expressed confidence in the King of Sardinia not forsaking his national cause.

A letter from Milan says that Garibaldi was contemplating a move from the Alps to the Appennines—from Northern to Central Italy; then there will be a gathering of about 50,000 volunteers in the Romagna, and Garibaldi's corps joined to that of Mezzocapo will form an army capable of securing the independence of Central Italy, at least against any Roman or Neapolitan force.

Clippings from Foreign Journals.

THE foreign journals, received by the Europa, contain numerous paragraphs about the extreme heat in Europe of the half of the last month. July 6th was reported to be the hottest day ever known in the south of France, the thermometer having attained the extraordinary height of 118 degrees of Fahrenheit's scale.

A CORRESPONDENT of the London Times, writing from Milan, says that when the news of the peace came he saw a young French officer at the Cafe dell' Europa draw his sword after reading the bulletin and break it against the marble table at which he sat. He heard others, who related the insulting words with which they had been assailed by the populace, sympathizing with the feeling which had dictated those words, and only pleading their innocence of the transactions of their sovereign. The revolution was so sudden and blasting to the Italians that in one day five persons were carried to the mad house, raving maniacs.

THE running of steam engines on common roads, though new in this country, has been tested in England. There is an engine running daily from Manchester to a colliery, eight miles distant. The road is undulating, and has several sharp curves, yet the engine draws five four-wheeled wagons, containing thirty tons weight.

LOMBARDY, which has just been ceded to Piedmont, has a superficies of 5,338 square miles, and a population of 2,800,000 souls. Lombardy has hitherto been divided administratively into nine provinces or delegations, viz., Milan, Pavia, Lodi, Cremona, Bergamo, Como, Mantua, Sondrio, Brescia, and Bergamo. The fortified towns of Mantua and Peschiera, form part of the province of Mantua. The fortress of Pezzighettone is comprised in the province of Cremona. After the annexation of Lombardy to Piedmont, this kingdom, the island of Sardinia included, will contain a superficies of 37,640 square miles, with a population of 7,800,000. As regards territorial extent, it will occupy a tenth rank in Europe, and will come immediately after the kingdom of the Two Sicilies, and stand before Portugal and Bavaria. With respect to population, Sardinia will stand in the ninth rank, on a level with Naples, and will be above Sweden and Norway, Belgium and Bavaria. The following table will complete the comparison, as regards Italy:

	Area—sq. Miles.	Population.
New Kingdom.....	37,640	7,800,000
Portugal.....	9,225	2,210,000
Papal States.....	17,218	2,900,000
Tuscany.....	8,741	1,700,000
Rome.....	2,168	800,000
Modena.....	2,060	410,000
Two Sicilies.....	42,000	8,400,000

THE London Times says:—"The Great Eastern has been getting on wonderfully during the last few weeks. The three iron masts rise 122 feet above the upper deck, and have a diameter of three feet and six inches for a height of 70 feet, when they decrease gradually to two feet six inches at the cap. The three wooden masts, which are also in their places, are not built masts, but are single "sticks." The fore and mizzen masts are 140 feet in height, and they are 44 inches in diameter at the deck; the jigger-mast is 192 feet in height, and of the same diameter. The trees which formed these masts were New Zealand pines.

THE editor of the London *Critic* expresses his belief that "if the Americans can gain anything by attacking Great Britain, they will throw chivalry and brotherhood to the dogs, and chase the almighty dollar through wars and rumors of wars."

In 1820 there were only twenty-six volumes of novels on the shelves of the British Museum, but there are now about 7,400, and all these have been written since "Waverley" was begun.

SIR ISAAC LYON GOLDSMITH, Bart., who recently died in London, has left personal property in England exceeding \$10,000,000, and real estate of a like amount. The will is most voluminous, and has not less than 43 codicils, most of them in the Baron's own hand-writing. The probate stamp duty payable thereon is \$75,000.

The News Condenser.

- More camels are coming to Texas.
- Street railroads are talked of for Cleveland.
- Napoleon carried a small printing office with him camp.
- San strokes have been numerous and fatal in Cincinnati.
- Since 1701 Austria has lost and regained Lombardy thirteen times!
- In Austria a man who cannot write his name may not get married.
- The peach crop in some counties in New Jersey will be very large.
- The number of visitors in Saratoga was never greater than at present.
- The Creek and Cherokee Indians are in a state of open hostility to each other.
- The whole number of deaths in New York city during the past week was 614.
- The owner stone of Forefathers' Monument was laid at Plymouth last Monday.
- In Ireland but one person has as large an income as a quarter of a million dollars.
- A telegraph line is to be constructed from St. Joseph to Leavenworth, Kansas.
- Free concerts are to be given during the present season, in the N. Y. Central Park.

- Private letters from Turkey state that Bulgarian women have been carried off by the Turks, and that the Bulgarian families are in consternation.
- The 200th anniversary of the establishment of the Hopkins Grammar School at New Haven, is to be celebrated during commencement week in 1890.
- Reports from 11 counties in Ohio show that 7,054 sheep were killed, and 7,560 wounded by dogs during the year 1888, the aggregate loss being \$25,842.
- Ten thousand revolving rifles are manufacturing at Col. Colt's armory, in Conn., for the British government. These are sufficient to arm six regiments.
- A "Children's Home" has been opened in New Orleans, under Episcopal auspices. In Richmond \$12,000 has been raised for an asylum for orphan boys.

1094 Wisconsin, and Michigan land for sale for real property in Western N. Y. Loans negotiated. A. H. JENNISON. (479) A. J. REYNOLDS

1102 E. - Paige's Perpetual Right, Patented July, '01 Superior to any in use for Wood or Coal. 2 1/2 cords wood, or 1 1/2 tons of coal to 100 cubic coal not calked or stone. Address (484) O. D. PAGE, Rochester, N. Y.

Written for Moore's Rural New-Yorker.
THE NOON OF NIGHT.

BY CHARLES R. FAULKNER.

The iron tongue of midnight hath told twelve.
(SHAKESPEARE.)

'Tis midnight, that silent, solemn, magic hour,
Which, like the light and darkness, spans sublime
The past and present in its mighty power,
And links each day into the chain of time.

It is the time when seconds balance ages;
For, at this parting hour of earthly night,
The clock of Nature, true, in silence gauges
The centuries by time's diurnal light.

It is the time when Nature's most at rest,
And wearied man is wrapped in sweet repose;
While half the world is deep in darkness dross,
And all around a fearful mystery grows.

It is the time when subtle "slow Disease"
Doth often make a sudden change, 'tis said;
And Nature shifts the patient's pangs appease,
Or Death again arguments the countless dead.

It is the time off valued by the sage
Intent the mines of Knowledge to explore;
To gain the mysteries of her fruitful page,
And to the world reveal the treasured lore.

It is the time the poet's fitful Muse
On wings of thought through realms of Fancy soars;
Ere the wild strain that Genius doth diffuse,
As she that vast, unbounded sphere explores.

It is the time when, in the calm, clear night,
The waning moon more mildly sheds her rays;
Throws her pale beams of sad'ning, silvery light
O'er the dim scene that lures the lonely gaze.

It is the time that, in its fullest bloom,
The gay Cereus smiles serenely fair;
Lives its brief life in night's inspiring gloom,
And dies ere Sol pours forth his morning glare.

It is the time when Conscience racks the breast
Of him who execrates the Power Divine—
Whose soul exalts in Sin, yet fain would rest,
Like those who worship at the sacred shrine.

It is the time Religion's soothing voice,
In low, sweet tones, inspires the righteous soul;
Inspires the Christian spirit to rejoice,
And, all-resigned, await life's coming goal.

Thus Midnight's hour begins and ends the day,
And to the lock of Time doth prove the key—
The bulwark of a transient, temporal stay
That mortals make from their Eternity.

Rochester, N. Y., 1859.

Entered according to Act of Congress, in the year 1859, by
D. D. T. Moore, in the Office of the Clerk of the District
Court for the Northern District of the State of New York.

ROSAMOND;
OR,
THE YOUTHFUL ERROR.
A TALE OF RIVERSIDE.

BY MRS. MARY J. HOLMES.

[Concluded from page 260, last number.]

Chapter XI.—The End.

OVER the horrid awakening which came to the wretched man, we need not linger; neither is it necessary to dwell upon the first few days of mystery and dread, when death seemed brooding over Riverside, and rumor was busy with surmises and suspicions concerning the stranger, and the relation, if any, which she bore to ROSAMOND LAYTON. We will rather hasten on to the morning when Mr. BROWNING the joyful tidings came that ROSAMOND was better—so much better, indeed, that he could see and talk with her if he chose.

Only once since the fearful night when he found her moaning in her bridal dress, had he stood by her bedside—for, though he longed to be there, he could not endure to see her turn away from him, whispering as she did so, "It was cruel,—oh, so cruel to deceive me so." Neither had he been near MAIRIE PORTER, consequently he knew nothing of the means by which she had imposed upon him the story of her death. But ROSAMOND knew,—ROSAMOND could tell him, and from no other lips would he hear it. So, when he learned that she was better, he asked to see her alone, and Mrs. PORTER, to whom he had necessarily confided the story of his marriage, carried his message to ROSAMOND.

For a moment ROSAMOND did not seem to hear, but when the message was repeated the great tears forced themselves from beneath her long eyelashes, and rolling down her cheeks, dropped upon the pillow.

"He might have spared me this," she said, "but if it is his wish, I can see him."

With a mighty effort she stilled the violent throbbings of her heart, forced an unnatural calm upon her face and whispered,—*"Let him come now; I am ready."*

He was standing without the door, so near that he heard the words, and in a moment he was at her side. Falling upon his knees before her, he clasped her hands in his, imploring her forgiveness for the great wrong he had done her, in not telling her the truth at first. "But I am innocent of the last," he said; "believe me, ROSAMOND, I thought her dead, or I had never asked you to be my wife. I know not how she deceived me so terribly, but you know, and I have sought this interview to hear the story from your own lips. Will you tell it to me, darling—Miss LAYTON, I mean," he added hastily, as he saw a shadow of pain flit over her face.

"I will if I can," she faintly answered, and summoning all her strength, she repeated to him what Miss PORTER had told her, except, indeed, the parts with which she knew he was familiar.

"The plot was worthy of her who planned it," he said bitterly; then, as ROSAMOND made no reply, he continued,—*"she told you, I suppose, of our married life, and painted me the blackest villain that ever trod the earth. This may in part be true, but, ROSAMOND, though I may never know*

the bias of calling you my wife, I cannot be thus degraded in your sight and offer no apology. I was a boy—a self-willed, high-tempered boy, nineteen years of age, and she aggravated me beyond all human endurance, seeking ways and means by which she could provoke me. I loved her at first—nay, do not turn away incredulously. Heaven is my witness that I loved her, or thought I did, but 'twas a boyish love, and not such as I feel for you."

"You spoke at her," said ROSAMOND, unable to reconcile love with an oath.

"Once,—only once," he replied. "I blush to own it, for it was not a manly act."

"You struck her," and for the first time since he had been in that room, the brown eyes rested full upon his face.

"Yes, ROSAMOND," he answered; "I own that, too, but she goaded me to madness, and even raised her voice against my sainted mother, who had borne so dastardly a son as I!"

"And Riverside?" said ROSAMOND. "Did your uncle die deceived?"

"Never—never," Mr. BROWNING exclaimed, starting to his feet. "I told the whole truth, or I would not have lived here a day. ROSAMOND, I have greatly sinned, but she has not been blameless. She insulted me in every possible way, even to giving you her wedding ring, and then, lest I should not see it, wrote me 'to look upon your finger.' No wonder you thought me mad!"

"Her wedding ring! Could she do that?" said ROSAMOND.

"Yes, her wedding ring. It first belonged to SUSAN, who gave it to me for the occasion, and two weeks after I had it marked with MAIRIE's name and the date of our marriage. It is broken now, and I would to Heaven I could thus easily break the tie which binds me to her, and keeps me from you! Oh, ROSAMOND, ROSAMOND, must I be?—Must I live my life without you, when I need you so much,—when my heart longs so to claim you for its own?"

He covered his face with his hands, and ROSAMOND could see the tears dropping slowly through his fingers. Terribly was he expiating the sin of his boyhood, and what wonder is it, if, in his agony, he cried,—*"My punishment's greater than I can bear."*

ROSAMOND alone was calm. She seemed to have wept her tears away, and the blow which had fallen so crushingly upon her, had benumbed her heart, so that she now did not feel as acutely as the weeping man before her. Very soothingly she spoke to him, but she offered no word of cheer,—no hope that all would yet be well. "They would bear it with brave hearts," she said, "and he must be reconciled to his wife."

"Never—never," he exclaimed. "The same roof cannot shelter us both, and if she chooses to stay when she is better, she is welcome to Riverside—but I cannot share it with her."

Neither said to the other, "It may be she will die," for such a thought had never intruded itself upon their minds, and yet MAIRIE PORTER's life was numbered now by days. The heart disease from which she had long been suffering, was greatly aggravated by the strong nervous excitement through which she had recently been passing. Stimulants of a most powerful kind had created a kind of artificial strength which had enabled her to come to Riverside, but this was fast subsiding, and when she bent over the motionless form of ROSAMOND and feared that she was dead, she felt indeed that death would ere long claim her as his own. The sight of her husband, too, had well nigh been more than she could bear. For nearly nine long years she had not looked upon his face, but she remembered it well—a handsome, boyish face. His hair she remembered, too—his soft, dark, wavy hair, through which her fingers had sometimes strayed in the far back days at Holly Wood, before she was his bride. He would not be greatly changed, she thought, and when on that fatal night she heard his coming footsteps, she pictured him in her mind much as he was that winter day, when standing in his sister's door he bade her a long good-bye. Nearer and nearer he had come—faster and louder had beaten her heart, while a cold, faint sickness crept over her.

"Open the window—I cannot breathe," she gasped, but ere her request was obeyed, RALPH BROWNING had fainted on the threshold, and she had asked that she might die.

She had seen him only for an instant, but that sufficed to tell her he was changed from the dark-haired, handsome boy, into the gray-haired, suffering man. His eyes had not hers, but the fierce hatred she expected was not there, and the look of utter, hopeless despair which she saw in its place, touched her as reproach and resentment could not have done.

"Oh, I hope I shall die," she said, as she hid her face in the pillow. "I hope I shall die."

This wish she uttered every hour, and when at last the physician said to her,—*"Madam, you will die,"* she answered, "It is well!"

She did not ask for Mr. BROWNING, for she knew he would not come, but she inquired anxiously each day for ROSAMOND, and when at last she heard they were together, she laid her hand upon her heart, and watching its rise and fall, smiled to think how fast her life was going out.

"Listen, MARIA," she said, "Listen to what they say, and hear if they talk of me."

Noislessly MARIA glided to the door of ROSAMOND's chamber—stood there for a moment and then as noiselessly came back repeating to her mistress the substance of what she had heard, together with sundry little embellishments of her own.

"He will give you Riverside and go away himself," she said, and Miss PORTER quickly rejoined, "Go where? Go with whom?"

"With Miss LAYTON, of course," returned MARIA.

"He said he would not live without her."

"The wretch!" ejaculated the angry woman, all her softer emotions giving way to this fancied insult. "He might at least wait now until I'm dead. I'll go to him myself, and see if in my presence he dare talk thus to her."

She was greatly excited, and spite of the painful throbbings of her heart and the dizzy sensation about flitting over her, she stepped upon the floor, and hurriedly crossed the room. The effort was too much for her feeble strength, and she sank

fainting upon a chair. The girl MARIA had seen her faint before, but never before had she seen so fearful a look upon her face, and she ran in terror to Mr. BROWNING, beseeching him to come "for her mistress was dying sure, and would trouble nobody much more."

For a moment he hesitated, but when ROSAMOND said "Go," he went. Taking the fainting woman in his arms he laid her upon the bed as gently, though not as tenderly, as he would have lain his ROSAMOND there.

"Call Mrs. PORTER," he said, and when that matron came, he bade her give to the invalid every possible care.

Slowly Miss PORTER came back to life, but it was only to faint again, and with each fainting fit it became more and more apparent that life was ebbing fast. They did not say to ROSAMOND that she would die, but they told it to Mr. BROWNING, who heard as one who hears not. Every other sensation seemed to have given place to a feeling of horror, and when at the close of the second day word came to him that she was dying, and had asked to see him, he arose mechanically and walked to her sick room as calmly as he had visited it the previous night, when he knew she was asleep. One glance, however, at her white face and wild bright eyes roused him to the reality, and bending over her pillow, he forced himself to take her hand in his, saying kindly, "MAIRIE, do you know me?"

"Know you?" Yes," she answered. "You are my husband—my husband." She lingered upon that name as if its sound recalled to life some olden feeling—some memory of Holly Wood, where they first had met.

"MAIRIE, you are dying," he continued. "Shall we part in anger, or in peace?"

"In peace, if you will," she answered. "I have had my revenge—but it is not sweet as some say it is. I would rather, RALPH, that I had never known you, for then I should not have been the wicked wretch I am."

Mr. BROWNING did not reply to this, and for a few moments there was silence, during which she seemed to sleep. Rousing up ere long, she gasped for breath, and grasping nervously her husband's hand, she whispered, "I am going now—there's no sham this time;—five minutes more and you are free to marry ROSAMOND. Be kind to her, RALPH. Deal with her not as you dealt with me, and—come closer to me, RALPH. Let me whisper this last so no one can hear."

He bent him down to listen, and summoning all her strength, she said, not in a whisper, but in tones which echoed through the silent room, "NEVER,—NEVER,—NEVER BOX ROSAMOND'S EARS!"

Rapidly the story circulated that the strange woman who lay dead at Riverside had been RALPH BROWNING's wife, and hundreds flocked to the funeral, hoping to gain a view of the deceased. But in this they were disappointed, for there was nothing visible, save the handsome coffin, on whose silver plate was inscribed the word "MAIRIE."

Some said that "BROWNING" might have been added to the name, and while others marvelled that the husband wore no badge of mourning, a few said wisely that the mourning was visible in other than the usual signs—in the hair gray before its time, and in the deep-cut lines which a living sorrow alone had made. And so, amid surmises of the past and fore-tellings of the future, the ill-fated MAIRIE was laid in the village vault, until word could be received from her old uncle, who might wish to have her rest among the balmy groves and fragrant flowers of her beautiful Florida home.

And now our story winds to its close. RALPH BROWNING was free indeed, but death had been at Riverside, and the shadow it had left must disappear ere he took to himself a second bride. ROSAMOND, too, must recover from the blow which had fallen so crushingly on her—must learn to confide again in the man she loved—to think of the great wrong he had done her as the result of an early, boyish error, which he regretted even more bitterly than herself.

And so the warm spring rains had fallen and the April blossoms were bursting from the dark, moist earth ere the wedding morning came. At the bridal there was no satin dress—no orange wreath—no flowing veil—but there was perfect love shining in the beautiful brown eyes of the girlish bride, while the fine face of the bridegroom wore a look of perfect happiness, as if the dreary past were all forgotten, and the world was bright and new. Europe was all their destination, and among those who accompanied them to New York, going with them even to the vessel's deck, none bade them a more affectionate adieu than Mrs. VAN VENTRAN herself. She had spent a part of the winter at Riverside, and had learned to appreciate the gentle girl who, she knew, was to be her brother's wife.

But, too, was of the party, though whether he were pleased or not at having ROSAMOND for his aunt was a difficult matter to decide. He had listened in amazement to the story of his uncle's first marriage, wondering how it could have been kept from him, and remembering several little incidents the meaning of which he now understood. He had given up the Crimean war as well as the dancing girl, and now he had given up ROSAMOND, too, but he bore it quite heroically, saying to himself as he stood upon the shore watching the vessel which took her away, "One thing is certain—It's a mighty mean wind which blows nobody any good, and if I've lost ROSAMOND, I've learned a heap of lessons from Uncle RALPH's experience. One is, not to marry till I'm old enough to know whether I like her or not. Another is, not to keep my marriage a secret for the sake of a little money; and another, which I consider the most important of all, is 'NEVER, ON ANY OCCASION OR PROVOCATION, TO BOX MY WIFE'S EARS!'"

BROOKPORT, N. Y., 1859.

A THOUSAND acts of thought and deed, shape the features and expression of the soul—habits of love, and purity, and truth—habits of falsehood, malice and uncleanness—silently mould and fashion it, till at length it wears the likeness of God, or the image and superscription of Evil.

SALMAGUNDI.

Misfortunes are like thunder and stormy clouds—in the distance they appear black, but when over our heads they are scarcely gray. As bad dreams denote an agreeable future, so will it be with the often painful dream of life when it is past. All our strong feelings, like ghosts, have their influence for a certain period only; and if a man were to say to himself this passion, this pain, this rapture, is sure after three days to lose its effect on the mind, then would he always be more composed and quiet.

An inquiry in a country paper, for a rhyme for the word "month," brought out in reply the following old epigram:

"You can't," says Tom to Heping Bill,
"Find any rhyme for 'month,'"
"A great mistake," was Bill's reply,
"I'll find a rhyme at *month*."

INTERCOURSE with persons of decided virtue and excellence is of great importance to the formation of a good character. The force of example is powerful; we are creatures of imitation, and by a necessary influence, our habits and tempers are very much formed on the model of those with whom we familiarly associate.

A BAKER once advertised:—"That as all men need bread, he wishes the public to know that he kneads it. He is desirous of feeding all who are hungry, and hopes his good works may be in the mouth of every one. He is well disposed towards all men, and the best bred people among us will find him, he hopes, one of the best bread men in the city."

"GO-AHEAD," says the Alta-Californian, is of American origin, and is little used by the British, who usually say "all right" in cases where Americans would say "go-ahead." It has been said that the two phrases describe most forcibly and truly (their brevity considered,) the general spirit of the two nations respectively.

NEVER be influenced by external appearances in forming your judgment of a person's worth. This is an important rule, for many a noble spirit is covered by habiliments of poverty, while not unfrequently a showy exterior conceals a villain of the basest kind.

"Now do take this medicine, wife, and I'll be hanged if it doesn't cure you." "Oh, I will take it, then, by all means, for it is sure to do good one way or the other."

STONE SMITH says the Anglo-Saxon race was made for two purposes—to manufacture calico and steal land.

"They pass best over the world," said Queen Elizabeth, "who trip over it quickly; for it is but a bog—if we stop we sink."

For Moore's Rural New-Yorker.

HISTORICAL ENIGMA.

I AM composed of 28 letters.

- My 1, 2, 3, 5, 10, 15 was the daughter of Cadmus and Hermione, and mother of Baeceus.
- My 2, 13, 12, 6, 2 was the name of a mountain at the entrance of the Mediterranean Sea.
- My 3, 2, 9, 6, 8, 4, 1 was a Roman proper name.
- My 4, 6, 7, 1, 17, 5, 22 was a distinguished king of Ithaca.
- My 5, 6, 11, 4, 1, 8, 22 was a town of Attica, sacred to Ceres.
- My 6, 5, 3, 2, 9, 4, 22 was the name of a lake in Gaul.
- My 7, 2, 13, 8, 4, 22 was the name of an illustrious Roman family.
- My 8, 13, 6, 14, 4, 1 was the name of a river in Spain.
- My 9, 2, 13, 8, 1 was a tyrant of Laedaeomon.
- My 10, 8, 13, 12, 2 was a kingdom of Africa.
- My 11, 9, 2 was a town in Sicily.
- My 12, 8, 13 was the name of a fabulous root.
- My 13, 11, 6, 4, 1 was the founder of the Babylonish empire.
- My 14, 20, 8, 4, 6, 4, 22 was the first king of Rome.
- My 15, 9, 2, 9, 8, 4, 22 was an ancient Roman poet.
- My 16, 4, 13, 20, 10, 2 was a large island in the Aegean Sea.
- My 17, 5, 3, 8, 21, 2, 8, 22 was a warlike queen of Assyria and the wife of Ninus.
- My 18, 4, 8, 5, 9, 11, 17 was a general in Alexander's army.
- My 19, 9, 14, 8, 4, 1 was a distinguished Roman general.
- My 20, 13, 13, 11, 6, 4, 1 was a mountain of Thrace.
- My 21, 20, 19, 13 is a city on the Tiber.
- My 23, 16, 9, 2 was a town of Picenum.
- My 23, 6, 13, 5 is the name of a river.
- My whole is the name of a distinguished electrician.
- Bennett's Corner, N. Y., 1859. H. N. ARONSON.
- Answer in two weeks.

ENIGMA.

I AM composed of four syllables.

- My first is composed of many people, and also means the female sex.
- My second is a pronoun, and signifies us.
- My third is a preposition.
- My fourth is a pronoun.
- Place these syllables as they should be and they are the name of a mountain in North America.
- Come this, 1859.
- Answer in two weeks.

THEY ARE HARMLESS! No injury can arise from their use.

THEY ARE SIMPLE! You always know what to take, and how to take it.

THEY ARE CONVENIENT! You can always give the medicated proper Sugar Pill at a moment's notice without hesitation or delay.

THEY ARE EFFICIENT! Thousands are using them in curing disease, with the most astonishing success.

LIST OF SPECIFIC REMEDIES.

No. 1. PETER PILLS—For Fever, Congestion and Inflammation of all kinds.

No. 2. WORM PILLS—For Worm-Fever, Worm-Colic, and Wetting the Bed.

No. 3. BABY'S PILLS—For Colic, Crying, Teething and Wakefulness, and Nervousness of Adults.

No. 4. DIARRHOEA PILLS—For Diarrhoea, Cholera-Infantum and other Complaints.

No. 5. DYSENTERY PILLS—For Colic, Griping, Dysentery, or Bloody Flux.

No. 6. CHOLERA PILLS—For Cholera, Cholera Morbus, Vomiting.

No. 7. COUGH PILLS—For Coughs, Colds, Hoarseness, Influenza and Sore Throat.

No. 8. TOOTH-ACHE PILLS—For Tooth-ache, Face-ache and Neuralgia.

No. 9. HEAD-ACHE PILLS—For Head-ache, Vertigo, Heat and Fullness of the Head.

No. 10. DYSPEPSIA PILLS—For Weak and Deranged Stomach, Constipation and Liver.

No. 11. FOR FEMALE IRREGULARITIES—Scanty Painful or Suppressed Periods.

No. 12. FEMALE PILLS—For Leucorrhoea, Profuse Meneses and Bearing Down.

No. 13. CROUP PILLS—For Croup, Hoarse Cough, Bad Breathing.

No. 14. RHEUM PILLS—For Erysipelas, Eruptions, Pimples on the Face.

No. 15. RHEUMATIC PILLS—For Pain, Lameness or Soreness in the Chest, Back, Limbs and Lungs.

A.—For Fever and Ague, Chill Fever, Dumb Ague, old mis-managed Agues.

P.—For Piles, Blind or Bleeding, Internal or External.

O.—For Sore, Weak or Inflamed Eyes and Eyelids; Falling, Weak or Blurred Sight.

C.—For Catarrh, of long standing or recent, either with obstruction or profuse discharge.

W. G.—For Whooping-Cough, abating its violence and shortening its course.

In all ACUTE DISEASES, such as Fevers, Inflammations, Diarrhoea, Dysentery, Croup, Rheumatism, and such eruptive diseases as Scarlet Fever, Measles and Erysipelas—the advantage of giving the proper remedies promptly is obvious, and in all such cases the specifics act like a charm. The entire disease is often arrested at once, and in all cases the violence of the attack is moderated, the disease shortened and rendered less dangerous. Even should a physician afterwards have to be called, he will take the case at decided advantage from the previous treatment.

COUGHS AND COLDS, which are of such frequent occurrence, and which so often lay the foundation of diseased lungs, bronchitis and consumption, may all be at once cured by the Fever and Cough Pills.

In all CHRONIC DISEASES, such as Dyspepsia, Weak Stomach, Constipation, Liver Complaint, Piles, Female Debility, irregularities, old Head-ache, Sore or Weak eyes, Catarrh, Spleen, and other old and new cases, the case has been cured whose proper application will afford a cure in almost every instance. Often the cure of a single chronic difficulty, such as Dyspepsia, Piles, or Catarrh, has been effected, or Female Weakness, has been more than paid for the case ten times over.

FOR COUGHS AND COLDS.—A gentleman, well known in this City, in our office, remarked: "Your COUGH PILLS have been of great value at our house this Winter. In every instance when one of the fever pills has been taken, three or four doses of the COUGH and FEVER PILLS, given in alternation, have entirely cured the case in a day or two. The case has already paid for itself several times over."

COUGHS AND COLDS.—A gentleman, a public lecturer, took a severe cold the latter part of last month, while traveling and lecturing in northern Pennsylvania, though addressing public audiences every evening, yet in five days by the aid of the Specific he was entirely recovered, and enabled to pursue his avocation without inconvenience. No public speaker should be without them.

BAD COLD.—A married lady of forty had taken a violent cold, which settled on her lungs, causing severe cough, pain in the side and considerable fever and hoarseness. Such colds were usually very lasting and troublesome, but by taking the Specific Cough Pills four times per day, in three days she was entirely well.

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
RURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,
With an Able Corps of Assistants and Contributors.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the RURAL an eminently Reliable Guide on all the important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it zealously advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other Journal,—rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.
For Terms and other particulars, see last page.

RURAL LETTERS FROM EUROPE.—3.

BY SANFORD HOWARD.

Yorkshire; its Breeds of Horses, Cattle and Sheep—Soil, Crops, &c.—Bad Farming, poor Implements, and worse Vehicles—Short-horn and Irish Cattle in the Valley of the Tees—Professional Breeders—Kirkcaldy, Scotland, residence of the late Thomas Bates, Esq.—and its "P" Short-horn—Mr. Booth's Herd of Short-horn; its History and Superiority—Improvement of the Breed, &c.

THIRSK, YORKSHIRE, July 23, 1859.

This part of England is famous for horses—of coaching and hunting breeds, with a sprinkling of racers—Short-horn cattle and Leicester sheep. The land is generally good, and the crops often heavy, though the cultivation is not always of the best kind. I lately spent a day in riding through the country along the river Tees, in York and Durham—that stream forming the boundary between the two counties—and was quite surprised to find in that district, so celebrated for the fertility of its soil, the poorest farming I have seen in Britain. The soil is mostly very strong, inclining to clay; good for grass, but in many cases not sufficiently drained; wheat and other grain crops often light, the hedges neglected and covering two or three times as much ground as is necessary, and in many cases an appearance of slovenliness which would be considered disgraceful, even in America, where we are accustomed to find excuses for slipshod farming. The implements are old-fashioned and rude—such as one would suppose had gone wholly out of use, from the numbers of improved kinds seen at the Agricultural Shows, or on the farms in some other parts of the Kingdom. The farm wagons are clumsily made, much in the style of the old Dutch wagons of the Mohawk Valley—the bodies only about wide enough for a hog-trough, and oak timber enough in one to go far towards building a ship-of-war. These are used for carrying manure, and for general farm purposes. What a contrast to the vehicles used on the farms of Scotland and some other parts of England!

The Valley of the Tees, it will be remembered, became celebrated at an early day for Short-horn cattle, then called the Teeswater breed. Subsequently, the stock having been adopted and improved by several noted breeders in Durham, it took the name of Durham Short-horn, and latterly, as the improved variety has become more widely disseminated, it is more properly designated the Improved Short-horn, or simply as the Short-horn breed. Yet, notwithstanding this territory appears to have been the original habitat of the English Short-horn, the breed has by no means exclusive possession here at the present day. I have been surprised at the number of Irish beasts in the pastures, and on mentioning this to my traveling companion, who is a native of the county, and familiar with every part, he assured me that more Irish cattle were grazed here than of the native breed. The Irish are a sort of Long-horn, in many instances crossed with the Short-horn. From the number of cows of this kind that are seen, I infer that they are fine milkers. The common Short-horn are large, rather coarse animals, and though resembling the improved variety in color, have nothing in general to recommend them in style or quality. Some of them undoubtedly give, with abundant feeding, large quantities of rather thin milk. The improved kind is less numerous than would be supposed from the length of time it has been known here, and is mostly in

the hands of men called professional breeders. There have been many of these in this neighborhood within the last fifty years.

The late THOMAS BATES, whose name was so well known in America, resided at Kirkcaldy, near Yarm. I was there a few days ago, and viewed with no little interest the locality so famous for the Dukes and Duchesses which the late proprietor regarded as the only true aristocracy of Short-horns. But the glory of Kirkcaldy has departed. Mr. BATES, after a long career, has been gathered to his fathers; his relatives, who resided on his estate, have removed to distant places, and the rich pastures formerly grazed by the gray-colored and titled Short-horn, are occupied by stock of no pretensions. I am informed that very few animals descended entirely from Mr. BATES' herd are now to be found in this section, or even in England—the reputation which they had acquired abroad being so much greater than that conceded to them at home that they have been permitted to leave the country. This will be partly understood in America, when it is remembered that not many years have elapsed since the public were told that there was only one herd (Mr. BATES') in England that could improve American stock—a statement promulgated with a pertinacity which has illustrated the adage, that "a lie well stuck to, is as good as the truth."

Yesterday I had the pleasure of a visit to Warley, by the residence of RICHARD BOOTH, Esq., the far-famed breeder of Short-horn cattle. I saw specimens of his herd at the Show of the Royal Agricultural Society at Chester, and of the Yorkshire Society at Northallerton, last year, and of the former Society at Warwick, this year. In examining these, I was struck with the superior excellence of some points over any other Short-horns I had ever seen. The principal of these points are the fineness of the shoulder-joint, the shape and fine match of the shoulder-blade to the chine, and the fullness of the first ribs—in a word, the perfection of what in sheep is called the *fore flank*. As a breed, the Short-horn is prone to be defective at these points; their shoulders are apt to be protuberant, large and upright, with hollow crops and flat fore-ribs, giving coarse meat, much offal, and a narrow chest. The exception in the case of Mr. Booth's cattle is very striking, several of them being as perfect in the points alluded to as the best Herefords or Devons. He has attained this extraordinary perfection without the sacrifice of any point; on the contrary, he has secured other rare properties—as great circumference of rib, breadth of back, general evenness of carcass, thickness and quality of flesh—which, with the points before spoken of, render his animals decidedly more perfect than any others of the breed that I have ever seen. Many of them have immense size, but with all the firmness of bone and symmetry of proportion that the most fastidious critic could desire. As an example of this, I might refer to the cow Nectarine-blossom, which took the first prize in her class at the Show of the R. A. S. last year. She is five years old, and has had three calves—the first a splendid white bull, now three years old, and this season in Mr. Booth's herd.

As an instance of the uniformity of Mr. Booth's stock, or of the certainty with which the desired model is produced, I may mention that the model prize-takers, Queen Mab, Queen-of-the-May, and Queen-of-the-Isles, with a prize bull whose name I do not remember, were all the produce of one cow, in regular succession. Queen-of-the-May is one of the cows which so much attracted my attention last year, and Queen-of-the-Isles is the heifer which last year, as a yearling, swept all before her at Chester and Northallerton, being universally commented on as a prodigy, and which, though she has come up with all the improvement which a year could be expected to give, was passed over at Warwick, the other day, without even so much as a commendation! She is the most extraordinary animal, for symmetry and weight combined, that I ever saw of her age, and upon what ground she was put out at Warwick, is more than any one can understand. I have seen outrageous decisions in America, but none that were worse than this. It excites much comment here, but will not injure Mr. Booth in the end.—Mr. Booth seldom sells cattle, but lets his bulls by the year. He has now upwards of twenty stationed in different parts of the Kingdom, none of which are let for less than a hundred guineas a year, and the larger number of them at two hundred guineas. The income from all his bulls is from £3,000 to £4,000 (\$15,000 to \$30,000) a year. One of his most noted bulls, Hopewell, ten or twelve years old, is now at home, after seven years' absence in Ireland, at an annual rent of two hundred guineas.

Mr. Booth derived his stock from his father, who for several years used some of the best bulls of CHARLES and ROBERT COLLINGS. Mr. B. has himself a distinct recollection of many of these—as

Comet, Albion, Ben, Pilot, Twin-brother-to-Ben, &c. He has portraits (oil paintings, colored engravings, pencil sketches, &c.) of some of the most celebrated animals of forty or fifty years since. They were evidently fine, though not equal in some of the points to which I have alluded, to the best of Mr. Booth's herd. Indeed, to have effected the improvement in the fore-quarter, must have required much skill and a great length of time. Mr. Booth thinks the best short-horns of the present day are superior to those of fifty years since in quality of flesh. The breed had a tendency (as it generally has now,) to make fat and lean separately, the former sometimes overlying the latter in a mass. This defect has been considerably corrected in the best modern animals, which have not only greater thickness of meat, but a finer grain, and better mixture of fat and lean.—There is still plenty of room for improvement in these respects with most breeders, and it would be well if they would follow the proper examples which have been set before them.

SEED-TIME AND HARVEST.

Now that some of our principal crops are gathered, and the husbandmen are agreeably disappointed at the fairness of the quality and abundance of the yield,—and those still growing give promise of a return seldom equaled,—now that the midge has ceased its ravages, the potato rot is feared no more, the voice of the grumblers is hushed, and all hearts are made glad at the prospect of peace and plenty, it is well that we remind our readers of a promise made four thousand years ago,—a promise that has never failed,—that "while the earth remaineth seed-time and harvest, cold and heat, and summer and winter, and day and night shall not cease."

The farmer has cause to rejoice in this glorious promise that he should never lack an opportunity to labor, and that the reward of his labor should never fail. No such encouraging promise is on record for any other class in community. The merchant depends for success upon his foresight, care and diligence. Yet reverses, sore and ruinous, often overtake him, which the wisest cannot foresee, nor the most diligent avert. His ships are lost—debtors fail—goods depreciate on his hands—speculations in which he hoped to reap a golden harvest prove his ruin. Not more than one in ten, it is said, even of those of fair ability, and who exercise ordinary good judgment, succeed in commercial life. Failure is no evidence of want of ability, for success is the reward of only the few, and many who are successful for a score of years, find themselves unexpectedly financially ruined—a calamity crushing in its effects, filling the soul with bitterness and despair, driving the unfortunate one from his house, and home, deserted by the friends of his prosperity, and forgotten by those on whose gratitude he has especial claims. The earnings of a long life on which he had trusted for his declining years are swept ruthlessly away, and happy is he if he escapes dark suspicions and cruel whisperings of dishonesty, and still happier if, in the wreck of worldly hopes, he maintains an approving conscience.

The farmer, under fair auspices, if he exercises ordinary care and possesses common ability, cannot fail. Such a result would be evidence of *fault*, and not of *misfortune*. The cause would be as apparent to the observer as the noonday sun, and lower such a man in the esteem of all sensible men; and sometimes makes him the butt of ridicule, the standing joke for the whole neighborhood. The farmer, it is true, meets with losses—the wheat midge or rust injures the wheat, the rot destroys his potatoes; some seasons are very dry, and others are excessively wet, and crops suffer—but these losses are only partial, and confined generally to one crop. The loss is one of anticipated profit and not of money expended—for under the most unfavorable circumstances, enough is usually raised to pay for the outlay of money and labor. Then the causes that affect his crops injure those of his neighbors also, and generally extend over a large district of country, and the natural consequence is an increase in price, which helps make up for the diminution in quantity. The loss may be inconvenient; indeed, it may be exceedingly annoying. It may prevent the prosecution of some cherished plan for underdraining—cause a delay of a year or two in building a new house, or a larger barn—prevent the adding of "house to house and land to land"—deprive the family of some desired luxuries; but it brings no crushing calamity that destroys hope, darkens a whole life, and causes the man, in his despair, like Jon, to curse the day on which he was born.

The farmer may well congratulate himself not only on the honor and the comfort, but the *safety* of his position. He lives in fear of no sudden reverses that shall drive his household gods from their home, and make them dependent upon the

sympathies of a selfish world. He may believe, but he will never realize the truth of the lines,

"The friends that in our sunshine live,
When summer's gone and down,
And those that have but tears to give,
May weep those tears alone."

Let him treasure up the useful lesson, so often taught, that "all is not gold that glitters," learn to be content with his lot, for though his gains are not rapid, they are generally sure, and though he meets with losses they are neither great nor embarrassing; and above all, let us daily thank the Giver of all Good for the glorious promise that seed-time and harvest shall not fail.

THINGS TO BE AVOIDED.

Is all the varied vocations to which the human family devote both mental and physical resources, there are recognized governing principles, which, when brought fully to bear, work out, for each and the aggregate, that problem known as *success*. The violation of these rules as unalterably produces disaster—as certainly writes *failure* and *ruin* against the transgressor of immutable law. The young man just trimming the sails of his own bark upon "life's troubled waters," as, chart in hand, he endeavors to escape the hidden dangers that surround, presents a picture unsurpassed in the elements of moral sublimity and grandeur. Watchful of the causes producing misfortune, he aims at their avoidance, and, conscious of the integrity of his purpose, his "Labor of Life" marks a performance which will render the world and mankind better. The principles we have mentioned exercise the same influence upon the calling of the farmer—their adoption is sure of the same benefits, and their rejection as imperative in its penalties—as in any occupation of the race. The Rural Press is the chart of the Agriculturist, and, though its imperfections are many and apparent, it carries a warning voice, pointing out the rocks where hopes and aspirations have met shipwreck. This is our purpose at the present, and if the range is of necessity circumscribed, it may suggest thought which, carried out in the minds of those tilling the soil, will be productive of good works.

A quaint writer recently remarked that "the prevailing disease among American farmers was a *desire to sell out*." The forest bows beneath the sturdy strokes of the pioneer—the "log cabin" is erected, and the smoke curling heaven-ward gives signs of progress—for long years the struggle with privation is bravely contested—improvement is indelibly fixed upon the broad fields—peace and plenty at last sits at the farmer's board, and we are almost led to exclaim,

"If there be an Elysium on earth it is this,"

when the home is too often exchanged for the dollar, and life is begun anew. This is, too frequently, the true view of American farm life—this is what renders our systems of culture so vague and uncertain. Contrast with the following item which we clip from the "Foreign Extracts" in a July issue of the RURAL:—"Among the obituary notices in the Leeds *Intelligencer*, is the following: 'On the 20th inst., aged 45, Mr. PETER MATTERSON, of Low Dunford, near Boroughbridge. He and his ancestry have been the owners and occupiers of the farm on which he died more than eight hundred years. The farm was not entailed, and the owner has always been a MATTERSON without adoption.' Who will estimate the effects of such fixity of habitation and purpose upon the welfare of any people? The well known tenacity of 'JOHNNY BULL' is thus indoctrinated, and under such teachings it is no marvel that England's morning reveille sounds round the world,—no wonder that the products of her soil should be the admiration of wide-awake, progressive agriculturists.

Another defect in our system of tillage, and the one which exerts the most deleterious influence upon American farm literature, is our proneness to *jump at conclusions*. From the very condition of the case, all the knowledge obtainable must come slowly—Nature gives but a single lesson in a year, and in the advancement made there can be no mushroom growth. Not a single reason exists why our chosen calling should not possess as stable and truthful a written history as any other science,—why all the fallacies with which it is now cumbered should not give place to facts, if those who compose the rank and file of the great producing army do but will that such change shall be effected. Each individual should have a portion in this occupation, throwing in his ray of intelligence, the aggregation of which shall cast light upon the dark places in our pilgrimage. Let us have the results of well-conducted experiments—not alone those terminating in pleasant and profitable returns, but those, also, which yielded neither gratification nor pecuniary reward. Thus, only, can we avoid the difficulties which environ us, and walk abroad in a path everywhere marked with the manifestations of prosperity.

HICKOK'S KEYSTONE CIDER MILL.

Tracon cider is far less popular, as a beverage, than it was "long time ago"—or even in the days of our youth, which was not so very long ago—it is still manufactured to a considerable extent, and ranks among the useful products and necessities of the country. Many like it sweet, (with or without a straw,) while some prefer it in the 1840 style—rather "hard" or sour—and not a few people now traveling the down hill of life, retain their early habits by partaking of cider as a common beverage. It is also useful for so many other purposes—cooking, vinegar, etc.—that it will not be likely to go entirely out of fashion or use so long as attainable. The science of making, preserving and using cider, is but imperfectly understood by the great mass of even those who use and consume it—but we do not now propose to discuss these points, as it is too early in the season.

Our present purpose is merely to call the attention of RURAL readers to an improved machine or mill for making cider—the one above represented, known as "Hickok's Patent Portable Keystone Cider and Wine Mill," and which we are assured possesses merits and advantages proportioned to its elongated name! This mill is quite complete and perfect, occupies but little space, and is so light as to render it very portable. It has been improved the present year in several respects, so that the patentee is confident "there is no mill in market that will grind so fast or with so little power, nor is there any one that is made in a better or more perfect manner." It is worked by horse, steam or hand-power, and when the apples are ground, a boy of fourteen years can easily press the pomace. The machine, when properly worked, is capable of making from 6 to 12 barrels of cider a day, with ease. One great advantage of this mill is, that a few gallons of cider may be made at any time, for immediate use—or from one gallon to several barrels. It can also be used for pressing currants, cherries, berries, cheese, butter, lard and tallow. We therefore regard Hickok's Mill as a useful and convenient "institution."

A PEEP INTO MODERN PHILOSOPHY.—No. II.

The Astronomers said, Give us matter, and a little motion, and we will construct a Universe.—Modern Philosophers say, Give us Soil, Guano, or some "special fertilizer," and we will change the whole code of laws of the vegetable kingdom.—While Astronomers were playing with the question, Nature gave the ball a toss and bestowed the first impulse, and all the harmony of centrifugal and centripetal forces have grown out of it. The ball once in motion, there is no end to the consequences. This aboriginal push generated motion and electricity, and converted Nature into one vast pramis, not to be realized or unfolded by the hand of reality. Great causes are never tried on their own merits,—but reduced to suitable size to be measured by the operator's mind, and the contest is always hottest on minor points. Nature never commits the enactment or execution of vegetable or mineral laws to human conception or human comprehension. When the philosophers told the tiller of the soil how many bushels of wheat he could raise on an acre, by analyzing his soil, some astonished wag refused to play the game, and blabbed the secret, and the whole thing fell back into Nature's arms.

This paltry game of exaggeration has been played for ages. Nature always furnishes an excess of material to every person, to force him on in the right, direction and if he fail to make wheat straw out of "flint sand," he will go the game over again with a new whirl for years to come. Still, the philosophers are "in loco"—they have only fired over. We must aim above the mark to hit it. It is not enough that the heart should beat just hard enough to thaw the blood to the ends of the fingers and toes—there must be an excess of force, an exaggeration of impulse, or it would never return. Quite anal-

gous to these deceptions in physical science are the results that grow out of it. The farmer sends to New York or Boston for "special fertilizers" that furnish to his basal organs the same ammoniacal emanations that he meets at every visit to the village or city. The blood and bones from the slaughtering-houses, the night soil from the vaults of privies, compounded with meadow muck by the chemical hand of science, are sent him for the paltry sum of 2½ cents per pound, while cords of the same materials in his own district are going to waste. "The stench of the city is the harvest of the country." From J. J. MAPES' success in pear culture he has been led to believe that he "can make a manure that will produce either fruit or wood." Quite novel and plausible, but further on he has told the secret. "When I plant out my trees I head them in severely." Our over-anxiety to get beautiful trees leads us to grow wood at a loss of fruit. When fruit trees stop growing, they "bear abundantly." Some varieties begin to bear before maturity. All the blood and bones of New York, with all the guano of Peru, cannot make a vigorous grower and abundant bearer of a premature scion and sickly stock. The normal laws of the vegetable kingdom are irreparable—unalterable. By these laws one variety is an abundant bearer, another a shy bearer.

Chemically speaking, silica is an acid, and will unite with large doses of the two alkalies, potash and soda, and will form a soluble silicate of those bases. This explanation reveals the secret why the alkalies in wood ashes are so valuable on sandy soils. So says Dr. LEE. He now came in to ask the question, is this "soluble silicate" formed from flint sand by decomposition, in connection with two powerful alkalies, the vegetable silicate found in wheat and other straw at maturity, which enables it to hold up the full head of grain under the weight of atmospheric pressure? or is the flinty solution which gives strength to the straw, purely vegetable, and transformed from the volatile and liquid elements poured into the plant, by capillary attraction and atmospheric pressure, by crystallization? Crude minerals, drawn into growing plants are just as poisonous to the vital fluids, or sap, as mercury is to the human system. Potash and phosphorus, are the surest elements that enter into these fluids, and when purely refined by the laws governing these elements, are sure to produce the best results in both cases. The carpenter upon the frame, well understands a want of this fluid upon the brain when his head begins to "swim." The drooping plant betrays the same deficiency. The fact is well established, that you shall place a growing plant in a pot or box filled with sand and mould, and when the plant has obtained the weight of several pounds, remove it, and the pot or box will weigh the same as at first. The "great secret" why wood ashes are so valuable upon sandy soils, lies in its own native power, and not in its power to reduce minerals to vegetable fluids.

Clay, sand, vegetable mould, wood ashes and animal manures are the "five great powers" of the vegetable kingdom. All these elements are at the farmer's door, and he who looks to the city and drug store for fertilizers to restore his exhausted fields to a state of fertility, is doomed to disappointment. In those five elements the farmer has potash, lime, soda, phosphorus, sulphur, chlorine and iron—all the leading minerals found in matured plants. No men are more deeply interested in a knowledge of the laws of geology, chemistry, of vegetable and animal physiology, than the tiller of the soil. His book is the book of nature—God its author. The great problem to be solved by him is, the best method of making the elements at his command into beef, pork, fruit, butter, wool and other necessities of life. All hail to the man who tills the soil.

L. L. PIERCE.

CLEANSING WOOL—FOOT AIL IN SHEEP.

EDS. RURAL:—In your paper of July 30th, a subscriber from Michigan wishes to know how to cleanse wool. As my wife has been cleaning a little for her own use, I send you her method. The wool should be first assorted, the best or cleanest first, and put in a tub or barrel loose, not packed. Take 1 pail of chamber lye to 3 pails of rain-water and pour on, boiling hot, enough to cover the wool. Let it soak some time; squeeze it and let it drain out of the water. Rinse it two or three times through soft water, hot as the hands can bear.—The wool should be squeezed out in large handfuls, (not washed,) which will save labor in picking it for the mill. The first water will do to heat up for the poor wool.

While my hand is in I send you a recipe for Foot Ail in Sheep, which I have obtained from a farmer who has over 300 sheep, and says that two applications will cure the worst cases. The recipe ought to be in print, therefore I promised him to send it to your paper for publication:

Verdigris, ground, 4 ounces; tar, 2 oz.; spirits turpentine, 2 oz.; lard, 1 pound. Warm and mix. Scrape the affected part between the toe with a knife clean (no matter if it does bleed); pare the end of the toes a very little, and scrape it out clean, or all the black in it, and put on the salve with a little puddle. The fever in the foot will cause the salve to spread between the toes.

M.

PLOWING—A SCOTCH MODE.

EDS. RURAL:—Sir, I find the boys are quite ardent in the cause of improving their hands in plowing, and I am pleased with the idea. Now, without finding fault with any one, (as I know the old proverb, "every man likes to wear his belt his own gate"), I will tell you my practice, for the last fifty years, here, and on the "banks of the Tweed."

If the field is fallow, to rig up, I get three or four polls 7 feet long, with iron points, and mark them at 6½ feet, as I wish to make the rig 13 feet wide, (that being the standard width for a rig on clay soil.) Beyond that, you will thank your rig. I then take a square and lay it down at the corner of the field, to mark the direction of the polls. I do the same at the other corner, and then measure off my rig with my polls to a dead straight.

In plowing I use rope lines, single to each horse, and fix to the handle of plow with an eye in the rope. I take short lines, say five feet long, for use between the horses, and fix them to the buckle of the back-band, so that I can make the horses go wide apart, or not, that I can see the polls, and if one of the horses should be a little hasty, I can easily bring him to. I then lay the first furrow very shallow, and come down in the same furrow, laying it open. In this way the field will be straight, and one rig not one inch wider than another. Six times about will finish the rig. The first time about I lay very light. The next two times very deep, then a little shallower until I meet in the furrow. This will make a round rig. With lee land, I do the same, laying the furrows at an angle of forty-five degrees, so that the seed can send down their roots to the whole depth of the furrow.

I never drew a furrow in my life that I was pleased with, but I have a pretty good guess how it should be done. So saith one of your Scotch patrons, formerly from the banks of the Tweed.

DAVID HILL.

Gouverneur, St. Law. Co., N. Y., August, 1859.

WORN OUT LANDS OF VIRGINIA.—INQUIRY.

EDS. RURAL:—Agricultural papers are the reliable mediums through which the farmer gains valuable information. I desire information in regard to the worn out lands in Virginia, and know of no better way to obtain it than by making inquiries and soliciting answers from your able and posted correspondents. I have read some articles in the RURAL, written by men who have settled on these lands; they are not satisfactory, and I wish more light. I am interested, because I contemplate going there the coming fall with the view to purchase some of said land, provided the inducement is good; and I am not alone interested, as several families in this vicinity are anxious to go. Would it be advisable to go there with a small capital only? Are these cheap lands overgrown with weeds or grass, or are they barren? And can they be "brought to" by raising clover to enrich them? If not—that is, if clover will not grow on them in their present poor state—how can they be enriched? Will it not cost too much to purchase manure, &c.? In which counties are these lands principally located? And what are the facilities for markets, schools, &c.? Is the white laborer disrespected there, or are there in some localities societies of northern men who work as they did at the north, and acknowledge the dignity of labor? Answers to these questions, and others pertaining to them, such as climate, &c., will be gladly received, either through the columns of your paper or by letter.

HARMAN LINDSAY.

Newfane, Niagara Co., N. Y., 1859.

A LITTLE MORE ABOUT CURING HAY.

My friend WINGGAR says the true way to make hay is, when the sun shines. That is something new under the sun at any rate. He has owned horses twenty years, and has never had one get the heaves. I have owned horses nearly fifty years, and think he will admit that I have owned twenty if not thirty horses to his one. I have no recollection of ever having but two get the heaves; one I know to have been caused by bad usage, the other I think by the same cause. I would almost concur with friend WINGGAR as to curing clover hay in the sun and rain enough so that it would not mow-burn; it would not then give a horse the heaves, for I think it would then often be in a condition that a horse would hardly eat enough to keep him alive, let alone giving him the heaves. I do not believe in curing clover hay all together in the swath, nor in the cock. Let it lie in the swath a sufficient length of time to be tolerably well cured, but not so that the leaves drop off, then rake and cock it up; it will not heat to injure it at all; but let it stand until it gets in sweat, then if you can get a favorable, sunshiny day to draw it in, I will warrant it not to mow-burn, and you to have as good hay as the man that leaves his grass on the swath to be burnt up by the sun and drenched with the rain.

Spring Port, N. Y., Aug., 1859.

Inquiries and Answers.

CURE FOR LIQUID MANURE.—I should like to learn from you, or some of your correspondents, the proper way to build an efficient and durable cistern in a barnyard for holding liquid manure? I want its capacity equal to three or four hundred barrels.—J. W. CHANDLER, Paction, N. Y., 1859.

CATTLE WITH THE HEAVES.—Are horned cattle subject to the heaves? I have an ox which, to all appearances, is affected with that disease. If any of your numerous correspondents know of a remedy, I shall be greatly obliged by having it given in the RURAL.—A SUBSCRIBER, Meadville, Pa., 1859.

The disease of your animal is doubtless a bronchial affection, attended perhaps with more or less inflammation of the lungs.

BLOODY MURRAIN.—About 6 months ago I addressed you requesting some information about Bloody Murrain—its cause, and a cure for the same. As, perhaps, you may not have received my communication, I will thank you to make some observations upon it. A large number die from this cause in this neighborhood every year, but a very few recovering when once attacked.—AGRICOLA, Lambton, C. W., 1859.

In the RURAL of December 4th, 1858, the query of "Agricola" received special attention to the extent of two columns. We have mailed said copy to your address. HIRSH H. ALLEN, Kent Co., Mich., gives the following prescription for Dry Murrain:—"On the first discovery of it give from 1 to 2 lbs. of salts, according to the age and size of the creature, say an ox, 2 lbs. I never knew it to fail. I am not a cattle doctor, but a farmer, and have kept considerable stock, and merely give my experience and observation."

WHEN TO PURCHASE MULES.—As I am a reader of the RURAL NEW-YORKER, I noticed the inquiry for mules at reasonable rates. I have not seen an answer, therefore I take it upon myself to give such information as I can. The coal regions are now over-stocked with mules and they can be bought cheap at Scranton, Carbondale, or Montrose.—There are several pairs in this place for sale.—W. T., Harford, Penn., 1859.

Rural Spirit of the Press.

Signs of a Good Ox.

IN the RURAL of the 13th inst., we gave an extract from an "Essay upon Working Oxen," read before the Concord (Mass.) Farmers' Club, by CHARLES A. HUBBARD, the subject of Training being then presented. We again dip into the "good things" contained in his remarks, as follows:—"Till oxen are four years old, they are usually called steers, afterwards oxen. The signs of a good ox for work, according to my experience and observation, are these: long head, broad and level between the eyes, and the eye full, keen and pleasant. Such marks indicate ability to receive instructions, and a willingness to obey. An ox with large horns near the head, is apt to be lazy, and he will not endure heat well; forward legs straight, toes straight forward, hoofs broad, not peaked, and the distance short between the ankle and the knee; these properties enable an ox to travel on a pavement or hard roads. If the ox loses out, the strain comes on the inside claw, and when traveling on hard ground, he will be lame at the joint between the hoofs and the hair; when the toes turn out, the knees bend in, and an ox with crooked knees is apt to become lame by holding heavy loads down hill; full breast, straight on the back, round ribs, projecting out as wide as the hip bones; these are signs of strength and a good constitution. The best colors are brown, dark red and brindled. When the ox has completed his eighth or ninth year he should be fattened."

Certain Cure for Botts in Horses.

"LIVERY KEEPER" writes thus to the Kentucky Farmer:—"When you find your horse complaining, and looking around at his side, and lies down pretty often, and is not swollen, you may very readily come to the conclusion that he has the botts. Lose no time in giving him a quart of sweet milk and molasses, and just as soon as you let his head down, after he swallows the drench, slap him several times on the side of which he complains most, with a paddle about two feet long, six inches wide and one inch thick, striking him pretty hard; this process jars the botts loose from him, and they take hold of, and feed on the milk and molasses. In ten or fifteen minutes after striking him with the paddle, give him a quart or half gallon drench of strong sage tea; this accomplishes the object by killing the botts, and the horse is relieved."

Rolling Corn Ground.

A CORRESPONDENT of the Prairie (Ill.) Farmer writes:—"Last spring for the first time we used the roller, and as little as we know of its utility we would as soon dispense with the harrow as with the roller. To say nothing of rolling wheat or oats, it will amply pay to buy or make one on purpose to roll corn ground. One would hardly believe it made such a difference in the land till they saw it. Whether it makes any difference in the growth of the corn or not I cannot say. But this I know, once rolling puts the land in better order than several times harrowing, for it crushes all the large lumps, so that when you come to mark, plow and hoe, the ground is level, and there are no lumps in the way."

Time of Harvesting Wheat.

An Illinois correspondent of the American Agriculturist, incited by a statement of the advantages of early cutting, tried the experiment on a field of 50 acres last season. The bulk of the crop first cut, weighed 82½ lbs. to the measured bushel. The part of the field left until fully ripe before cutting, gave wheat weighing but 68 lbs. per bushel—making a difference of nearly one hundred bushels on the whole field in favor of early cutting—from ten to fourteen days before full maturity.

THE GREAT WOOL FAIR AND SALE.—The Wool Growers' Convention—or, rather, the Wool Fair and Sale—held at Cleveland, Ohio, on the 4th inst., proved very successful. The display of Wool was large and superior, while the sales (amounting to some 500,000 lbs.) were decidedly encouraging to producers. There were plenty of purchasers and the competition was brisk. Good full blood Merino fleeces sold at 45 to 50¢ cts. Many fancy clips brought 60 cents, while some of the finest premium samples sold as high as 72 and 78 cents. This indicates confidence in the future of the wool trade, and an advance of prices—especially as most of the purchasers are said to be manufacturers and their agents, instead of speculators, and men who ought to be well advised as to the quantity and quality of the clip, and to possess intelligent convictions as to its prospective value.

At the close of the exhibition and sale, an "Ohio Wool Growers' Association" was formed, and the following officers elected:—President—WM. BOHAR, Knox County. Secretary—G. N. ABBEY, Treasurer—Harvey Baldwin, Summit. Executives Committee—Thos. Brown, Cleveland; H. C. Burt, Cleveland; Peter A. Morse, Akron.

OWEGO CO. AG. SOCIETY.—Officers, Fair, &c.—Officers for 1859:—President—ORRIN R. EARL, of Sandy Creek. Vice-Pres.—T. H. AUSTIN, New Haven. Sec'y—ANDREW JOHNSON, Mexico. Treas.—L. H. CONKLIN, Mexico. Directors—Elias Thomas, Volney; Weston Marks, Sandy Creek; Harvey Palmer, Parish; Solomon Mathews, Mexico; John W. Lyon, Constancia; C. D. SNELL, Mexico. The fourth Annual Fair (under the new organization) is to be held on the Society's Grounds in the Village of Mexico, Tuesday, Wednesday and Thursday, the 18th, 19th and 20th of September. The Annual Address will be delivered by D. D. T. MOORE, Esq., Editor of the RURAL NEW-YORKER.—O.

NEW VARIETIES OF WHEAT.—We are in receipt of several inquiries relative to the new varieties of wheat (or at least new horsebreds) tried in Western New York the past season, and again request those who have experimented to report the result through the RURAL—stating the time of sowing and harvesting, quality, yield, &c. Most of the inquirers wish information concerning the Dayton, May, &c., but we are not prepared to make any material additions to what we have already published. Considerable wheat will be sown in this region the ensuing fall, principally, we think, of the Mediterranean and Soules' varieties.

HON. JOHN A. DIX is to deliver the Address at the next New York State Fair, and Gov. BAXTER, of Mass., at the Mich. State Fair.

MR. E. MARKS, of Canillus, has recently sold his fine young Short-horn bull "Felix" to TIMOTHY BAXTER, Esq., of Adams, Jefferson county, N. Y.

NATIONAL, STATE AND LOCAL FAIRS, 1859.

BELOW we give a revised list of the Agricultural Fairs for 1859, including, in addition to the State Fairs, an enumeration of the principal County and other Fairs so far as ascertained—making altogether the most complete list yet published:

STATE FAIRS.	
U. S. Ag. Society, Chicago	Sept. 13.
American Institute, New York	Sept. 21-Oct. 23.
National Horse Exhibition, Kalamazoo, Mich.	Oct. 11-14.
New York, Albany	Oct. 4-7.
Wisconsin, Milwaukee	Sept. 26-30.
Pennsylvania, Philadelphia	Sept. 27-30.
New Hampshire, Dover	Oct. 5-7.
Alabama, Montgomery	Oct. 5-7.
Massachusetts, Boston	Nov. 15-18.
Rhode Island, Providence	
Nebraska, Nebraska City	Sept. 21-23.
Connecticut, New Haven	Oct. 11-14.
Maryland, Frederick City	Oct. 25-28.
Tennessee, Nashville	Oct. 10-15.
Georgia, Atlanta	Oct. 24-28.
Illinois, Freeport	Sept. 5-7.
Indiana, New Albany	Sept. 23-25.
Iowa, Ocala	Sept. 29.
Kentucky, Lexington	Sept. 18-16.
Maine, Augusta	Sept. 20-23.
New Jersey, Elizabeth	Sept. 18-16.
South Carolina, Columbia	Nov. 8-11.
Ohio, Zanesville	Sept. 20-23.
Vermont, Burlington	Sept. 13-16.
California, Sacramento	Sept. 27-Oct. 6.
Michigan, Detroit	Oct. 4-9.
Missouri, St. Louis	Sept. 25.
Canada West, Kingston	Sept. 27-30.
Canada East	

COUNTY FAIRS.—MAINE.	
Androscoggin	Oct. —
Franklin, Farmington	Oct. 5-7.
Kennebec, Readfield	Oct. 11-13.
Lincoln, Union	Oct. 18-20.
North Franklin, Bangor	Sept. 28-29.
North Penobscot, Lincoln	Oct. 5, 6.

MASSACHUSETTS.	
Essex, Danvers	Sept. 23, 29.
Middlesex, Concord	Sept. 23.
Middlesex, Farmington	Sept. 20, 21.
Middlesex, Lowell	Sept. 21.
Worcester, Worcester	Sept. 28, 29.
Worcester, W. Barre	Sept. 27.
Worcester, N. Fitchburg	Sept. 29, 30.
Worcester, St. Lawrence	Sept. 28.
Hampshire, Franklin, &c., Northampton	Sept. 28, 29.
Hampshire, Amherst	Oct. 18, 19.
Hampden, Springfield	Sept. 21, 22.
Hampden, E. Palmer	Oct. 4, 5.
Franklin, Greenfield	Sept. 27, 28.
Berkshire, Pittsfield	Oct. 5-7.
Housatonic, Great Barrington	Sept. 23, 29.
Norfolk, Dedham	Sept. 27, 28.
Bristol, Taunton	Sept. 14, 15.
Plymouth, Bridgewater	Oct. 5, 6.
Barnstable, Barnstable	Oct. 5, 6.
Nantucket, Nantucket	Oct. 12, 13.
Martha's Vineyard, West Tisbury	Oct. 11, 12.

CONNECTICUT.	
Fairfield, Norwalk	Sept. 27-30.
Middlesex, Middletown	Oct. 5-7.
Windham, Brooklyn	Sept. 21, 22.
Hartford, Hartford	Sept. 27-30.

NEW YORK.	
Cayuga, Auburn	Sept. 14-16.
Cheungo, Norwich	Sept. 21, 22.
Delaware, Bloomville	Sept. 14-15.
Essex, Buffalo	Sept. 27-29.
Essex, Elizabethtown	Sept. 22, 23.
Genesee, Batavia	Sept. 14, 15.
Greene, Catskill	Sept. 28-29.
Jefferson, Watertown	Sept. 21-22.
Lewis, Lowville	Sept. 21, 22.
Livingston, Genesee	Sept. 20-22.
Monroe, Rochester	Sept. 28-30.
Onondaga, Oswego	Sept. 28-30.
Ontario, Cananadaga	Sept. 27-29.
Orangetown, Syracuse	Sept. 20-22.
Orange, Goshen	Sept. 21, 22.
Orleans, Albion	Sept. 20-22.
Queens, Cooperstown	Sept. 28, 29.
Seneca, Rome	Sept. 18-15.
Putnam, Carmel	Sept. 27-28.
Queens, Hempstead	Sept. 15.
Rensselaer, Lansingburgh	Sept. 18-16.
Saratoga	Sept. 6-8.
Schoharie, Watkins	Sept. 14-16.
Seneca, Waterloo	Oct. 12-14.
Staten, Bath	Sept. 28-30.
St. Lawrence, Canton	Sept. 28-30.
Tompkins, Ithaca	Sept. 21-23.
Washington, Fort Ann	Sept. 7, 8.
Westchester, North Salem	Sept. 20-22.
Wyoming, Warsaw	Sept. 27-28.
Yates	Oct. 12-13.

NEW YORK UNION TOWN SOCIETIES.	
Brookfield, Brookfield	Sept. 23-29.
Byron and Bergen, Byron	Sept. 23, 28.
Cannestota, Canastota	Sept. 23-28.
Croftville, Croftville	Sept. 27-28.
Dryden, Dryden	Sept. 28, 29.
Galen, Galen	Sept. 15.
Harpersville, Harpersville	Sept. 20, 21.
Harland, Harland Corners	Sept. 23, 24.
Lebanon, Smith's Valley	Sept. 16, 17.
Oxford, Oxford	Sept. 20, 21.
Palmyra, Palmyra	Oct. 11-13.
Sandy Creek, Washingtonville	Sept. 6, 9.
Smithville, Smithville	Sept. 14, 15.
Smyrna, Smyrna	Sept. 13, 14.
Susquehanna Valley, Canadilla	Sept. 21, 22.
Tonawanda Valley, Attica	Sept. 21, 22.
Union, Union	Sept. 14-16.
Union Trumansburg	Sept. 28-30.

PENNSYLVANIA.	
Chester, West Chester	Sept. 28, 29.
Crawford, Crawford	Oct. 5-7.
Monongahela, Monongahela City	Oct. 6-7.
Venango, Franklin	Oct. 6-7.
Union, Lewisburg	Oct. 6-8.
Mercer, Mercer	Sept. 14, 15.
Erle, Erle	Sept. 21, 22.
Erle, Reading	Sept. 21-23.

OHIO.	
Guernsey, Cambridge	Sept. 15, 16.
Lucas, Toledo	Sept. 27-29.
Odessa, Odessa	Sept. 28-30.
Payette, Washington	Sept. 7-9.
Pickaway, Circleville	Sept. 13-15.
Ashtabula, Jefferson	Sept. 18-15.
Genaga, Barlow	Sept. 18-15.
Brown, Georgetown	Sept. 6-9.
Jefferson, Greenville	Sept. 14-16.
Erle, Huron	Sept. 14-16.
Marion, Marion	Sept. 14-16.
Madison, London	Sept. 14-16.
Portage, Ravenna	Sept. 19-21.
Brown, (Ind.) Ripley	Sept. 20-22.
Chermon, Bainton	Sept. 14-16.
Delaware, Delaware	Sept. 14-16.
Lake, Painesville	Sept. 21-23.
Freble, Eaton	Sept. 22-24.
Lorain, Elyria	Sept. 27-29.
Belmont, St. Clairsville	Sept. 27-29.
Medina, Medina	Sept. 27-29.
Greene, Xenia	Sept. 27-29.
Champaign, Urbana	Sept. 27-29.
Adams, West Union	Sept. 27-29.
Tuscarawas, Canal Dover	Sept. 24-30.
Genaga, (Free) Claridon	Sept. 24-30.
Columbiana, New Lisbon	Sept. 24-30.
Highland, Hillsboro	Sept. 24-30.
Seneca, Elm	Sept. 24-30.
Fulton, Ottawa	Sept. 24-30.
Defiance, Defiance	Sept. 24-30.
Union, Marysville	Sept. 24-30.
Putnam, Ottawa	Sept. 24-30.
Butler, Hamilton	Oct. 4-7.
Trumbull, Warren	Oct. 12-14.
Coshocton, Coshocton	Oct. 12-14.
Ashland, Ashland	Oct. 12-14.
Hancock, Findlay	Oct. 8-5.
Logan, Bellefontaine	Oct. 8-5.
Sandusky, Fremont	Oct. 4-5.
Shelby, Findlay	Oct. 4-5.
Darke, Greenville	Oct. 4-5.
Cuyahoga, Cleveland	Oct. 4-5.
Clark, Springfield	Oct. 4-5.
Licking, Newark	Oct. 4-5.
Noble, Sarahsville	Oct. 4-5.
Stark, Canton	Oct. 4-5.
Morrow, Mt. Gilead	Oct. 4-5.
Harrison, Cadiz	Oct. 4-5.
Wyandot, Upper Sandusky	Oct. 4-5.
Wayne, Wooster	Oct. 4-5.
Monroe, Wooster	Oct. 4-5.
Montgomery, Dayton	Oct. 4-5.
Summit, Akron	Oct. 12-14.
Morgan, McConellsville	Oct. 12-14.
Crawford, Bucyrus	Oct. 12-14.
Hardin, Kenton	Oct. 12-14.
Carroll, Carrollton	Oct. 25-27.

Madison, London.....	Sept. 14-16.
Portage, Ravenna.....	Sept. 14-16.
Brown, (Ind.) Ripley.....	Sept. 19-21.
Clermont, Bainton.....	Sept. 20-23.
Delaware, Delaware.....	Sept. 14-16.
Lake, Painesville.....	Sept. 11-13.
Preble, Eaton.....	Sept. 21 23.
Loran, Elyria.....	Sept. 22-23.
Belmont, St. Clairsville.....	Sept. 27-29.
Medina, Medina.....	Sept. 27 29.

A PLEASURE TRIP.

For a few days past the Horticultural Editor has been ruralizing among the hills and valleys, brooks and lakes of Cayuga and Tompkins counties. And he has enjoyed himself immensely, and seen as many wonderful and beautiful things as though he had traveled through Italy, Wales, or Scotland, or any other favorite resort of the tourist—at least he is perfectly content, and returns to his duties with a feeling of thankfulness that God has given us such a goodly heritage.

There may be lakes more beautiful than Cayuga, but we have never seen them, and as we sailed over its transparent surface, enraptured by the beauty of its fertile banks, dotted with cottages and farm houses, with occasionally a "clump" of the old woods remaining, giving the scene the appearance of a magnificent park, we thought that neither nature or art could add another grace.

Then, as we climbed the fertile hills of Trumansburgh and Endicott, it rejoiced our heart to see the promise of goodly crops, the orchards laden with fruit. Beautiful specimens of dwarf pears are to be found in almost every village garden; but our friends must learn to keep the grass away from their trees, or they will not make a good growth. A little circle a foot in diameter around a pear tree, is of no use. Cut away the turf for a large space, give plenty of manure, and all will be well.

On our return we took a look at the villages on the eastern side of the lake. Aurora is a beautiful place, with scores of pleasant residences, surrounded with well-kept lawns, and ornamented with graceful trees and flowering shrubs. At Union Springs we spent a few hours very agreeably with our horticultural friend, JOHN J. THOMAS, and although we did not find the army of weeds that so troubled the correspondent of a Yates County paper, we saw very much to interest us. Mr. T. has been only two years on his present farm, and in that time has built a new and tasteful house, removed old barns and fences and made new, laid down over three miles of drain tile, made a lawn, gravel and flag walks, planted trees, started a nursery, and made many other improvements, taking a large amount of time and money, the benefit of which will be seen in a few years. The place is new and incomplete, and to a casual observer it would contrast unfavorably with those older and more finished. Those acquainted with horticultural labor and its results, can see the work of a master hand, and with a little more time and labor, and that finish which time alone can give, friend THOMAS will have a very delightful home.

In all our travels we saw nothing more beautiful than a natural garden of the *Hibiscus*, a mile or two north of Union Springs, on the shore of the lake. Several acres were covered with this beautiful and showy flower.

DOWNING'S EVER-BEARING MULBERRY.

For some time past we have designed to call the attention of our readers to what we consider a very valuable fruit, *Downing's Mulberry*, and have only been waiting for an opportunity to taste it. With the *English Black Mulberry* we are well acquainted, having eaten of its fruit from our earliest recollection. *Downing's Ever-bearing* we saw last season in the grounds of Dr. GRANT, of Iona, but too late for the fruit. It is a beautiful tree, with its broad, bright foliage, and its growth is almost marvellous. If we recollect aright, we measured branches of one year's growth over fifteen feet in length. It makes a truly ornamental tree, and we see no objection to giving it even a conspicuous place on the lawn.

The following note from JOSEPH FROST, Esq., of the well known nursery firm of A. FROST & CO., has directed our attention to the matter at this time. Mr. F. it will be seen, has tasted of the fruit, and states that it is "good and delicious." Mr. GLENN, of the firm of H. E. HOOKER & CO., has also tasted the fruit and also expresses a very favorable opinion of its merits.

EDS. RURAL:—During a recent visit at Dr. GRANT's, at Iona, near Peekskill, N. Y., I had the pleasure of eating of *Downing's Ever-bearing Mulberry*. I know what many have said of it, yet was quite unprepared, from our familiarity with other mulberries grown here, to find the fruit so good and delicious. The tree from which the fruit was gathered is unavoidably grown under very unfavorable influences, as it grows almost entirely in the shade of two other valuable trees which detract much from the size and somewhat from the quality of the fruit. The fruit was about an inch long and nearly half an inch in diameter, purplish black, with a most agreeable sub-acid flavor.

At the time I was there (20th of July), the tree had been bearing a couple of weeks, and from the size of the fruit in its different stages of growth, with much ripe fruit ready for picking, it would probably continue to fruit for five or six weeks longer.

Plants, of one year old from the graft, are liable to be killed back the first winter, but afterwards they seem to be very hardy. It is my opinion that as soon as the merits of this new Mulberry are known, it will become universally popular.—J. FROST.

Not long since, a gentleman who has eaten of it freely for a couple of years, informed us that he considered it equal to the raspberry. This being the case, the value of a tree that will give several bushels of such fruit, ripening in succession for five or six weeks cannot be questioned. It is an acquisition to our catalogue of small fruits that our people will not be slow to appreciate.

CHARLES DOWNING gives the following interesting account of the habits of the tree, quality of fruit, &c.

"The mulberry which is called, but not very felicitously, 'Ever-bearing,' has a fruiting season of about ten weeks, beginning to ripen its fruit just as the Strawberry season is drawing to a close, and by its excellence seems fitly to follow that universally esteemed fruit. It had but just been thoroughly proved as the time arrived for

carrying out my plan of discontinuing the growth and propagation of trees for commercial purposes, to enable me in other ways more completely to devote the remainder of my life to the advancement of Pomology undistracted by the interests and cares of business. Therefore I propagated only a few, which I presented to some of my friends, a part of whom did not appear to think a mulberry could be of any value, and never gave them any attention, but by all who cared for them, I have had the pleasure of seeing them prized and fully appreciated. I also tried to prevail upon a neighbor to undertake its propagation for general dissemination, being well assured he would be doing the country a great favor. It was soon after undertaken by my friend, Dr. C. W. GRANT, whose efforts, in consequence of its peculiarities, were at first unsuccessful, but I am now happy at knowing that he has a small stock of very fine trees.

Of its excellent flavor and productiveness, I need not speak—its character, so far should at least be now well established. As a tree for the lawn, I think it deserves attention for its great beauty of foliage and habit, and also for its hardiness and unequalled rapidity of growth under generous treatment. When grown in a border deep, rich, and broad, and not interfered with by other trees, its leaves, which are borne in profusion, acquire a very large size, and in an incredibly short time it becomes a large tree, with a deep, cool, and impenetrable shade. For the first three years no grass-roots should be suffered to abstract nourishment from its roots. Afterwards, grass closely shaven may be suffered to grow around and beneath, on which the fruit may be suffered to fall. Every morning it may be gathered from the tree by picking, to which it then adheres with considerable tenacity. At mid-day a pretty severe jar will dislodge the fruit, but if left till towards evening, it begins to fall off itself, to make way for the next day's fruitage. That gathered in the morning has a large share of sub-acid briskness, and may be kept for several days. As the day advances, the fruit becomes softer, but it never loses its full, rich, vinous, aromatic flavor, and always leaves the mouth cool and healthy. I think it a fruit which every one will enjoy."

Mr. BERCEMANS, the well known Belgian Pomologist thus wrote of it in the summer of 1858:

"This truly most distinguished fruit, so different from the other American mulberries, by its rich and sub-acid taste, was obtained from the seed of the *Mulcaulis* by our worthy and distinguished Pomologist, CHAS. DOWNING, some twelve years ago, in his experimental grounds near Newburgh. The tree is very vigorous, hardy and productive. Its foliage is large and fine, making it altogether an ornamental as well as useful tree. It comes into bearing the third or fourth year, and the fruit increases in size as the tree attains a more mature condition. The fruit ripens in succession from before the first of July to the beginning of September, producing a never-failing crop of the most luscious fruit, highly valued by all who have had an opportunity to taste it, and making a fine dessert, and a most delicious pie or pudding fruit. From over one inch to one inch and a half in length, about half an inch in diameter, and larger under good, rich cultivation. Color purplish-black with small fine grains, and is almost entirely without seeds, and of a delightful, rich, sub-acid taste."

Rev. HENRY WARD BEECHER who had such a dislike to the common mulberry that he could hardly be prevailed upon to taste this, expressed the greatest surprise and gratification at the excellent flavor of the new fruit, and wrote as follows, to the gentleman who had presented him with the specimens:

"Just as soon as I can find a spot where it can have rest, and roof-room, I shall want a mulberry tree, which I hope you will not fail to reserve for me. I regard it as an indispensable addition to every fruit-garden, and speak what I think, when I say I had rather have one tree of *Downing's 'Ever-bearing'* Mulberry than a bed of strawberries. And I think all lovers of fine fruit, who like me can be prevailed upon to taste it, will be ready at once to award to Mr. CHARLES DOWNING a high rank among public benefactors, had he done nothing more than give us this most estimable of all small fruits, which the tree furnishes abundantly, for more than two months of the season, when such are most conducive to health and enjoyment."

"If any word of mine spoken through you or otherwise will tend to induce amateurs and others who are enriching their gardens and grounds with choice fruits, to become possessed of this new kind, that word shall be most heartily spoken, for I regard it as a very great acquisition."

WIRE PEGS FOR POT PLANTS.

FINDING I needed something to keep the branches of my *Chrysanthemums* down, I referred to your number of last year, and found there the representation of a wooden peg invented by Mr. Broome. As, however, I have not much time to devote to the sawing and cutting of wood, I thought myself of something more easily attainable, and I think at the same time more serviceable. It is as follows—I procured a small quantity of copper

wire, and cutting this up into pieces about six inches in length, the end is readily bent with the fingers into the shape of the peg just adverted to as made by Mr. Broome. But a difficulty arose. My branches were overhanging the pots they were in, consequently pegging them down to the pots was of very little use. I therefore found that the cop-

per was much more preferable to the wood, as it enabled me to twist it any way I please; thus I had the means at my command of stretching my shoots some distance over the sides of the pots. The above is a sketch of its appliances in the form I have it now in use. These slips are capable of being bent to any shape, whereas the wooden ones could with great inconvenience only be used for pot plants. Another advantage gained is, that for the price of 2d. I procured sufficient wire to make 40, and the time (an object with me) occupied in making them was only 20 minutes. It is, therefore, I think, an improvement on the wooden peg; should, however, a doubt arise that the wire would slip from the mould, this may be remedied by pressing the surface with the finger where the wire enters, thus giving a compact body to resist any attempt at rising. But before concluding I must add a word of caution to amateurs like myself, namely, that should the branch intended to be bent down be too strong and too full grown, it will be found necessary to have a crutch or prop (similar in shape only to those used by laundresses in supporting their clothes-lines) formed out of a piece of wood, or the joints at a in the wood cut may snap and produce disappointment. A piece of bast tied round the branch bent and again to the parent stem will answer the same purpose as a crutch. Any information as to recent improvements that may have been made will be considered a boon. The Tulip, the Dahlia, and several other plants have long been favorites with the public, and as the *Chrysanthemum* now seems rising in estimation all that can be gleaned from experience in regard to the management of that plant will be highly acceptable.—G. AUCOTT, in *Gard. Chron.*

THE NEW GRAPES.

A CORRESPONDENT and nurseryman of Pennsylvania writes us as follows:—"I have felt in duty bound to take a position on the grape question which I feared would offend some enthusiasts, but am happy to see by a former number of the RURAL that your views are like mine, and of course, I think correct. It was a great satisfaction to find that I was backed by so good authority. As to enthusiasm, I have no stones to throw at others, for I suppose I have spent as much for new grapes, and have, perhaps, nearly as many, as any other person; but I have always felt a disposition to put my foot on all humbugs, while, at the same time, I have patronized humbugs in every form and on every occasion for twelve years, always being among the first to be caught. I do not, however, look upon the present grape mania as a humbug, for I truly believe it will be the cause of great and good results. Yet, in imprudent or dishonest hands, the cause may receive a check, and great injury, before the good is fully gained."

Well may a person feel timid when entering on a subject which has so absorbed the attention of the great mass of pomologists and fruit-growers, as to result in an almost perfect mania, under whose influence each one seems to run as though the fever was destined to consume him, and firmly convinced that the sooner he is consumed, the less he will suffer. This may all be true, in a pecuniary point of view, with those who are propagating for sale,—but whose feelings will be most comfortable, when the fever has subsided, can better be told than, than imagined now; as we all seem to be alike laboring under the popular hallucination. We are collecting from all quarters, new, and said to be, superior sorts. Some may be so, and no doubt the result will lead to a great deal of good, both individually and nationally, by producing more abundance of the wholesome fruit of the vine, which, to some extent, may do away with some of the poisonous drugs commonly termed beverages."

But in our wild enthusiasm, let us not run our race too hurriedly, too inconsiderately, but fear lest we finish our course ere the best results are achieved; causing a reaction, and turning the mass against the cause from the dissemination of inferior varieties to such an extent as to destroy all the good done by sending out the few real valuable varieties, ere it has resulted in the amount of good it is destined to accomplish, if guided cautiously. Viewing the case in this light, I would not excite the feelings by glowing descriptions; for the public prints abound in this too plentifully. Many of the varieties have never yet been fairly tested out of their native locality, while others have been so hurried on by hot-bed culture—to supply demand—as to require years to do even them or their cultivators justice."

CHECKING GROWTH OF TREES.—Will you, or some of your numerous correspondents, inform me how to prevent Pear trees from making too large a growth of new wood? I have cut the wood back, but it seems to do no good. Some of the trees have made from five to five feet of new wood after being cut back the present season. I have been advised to cut back my trees this month, but I am fearful that the new wood will be so tender that it will become winter-killed. I should like any information you can impart to us new beginners in fruit growing through the columns of the RURAL.—H. B., Irondequoit, Monroe Co., N. Y., 1859.

We like to have young pear trees make a fine growth of wood. The first object to be gained is a good, substantial, well-formed, healthy tree, and not fruit. We know of no evil likely to result from a "large growth of new wood," as described by our correspondent, and would take no means to check it until the tree got to be quite large. A few small crops of fruit will not repay the damage done to a young tree by rashly checking its naturally vigorous growth. When the tree, however, becomes older, and seems disposed to run too much to wood, pruning the latter part of July will check it, and generally cause the formation of fruit buds. All that is necessary is to pinch off the tops of the most vigorous branches. Now and tender shoots may be in some cases forced out when the autumn is warm and growing, but no injury would result should these be winter-killed, as they would be mostly removed in spring pruning. Root-pruning is the best way to check the growth of a tree. Dig around it and cut off with a sharp spade a portion of the roots. To accomplish much in this way with large trees, it is necessary to dig a trench around them.

MEDAL TO MR. FORTUNE.—The Paris Society d'Acclimation has awarded to Mr. Fortune one of their first class medals, in consideration of his having introduced to England so many useful and beautiful plants.

LAWTON BLACKBERRY CROP, &c.

EDS. RURAL:—Having noticed a new feature (to me at least,) in the growing of the Lawton or New Rochelle Blackberry, I write this to try and ascertain if it is a common occurrence. After the first crop of fruit was set on my bushes and nearly ripe, they all budded and blossomed the second time, so that I had ripe fruit and blossoms in profusion at the same time. As I have never seen anything of the kind noticed before, I conclude that it is peculiar to the West, and perhaps to my garden alone. The "Lawton" thrives well here, and is destined to become a popular fruit in Western Iowa and Nebraska. Our hard winters generally kill the ends of the twigs and late growth, but not enough to injure the plants in the least. I have grown some very fine fruit this season, some of the berries measuring 2½ inches in circumference. Should they prove a perpetual they will be all the more valuable.

As a general thing, crops of all kinds are good with us. Spring wheat is light straw, but well filled. Oats are a very fair crop. Corn bids to be very heavy, although owing to bad seed and bad weather and re-planting, a portion of it is late—but if frost holds off as late as usual it will all mature. Early potatoes will be poor, owing to the dry weather a few weeks past, but the late rains will make the late crop good. Grass is not quite as heavy as usual on account of the dry weather. Crescent City, Ia., July, 1859. H. A. TRENT.

GERANIUMS STRUCK FROM ROOTS.

The accompanying is a specimen of propagating this class of plants by roots. I don't know if it is generally known. I find it very useful. Roots cut

into short pieces at any time of the year grow just covered with earth. If put in in the autumn they will push in the spring; any time during summer they are up in a few weeks.—W. W., in *Gardener's Chronicle*.

BUDDING VINES.

HAVING lately seen several articles in your columns relative to the propagation of the vine, and conclusions drawn that the time will arrive when "grafted plants will be more common," I am induced to lay before your readers a system I have adopted, and which I have not seen alluded to in any treatise on the vine; nor in conversation with most experienced grape growers have I found they have practised it. It is certainly far preferable to grafting, as a season for fruiting is gained, and a more perfect union effected—I allude to budding in the months of July and August. On August 9th, 1858, I received from a nurseryman a small one guinea plant of the Black Muscat vine, a plant of the Golden Hamburg and one of the Bowwood Muscat. I was desirous that the Black Muscat Hamburg should be next to them, that I may fairly test the relative merits of these three fine grapes; but as there was a Black Hamburg of two years planting next to the Golden Hamburg, I did not like removing it to plant the Black Muscat Hamburg, but resolved on trying the effect of budding the Black Muscat Hamburg on the stock of the Black Hamburg. On the 10th of August I inserted three buds, and at the time of winter pruning cut the Black Hamburg down to the top bud inserted. Each bud has broken quite as strong as a natural eye, and on each shoot there were three as strong and fine bunches of grapes as could be desired. Since then the fruit from the leader has been removed, and also two bunches from each side shoot, leaving one to each bearer. This operation has been performed in a young vineyard, where there are about forty vines, and the bunches on the shoots of the inserted buds are just beginning to color. I shall, therefore, fruit this season, side by side, from established plants in the border, the Black Muscat Hamburg, the Golden Hamburg, and the Bowwood Muscat. From what information I have been able to collect, I believe this to be an advance in the propagation of the vine not before practised. If it has been, I should from any of your numerous readers like to know, and if not, it gives me gratification to lay before the grape-growing world the result of my experience.—JAMES ALDRIDGE, in *London Gardener's Chronicle*.

IRVING PARK.—A novel and very admirable idea is in process of being carried out at Tarrytown, on the Hudson. About one hundred acres of ground, adjoining Sleepy Hollow—made memorable by Irving's pen—have been converted into a park, which, when finished, will contain carriage drives of several miles in extent, neatly kept walks for promenaders, and spacious lawns and sloping terraces where children can play and gambol. Within this park are villa sites, from one or two, to six or eight acres in extent, which are for sale; and each purchaser will not only possess a charming homestead, but, also, be guaranteed all the privileges of the park, which ground will be for the use and benefit, and under the control of the owners of the sites.—*Horticulturalist*.

ALL ABOUT BEANS.

BEAN SOUP.—Boil the beans for soup in the usual way, but only in water, seasoned with salt and pepper to taste, and herbs if you like. When ready to take up, cut a couple of large slices of light, stale bread into pieces half an inch square; add a lump of good sweet butter, size of a hen's egg, (or more, if you have much soup,) and fry it on the stove or toast it in the oven. When brown and crisp, put it in the soup tureen, pour the bean soup over it and serve.

MINNESOTA, BEAN FRITTERS.—Soak a pint of beans, and then boil in water. Salt it to taste. When the skins commence to loosen, place a covered steamer close over the pot of beans, and in a few moments take it off briskly, and as quickly skim off the skins which have risen on the surface. Replace the steamer, and repeat the same until you have as much of the skins as you can skim, then let the beans boil to a mash. Take off; let them cool to blood heat, then add sufficient yeast to rise it, and stir in flour with a spoon until you can get in no more. Be sure to have sufficient salt. Let it rise, and when very light (not sour,) drop the mixture by spoonfuls into hot lard—as much or as little fat as you please. Serve up hot.

Beans may be prepared more delicately for these fritters by soaking bean meal in water over night, then either baking in the oven with plenty of water for four hours, or boiling in a pudding bag for 5 to 6 hours. Or, allow it to get perfectly cold, and cut in slices, and fry like cold mush.

A NEW SOUNSCHEM.

Oak Hills, Minnesota, July, 1859.

CAKES, CRACKERS, &c.

MESSRS. EDS.:—In the RURAL of June 18th is an inquiry for a good recipe for making Crackers—I send one, together with others that I think are good:

CRACKERS.—Ten ounces of butter to 5 pounds of flour wet with water. Mix very hard—pound half an hour.

PLAIN CAKE.—Two eggs; ¾ cup cream; 1 of sugar; 1 of flour; 1 teaspoonful of saleratus; 1 tablespoonful of rose water.

HARD GINGERBREAD.—Three cups of sugar; 1½ of butter; 1 of sweet milk; 1 egg; 1 teaspoon ginger; 2 of saleratus. Mix hard, roll out thin, cut in cakes, and bake quick.

COOKIES.—Two cups of sugar; 1 of butter; 2 eggs; ¾ cup sour milk; 1 teaspoon soda.

GINGER SNAPS.—One cup molasses; 1 of sugar; ½ cup warm water; 1 cup butter; 1 teaspoon soda, dissolved in the water; 2 tablespoonfuls of ginger, and a little salt.

INQUIRY.—Will some of the lady readers inform me through the columns of the RURAL how to cook Lima Beans. LINA. Nunda, N. Y., 1859.

KEEPING CIDER FRESH AND SWEET.—How can cider be kept fresh and sweet? I wish to have a barrel or two for fall and winter use. Can some of your correspondents furnish a recipe that will prove certain in keeping the cider good? Is boiling-cider down a good plan? Does such boiled-down cider, when you add water to it, make as pleasant a beverage as the unboiled?—E. H., Cincinnati, Ohio, 1859.

A CURE FOR RHEUMATISM.—In the RURAL a short time since, I saw an inquiry for a recipe for the relief of rheumatism, and I will send mine, which is called No. 1. Half pint brandy; 1 oz. of bear's oil; 1 oz. origanum oil; ½ oz. of cayenne pepper. Mix, and bathe the part affected.—L. T. D., Ashland, Dodge Co., Minn., 1859.

CHEAP VINEGAR.—Take one quart ripe red currants, crush, mix with one quart soft water, one cup sugar or molasses. Put all in a stone jar, stir well, cover well with a thin cloth, place it in the sun, shake occasionally, and in one week you will have excellent vinegar. Try it.—A RURALIST, Ontario, N. Y., 1859.

A GOOD, HEALTHY DESSERT PUDDING.—The following recipe is given us by ISAAC COLVIN, of Hensietta, who has found the article very palatable and healthy:—Take equal parts of Indian meal and rye flour, and make same as hasty pudding. Eat with either milk or molasses, according to taste.

BUTTER CRACKERS.—Correction.—In the recipe, sent you for "Butter Crackers" an error occurs in print. It should be a cup of *sour* instead of *sour cream*. This would make a material difference in the quality of the crackers.—N. O. M., "Home Vale," N. Y., 1859.

JUMBLES.—From my mother's manuscript Cook Book, commenced prior to her marriage in 1792.—Three pounds of flour; two do. of sugar; one do. of butter; six eggs, and some caraway seed.

A HOT SPOON held over varnished furniture will take out white spots, it is said.

A bit of glue dissolved in skim-milk and water will restore old crape.

RIBBONS of any kind should be washed in cold soap suds, and not rinsed.

If you are buying a carpet for durability, choose small figures.

A bit of soap rubbed on the hinges of doors will prevent their creaking.

SCORCH SNUFF put on the holes where crickets come out will destroy them.

WOOD ASHES and common salt wet with water, will stop the cracks of a stove, and prevent the smoke from escaping.

TO MY MOTHER.

My mother! at thy holy name
What thronging memories come—
Once more I'm sitting by thy side
Within my much-loved home.

Again thine eyes, so full of pure
And deep affection, on me shine;
Which, with their gentle light, so oft
Have calmed this passionate heart of mine.

I see thy smile, so calm and sweet,
Which on my giddy youth reprieved—
Thy kiss upon my brow I feel
That tells how dearly I am loved.

I see—I feel—and yet I dream,
For I, alas! am far from thee,
And those bright hours, that real seem,
Memory alone recalls to me.

Mine, N. Y., 1859. Lura.

DEATH OF A CHILD.

"Thou little lamb is sheltered
Within a pasture fair;
No scorching heat of summer,
No blighting frost is there—
Can you not trust your darling
To the kind Shepherd's care?"

The little voice was silent,
The footsteps, light and small,
Stole softly o'er the carpet;
And vainly on the wall
The mother strained her eyes to see
The tiny shadow fall.

At morn, when household faces
Came gently to the door,
They found the tender mother
Clay-cold upon the floor.
On earth another coffin;
In heaven one angel more!

[Harper's Magazine.]

Plain Talks to American Women.—No. 17.

BY MRS. M. P. A. CROZIER.

DISTRICT SCHOOLS.—We have given some hints to aid mothers who may think best that the primary education of their children be conducted under their own eye; but there will be many whose circumstances will not permit this, and others who may not think it a matter of sufficient importance to cause them to change the course they have already adopted, of relying principally upon the Common School and its influences, for their mental culture. To such, then, is this article particularly addressed.

It may not have occurred to all of you, that the mothers who patronize a District School can have any material influence in determining its character. Their voices are not heard at the school-meeting; they are not chosen members of the school-board—how, then, can they greatly promote its interests—how can they effect any needed change?

They may, if necessary, call a school-meeting of their own, and decide what kind of a school it ought to be, and that it must be sustained. They may pass resolutions relative to the character and qualifications needed by the teacher who is to be intrusted with the education of their children, the arrangements necessary for the comfort of the pupils, and their advancement in knowledge—in short, they may resolve what shall be the standard at which their school shall aim, and set themselves vigorously at work to bring about its attainment. The report of their meeting being presented at the regular annual school-meeting of the fathers and brothers, would be likely to influence their action in a great degree. If the mothers had decided that no person but one of high qualifications should be intrusted with a responsibility so great as the instruction of their children, the school-board would hardly dare employ an inefficient teacher, lest the school should be "non est." The voters of the district would be ashamed to refuse to vote a tax for the repairs of the house, or the apparatus which the mothers had unanimously resolved necessary for the comfort and progress of the school.

But not alone by the influence they might exert upon the minds of those thus having the interests of the school particularly in charge, can the mothers advance those interests. They should establish "a regular system of school visitation," some one or more of their number being present, at least weekly, to see what is being done, call the attention of the teacher to any errors observed in his management or system of instruction, and give encouragement to both teacher and scholars. Understanding this plan of the mothers, how careful would the teacher be in adopting the best methods of teaching of which he could avail himself; and he who might be so favored as to be approved by them, would feel that he had a right arm of strength upon which to rely, and would gird himself daily for his toil with courage as to the result. And the children, knowing that the eyes of their parents were continually marking their progress, would be much more ambitious to excel, than where no parental approbation was sought or expected.

"But," says one, perhaps, "we mothers have not time to attend to these things."

What, not even time to see that your Common Schools are what they should be? Your cares may have exalted you from adopting an extended system of home education, but they certainly should not excuse you from the responsibility of taking some interest in your children's intellectual welfare.

Still further, we would call the attention of those mothers who patronize the Common Schools, to the making of the "school-house" a pleasant place of resort for the little ones—to an appreciation of the subject of "the beautiful and tasteful

in education." We can do no better than to quote a few paragraphs from Mrs. SIOUXSKY on this subject:

"Why should not the interior of our school-houses aim at somewhat of the taste and elegance of the parlor? Might not the vase of flowers enrich the table, the walls display not only well-executed maps, but historical pictures or engravings of the moralist, sage, orator, or Father of his Country? It is alleged that the expenses thus incurred would be thrown away, and the beautiful objects defaced. This is not a necessary result.

"I have been informed by teachers who had made the greatest advances towards appropriate and elegant accommodations for their pupils, that it was not so. They said it was easier to enforce habits of neatness and order among objects whose taste and value made them worthy of care, than amid the parsimony of apparatus, whose pitiful meanness operates as a temptation to waste and destroy.

"Let the communities now so anxious to raise the standard of Education, venture the experiment of a more liberal adornment of their dwellings. Let them put more faith in that respect for the beautiful which really exists in the young heart, and requires only to be called forth and nurtured to become an ally of virtue and a handmaid to religion. Knowledge has a more imposing effect on the young mind when it stands like the Apostle at the gate of the Temple. Memory looks back to it more joyously from the distant or desolated tracks of life, for the bright scenery of its early path.

"I hope the time is coming when every isolated village school-house shall be an Attic temple, on whose exterior the occupant may study the principles of symmetry and grace. Why need the structures where the young are initiated into those virtues which make life beautiful, be divorced from taste and comfort? Do any reply that the perception of the beautiful is but a luxurious sensation, and may be dispensed with in systems of education which this age of utility establishes? Is not the culture the more demanded to throw a healthful leaven into the mass of society, and to serve as some counterpoise for that love of accumulation which pervades every rank, and spreads, even in consecrated places, the tables of the money changers.

"In ancient times the appreciation of whatever was beautiful in the frame of Nature was accounted salutary by sages and philosophers. GALEN says, 'He who has two loaves of bread, let him sell one and buy flowers, for bread is food for the body, but flowers are food for the soul.' If the 'perception of the beautiful' may be made conducive to present and future happiness, if it have a tendency to refine and sublimize the character, ought it not to receive culture throughout the whole process of education? It takes root, most naturally and deeply, in the simple and loving heart; and is, therefore, peculiarly fitted to the early years of life, when, to borrow the words of a German writer, 'every sweet sound takes a sweet odor by the hand, and walks in through the open door of the child's heart.'

Now may not the united efforts of the mothers accomplish very much in each district, in this direction? Could they not cause young trees, and shrubbery, and flowers to be transplanted to the environs of the school edifice? If there is no fence to protect them, can they not contrive some way to secure one? Can they not add very much to the attractiveness of the interior, by placing upon the floor a plain rag-carpet, the workmanship of their own hands? Can they not, with very little trouble, curtain the windows, and place a spread upon the table? If all would share in the work, with how little actual outlay of money might the school-room be made a delightful place, a place where the children would love to congregate, and whose influence would shed a refinement over their characters, which the bare, broken walls, cob-webbed windows, and unclean floors could never exert—a place where the mothers would find it pleasant to spend an occasional afternoon in listening to the recitations of their children, observing their deportment, and assisting in their studies.

Mothers, "rouse to" this "work of high and holy love!" It is worthy your attention. What subject, external to her own salvation, can be of greater moment to the mother than the proper unfolding and development of her children's natures? How can she regard as of permanent importance those trifles which so frequently engage her attention? Does she not feel that her offspring are the inestimable gift of God—unpolished gems, which she may trample in the dust, or whose brilliancy she may so develop, and, by the assistance of the Giver, improve, that they shall be worthy a place in the diadem of the Savior, there to "shine as stars forever and ever." Let her realize that she must, at a future day, render account for the manner in which she has discharged her duty to those committed to her trust, and

"Not deem it woman's part to waste
Life in inglorious sloth, to sport awhile
Amid the flowers, or on the summer wave,
Then seek like the Ephemeron away,
Building no temple in her children's hearts,
Save to the vanity and pride of life,"

but "work while the day lasts," that a noble edifice may arise there which shall be forever golden with the glory streaming from the Throne of God.

A SWEET VOICE.—A sweet voice is indispensable to a woman; I do not think I can describe it. It is not inconsistent with great vivacity, but is often the gift of the gentle and unobtrusive. Loudness or rapidity is incompatible with it. It is low, but not guttural—deliberate, but not slow. Every syllable is distinctly heard, but they follow each other like drops from a fountain. It is like the cooing of a dove, not shrill, nor even clear, but uttered with that subdued and touching readiness which every voice assumes in moments of deep feeling or tenderness. It is a glorious gift in woman—I should be won by it more than by beauty—more even than by talent, were it possible to separate them. But I never heard a deep, sweet voice from a weak woman. It is the organ of strong feelings and of thoughts which have lain in the bosom till their sacredness almost bushes.—Willis.

SUMMER'S DEPARTURE.

'Twas the last day of summer—as lovely and bright
As the glories that shine on a mid-summer night—
E'en Nature seemed smiling in beauty serene
As she gave the farewell to her favorite queen—
The zephyrs were playing o'er meadow and hill,
And echoes were hailing in hollows so still,
While Pegasus above, in her radiant sheen,
A halo of glory threw over the scene.

In the freedom of youth, and with spirits as gay
As the songs of the birds that we met on our way,
We clambered the hill-side and traversed the glen,
Where oft we have wandered again and again,
To list the low voice of the murmuring rill
That in spring-tide, when swollen, once turned the cold mill;

Now with moss overgrown, so silent and cold,
What tales of the past might its record unfold!

And then in the forest we saw at their play,
The shadows that flitted through aisles dim and gray,
Where fairies might linger in rural delight,
And hie to their acorn-cups quickly at night.
The grass made a carpet rich and soft to our feet,
While the hemlock and chestnut, with oak intertwined,
Formed a couch where a king might in pomp have reclined.

Yet onward we wandered in dreamy delay,
Now weaving wild flowers in a brilliant boquet,
Now twining a wreath, like the sages of yore,
For the brows of their heroes when battle was o'er.
Up the hills, down the valleys, with a joy that e'en now
Brings a light to the eye and a smile to the brow,
We wended our way till the broad azure blue
Of Ontario's wave spread full on our view.

But night was approaching, and far in the west,
The day-god was sinking in splendor to rest;
While o'er the calm waters a broad belt of gold,
A pathway to Paradise seemed to unfold;
So, gathering our treasures we hied to our home,
Unfettered in dreams on that pathway to roam.

Oh, ye who in cities are toiling away,
Where brick walls and black smoke quench the light of the day,
Would ye quaff the rich goblet of beauty and health,
Which no honors can purchase, nor glittering wealth?
Go traverse the forest, the meadow and field,
And feel the glad impulse which nature doth yield;
Go back in the sunshine—go mosee on the strand—
And be grateful to God for the works of his hand.

Somerset, N. Y., 1859. W. C. W.

Choice Miscellany.

HOW TO MEET LIFE.

If we would meet life with a truly philosophic spirit, we must cultivate a calm indifference to the numerous and varied ills and vexations to which humanity is subject. A few years, at most, number the term of our pilgrimage, and shorter and shorter seem the years, as we hasten on our way. Brief, indeed, are the hours of youth, and hope, and pleasure, and we all learn the sad lesson as time advances, that change, decay and death are written on all things. Each one of us, as compared with the great mass of human beings, is of no more importance than a grain of sand on the sea shore, or a blade of grass in the fields, and comparatively few immortal names will be recorded for the remembrance or veneration of coming millions.

Our dearest friends sink into the grave by our side, and we wake to find our fondest hopes and anticipations wrecked, or vanished. The friendship, the love we clung to and trusted, turns to coldness or dislike—the change may be in ourselves, and we know it not. Why do we, miserable creatures of a day, spend a moment in repining for fancied advantages of name, or station? To seek all the good we can is our duty, and to acquire all the capacity and fitness for life in our power. But to sigh for what is beyond our reach, to covet beauty, or praise, or fame, or wealth—and carry a morose and lowering brow, how will it lessen our trials, or open the way to brighter days? Which of us is satisfied with our condition as it is? And which of us has not to bear burdens laid upon us thro' the ignorance or thoughtlessness of others? Verily, we may not choose a sunny, flowery path, nor even can we find unalloyed peace and happiness in our present undeveloped, inharmonious life. Then let us take life as it comes. If storms and difficulties beset our way, endeavor to preserve a serene temper. If joys and blessings come unexpectedly, receive them with a thankful heart.

Sometimes a wise course will avert the cloud that threatened. Let us seek wisdom, so that whether our way be prosperous or adverse, we may walk calmly, unmoved by envy or detraction.—Whatever we know to be the future in the world hereafter we know not—we are taught to hope it is not a repetition of the errors, the blindness, the perversity which poisons what might, and should be, a beautiful, happy, and desirable existence. Let us believe we shall yet see clearly and live rightly.

VIOLENCE AND TRUTH.—It is a strange and tedious war, when violence attempts to vanquish truth. All the efforts of violence cannot weaken truth, and only serve to give it fresh vigor. All the rights of truth cannot arrest violence, and only serve to exasperate it. When force meets force, the weaker must succumb to the stronger; when argument is opposed to argument, the solid and convincing triumph over the empty and false; but violence and verity can make no impression on each other. Let none suppose, however, that the two are therefore equal to each other, for there is this vast difference between them, that violence has a certain course to run, limited by the appointment of heaven, which overrules its effects to the glory of the truth which it assails; whereas verity endures forever, and triumphs over its enemies, be- lieving eternal and almighty as God himself.—Pascual.

REVILING may be less common and less polite, but it is not more wicked than flattery.

SOLITUDE.

Eulogies, sonnets, and invocations have erst proclaimed the beauties, benefits, and delights of solitude. It comes to us a delightful rest—a breathing pause in the steep and rugged ascent—a moment's calm in life's seething vortex. For this we appreciate and seek it. Yet we look with suspicion and something of awe on him who, disgusted at life's revelations, loathing the world spurns it from him a paltry bubble, and in

"Dear Solitude, the soul's best friend,"

waits the sealing of the book. The gloomy recluse who turns his back upon society, and from the dark fastnesses of his solitude hurls bitter taunts and stinging rebukes at the errors and failings of his fellows, is, to us, a repulsive vampire, fattening on the wrongs and evils of his brethren, from whom no good can emanate. All the shining virtues, sweet peace and calm contentment, ascribed to solitude have not there their origin or abode. Too sure has ready evidence established solitude the birth-place of mischief. Evil thoughts are born in secret, wicked plans devised, and deadly results follow. Devils hold secret orgies. Wrong and error, dark purpose and deadly deeds, have their origin, education and maturity in silence and secret. Alone with his evil thoughts and dark fancies, the assassin arranges his vile plans, and under night's fitting darkness and secrecy, fulfills his terrible purpose. The crafty wolf and stealthy anaconda spring from hidden solitudes upon the innocent, unsuspecting victim, and these may find their counterpart in human society.

It is well for man at times to isolate himself from his surroundings, and hold severe communion with himself,—ask himself how far the pages of experience are perused to his profit and advancement. How much of good is learned—how much of charity and kindness has been passed on the other side,—and if he discover a mission appointed him, there, undisturbed, digest his plans for its noble fulfillment. There, too, may we seek the source—search out the cause of the wide extension of error, crime, and suffering, whose lengthening shadows are veiling our country in shame and gloom, and rouse our ability to alleviate or remove. Long continued solitude makes one morose, fretful, jealous—anything but a pleasant companion to mingle again in society. Unused to respecting others' rights, and forgetful of that mutual dependence co-existent with society, the recluse occupies an unhappy position.

To such results solitude can present no legal claims, and certainly is not, therefore, deserving sounding panegyric, or pompous eulogy.

BEN BURDOCK.

WHINING.

There is a class of persons in this world, by no means small, whose prominent peculiarity is whining. They whine because they are poor, or if rich, because they have no health to enjoy their riches; they whine because it is too rainy; they whine because it is too hot; they whine because they have "no luck" and others' prosperity exceeds theirs; they whine because some friends have died and they are still living; they whine because they have aches and pains, and have aches and pains because they whine, and they whine no one can tell why. Now, I would like to say a word to these whining persons.

First, Stop whining. It is of no use—this everlasting complaining, fretting, scolding, fault-finding and whining. Why, you are the most deluded set of creatures that ever lived. Did you not know that it is a well-settled principle of physiology and common sense, that these habits are more exhaustive of nervous vitality than almost any other violation of physiological law? And do you not know that life is pretty much as you take it and make it? You can make it bright, sunny, or you can make it dark, shadowy. This life is meant only to be disciplinary—to fit us for a higher and purer state of being. Then stop whining and fretting, and "go on your way rejoicing."

Second, Sing the song of life cheerily. Hark! Do you hear yonder bird singing joyously its merry carols, as it hops from bough to bough in its native forest-home? Imitate it! Take up your song of life, using it joyously and bravely. Sing on, though you feel it not. You are a miserable, nervous dyspeptic, in wrong relations to yourself and all God's universe, and that's all that ails you. Then stop short, take up the song of life, and leave off forever that whine of death.

"A merry heart doeth good like a medicine; but a broken spirit drieth up the bones." Live simply, cheerfully and trustingly; and, by-and-by, your troubles "will take to themselves wings and fly away." You will gradually grow more and more into harmony with the natural order of things, and the bright light of heaven will shine pleasantly down upon your souls and baptize them into new life.—Life Illustrated.

PAST TROUBLES.—Don't harp on past troubles. When we see a pale, nervous woman, in the midst of her friends, preferring to entertain them with a list of the racking pains she has suffered, to a saunter in God's free air and sunshine, we cannot wonder that the rose returns not to her blanched cheek. Why is it to some these memories are very meat and drink? They consume them—the bitter agony is acted over and over again, the tear thrice shed, the place cherished where such a dreadful thing occurred—the scar fondly petted that tells of the almost fatal knife. They gasp over, and yet cling to them.

GOODNESS.—The goodness of people around us is not all a mask. There is a great deal that is as the sounding brass and the tinkling cymbal; but, God be thanked, there is a great deal that is true, sweet music with the rest of it. I believe, in fact, that those men who seem to us the worst, seem worse than they really are. I believe that the man who has stood before his fellow-men as the worst man, is conceived by them to be worse than he really is. I believe there is some vein of light in the darkest heart, some extenuating incidents in the basest life.—E. H. Chapin.

THEY WILL BE DONE.

They will be done! Oh, what a state
Of meek submission that implies!
That, disappointed, still can wait
In patience for the promised prize.

They will be done! Yes, God's own will,
Without a thought of ours that err,
And which, tho' often crossed, can still
Give up at once and not demur.

They will be done! and only this,
Whatever else is left undone;
And let obedience and bliss
Through all our lives and natures run.

They will be done! and can we say
This sweet acknowledgment of trust
In that sincere and humble way
That every true believer must?

Victor, N. Y., 1859. K.

OUR GARDEN.

We have each of us got one, reader,—a garden of the heart. Many are the flowers, but I fear there are more weeds. Sometimes chilling winds sweep through it—blighting all the blossoms.—The leaves become faded and crisp, emitting no fragrance. This often happens in mature life, when

"Ambition's wild, aspiring dream is o'er."
I gaze upon the little prattler by my side with sad forebodings of what may be. Her rosy face looks up very confidently from its sunny frame of curls, and while I press a kiss upon the little mouth, a prayer goes up from my soul that "Miriam's garden may ever be bright with the flowers of affection, and the little 'Hope-bird' ever sing as gaily upon the green sprays of Trust." Trust!

"A volume in a word,
An ocean in a tear."

It is a cool fountain upon the dusty highway of Life, and its rainbow foam reflects the light which streams through the windows of the Future.—There are many smooth paths winding through "our gardens," and Joy loves to dance therein to the music of Hope and Love; but this happy visitor often flees from the presence of a pale, and-eyed stranger, whose veil of sorrow is woven with tears. We cannot welcome her cordially, even if her first words are, "Your light affliction, which is but for a moment, worketh out for you a far more exceeding and eternal weight of glory."

No! The eye of faith is dim—our spirit's bell is tolling the knell of cherished hopes, and we listen to it instead. Anticipation has folded her wings and now dark despair broods o'er us. We forget that

"Behind a frowning Providence
He hides a smiling face."

There are no more singing birds fluttering through "our garden"—silent and desolate, it only echoes that slow, dismal, tolling—tolling. The flowers are almost crushed by the blinding "tear-rain;" but when the storm has passed we can see the blessed baptismal, in the freshness and purity of each blossom.

Oh, Earth's sorrowing ones, who are walking with torn and bleeding feet over a thorny pathway, "look 'out for the light.'" "Night brings out stars as Sorrows show us Truths." Each bears a new blessing in her hand for some poor mortal! We should take comfort from this, knowing that our turn will come sooner or later, never forgetting that "our gifts" are sometimes in disguise.

Marshall, Mich., 1857.

ANTICIPATING EVILS.

Enjoy the present, whatever it may be, and be not solicitous for the future; for if you take your foot from the present standing, and thrust it forward towards to-morrow's events, you are in a restless condition. It is like refusing to quench your present thirst by fearing you shall want drink the next day. If it be well to-day, it is madness to make the present miserable by fearing it may be ill to-morrow—when you are full of to-day's dinner, to fear that you shall want the next day's supper; for it may be you shall not, and then to what purpose was this day's affliction?—But if to-morrow you shall want, your sorrow will come time enough, though you do not hasten it; let your trouble tarry till its day comes. But if it chance to be ill to-day, do not increase it by the cares of to-morrow. Enjoy the blessings of this day, if God send them, and the evils of it bear patiently and sweetly; for this day is only ours—we are dead to yesterday, and we are not born to the morrow. He, therefore, is wise that enjoys as much as is possible; and if only that day's trouble leans upon him, it is singular and finite. "Sufficient to the day (said Christ) is the evil thereof;" sufficient, but not intolerable. But if we look abroad, and bring into one day's thoughts the evil of many, certain and uncertain, what will be and what will never be, our load will be as intolerable as it is unreasonable.—Jeremy Taylor.

PEACE.—Peace is better than joy. Joy is an uneasy guest, and always on tiptoe to depart. It tires and wears us out, and yet keeps us ever fearing that the next moment it will be gone. Peace is not so—it comes more quietly, it stays more contentedly, and it never exhausts our strength, nor gives us one anxious thought. Therefore let us pray for peace. It is the gift of God—promised to all His children; and if we have it in our hearts we shall not pine for joy, though its bright wings never touch us while we tarry in the world.

HOW TO DIRECT YOUR LETTERS.—When you send your letters (so he calls our prayers,) be sure and direct them to the care of the Redeemer, and then they'll never miscarry.—Matthew Henry.

MANAGEMENT OF SCHOOLS.

It would seem that enough had been said and written upon the subject of Common School Education to now let the matter remain in silence, but when we consider that the little children composing our schools, are soon to enter the great field of action, as the thinkers and workers upon whom will rest the destiny of our country, we think that too much cannot be spoken to arouse teachers and patrons to a sense of their duty.

The child's mind is a canvas upon which the principles and character of those with whom he has daily intercourse soon becomes impressed. A word may change his whole after-life—may awaken the energy and the power to rank first among the honored of our land, to achieve works of true greatness, or may crush that spirit, and the child become the "vilest of the vile," an inhabitant of a prison cell. Yet how many parents there are who never enter the school-room to look after the interests of their children? The lowest applicant is usually employed, without any regard to reputation as a teacher, and the work is begun and ended without further notice.

"Haven't time to attend to such matters," says one—"business will not admit," remarks another. Certainly you "haven't time," yet of what enlargements will not your "business" admit, and all receive due attention. Perhaps you never thought how a few hours spent in the school-room now and then, would encourage pupils and interest teachers in their work. The same round of duties, day after day, becomes irksome—the child longs for some change, and the thought that some one is interested in their welfare, and desires to see them progressing, will give to each a new relief for study and a new determination to improve.

Some say "our school is small, hardly worth teaching, much more visiting." If you possessed an acre of ground, would you neglect to cultivate because you hadn't fifty, or bestow your whole care upon it in order that the harvest might be more abundant? In either case the idea of neglect suggests itself to our minds as a very erroneous one. If the few are not educated, how are the mass to become so? That little company may contain another Washington, a Newton, or a Franklin—let him be educated judiciously, then, and receive his place in society. At a time when an education is within the reach of every one, let every possible exertion be made to enhance the cause. Let teachers visit the parents and talk with them about the matter. If they neglect to send their children regularly, tell them the evils resulting from such a practice, and get them interested—if too poor to afford to buy a book, buy one yourself—the expense would be but a trifle, and the consciousness of having performed a kind action would more than furnish a recompense. Since immortality is the birth-right of every human being, let no one be left in ignorance of those divine truths which refine the nature, and prepare the soul for that "glorious hereafter," promised us as a reward for well doing. EMILY ELLIS.

New Lebanon, Col. Co., N. Y., 1889.

QUALIFICATIONS OF THE TEACHER.

It is with a great degree of pleasure that I read the articles appearing in the RURAL, (by the way, your paper is a regular and very welcome visitor at many a happy home in this section of the country,) under the caption "Educational." I am much interested with other portions, and having taken some pains to extend its circulation, I am glad to hear it spoken of, as I often do, as the paper that does more for the Farmer than any other. But particularly am I interested with your suggestions to teachers, from which alone I have gained more than enough to pay for my year's subscription. The education of the young has of late occupied the minds of the people more than in former days. Many improvements have been made in the system of Common School teaching, and many advantages are now enjoyed of which we knew nothing a few years since. But although much has been done, much remains to be accomplished. Many of our people have a great deal yet to learn, both with regard to choosing teachers, and treating them properly after they are employed. Or, if these lessons are already learned, they need to be brought into practical use.

In this age of dollars and cents, when gold and silver gain respect and influence for a man who deserves neither, and when bank notes are a passport to office, many seem to lose sight of the proper qualifications for a teacher, and, too often, of two applicants for a school, the one who obtains employment gets it, not because he is the better qualified of the two, but because he will teach for a few dollars less than any one else. I hope that the time will soon come when the truth will be learned—cheap teachers are poor bargains at least, in the majority of instances. True, there are cases where very competent teachers can afford to labor for a low salary; but what we would urge, is, this should not be the reason why they are employed. From experience and observation I am speaking, and would notice further, that I have known teachers destitute of right moral principles—to say nothing more—gain employment where those of good moral character were refused. This is not as it should be. Parents do not rightly estimate the amount of influence that a teacher is calculated to exert. The teacher's example will either be useful or injurious to the pupils through life. Impressions made upon the youthful mind, can never be erased. The teacher may, by exerting a proper influence, produce impressions which the minister of the Gospel may vainly strive for years to produce. How necessary, then, that none be employed to instruct the youth, but those who will labor earnestly to inculcate right moral principles. London, G. W., 1889. P. R. DAY.

PHIPPS UNION FEMALE SEMINARY, ALBION, N. Y.

One of the prominent and most pleasing characteristics of Western and Central New York consists in its finely located and well sustained Academies and Seminaries—almost every town of note having at least one institution of merit and reputation. The edifices occupied by these institutions are mostly substantial and beautiful structures, and many of them admirable in location and surroundings. This is particularly true of several heretofore presented in the RURAL—such as the Elmira Female College, Auburn Theological Seminary, Brockport Collegiate Institute, Tracy Female Institute, and others. And we take pleasure in giving a view, and brief notice of another excellent institution—that of Phipps Union Female Seminary, above represented.

This Seminary has long ranked among the first of its class in this section of the Union, having been incorporated by the Regents of the University

of New York in 1840. The last Annual Catalogue (for the year ending June 23d, 1889,) shows that the institution is well patronized and in a very prosperous condition. The annual Examination of pupils (June 21st, 22d and 23d,) is said to have been highly creditable. We make the following extract from the Report of the Examining Committee:

"Seldom, if ever, has there been witnessed more perfect order, and clearer evidence of thorough scholarship, than were exhibited during this examination. While all evinced good training and commendable proficiency in their respective departments, it is but just to mention some classes that excelled. The large class in Cornell's High School Geography, showed a thoroughness and practical readiness highly pleasing to all. The examination of the classes in Botany, Wayland's Moral Science, Butler's Analogy, Kames' Elements

of Criticism, and the class in Algebra and Trigonometry, would have done credit to similar classes in any of our best Colleges. The young ladies not only answered promptly, but explained many of the leading and most difficult parts of these sciences in the most lucid and satisfactory manner. They gave clear evidence of diligent application, and that thoroughness which can only be acquired by persevering effort, and faithful, earnest, and laborious teaching. Another excellence manifest at this examination, of which the Committee would speak particularly, was the care given to teaching penmanship and composition. More neat, or improved writing-books, it has never been our privilege to examine. The Graduating Class deported themselves most becomingly. Their compositions were of a higher order of sentiment—well written and well read; worthy of the highest commendation."

STATE TEACHERS' ASSOCIATIONS.

The New York State Teachers' Association held its Fourteenth Annual Session at Poughkeepsie, on the 2d, 3d, and 4th inst. The following persons were chosen officers for the ensuing year:

President—JAMES N. McELLIOTT, LL. D., New York. Vice-Presidents—Jas. Johnson, Syracuse; W. N. Read, Newburgh; Asa Baker, Johnstown; Edwin A. Charlton, Lockport. Recording Secretaries—James Atwater, Lockport; G. N. Harris, Syracuse. Treasurer—Wm. H. Hughes, Albany.

Board of Editors for the New York Teacher.—J. W. Bulkley, Brooklyn; E. A. Sheldon, Oswego; A. Z. Barrows, Buffalo; W. W. Raymond, Skaneateles; D. H. Crittenden, New York; Emily A. Rice, Schenectady; Helen M. Philleo, Boonville; E. W. Keyes, Albany; A. B. Wiggins, Oswego; Edward Webster, Rochester; J. W. Barker, Niagara Falls.

The Association resolved to hold its next Annual Meeting at Syracuse, July 31st, 1890.

The Wisconsin Association held its Sixth Annual Session, at Madison, last week. There were some three hundred teachers present. The session was continued four days, and the exercises were highly interesting. The following officers were elected for the ensuing year:

President—J. B. PRATT, of Sheboygan. Vice-Presidents—M. P. Kinney, Racine; George Gale, Trempealeau; J. J. McIntyre, Berlin. Secretary—James H. Magoffin, Waukesha. Treasurer—E. S. Green, of La Crosse. Counsellors—A. J. Craig, Palmyra; J. L. Pickard, Platteville; E. C. Johnson, Fond du Lac; E. P. Larkin, Milwaukee; T. J. Connaughty, Kenosha.

The next session of the Association will be held at Milwaukee, in July, 1890.

KEYS IN MATHEMATICS.—The attention of teachers and parents should be called to the use of "Keys" by pupils in Arithmetic and Algebra, in some of our schools. The title page says they are designed for the teachers only; but the booksellers in some towns inform us that the demand for them nearly equals the sale of the corresponding text-books. Whatever may be said of the convenience or necessities of teachers, there can be no defense of their use by pupils. They prevent thoroughness and self-reliance, defeat the primary purpose of education, and directly foster indolence, superficiality, and conceit. The pupil who has simply copied a solution, comes to the recitation with the complacent assumption that he understands the problem, when it can be truly comprehended only by being worked out. "We get along so fast with them" is the poor plea which seems to satisfy those who do not consider that mental discipline is gained more effectually by doing a few things well, than by any such accelerated efforts to go over a wide field. A child is the creature of habit, and if dependence upon such aids be permitted, the habit will soon be fixed, and self-reliance be sacrificed. —Massachusetts Teacher.

GREATNESS.—A great, a good, and a right mind is a kind of divinity lodged in flesh, and may be the blessing of a slave as well as a prince; it came from heaven, and to heaven it must return; and it is a kind of heavenly felicity, which a pure and virtuous mind enjoys in some degree, even upon earth. —Seneca.

DESIGN OF EDUCATION.—The real design of education is to give children resources that will endure as long as life endures; habits that time will ameliorate, not destroy; occupations that will render sickness tolerable, solitude pleasant, age venerable, life more dignified and useful, and death less terrible. —Sidney Smith.

MAKING A NEEDLE.

I wonder if any little girl, who may read this, ever thought how many people are all the time at work in making the things which she every day uses. What can be more common, and, you may think, more simple than a needle? Yet, if you do not know it, I can tell you that it takes a great many persons to make a needle, and a great deal of time, too.

Let us take a peep into the needle manufactory. In going over the premises, we must pass hither and thither, and walk into the next street and back again, and take a drive to a mill, in order to see the whole process. We find one chamber of the shop is hung around with coils of bright wire of all thicknesses, from the stout kinds used for codfish hooks, to that of the finest cambric needles. In a room below, bits of wire, the length of two needles, are cut by a vast pair of shears fixed in the wall. A bundle has been cut off; the bits need straightening, for they just came off from the coils.

The bundle is thrown into a red-hot furnace, and then taken out and rolled backward and forward on a table till the wires are straight. This process is called "rubbing straight." We now see a mill for grinding needles. We go down into the basement and find a needle pointer seated on his bench. He takes up two dozen or so of the wires and rolls them between his thumb and fingers with their ends on the grindstone, first one end and then the other. We have now the wires straight, and pointed at both ends. Next is a machine which flattens and gutters the heads of ten thousand needles an hour. Observe the little gutters at the head of your needle. Next comes the punching of the eye, and the boy who does it punches eight thousand an hour, and he does it so fast your eyes can hardly keep pace with him.—The splitting follows, which is running a fine wire through a dozen, perhaps, of these twin needles.

A woman, with a little anvil before her, files between the heads, and separates them. They are now complete needles, but rough and rusty, and, what is worse, they easily bend. A poor needle, you will say. But the hardening comes next. They are heated in a furnace, and when red-hot are thrown into a pan of cold water. Next they must be tempered, and this is done by rolling them backward and forward on a hot metallic plate. The polishing still remains to be done.—On a very coarse cloth needles are spread to the number of forty or fifty thousand. Emery dust is strewn over them, oil is sprinkled, and soft soap is dashed in spoonfuls over the cloth; the cloth is then rolled up with several others of the same kind, thrown into a wash-pot, to roll to and fro for twelve hours or more. They come out dirty enough, but after a rinsing in clean hot water, and a tossing in sawdust, they look as bright as can be, and are ready to be sorted and put up for sale. But the sorting and doing up in papers, you can imagine, is quite a work by itself.

"There are some members of a community," said the sagacious and witty Thomas Bradbury, "that are like a crumb in the throat; if they go the right way they afford but little nourishment, but if they go the wrong way, they give a great deal of trouble."

ABOUT INSECTS.

Insects are largely endowed with the faculty of sight; for their eyes, though unable to turn, are infinitely multiplied, and compensate by quantity for their want of motion. To give an idea of the numbers some orders possess, I may mention that to one species of butterfly, by no means among the largest, is allotted nearly 35,000 eyes. These are distributed over every part of the body, and thus, whatever may be the position of the animal, no danger can approach unperceived, as a sentinel keeps watch in every quarter.

The passions of love and fear, and sometimes higher emotions, are exhibited very signally in some orders of insects, and are even expressed in sounds, which, while not without significance to the human ear, are doubtless full of meaning to themselves. The fact may be demonstrated by giving chase to a common blue-bottle, which will immediately raise its note in a surprising manner, the tone being one of unmistakable alarm. In tropical countries I have noticed the same peculiarity, with but little variation, in mosquitoes; and the adroitness with which these little janissaries avoid capture indicates an organization still more subtle.

Few are unacquainted with the alertness or ferocity of spiders, exhibited so constantly within the sphere of familiar observation. Let a fly be thrown on a spider's web and a strange spectacle will follow. The terror and despair of the fly at the first approach of his inexorable enemy, his energetic efforts to escape from the tyrant's clutches, and his last touching death-struggle, with the exultation, rage and malignant cruelty of the spider, are a vivid mimicry of the mightier paroxysms of man, which few will be able to contemplate with apathy and indifference.

I need not dwell here on the affection of insects for their progeny, as that is a passion which, by the wise providence of the Almighty, prevails, with few differences of degree, throughout the whole range of nature. But it would be an omission not to say that they experience more than usual difficulty in providing for the necessities and requirements of their young, yet pursue this object, under every disadvantage, with unwearied forecast, tenderness and perseverance. —Fullon.

THE RELIGIONS OF CHINA.

The national religions of China are three, namely, the system of Confucius, that of Tao, and that of Buddha. Besides these, there are about a million of Christians and quite a number of Mahomedans. The religion of Confucius addresses itself to the moral nature. The idea of virtue and vice is inculcated, and the duty of compliance with the precepts of law. But it ignores, or but faintly recognizes the higher sanctions of rewards and punishments in a future life.

Taoism is materialistic. Its ideas of the soul are physical and chemical. It regards the stars as divine, and it defies hermits and physicians, magicians and alchemists.

Buddhism differs from both. It is commonly said to be a form of materialism, and yet it is eminently subtle, metaphysical and imaginative. It denies the existence of matter, repudiates the evidence of the senses, and renders its homage and worship only to abstract ideas of fictitious imperfections.

These religions are so many attempts to meet the wants of the human mind, and they supplement each other, so that one does not absolutely supersede the others. The very fact that this variety of faith can be professed and tolerated by the Chinese people, in this characteristic quietness and forbearance, is an indication of a tolerant and religious disposition of mind.

HIGH NOTIONS, A JAIN.

EDS. RURAL.—I have read with much pleasure and interest, the "Young Ruralist" column, and think it is an essential part of your most excellent paper, which we hail with much pleasure every week. Now, my name is not very often seen in public print, but I have made bold this time for the following reasons.

In the RURAL of June 4th, I saw an article written by "Chips," headed "High Notions," which suited my fancy exactly. I felt that I could indorse every word of it. Judge of my surprise then, on opening the RURAL of July 30th, to find an article over the signature of "W. S." of Niagara Co., wholly setting aside, or taking back said article, and asserting that "he was evidently laboring under intense excitement" when he wrote it, calling it "an 'old fog' influence" which he was trying to spread, &c. Now, if it will not arouse any one's dander to hear one's chosen occupation, —one so pleasant and delightful, too,—so greatly depreciated as "W. S." would have it, then we do not know what would.

Where do you find the most true enjoyment—true happiness? Is it with those who follow a Commercial life? Is it with those who follow the Plow, and obey that mandate, "earn thy bread by the sweat of thy brow." Do you see any real happiness depicted on the countenance of those pale-faced, young men, that are seen behind the counter of every city store? On the contrary, you hear them complain of sickness in some of its forms. Poor fellows! We pity them from the bottom of our hearts. Evidently W. S. did not read "C. P. O.'s" article in the RURAL of July 2d, or perhaps he is disposed to try the new "drive-wheel" again. We would tell "W. S." it will not go. It is not made of the right material. It has been tried enough to satisfy candid and thoughtful persons. The "drive wheel" of Honest Society, must be made of Agricultural pursuits. We would not be understood to say that every body must be Farmers. No! no! that would never do. It has often been truthfully said that "one trade is dependent on another." It takes all of them to make up a world—one could not do without the other, but if the "drive wheel" keeps constantly diminishing, and the other parts increasing, then the motion stops. We are for every person making a free choice of occupation, as well as "W. S.," but let all occupations be held up in the same light—then we can see to make a choice. Our "drive wheel" has been weakened and constantly diminished by so doing, and what has been the result? Alas! the answer is known too well. But of late, we are happy to assert, much has been done to replace the old "drive wheel," so that things may go on with their wonted regularity; and it is being replaced. A few more revolutions and the old "drive wheel" will be in full operation again.

There are some disagreeables appertaining to farming as well as to anything else, but we think they are fewer. Go upon a well-regulated farm with all the improvements of the day, in tools and other appurtenances, and there are few unpleasant features. Farming has been let run to too low a figure; but, for a few years back, through the instrumentality of first-rate agricultural papers, together with the go-aheadiveness of the people, it has been revived, and is still reviving. Farming is a very pleasant, healthful, and useful occupation, and it can be made more so, and will be. The time is speedily coming when the farmer will hold his proper place in community. A great many of our most influential men are directing their attention to farming. FRANK D.

Akron, Erie Co., N. Y., 1889.

THE DOGS.

MEANS, EDS.—I wish to say a word for my friends, the Dogs, in answer to Mr. PRANSON, in the RURAL of July 16th. I cannot see the noble creature so cruelly maligned and not speak a word in its defence. Instead of waging an indiscriminate war of extermination against him, let us educate him. No animal, except man, has faculties so susceptible of cultivation; and in the place of useless untrained curs which make night hideous, we shall have faithful and valuable servants. I extract a few items from an able article on dogs, in the last New American Cyclopaedia, as comprising what I wish to say much better than I could say it:

"It would be useless here to introduce anecdotes proving the sagacity, faithfulness, affection, gratitude, courage, velocity and other useful qualities of the dog; these have been known from remote antiquity and are recognized in the earliest systems of Pagan theology and astronomy."

"In France and several other countries, especially Holland, dogs are frequently employed as draught animals, and in Kamtschatka and Greenland, almost exclusively for the same purpose.—From the above remarks it must be evident that the dogs are the most complete and useful conquest ever made by man; all their faculties have been rendered subservient to him, for his pleasure and profit, for his safety against his own kind and other animals."

What a crowd of anecdotes, illustrative of the sagacity and courage of the canine species, does the name of St. Bernard suggest! His noble deeds of rescuing snow-bewildered travelers in the Alps should alone for all defects in the manners of his humbler brethren. In conclusion, I would advise Mr. PRANSON to read the article from which I quote, and then buy himself the best-looking puppy he can find in St. Lawrence county. Cazenovia, N. Y., August, 1889.

GENUINE GOODNESS is no stagnant pool, but flowing and melodious like a mountain stream. Even innocence is sometimes insipid, but virtue, which is innocence, is tried and tempered like steel in the fire of experience—virtue, which is purity of heart, made positive and put in action, commands the love and reverence of the world.

MOORE'S RURAL NEW-YORKER

NEWS DEPARTMENT.

ROCHESTER, N. Y., AUGUST 20, 1859.

TERMS, IN ADVANCE:

One copy, 1 year, 82	One copy, 6 mo., 41 00
Three copies, 2 50	Three copies, 1 25
Five copies, 4 00	Five copies, 2 00
Ten copies, 7 50	Ten copies, 4 00
Twenty copies, 14 00	Twenty copies, 8 00
Forty copies, 26 00	Forty copies, 14 00
Eighty copies, 48 00	Eighty copies, 28 00
One hundred copies, 60 00	One hundred copies, 36 00

And an Extra Copy, free, to every person remitting for a club of six or more copies; and Two free copies for every club of thirty or over. As a new Half Volume commenced July 2d. Now is the time to form Clubs for either Six Months or a Year. All persons who form new clubs to commence with July, or introduce the *RURAL* in localities where it is not now taken, will be liberally remunerated for their time and attention.

Back numbers from April or January can still be furnished, if desired. We will send Specimen Numbers, Show Bills, &c., to all applicants, and to the addresses of all many non-subscribers as may be forwarded.

DOMESTIC NEWS.

Matters at Washington.

The Interior Department has received dispatches from the Commissioner of the U. S. Texas Boundary Survey. The trip was made up the Pecos river until Captain Wipley's trail was struck. Much had been added materially to the geographical knowledge of a region heretofore little known.

The Chevalier Massone, Charge d'Affaires of his Sicilian Majesty, has presented his credentials in that character to the Secretary of State, and M. Edward Blondell delivered his credentials to the President on the 10th inst., and was received as Envoy Extraordinary and Minister Plenipotentiary of his Majesty the King of the Belgians.

It is ascertained from an authentic source that on the 17th of June, the U. S. Deputy Marshal of Northern Florida, informed the government of the prevalence of reports that a vessel was expected on the coast of Florida from the coast of Africa, with a cargo of slaves, and made some suggestions as to the best mode of intercepting and arresting them, the Marshal himself being absent in another part of the State. The Secretary of the Interior on the reception of this communication immediately telegraphed to the Deputy Marshal, informing him that a revenue cutter had been ordered from Charleston to cruise along the coast of Florida under his directions. The Deputy accordingly went on board the cutter on the 30th of June, and reached New Smyrna Inlet on the 3d of July. Two weeks thereafter he wrote he had boarded various schooners to which suspicion had attached, and made careful inquiries for many miles along the coast, but there was no information to verify the reports of the landing of Africans. It further appears that Marshal Blackman himself was far behind the times, as he did not inform the Interior Department of these rumors until his Deputy had investigated their truth with the above mentioned result.

The National Teachers' Association in session at Washington, elected J. W. Bulkley, of Brooklyn, N. Y., President for the ensuing year, and decided to publish a monthly periodical in the furtherance of the cause of education. In the afternoon the delegates had a pleasant time in visiting President Buchanan.

Personal and Political.

The officers of the American Scientific Association for the ensuing year, are—President, Isaac Lee, of Philadelphia; Vice-President, B. A. Gould, Jr., of Cambridge; Secretary, Joseph Leconte, of Columbus, S. C.; Treasurer, A. L. Elwyn, of Philadelphia.

The New York Democratic State Committee met at Albany on the 4th inst., and unanimously adopted a resolution requesting the Democrats of each Assembly District to appoint one delegate from each district to a State Convention, to be held at Syracuse on the 14th of September next, for the nomination of State officers and the choice of delegates to the Charleston Convention, or to determine the manner in which, and the time when, said delegates to the Charleston Convention shall be chosen.

A private dispatch from Houston, Texas, via New Orleans the 5th, says that Gen. Houston is certainly elected Governor.

Andrew Moore, (Dem.), is re-elected Governor of Alabama by 15,000 to 20,000 majority. Stallworth's (Dem.) majority for Congress in the Mobile District is over 8,000. Clifton's, in the Montgomery District, is 214. In the other five Congressional Districts there seems to have been no serious opposition to the Democratic candidates.

Thirty counties in Tennessee have been heard from—more than half the State vote. Netherland, Opposition for Governor, gains 1,000, indicating a Democratic majority of about 8,000. Opposition elect their Congressmen in the 8th and 9th districts. The State Senate is one certain, and probably three Democratic majority. The House is three and probably five Democratic majority.

The American State Council of New York meets at Geneva on Wednesday, the 24th of August.

The New York Republican State Convention to nominate State officers, meets at Syracuse on Wednesday, the 7th day of September.

At the late election in St. Louis, the vote taken upon the question whether the liquor selling establishments should be closed or not upon the Sabbath, resulted as follows:—For closing, 7,413. Against closing, 5,392. Majority for closing, 2,121. This is a most emphatic vote, and indicates, more significantly than any vote recently taken, the general estimation in which the Sabbath is held by men of all creeds and of all nationalities.

The late Temperance Convention at Saratoga, closed its session on Wednesday, 10th inst. The delegates in attendance were numerous, and the meeting was more enthusiastic than any similar one for several years.

Several resolutions were discussed and adopted,

the most important of which were those embracing the programme of future action, under the head of WORK TO BE DONE.

Whereas, In the opinion of this Society, the great object contemplated by the Temperance Reform can never be fully realized till the traffic in the drunkard's drink is prohibited by legislative enactment, and the organic law of the State so amended as to make that prohibition stable and efficient; therefore,

Resolved, That the great work to which the energies of the friends of Temperance in this State should now be directed, is the creation of such a public moral sentiment throughout its length and breadth, as shall secure those important objects; that as means to their accomplishment, the pulpit, the press, the temperance lecturer, and petitions to the law-making power should be employed to the greatest extent possible, and with no abatement of interest till the work is completed.

Resolved, That we memorialize the Legislature to enact a Prohibitory law, and to place such a law as far as possible above the capricious action of our courts.

Resolved, That we will use our best endeavors in primary meetings, and at the ballot boxes, to secure the election of friends of prohibition for office.

Resolved, That we earnestly recommend the formation of a Temperance Society, in connection with every Sabbath School; the object of which shall be the gathering, not only of all youth, but also of all the adults, in the community where the Society shall be established.

Resolved, That we recommend to every Temperance Society the holding of stated meetings, at which a temperance sermon or address shall be delivered, and the temperance pledge invariably circulated.

A CALIFORNIA letter states that all the recently pending differences between Col. Fremont and other owners in his Mariposa estate have been amicably adjusted. All suits growing out of them have been withdrawn, and the Colonel is about to erect new additional quartz mills upon the river. Col. Fremont's family and household are encamped upon the top of Mount Bullion, 2,000 feet above Bear Valley, and about 4,500 feet above tide-water, where the air is comfortable in the hottest season.

News Paragraphs.

The British government pays to the various steamship lines which ply between England and the United States and Canada, an aggregate bounty of \$1,600,000, in the shape of mail contracts. This seems to be the only way in which steamship navigation can be maintained.

The new cent is not a legal tender for any specified amount. Neither was the copper cent of former years a legal tender for any sum. They are "lawful coins," but they are not expressly made a legal tender in payment of debts. The Constitution of the United States prohibits the States from making "anything but gold and silver a legal tender in payment of debts."

It is calculated that upwards of \$800,000 worth of cotton has been lost by fires at sea within the past year, mostly occasioned by the use of oil in the cotton presses at New Orleans or on shipboard.

The first American woman who ever went ashore in Japan, was Mrs. Bailey, wife of Capt. Bailey, of Philadelphia, master of the ship Mary Ellis. She was surrounded and followed by a large crowd of Japanese, but all their movements were perfectly respectful.

The grass has become so dry in some portions of Indiana, that it catches fire from the sparks of the locomotives. On the Terre Haute road they have cut ditches near the track to check the flames, and prevent their consuming the ties of the road. At several places on the Bellefontaine road, the trains have been forced to stop and extinguish the fires.

Accounts from Mogadore, Africa, state that the inhabitants had risen in rebellion against the constituted authorities, and established a Republic.—Mogadore is a fortified city and principal seaport of the Empire of Morocco, on the Atlantic. The population is estimated at seventeen thousand, including four thousand Jews.

A NEWSPAPER is about to be established in New York by the "Spanish American Printing Company," entitled *El Noticiero de Nueva York*. It is "dedicated to the defence of the interests of the Spanish-American Republics, and in which they should find at the same time a sympathetic exponent and advocate of their opinions."

A HACKMAN of Chicago, sent to the penitentiary recently for five years, has just been informed that he is heir to \$80,000, left him by a brother who died in California.

A LOT of land in St. Louis, nineteen feet front by seventy feet in depth, was recently sold for \$38,000, which is said to be the highest price ever paid for land in that city.

The Corn Exchange of Boston have appointed a Committee to prepare a scale of grades, and devise a more uniform and reliable inspection of flour.

The Philadelphia North American publishes several conclusive testimonials as to the superiority, both in point of durability and cheapness, of rails made of Pennsylvania iron, over the imported British iron.

The English naval estimates for the current year amounted to more than sixty millions of dollars, (\$12,632,055), and very nearly equal the sum total of the expenses of the American government for the year 1856-7.

RAYMOND, of the N. Y. Times, writing to his paper from Italy, since the declaration of peace in that country, attributes the successive defeats of the Austrian army to the incompetency and vacillating presumption of the Austrian Emperor.

TELEGRAPHIC BLOWERS.—Justice to a well known and esteemed army officer requires the republication, in a corrected form, of the following dispatch:

"St. Louis, Aug. 7, 1859.
"Salt Lake advice is to the 18th ult. A man named Brower had been arrested at Camp Floyd for having in his possession \$80,000 in counterfeit Government checks on the Sub-Treasury at St. Louis, most of which were ready for issue, and the signature of Col. Crossman, which is necessary to such documents. The engraver had also been arrested in Salt Lake City, and in his shop were found all the implements and materials used in preparing the checks, together with large bundles of unfinished checks."

The omission of points in the dispatch caused the statement in our paper that Col. Crossman was the engraver of the fraudulent checks, whereas he is one of the most efficient disbursement officers in the service of the Government.

STATISTICS OF MORMON POPULATION.—The *Falvey* contains the following statistics of Mormon population:—The population of Mormons in the United States and British Dominions in 1853 was not less than 68,700, of which 38,000 were residents in Utah, 5,000 in New York State, 4,000 in California, 5,000 in Nova Scotia and the Canadas, and 9,000 in South America. In Europe there were 36,000, of which 32,000 were in Great Britain and Ireland, 5,000 in Scandinavia, 2,000 in Germany, Switzerland and France, and in the rest of Europe 1,000; in Australia and Polynesia 2,400; in Africa 100; and on travel, 2,800.

To these, if we add the different branches, including Stragglers, Rigdonites and Whiteites, the whole sect was not less than 126,000. In 1856 there appears to have been a decrease in the population of Utah—the number being only 34,022, of which 9,000 were children, about 11,000 women, and 11,000 men capable of bearing arms. There are 2,388 men with eight or more wives; of these, 18 have more than nineteen wives; 730 men with five wives; 1,100 with four wives, and 2,400 with more than one wife. Recapitulation—4,617 men, with about 16,500 wives.

FROM CALIFORNIA.—The North Star arrived at New York on the 11th inst., with California dates of the 20th ult., and Aspinwall, August 3d. Nothing important from California.

The excitement on the Isthmus about the Indian mounds is dying out.

The English steamer Parametta was still lying on the reef near St. Thomas. All her cargo had been thrown overboard, and divers were at work blowing up the coral rock on which she was lying.

Advices had been received of the revolutionary movements at Carthage, of July 23d, when the Liberal party pronounced against the authorities and appointed ex-Governor Juan Jose Victor provisional ruler.

California markets dull, with little prospect of immediate improvement.

FROM SANTA FE.—The Santa Fe mail with dates of the 25th inst., arrived at Independence 13th ult. Another treaty had been concluded with the Navajos. Large numbers of Indians had been seen on the plains but they were all friendly. The troops at Pawnee Fork were all well. The mail party met a company of U. S. troops en route to New Mexico.

"NOTHING TO WEAR."—In our money column, remarks a recent issue of the *New York Express*, will be found a statement of the business we have been doing at this port in foreign dry goods for the current month. The totals, compared with the previous two seasons, stand thus:—1857, \$66,716,283; 1858, \$80,169,358; 1859, \$71,782,985. These figures show how soon Flory McFlimey has forgotten all about the panic her extravagances helped so much to bring on two years ago, and how ready she is with her silks, satins and velvets, to "go it blind," and to "go it with a rush" again. Seventy-one millions worth of dry goods in seven months! "Nothing to Wear," indeed!

A MISSIONARY CLASS.—The late graduating class from Andover Theological Seminary numbered thirty-four; of these, eleven have offered themselves to the Missionary Board, and before the close of the year all expect to be in foreign fields of labor.

FOREIGN NEWS.

The arrivals during the week have been more than ordinarily numerous, and the news received is of considerable importance. We condense as follows:

GRAT BRITAIN.—The English Ministry announced that they would not accept an invitation to send a Plenipotentiary to a European Congress until the result of the Zurich Conference is known. Lord John Russell and Palmerston had made important speeches in Parliament on European affairs. They admitted that England had acted as the medium for conveying terms to France and Austria, but said that in doing so she did not in-dorse them. The subject of the national defences had also been debated, and the speeches on the government side exhibited an intention to vigorously prosecute the work.

The London Herald has the following:—We have reason to believe that Mr. Dallas has recently placed in the hands of Lord John Russell, a dispatch from Washington, in which it is stated that the U. S. Government has resolved to abandon privateering, and thus to accept the declaration respecting this portion of Maritime law, agreed upon in the Congress at Paris, in 1856.

The London Post says that Garibaldi has sent a circular to all the free States of Italy, in which he declares his army to be ready at any moment to continue the Italian war of independence.

The London Times of the 25th says that four notices are offered in the House of Commons on subjects connected with the naval and military defences of the British Empire.

The same journal gives the preliminaries of the peace of Villafranca as follows:—The two sovereigns will favor the creation of an Italian Confederation, that Confederation shall be under the honorary presidency of the Holy Father. The Emperor of Austria cedes to the Emperor of France his rights in Lombardy, excepting the fortresses of Mantua and Peschiera, which rights the Emperor of France will hand over to the King of Sardinia. Venice forms a part of the Italian confederation, but remains under the crown of Austria. The Dukes of Tuscany and Modena are to return under the condition of granting a general amnesty. Both Emperors will ask the Pope to introduce indisputable reforms. A full and complete amnesty is to be granted to all the people.

FRANCE.—The Minister of War has addressed an order to all Colonels of regiments to send home all soldiers whose absence had been recalled, and likewise all those who are entitled by their services to leave of absence for six months, so that they may be at the disposal of the farmers who may require them for getting in the harvest. The accounts from the agricultural districts are not unfavorable. The harvest, altogether, will exceed that of a good ordinary year, and there will be an overplus for exportation.

The Emperor Napoleon had decided that the French army and navy should be restored to a

peace footing with the least possible delay. He was generally regarded as sincere, and his intentions were considered pacific.

The Zurich Conference has not yet been held. The Morning Post says that according to reports in Paris, Count de Persigny has deferred for a day or two his return to London from Florence, on his mission from the French government.

The Invalides Russe says the Cabinets of Paris and Vienna may make whatever treaties they please, but in fixing the lot of Italy they are bound to ask the concurrence of the rest of Europe.

The French army of observation on the Rhine had been disbanded.

The Nord denies that any French troops are to occupy the Duchies. Those who are at Rome will remain for the present where they are. No where else will there be any intervention in Italy.

AUSTRIA.—The correspondent of the Independent Belge thus remarks of the project of reform entertained by the Emperor of Austria:—All provincial councils of the Emperor are to be convoked simultaneously, in order to answer a series of questions on the amelioration which they may think necessary to the internal government of the States, especially in the provincial organization. The councils will have complete liberty in their deliberations, and may make known openly and sincerely to the Emperor the wants and wishes of the population. Important financial and military reforms are likewise projected.

The Austrian war department has directed that the first army shall be maintained for the present on a war footing. Its effective strength is estimated at nearly 200,000 men. The other corps are on the march to their former cantonments in Galicia and Hungary.

ITALY.—The official Piedmontese Gazette publishes a circular of the Minister of the Interior to the Governors and Intendants Generals, which says the change of Cabinet does not produce any serious variation in the character of the policy of Sardinia. The new ministry will continue to favor as largely as possible, the development of the great principles which are the basis of public right. The Minister goes on to ask for support in the tranquilization of discouraged minds, in strengthening the belief in the rights to liberty, and in preparing the annexed Provinces for liberal institutions. The circular concludes by promising reform in the extension of commercial and provincial liberty.

Preparations were being made at Milan for a grand illumination, to take place on the arrival of the King of Sardinia, who was expected in a few days to visit the new Lombardy capital.

Chevalier Farini, Governor of Modena, has by order of the King of Sardinia, withdrawn from Sardinia authority, and published a proclamation, in which it remits the government to the municipal members.

The populace assembled in crowds and proclaimed the authorities municipal by acclamation the dictators of the country.

The Dictator of Modena has convoked the popular assemblies. All persons competent to read and write, and whose age is not less than 21 years, will be entitled to vote. Perfect order prevails.

PIEDMONT.—Garibaldi has issued the following order, dated Levere, July 29:

"Howsoever political affairs may go in the present circumstances, it is the duty of the Italians not only to lay down their arms and manifest discouragement, but to swell the ranks and show to Europe, that, guided by the heroic Victor Emanuel, they are ready again to confront the vicissitudes of war, in whatever form they may present themselves."

PAPAL STATES.—The Times correspondent from Rome says that there is a great dissatisfaction felt here, and I have no hesitation in saying that the French soldiers alone keep down a general outbreak. The Jesuits have been driven out of Faenza, Forlì and Ferrara—in the last city only one hour was given them to leave, and in the other two twenty-four hours.

The Bologna Gazette published a declaration to the effect that the Province of Romagna had shaken off the Papal yoke, never to retain it again, and that it is their wish to be annexed to Sardinia.

COMMERCIAL.—Breadstuffs.—Liverpool breadstuffs market was dull. Wheat and flour had undergone no change since Wednesday. European corn was offered at a slight reduction. In the Liverpool provision market, prices had a general downward tendency.

Clippings from Foreign Journals.

COURT CAVALIER is to have a medal subscription, got up by the National Guard of Turin, because he would not subscribe to the villainous treaty of Villafranca.

The Financial Reformer states that the present British Parliament is composed of 225 representatives of the aristocratic interest, 208 representatives of the military and naval interests, 119 representatives of the legal interest, 27 representatives of the money interest, 60 representatives of the mercantile and manufacturing interests, and 48 representatives of miscellaneous interests.

The Paris correspondent of the Manchester Guardian tells the following anecdote:—"When, after the peace, M. de Cavour found himself for the first time face to face with the Emperor and King, he found it impossible to remain within the bounds of etiquette, and his indignation burst violently forth; so violently that at length Louis Napoleon, under control as he is, lost temper in turn, and threatened! The word 'arrest' escaped his lips; at which the betrayed Piedmontese minister turned round, saying, 'Arrest me! Try it! But you would not dare; for then you would have no choice left you but to go back to France through the Tyrol!'"

ZURICH, where the European Conference is to be held, is a Swiss town, about the size of Poughkeepsie. It is the capital of the Swiss Canton of the same name, a sturdy little Republic, of a quarter of a million of people, who talk German and belong to the Protestant Church. It is near the northern frontier of Switzerland, and is easily accessible by Railroad, both from France and Austria. Near Zurich, just sixty years ago this month, (August 26, 1799,) the French defeated the Austrians and Russians in a pitched battle. It is questionable whether the latter will now achieve as much by diplomacy, as the former did then in the field.

The News Condenser.

—Great Britain is putting the Island of Jamaica in a state of defence.

—The mining news of California is good, and the grain harvest abundant.

—Two hundred French policemen were at the Turin reception of the Emperor.

—A farmer of Maryland has been very successful in threshing wheat by steam.

—The cost of the Earl of Elgin's special mission to China amounted to \$11,500.

—The subscribers to the Austrian loan have been released from their obligations.

—There had been 230 deaths from yellow fever, at Reynosa, Mexico, at last accounts.

—The war of races in Yucatan is reported to have ceased, and final peace is restored.

—The most important towns of the Roman States have sent deputations to Garibaldi.

—A conspiracy has been discovered in the city of Mexico to place Marquez in power.

—They are putting the lower provinces of British America in a good state of defence.

—California has exported \$28,635,532 in gold during the first six months of the present year.

—The hay crop in the State of Maine the present year is estimated at ten million dollars.

—Five men were killed last week on the South Carolina railroad by the explosion of a locomotive.

—During the past fortnight 26 cases of suicide have been reported in various parts of the country.

—The Pacific Railroad is now finished to Syracuse, 108 miles from St. Louis, and 90 from Kansas City.

—The fortifications of Dover, England, are about to be enlarged at an estimated expense of £150,000.

—It is said there are two thousand husbands and wives in Indiana and Illinois applying for divorces.

—Gold is a legal tender to any amount; silver to the amount of five dollars. Copper is not a legal tender.

—Gold diggings have been discovered in Williams-ville, Ct., and sluices are now being put in operation.

—During the week ending July 24, 15 deaths were reported in the city of Memphis, Tenn., from sun-stroke.

—A cat thrown out of a car window at Fonda, N. Y., astonished her mistress by running thirty miles home again.

—Baron Hess has been made Field Marshal, and will command the largest force any Austrian general ever did.

—Four of the gang who planned the burning of Oshkosh, Wis., are arrested. One confesses to several murders.

—The first public hydrant in Philadelphia was erected Saturday week, under a recent ordinance of the Council.

—The Papal Government is attempting to explain away the massacre at Perugia, making it out a very mild affair.

—Two convicts attempting to escape from the Ohio State Prison were terribly mutilated recently. One will not recover.

—The Tabanitepec Company have sent to our Minister at Vera Cruz to protect them against governmental oppressions.

—The Chinese have a temple in San Francisco which cost \$30,000, and have imported an idol from China at a cost of \$3,000.

—Mrs. Brackman, of Huntington, who recently gave birth to four children, has now given birth to three more—all doing well.

—Two hundred thousand cords of wood, piled alongside the Little Miami (Ohio) Railroad, was destroyed by fire a few days since.

—Two trains arrived at Kansas City, last week, from New Mexico, one of them bringing 39,000 and the other 59,000 pounds of wool.

—A ball-room in Conway, Mass., on the 29th ult., caused several fields of tobacco to be made into fine cut too early to be profitable.

—The San Island cotton crop of Texas will be two or three times as large as that of last year. The crop now promises remarkably well.

—The Iowa State reporter estimates the population of Iowa at not less than 600,000, and thinks the next census will show one million.

—Six hundred Africans have been landed near Tampa, Fla., says the U. S. Marshal, Blackburn. The vessel was immediately burnt.

—A tin mine has been discovered near Los Angeles, Cal., the ore of which has been assayed and found to contain 82 per cent. of metal.

—The Provincial Councils of the Austrian Empire are soon to meet to advise with the Emperor upon the amelioration of their condition.

—There is a Burmese native at the Madison University to be educated. He came over with Rev. Thomas Allen, a Missionary in Burma.

—It is said that the late Horace Mann suggested Rev. Dr. Bellows, of New York, as his successor in the Presidency of Antioch College, Ohio.

—John N. Pattison, a young man whose parents reside in Niagara Co., is making considerable sensation in Berlin, Prussia, as a musician.

—Fruit dealers of Boston are being prosecuted for selling berries by wine instead of dry measure; the penalty is a fine not exceeding \$10.

—Mr. Wm. Wooster, of Columbia, Me., killed a bear in a logging road, on the 6th inst. A bullet between the eyes fixed the flint of his bearship.

—The Hon. Jefferson Davis is lying very ill at Clifton, a point on the Baltimore and Ohio Railroad. His condition is said to be dangerous.

—The Great Eastern will be ready for sea in four weeks. When completed her cost will be about four and three-quarters million dollars.

—The yellow fever has been declared epidemic at Tampico, and generally along the coast of Mexico. Much alarm exists in consequence.

—A Baptist Church in Indianapolis is about to extend a call to the Rev. Anthony Burns, the hero of the celebrated fugitive slave case in Boston.

—The contract for the building of the Museum of comparative zoology at Cambridge has been made for \$41,500, and the work is commenced.

—Mr. Wise made an ascension at St. Louis on the 6th inst., intending to come East, but he only made 80 miles, being beaten down by the rain.

—Com. Stewart has just entered on his 82 year. He was in the navy 63 years ago, and is almost as old as an officer as the navy to which he belongs.

—The last week in June and the first three weeks of July were very warm in France. The thermometer in Paris was over 90 for 13 days in succession.

—A visitor to St. Petersburg was gratified to see one sign in the English language. It was as follows:—"Be-look on behaving, Cut, and frizing the Hairs."

MAKE YOUR OWN SOAP.

SAPONIFIER.

OR,
PURE CONCENTRATED POTASH.

Warranted double the strength of ordinary Potash. Without melt will make twelve gallons good lyeing Soda. One pound will make three gallons good lyeing Soda. Manufactured and put up in all sizes of kegs, casks, in lumps, with directions, at the DISTRICT CHEMICAL WORKS, No. 60 N. 7TH ST., PHILADELPHIA.

R. R. DURKEE & CO.
No Pearl Street N. Y., Provincetown.
Gold everywhere. 900-354

TEACHER.—A Young Man who has had experience as a Civil Engineer and Surveyor, and also as a Teacher, wishes to teach in some school where he could receive the Advancement in Science, or French, in some college or university. Best of references given. Address J. A. PETERS, 600-41 Darlen, Genesee Co. N. Y.

FARFIELD SEMINARY.—The high reputation of this Institution has become so generally known throughout the West and North, that it is no longer necessary to commend its numerous honors to particular classes of Managers. Superior advantages for the education of boys in Latin and English. Commenced Fall Term 1876 for \$10 per week. Tuition from \$10 to \$15. Fall Term 1876 for \$10 per week. Tuition from \$10 to \$15. J. B. VAN PETTEN, A. M., Principal, Farfield, Herkimer Co., N. Y., July 2d, 1876. 60-21

MILBURN'S AND PEABODY'S SEEDLING PLANTS.
To all whom it may concern, and especially the members of the Rural, Express Socy.—I sell deliver at my office, 100 Broadway, New York City, all kinds of Seedling Plants, and guarantee their safe arrival in a robust and healthy condition. I have the above fruit, at the following very low rates:—Plants for 50 cents. All do, for \$1. 50, do, for \$2. 50, do, for \$3. 00, do, for \$4. 00, do, for \$5. 00, do, for \$6. 00, do, for \$7. 00, do, for \$8. 00, do, for \$9. 00, do, for \$10. 00, do, for \$11. 00, do, for \$12. 00, do, for \$13. 00, do, for \$14. 00, do, for \$15. 00, do, for \$16. 00, do, for \$17. 00, do, for \$18. 00, do, for \$19. 00, do, for \$20. 00, do, for \$21. 00, do, for \$22. 00, do, for \$23. 00, do, for \$24. 00, do, for \$25. 00, do, for \$26. 00, do, for \$27. 00, do, for \$28. 00, do, for \$29. 00, do, for \$30. 00, do, for \$31. 00, do, for \$32. 00, do, for \$33. 00, do, for \$34. 00, do, for \$35. 00, do, for \$36. 00, do, for \$37. 00, do, for \$38. 00, do, for \$39. 00, do, for \$40. 00, do, for \$41. 00, do, for \$42. 00, do, for \$43. 00, do, for \$44. 00, do, for \$45. 00, do, for \$46. 00, do, for \$47. 00, do, for \$48. 00, do, for \$49. 00, do, for \$50. 00, do, for \$51. 00, do, for \$52. 00, do, for \$53. 00, do, for \$54. 00, do, for \$55. 00, do, for WILSON'S ALBANY SEEDLING!

YIELD'S OVER 200 BRUNNLS PER ACRE!

This unrivalled Berry has this year, on my grounds, exceeded all previous ones. In size, quality and productiveness. Numerous specimens, from 4 to 14 inches in circumference, some all large leaves, and some partially leafed and best of this fruit—and for nearly five weeks—I can supply selected, strong, new plants, warranted pure, of the very best quality. Each plant for \$1.00; 10 for \$9.00; 25 for \$20.00; 50 for \$35.00; 100 for \$60.00. Descriptive circulars sent to applicants including stamp.

NO TRAVELLING AGENTS EMPLOYED.

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
RURAL, LITERARY AND FAMILY NEWSPAPER.
CONDUCTED BY D. D. T. MOORE,
With an Able Corps of Assistants and Contributors.

The RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and in the beauty of its appearance. Its Conductor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the RURAL an entirely Reliable Guide on all the important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it so assiduously advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other Journal, rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.
For Terms and other particulars, see last page.

SMALL EXPERIMENTS.

The reports of small agricultural experiments have of late been subject to ridicule, and while good was no doubt intended, and the effect may be to cause more care in the details and nicer calculations as to the results, we fear the evil has been greater than the good, in causing many to withhold valuable facts from the press. A farmer grows the Chinese Sugar Cane on a few rods of ground, and makes a little syrup by the aid of the kitchen stove; another devotes a small patch to carrots, or ruta bagas, or corn fodder, gives especial attention to the culture, and raises an extraordinary crop. From this he calculates the cost of cultivating an acre, the product, and the profit of the operation. This is not, of course, quite as satisfactory as though the experiment was made on a larger scale, but if made with strict honesty, and with care, we know not why it may not tell a true tale. If the extent and condition of the soil, the manure, time employed in culture, &c., is stated, and the crop carefully measured, we know not why this may not prove a valuable experiment. If 150 bushels of carrots are raised on one-eighth of an acre, at a cost of six cents a bushel, we know not why 1,200 bushels could not be grown on an acre, by the same treatment, at the same cost, or a trifle less. We see no propriety in casting ridicule upon such experiments as being "fancy."

A farmer not long since exhibited to us a fine field of corn which he was growing for fodder. Last year he had made the experiment on a small scale, and raised so large a crop that he was now mainly depending upon it for winter fodder. Another had grown at the rate of 1,600 bushels of carrots to the acre, but both had neglected to state the facts, lest they might be subject to censure or ridicule for giving the results of "pocket-handkerchief" experiments.

In this country we must have the results of small experiments or none—for we have no experimental farm, nor have we, as in Europe, men of leisure and means which they are willing to devote to the development of great agricultural truths. Few farmers are able or willing to make experiments, the failure of which would involve pecuniary loss. Experiments, even when successful, are not usually profitable to those who make them.

We know of experiments with different varieties of guano, the present year, made with so much care, that whatever may be the result, the crop will not pay for the time and money expended in the trial. The same is true of other experiments, of which we hope to give a good account at the close of the present season.

In the experiments made and reported, there has been, no doubt, too much haste, and too little care—too much jumping at conclusions,—but an experiment, even though not reliable in all respects, is better than nothing, as it excites interest, makes the question one of thought and discussion among practical men; and finally those who believe as well as those who doubt, are led to make the trial, to prove or disprove the theory or the facts, and thus knowledge is increased. While admitting this, however, we urge upon all the necessity of exactness in operations designed to teach facts, for upon its exactness more than upon its extent the value of an experiment depends. The truth, and the whole truth should be given, then may we learn useful and important lessons.

THE FARMER'S COPARTNERSHIP.

The day must come when the farmers of America shall see and appreciate, more fully than now, how Nature and Nature's God have honored their occupation above all other human industries—honored it with living and glorious copartnerships, full of great harmonies and beauty; copartnerships with the morning stars, which sang together in the first golden twilight of creation—with great and everlasting vitalities which permeate the deepest depths of space—with the sun and moon, and planets, and the "sweet influences of the Pleiades"—with the grand forces which turn the wheels of celestial systems innumerable, around the red and fiery waves of central suns, whose huge disks, in the distance, look like specks of light to the eye; copartnerships with heaven's soft and silent dews, which distill their silver moisture upon leaf and blade—with rain, frost and snow—with winds of every breath, from the gentlest summer zephyr to the hurricane which shakes the primeval forest with its tempest arms—with all the grand machinery which moves the planets, shapes their orbits, and regulates their motions—with all the sublime economies of the seasons—with the mighty ocean, pulsating with the life which throbbeth up its million river-veins when yet "the earth was without form and void."

These are some of the farmer's copartnerships. These are some of the agencies which Providence has ordained to co-work with him, by day and night, in spring, summer, autumn and winter. If but the dial plate of time could be removed, so that the farmer could see all the internal machinery and gearing of these agencies, their co-working would fill him with wonder—with an elevating sentiment of the dignity which the Creator has put upon his occupation. His social position among the entities of terrestrial and celestial industry, is higher than the arrogant pretensions of a Chinese Emperor.—In his industrial relationships, he is more than "brother to the moon." That cold and subordinate luminary is but a satellite to the earth, which was made for man to own, till and beautify. The farmer is no satellite, nor parasite, nor subject. His toil honors the earth, and it honors him with a proud reward. The drops that fall upon its face from his moistened brow, are put by Nature and Providence upon the same footing with the dews which fall down out of the evening sky. They are raised to the peerage of celestial influences in the culture of the ground for man and beast. The plowing, sowing and reaping, each and every process of manual and mental labor which he gives to that culture, takes equal rank with sublime agencies in Nature's realm—equal rank with the sun's grand mission of light and heat, in so far as seeding and reaping are concerned. His labor is not an incidental auxiliary to the result—not a co-operation with Nature and her forces which hastened or increased the harvest. It acts in the process and issue as the first vital necessity—as a primary power among the dynamics of the material universe.

What fellowships!—what copartnerships! You bronzed-faced men at the plow, think of it. You red-browed wielders of the scythe and sickle, think of it, and let the thought make you look as erect as the blue heavens above as any man who ever raised his eyes to their serene and lofty depths. That great and glorious sun was not made for its own independent and isolated glory. It was not made for itself—not to light and warm its own inhabitants, minded or mindless—for none of either species can live upon its burning rotundity. It was made for this earth, and bodies like it. And the earth and its sister planets were made for men and beings like men. That sun has its work. As the centre of that great sisterhood, it produces and graduates all those revolutions which give us the seasons, day and night, seed-time and harvest. Grand and mighty movements are they. What is the slow motion of the farmer's plowshare in comparison! In comparison, very weak and small, indeed; but in copartnership, noble and glorious.—That is the way to put it, neighbor BROADBAND—in copartnership. God and Nature thus enjoined them in the morning of Creation; and what are thus joined, let not man put asunder. The revolution of the plowshare around the orbit of the farmer's field, turning slowly its foot-wide furrows, ranks full and even, in effect, in necessity, in dignity, with the revolution of the earth, in any way that it rolls or moves. Her wheels, great and small, might roll on forever; the sun might do its best, and the moon, and the seasons in their turn; the softest rains might alternate with summer sunbeams; the richest dews might fall, and the best south breezes blow, but without the intelligent, hopeful, heaven-honored copartnership of the farmer's toil, they would never turn out a sheaf of wheat or handful of corn for human sustenance.

Neighbor, of the bronzed brow and broad hand, think of this copartnership when you guide the

plow, and wield the sickle or the flail—or while directing the action of the improved implements and machines which have nearly rendered the sickle and the flail classical emblems. Think of it often, for the thought will help you when the heat or the burden of the day is hardest to bear.

EUROPEAN AGRICULTURE.

DAIRY EXPERIENCE.—Quantity of Milk.—In the last received issue of the London *Gardener's Chronicle*, R. Mc ADAM, of Staffordshire, relates his experience as a dairyman. We extract from his article as follows:

"The quantity of milk yielded by a dairy of cows depends altogether on their feeding, as nothing is more common than farmers overstocking their pastures in summer, and keeping more stock in winter than they have sufficient feeding for. My experience leads me to believe that it is profitable to allow cows as much pasture as they can eat in summer, and as many roots in winter as will maintain them in good condition; the quantity requisite to do so depends on whether their pastures have been eaten bare during summer, and what description of fodder is allowed them. When the foggage is good in winter, 60 pounds of turnips daily will keep cows in good condition, but when the foggage is bare it will require 84 pounds per day; this is assuming wheat straw as the fodder—where hay is given, less will suffice. My position being a dairyman, who rents cows by the year from a farmer, with a certain stipulated quantity of feeding for each cow, I will not speak of what might be made by extraordinary feeding, but will only note what is my own routine, and state the results. In the dairy of 100 cows rented by me, in winter we give each cow 42 lbs. of turnips at 5 o'clock in the morning, commence to milk at six; as soon as that is concluded, fodder with straw, then cleanse out the cowhouses, and currycomb all the cows, fodder again between 10 and 11, and at 12 turn them out to drink, put another feed of 42 lbs. of turnips in their troughs, and allow them to return to the house as soon as they desire; fodder again with straw as soon as they have their feed of turnips consumed, cleanse out the cowhouse again, and after milking again at six o'clock, the last fodder is given between seven and eight o'clock. The litter is carefully shaken up on their beds every time they get fodder. As the cows approach calving, a little bean meal in a mash of steamed or boiled turnips, mixed with chaff or chopped straw, is given daily to each cow, and by the time the cow is a week calved, she gets half of her allowance of turnips boiled or steamed, and mixed with chaff, or chopped, and three and a half pounds of finely ground bean meal in each mash (given her twice every day.) After having tried various methods and different sorts of grain, as oats, wheat, barley, Indian corn, oilcake, rape, &c., I decidedly prefer bean meal, both for quantity and quality of milk and butter. These two mashes are given at about blood heat, being well mixed and saturated with water. A stock of cows calved by April 1st, and receiving this feeding—assuming that all the herd have come to their proper time of calving—will average about 11 imperial quarts each daily, or 28 pounds per cow. I mention the weight as being the most certain way of being accurate with new milk, and in speaking of the quantities of butter or cheese produced by a stated quantity of milk, it requires to be understood that milk from newly calved cows does not yield so much butter or cheese as milk from cows approaching their time of going dry (in proportion to the weight of milk.) Thus from a stock of cows all calved by May 1st, 260 lbs. of milk will give 22 lbs. of cheese ready for the market in the month of June, while the same quantity of milk from the same cow in October will produce 28 lbs. ready for the market, and increase in the yield of cheese from the quantity of milk until the cow goes dry. The monthly yield of milk in my dairy stands thus:

April..80 days' yield, 28 lbs. of milk daily,	840 lbs.
May.....81 " 30 " " " "	980 "
June.....80 " 35 " " " "	990 "
July.....81 " 38 " " " "	1008 "
August...81 " 42 " " " "	1062 "
September 80 " 48 " " " "	1540 "
October...81 " 54 " " " "	1834 "
November 80 " 60 " " " "	2800 "
December 81 " 64 " " " "	3264 "

Milk..... 5,616 "
which, allowing 10 lbs. of milk on an average to yield 1 lb. of cheese, will leave as the year's produce of each cow 564 lbs. of cheese. This has been yielded by a dairy of 100 cows on an average, and I have been credibly informed by a farmer in the high districts of New Cummock, Ayrshire, that he has made more off each cow; but his stock was extra good, also his pasture and feeding."

Manufacture of Cheese.—The method of cheese-making pursued by Mr. Mc ADAM is known as the "Danlop," and the manner of operation is thus described:—"The previous night's and morning's

milk are put together after milking in the morning, raising the temperature to from 70° to 80°, using sweet steep, (rennet) and no more of it than will coagulate the milk in an hour, breaking the curds thoroughly at first, and after the whey is run off keeping up the temperature of the dairy, so as not to suffer the curd to cool rapidly, lifting the curds out of the tub and putting them into a cloth in a dresser and continuing to cut or break them up frequently, increasing the weight on them until they are very firm—six or eight breakings or cuttings will suffice generally. Then mill the curd and salt them, and put it into the cheese press; having changed it in half an hour, repeat that at five and nine o'clock, again next morning at five and ten, and the cheese will be entirely dry and pressed by one o'clock next day. Thus a cheese only remains 24 hours under the press, and if properly attended to the cheese will be easily pressed and of excellent quality. The principal feature of difference in the manner of making 'Cheddar' cheese, is the raising of the temperature by heated whey—first, after the curd is broken, to 30° of heat, and afterwards when the curd has stood an hour, when it is raised up to 100°. This I consider the most rational way of getting up the temperature to free the curd entirely from whey, as it does it most effectually when properly performed."

COAL ASHES AS A MANURE FOR GRASS LANDS.—Among American experimentalists coal ashes have met with little favor in the various tests that have been made, more, we think, from the fact that they have been thought valueless, than from any proofs furnished by a well-digested application. Occasionally, writers upon agricultural matters furnish the press with statements exhibiting their efficacy, but the mass either pass them by with silence, or scout at the idea of their possessing any nutriment calculated to aid in the growth of vegetation. It is stated in *Faulkner's Farmer's Manual*, an English publication on manures, that coal ashes contain sulphate of lime, with some potash and soda, all of which are known, when separately applied, to produce a good effect on clover crops, and to constitute an important part of the food of all grasses.

We give the following experiment by an English farmer, because thousands of tons of these ashes may be obtained in our cities, and if they are valuable it should be generally known. At all events, we need whatever light is obtainable upon the subject of fertilizers:

The ground selected contained three perches of clover; the first had no manure, and produced thirty-eight pounds when cut in full head; the second, where four quarts of sifted coal ashes, which had not been exposed to the weather, were applied, the produce was fifty pounds; on the third perch, one quart of plaster was sown, and the crop weighed fifty-four pounds.

SHEEP TICKS.

SHEEP TICKS are much more numerous, and more annoying, than many suppose. Men of experience, with large flocks, generally know and apply the necessary remedies, but there are hundreds of farmers, whose time and attention are principally directed to grain growing, &c., and who keep but a few sheep, whose flocks are sorely troubled by this parasite, and they never discover the cause of the evil. This, which we have good reason to know, was brought particularly to our notice in a recent sojourn among the farmers, and induces us to lay a few facts before our readers. The accompanying engraving of the insect in its different stages is from the *Oyclopedia of Agriculture*.

The Sheep Tick or Louse, lives amongst the wool and is exceedingly annoying to lambs. Their oval, shining bodies like the pips of small apples, and similar in color, may be found attached by the pointed end to the wool, (see engraving fig. 1; fig. 2, the same magnified.) These are not the eggs, but the pupae, which are laid by the female, and are at first soft and white. From these issue the ticks, (fig. 3; fig. 4, the same magnified;) which are horny, bristly, and dull ochre; the head is orbicular, with two dark eyes, (fig. 5,) and a rostrum, in front, enclosing three fine curved tubes, (fig. 6,) for piercing the skin and sucking the blood. The body is large, leathery, purse-shaped and whitish when alive, and notched at the apex.

The six legs are stout, very bristly, and the feet are furnished with strong, double claws.

The popular English remedies are—a wash of arsenic, soft soap and potash; decoction of tobacco; train oil with spirits of turpentine; and mercurial ointment.

RANDALL gives the following details of the best method of applying tobacco water:—"Ticks, when very numerous, greatly annoy and enfeeble sheep in the winter, and should be kept entirely out of the flock. After shearing, the heat and cold, the rubbing and biting of the sheep soon drive off the tick, and it takes refuge in the long wool of the lamb. Wait a fortnight after shearing, to allow all to make this transfer of residence. Then boil refuse tobacco leaves until the decoction is strong enough to kill ticks beyond a peradventure. This may be readily tested by experiment. Five or six pounds of cheap plug tobacco, or an equivalent in stems, &c., may be made to answer for 100 lambs.

The decoction is poured into a deep, narrow box, kept for this purpose, and which has an inclined shelf one side, covered with a wooden grate, as shown in the cut. One man holds the lamb by the hind legs, another clasps the fore-legs in one hand, and shuts the other about the nostrils to prevent the liquid entering them, and then the lamb is entirely immersed. It is immediately lifted out, laid on one side on the grate, and the water squeezed out of its wool. It is then turned over and squeezed on the other side. The grate conducts the fluid back into the box. If the lambs are regularly dipped every year, ticks will never trouble a flock."

WHEAT CULTURE.—TIME OF SOWING.

EDS. RURAL:—As the season for wheat sowing is rapidly approaching, it may not be inopportune to call for an expression in reference to the best time for accomplishing this work. Farmers differ in their practice in this respect, as in others. How can we arrive at correct conclusions here, unless we compare the results of our experience?

My own thoughts have been more particularly directed to the subject, for the past few days, in consequence of noticing earnest recommendations on the part of advisers to "sow early," in the hope of being able thus to measurably avoid the ravages of the midge. The propriety of this advice I am led to doubt. What shall we understand by *early sowing*? Perhaps we shall not agree on this point, and so shed ink in vain. The advice to "sow early" is quite general in its terms, and admits of a number of precise dates. The swift man, who has been in the habit of scattering his grain the last of August, will conclude that he must sow as soon as the middle of that month; while the slow man, who has heretofore congratulated himself on seeing his wheat committed to the soil about the middle of October, will conclude that he must put on a little more steam and sow the first of October. This will be the practical effect of the injunction to sow early, left in general terms.

Personally, I have been in the habit of considering the last days of August or first of September, as early sowing-time; the middle of September as the medium time; and the last days of September or first of October as late sowing time. Now, is this the view of those who recommend early sowing? If so, let us reason together. Suppose we sow a piece of ground the first day of September, and another piece of the same ground the twentieth of September. Will there be twenty days difference in the time of ripening? Will there be one-fifth of that time? I doubt if there will be one-tenth, or two days difference in the time of ripening in ordinary seasons. I say I doubt it, simply because I do not wish to speak dogmatically, having never brought the test of direct experiment. I judge from such facts as these: An individual in my immediate vicinity sowed a piece of sand and gravel soil (a quick-soil) the last week in last August; I sowed a piece of heavy soil between the 15th and 20th of September. My wheat ripened, for aught I could see, as soon as his. I commenced cutting a day or two sooner. I have

noticed other similar cases. Now, do we really get a materially earlier ripening of the crop by early sowing? This question I would like to see discussed.

Wheat raising, to a majority of cultivators, is a precarious business. Understand, I do not say this is necessarily so. There are Scyllas and Carybdis. In steering clear of one we are liable to swamp on the other. If we sow early we risk the liability of an attack of the "fly"—an enemy to be dreaded as much as the midge, judging from their operations in this locality. If we sow early we are liable to get too large a growth in the fall, rendering the crop more easily affected by the contingencies of winter—smothering, winter-killing, heaving, etc.—contingencies which may never arise in some localities, or when ground is properly prepared by draining, etc. But we are considering the ordinary processes of cultivation.

I know two wealthy farmers, owning adjoining farms, who summer-fallowed each a field—adjoining fields—and sowed to wheat. One sowed the last week in August, and reaped a miserable crop. The other, though fully ready, waited until the 15th of September. The last reaped an excellent crop. An energetic farmer, near me, sowed a piece of ground from which he should have taken 25 bushels per acre, the last of August or first of September last. He has just threshed his crop, and obtained ten bushels per acre. He ascribes his loss to early sowing. These, it will be said, are isolated cases. I could name many more.—Still they do not make a case. They simply make an indication. But as far as my experience and observation have gone, early sowing is rather hazardous, and that the best time, taking one season with another, and considering all the exigencies of the crop, will be found from the 15th to the 20th of September. Farmers, what say you?

Corunna, Shawnee Co., Mich. G. M. RAYNOLDS.

TIME OF SOWING WINTER WHEAT.

Mr. Moore:—You wished to know why I was opposed to early sowing of wheat, and I shall endeavor to make you understand. When I sow early, on rich land, and we have a growing Autumn, I have often found the main stalk and many of the strongest shoots had formed the first or upper joint and an embryo ear formed also; and when we have a very hard winter (say the thermometer sometimes from 12 to 20° below zero,) those embryo ears get killed or frost-bitten so that the stalk grows up small, like Timothy, only getting about two feet in height and not producing an ear or head of any kind, not even chaff. I think my farm, having a southern and western exposure, is more liable to have the snow blown off, hence more liable to be damaged in that way than land otherwise exposed. I have talked with wheat growers who have raised more wheat than ever I did, who never heard or thought of such a thing as the ear being formed and above ground in the fall, and would, I suppose, have thought it incredible had I not taken them to the field and dissected a plant and shown the ear in embryo, which is sometimes not larger than the point of the finest needle and sometimes as long as the finest needle. With a bright sun and good young eyes, or old eyes with the best kind of spectacles, one can see it in the ear, and see marks where the grain is to be formed, and with a microscope it can be seen very distinctly. May not this be the cause of those black heads in wheat without either chaff or grain?—Other years we have a great many ears with half an inch or more on the top having no grain. May not this be produced in the same way? When I sow about the 20th of September I never have those black ears without chaff or grain. I have seen none of those in the Mediterranean wheat, but I never raised much of it nor never gave it the attention I have the White wheat. It is somewhat singular that in swales, or low black soils, where wheat grows much larger in the fall, these embryo ears are not so plenty (if at all) as on upland that is made rich by manure.

This I think will be something new to farmers, and no doubt will be criticised, but let them examine carefully for themselves. It is rather a nice operation to dissect the stalk, it requiring care not to break off the little ear. I would give my mode of dissection if I thought I could make myself fully understood. Dissecting one will show how wonderfully Nature has protected the ear in an embryo state. The joint will be difficult to find to those who never dissected one, but in pulling down the outer coating they will generally break off at the joint, and good eyes will then detect it.

JOHN JOHNSTON.

Near Geneva, N. Y., 20th August, 1859.

BKES.—REPLY TO MR. BRAIL.

The "last snow," I hardly think, had anything to do with the loss of his three swarms. It is quite common for some few stocks to lose their queens in the course of the winter, (about three per cent,) and such are quite sure to desert the first warm days in spring, and join some other.—Probably Mr. B. did not notice this at the time, and only found it out a few days afterward.

His not having swarms up to June 18th is nothing remarkable. During the time that I have kept bees, I have waited several times till July before getting a swarm, and many more times till after the 20th of June. In a few seasons I have had swarms in May, sometimes as early as the middle. The earliest seasons are not always the best in the production of honey.

For making wax, he says:—"We generally place the comb in a coffee sack, put in a large kettle, and sink it by putting on weights, the wax rising on the top; but it is always of a very dark color, and not fit for market." This is just the process that I would recommend for getting out small quantities, only I would put the weights inside with the combs; it will allow the contents to be stirred about, and hasten the process. I cannot account for the dark color unless it should be in the sack, or bad condition of the combs—mouldy or otherwise. The interstices of a coffee sack may be too large for the purpose—letting through filth—but I hardly think that could affect the color.

M. QUINCY.

St. Johnsville, N. Y., 1859.

ABOUT WINTERING STOCK.—CUT FEED.

EXPERIENCE and observation unfold to view things of opposite natures. And in many cases this is wise and just. We learn wisdom from the foolishness of others. We prize virtue, when witnessing manifestations of vice. It may be thought that this is not necessary: that goodness and depravity—wisdom and foolishness, need not always exist in a state of co-partnership, from necessity. But this is a Theological question, which at present I do not mean to discuss. It is true wisdom that profits by the follies of others, and which, by making a right use of just means, creates a good instead of perpetuating an evil.

The above sage and exceedingly philosophical remarks, owe their existence to a few reflections concerning the shortness (in this vicinity,) of the grass crop, and the difficulty which some farmers will experience in wintering their cattle. Some of them increased their stock last spring by raising and buying, and now find themselves with more than they can keep—as, with many, only half the usual crop of hay was secured. Barley straw has been emphatically short, and what the oat crop will be in this respect, cannot be stated, exactly.—Wheat has done very well, generally speaking, with regard to straw. In thinking the matter over I have arrived at the conclusion that there is not any very great cause of alarm, providing the right thing is done in the right way. And here let me say that I am not giving your readers the benefit of a new discovery, but only urging upon their attention an old and valued one, that has been tried in the balances and found to be all it was represented. This right thing is, a practice of cutting hay and straw in fine portions, and mixing therewith sufficient quantities of meal to insure its consumption. Observation has led me to feel a conviction of the practicability, economy and wisdom of such a practice. It should be adopted into the details of Agricultural Economy, and every farmer should realize the necessity of cutting his hay, as well as cutting his grass.

In speaking to some farmers concerning this subject, I have been met by the same antiquated ejaculation which has sought to kill so many valuable improvements—"It won't pay." O! how this exclamation, like the embodied ghost of old foginess, throws its chilling, death-like influence around the form of investigation, and prevents the introduction of tried benefits. I had an opportunity last winter of witnessing the operations of a wondrous payite, and I am confident that in feeding forty head of cattle by the old process of scattering hay here and there over his barn-yard and around his fields, enough of it was wasted or remained uneaten, to have kept three cows in good condition. Now what is wanted is, an improvement in the construction of barns, so that all cattle can be fed from troughs—fed with cut feed.—If this is not convenient, sheds can be erected to answer the purpose, and then we want cutting machinery driven by horse power, so that we can cut up a whole crop of hay and straw, and have it ready for use when wanted. Would not this be more cheap and economical than any other way? Then with a large mixing box, (where necessary,) and such grain as we feed, ground and carefully mixed with our cut hay or straw, shall we not be enabled to feed more cattle with less food than by the ordinary wasteful methods, and still keep them better? I know not whether such machines as I have spoken of, have been invented. Neither do I know whether this plan has not been suggested or carried into execution. If it has, I make no doubt that it pays. If it has not, I find no greater proportion of doubt while asserting that it will pay.

If the old practices are followed throughout this winter, many poor cattle will come out in the spring looking as if they had been starved through it. Friends, cut your fodder. We have not got, among us, the machines spoken of, but you can all obtain small machines that will answer. Cut up everything that you feed, grind your corn, cob and all, and sprinkle enough on your cut fodder to make it agreeably eatable; and unless I am mistaken you will find that you can winter your cattle at much less cost, without buying hay at \$18 or \$20 a ton in the spring, without selling your stock at low figures during this fall, and without "stinting and pinching," two cows on the scanty supply of one. It will cost you something to fit up for this method, but make a calculation about it, and "get into it" somehow or other. Try it, if only for one season. Agitate the subject concerning those machines, find out what they will cost, and get up a mutual combination society to build one. Let us hear something concerning this matter, from those more able to give information than one who is at present but an amateur farmer. Ogden, Monroe Co., N. Y., 1859. W. E. S.

A RURAL LETTER ON VARIOUS TOPICS.

FRIEND RURAL:—Last night, spurred up by strong indications of rain at no very distant time, we succeeded in clearing the barley field, drew in what oats were fit to bind, and cleared up things generally for a wetting-up time. And to-day we are taking it in a sweet, gentle, delightful rain. (The same adjectives are equally applicable to the rest we are enjoying after a protracted season of hard "field work.") How refreshing, after such very hot and sultry days as we have had the past week, to have a half or whole day's gentle rain, copiously watering the parched earth, starting the feed in dry pastures, and re-animating the face of Nature generally. How much more pleasant and refreshing it seems, however, when we have no grain to be injured, or hay to be bleached—when everything is properly housed and sheltered.

Rural letters, I suppose, should treat of rural affairs; well, then, here goes for the crops in "Old Allegany." Grass is light, and will probably be not more than half a crop in bulk, and that half of an inferior quality; but this is much better than in the dairy section west of us, where, I am told, hundreds of acres will not pay the trouble of cutting, and as a consequence cows are offered and are selling very cheap—I am credibly informed from eight to fifteen dollars per head. Indeed, were it not for machine mowing, acres after acres would go uncultivated, the small products of which are now safely secured and sheltered.

Spring wheat generally looks well; straw bright,

heads large and well filled—a good crop. But very little attempt was made to raise winter wheat. I know of but one field, and most of that was killed by the June frost. Some fields of winter rye were sown, but met with the same fate. Barley and oats are fair average crops—oats were quite extensively sown. Potatoes never looked better; despite the frost, which "laid them low," they are very thrifty, and will probably, if the blight does not appear, (it has not yet,) be a good crop.

The corn prospect looks rather dubious. Nothing short of an extraordinary fall will insure anything of a crop, and even then not an average one by far. Many pieces were plowed up and sowed with buckwheat, which looks very well as a general thing; now and then a piece, however, nearly destroyed by grasshoppers. If the fall is favorable, a good crop may be expected. Lovers of buckwheat "slap-jacks" and maple molasses may safely calculate upon feasting, to their heart's, or rather stomach's content, upon their favorite diet.

Speaking of grasshoppers—Oh, what hosts, myriads, legions there are of them! Why, Xsaxs' army was nothing compared to them; and they are so perfectly lawless and ill-mannered—stepping or hopping right in before the cattle, appropriating the feed to the preservation of their unwelcome existences, and depriving stock of the means of subsistence. Carrots, corn, clover, and even *May-weeds* and *lansy* are levied upon to satisfy the cravings of their voracious appetites. We are in hopes that lice, cholera, plague, or epidemic of some kind will attack them, and thin their ranks, if not completely destroy them.

Is there no way of killing off woodchucks short of hunting and shooting, or trapping them? Can not a way of poisoning them be devised that will accomplish the object? It seems to me there might. Will some one answer? They are a great annoyance to us who live on the river bottom.

Will winter barley, after heading out and being killed by the frost, then heading out again and harvested, be good for seed? Will it be as good as the first heading? We have a piece which was so killed, about a quarter of which again headed out and matured; heads rather short, but very tolerably plump. Some Rural correspondent tells of sowing spring barley in the fall; I would like to hear more upon that subject. J. S. M. Fillmore, N. Y., Aug. 11, 1859.

SEEDING TO GRASS.

EDS. RURAL:—Your correspondent of July 9th wanted light on the subject of seeding to grass. Now I will tell him how we do here in old Dutchess. In the first place we plow the ground good, and spread over it fine rotted barnyard manure. Then harrow the earth till it becomes well pulverized. The seed is then sown, using 10 to 12 quarts to the acre. We then take a light roller and pass over the surface. The proper time for sowing is from the middle of August to the middle of September. If you wish a crop of grass, sow no grain. I think that if H. J. B. follows these directions he will have good luck, unless his ground is very poor, cold and wet, in which case it will require draining.—G. H. B., Dutchess Co., N. Y., Aug. 1859.

EDS. RURAL:—A word more by way of amendment, to H. J. B., on preparing grass seed. On Friday last, in preparing seed to sow on stubble, I met with a difficulty which I had not encountered before. The air was hot and humid, and the brined seed was not inclined to dry, even when the plaster was added; the salt and plaster both, as I suppose, inclined to attract moisture under the then state of the atmosphere; (had it been my first attempt, I think I should have given it up, and called it a bad job.) All my former preparations have been made in cool weather, and mostly in a stove room. Again, under a humid atmosphere, I would use less brine.—J. H., Henrietta, N. Y., Aug. 15.

THE GREAT WOOL FAIR.—A SUGGESTION.

EDS. RURAL:—Noticing the recent great sale of wool at enormous prices, at the Wool Growers' Convention, at Cleveland, Ohio, the question in my mind is, Where was all that enormous quantity of wool grown? And why should not Western New York have a place for deposit—a Wool Growers' Convention, and a time appointed for a public sale, where farmers can deposit their wool and attend the sale, if they choose?—where manufacturers can attend personally if they choose, and see for themselves what they purchase, instead of employing local or itinerant agents, who may take advantage of some farmers who don't take the papers, and fleece them if they can—and the wool has sometimes to pass through several hands before it reaches the manufacturer—all of whom must make a profit, and thus the wool grower is fleeced, if not the manufacturer.

Among the seventeen gentlemen who made large purchases at the above sale, there seems to have been but one agent—Mr. HUTCHINSON. It is presumed the other purchasers from Boston, Rhode Island, Pittsfield, Pittsburg, &c., were owners or manufacturers. I hope some able pen will do this subject justice. S. PIERSON. Le Roy, N. Y., Aug. 1859.

GAPES IN CHICKENS.—Dough, raised with milk rising, is a sure and safe remedy for gapes in chickens, fed while fermenting, but while still sweet. I learned the cure in this wise. We had some choice China chickens which contracted the disease, and tried every remedy that came to our knowledge, but all to no purpose. In petting them I let my bread run over, and when they could not eat any thing else, I gave them what had fallen, and found they were almost immediately relieved. I have since set milk emptings and carried out a panful of fermented dough to my chickens, when twenty or thirty had the gapes, and not one that eat of it but was cured. When I season their food with salt, as for cooking, they never have the gapes. I write from an experience of six or eight years, in answer to C. BOLKLEY's inquiry in the RURAL.—H. GAVIT, Greenfield, Erie Co., Pa., 1859.

Let the farmer's motto be, good farms, good stock, good seed, and good cultivation.

Rural Spirit of the Press.

The Wheat Midge in Canada.

MR. JOHN WADSWORTH, an experienced farmer who resides near Port Hope, C. W., writes to the Toronto Globe (under date of Aug. 4th) as follows:—"I wish to avail myself of a small space in your widely circulated paper, to say a few words about the wheat midge (*Cecidomyia Tritici*). Prof. Hind, in his prize essay, did me the honor to notice a communication I addressed to the Canadian Agriculturist in September, 1858. Quoting a passage from that letter with regard to the wheat midge, I stated at that time 'that the Five wheat is now as good after being sown seven years as it was at first, without the least sign or vestige of failure, in any shape except from Weevil; and to know that you can be sure of a crop of wheat sown as late as the 10th of June, and to fill and ripen without a speck of rust, and yield 20 to 30 bushels an acre, is scarcely a consideration.'

"What I stated in 1858 with a considerable degree of confidence, has been, I rejoice to say, fully borne out by three years more experience.—And what I would like to bring before the public at this time is a theory I entertained seven years ago, and which in my mind is fully established—that the ravages of the midge are confined to about 10 days; and that Fall wheat which has shot before the 25th of June, has for all this time comparatively escaped; while both Fall and Spring wheat shooting between the 25th of June and the 7th of July, has been more or less injured; and then the Spring wheat coming in after that time has escaped the midge.

"I will now give you the result of my observations for the present season, in this vicinity. The midge was first perceived on the wing on the 27th June, and in that shape till the 7th of July. All wheat in head before the 27th of June, was not much injured; while all which shot between the 27th of June and the 7th of July, has much of the maggot in it. A neighbor has a field of Club wheat sown in the second week of April, clear of insect; while another piece of land sown with Five at the same time is full of it. This is accounted for by the Club being ten days earlier in maturing. I have visited several fields in this neighborhood within the last two or three days. One field sown on the 3d of May, will be damaged nearly 25 per cent.; another sown on the 8th, will suffer about 20 per cent.; and all I have yet seen which was sown after the 12th, is clear altogether. I send you these few particulars, with the hope that it will draw the farmers to make closer observations, as to time and the habits of those enemies of our crops, than they are generally in the habit of doing; having myself more faith in evading the mischief than curing it, by trying to destroy the insects themselves."

Saving Clover Seed.

A TENNESSEE FARMER, writing to the Southern Homestead in relation to the saving of clover seed, says:—"I can assure you that the difficulties of saving clover seed are principally imaginary; the process is simple and easy. After the clover field has been cut or grazed let the second crop come on. When about two-thirds of the heads have turned brown, cut with a cradle or reaping machine, raised well up, turning the grass into double swaths to cure. When cured, rake up in the morning, while the dew is on, into convenient parcels for loading with a pitchfork, and as soon as all the danger for heating is obviated, get under shelter, either in the barn or protect it in the field.

"Be careful not to put it away while any moisture remains on the plants; and on the other hand, don't handle it rudely when very dry, when you don't want the seed to fall, for in that condition the heads shatter very easily. Having sheltered it, you may wait, if you choose, till winter affords leisure for threshing out. Sow in the chaff, as it is more certain than the cleaned seed. A bushel in the chaff will abundantly seed an acre. I may say more of sowing, however, at a more seasonable date.

"The second crop produces more seed than the first, and hence the economy of first cutting or grazing the field; though from that cut for hay, I have often saved enough seed for my own use. It is believed that more seed may be saved by cutting when about two-thirds of the heads have turned brown than at any other period, because, if cut sooner, too many seeds are unripe, and if later, too many shatter out of the heads in cutting and handling. By pursuing this course every farmer may easily save his own seed."

Hints on Poor Farming.

A WEEK or two ago we gave the "Creed" of the Progressive Farmer, and to-day present its opposite, which we find on a voyage among the newspapers:

- 1st. Invest all your capital in land and run in debt for more.
- 2d. Hire money to stock your farm.
- 3d. Have no faith in your business, and be always ready to sell out.
- 4th. Buy mean cows, spavined horses, poor oxen, and cheap tools.
- 5th. Feed bog hay and mouldy corn stover exclusively, in order to keep your stock tame. Fiery cattle are terribly hard on old, rickety wagons and plows.
- 6th. Use the oil of hickory freely whenever your oxen need strength. It is cheaper than hay or meal, keeps the hair lively, and pounds out all the grubs.
- 7th. Select such calves for stock as the butcher shuns; beauties of runs, thin in the hams, and pot-bellied, but be sure and keep their blood thin with scanty herbage. Animals are safest to breed from that haven't strength to herd.
- 8th. Be cautious in the manufacture of manures. It makes the fields look black and mournful about planting time, besides it is a great deal of work to haul it.
- 9th. Never waste time in setting out fruit and shade trees. Fruit and leaves rotting around a place make it unhealthy.

The road to poor farming, though largely traveled, is not well understood, and these landmarks are thrown up for the common benefit.

Agricultural Miscellany.

THE DAYTON WHEAT.—Though this variety of wheat has been grown by quite a number of farmers in this and Genesee counties the past year, not one, as far as we are aware, has reported the result for publication! From this we infer that the parties interested are either disappointed in the result, or are opposed to imparting information for the benefit of their fellow cultivators. We had hoped to give, on seeding time, some definite reports from reliable sources, as to yield, quality, &c., but have thus far received nothing definite on these points.

—After the above paragraph was in type (and while closing this paper for the press) we received a note from ELISHA HARMON, Esq., of Westland, relative to his crop of Dayton wheat—and also a letter addressed to him by an experienced miller of that town, Mr. HIRSH SMITH. We quote Mr. HARMON's note, as follows:—"I am now threshing my Dayton wheat. After making a reasonable deduction for the damage done by frost, (which in the judgment of those who helped harvest it was from one-fourth to one-third,) I now think that I shall get from twenty-five to thirty bushels per acre—while my neighbors' fields adjoining mine, that were good summer fallows, of other kinds of wheat, will not turn over fifteen, and very few crops in this town will average more than that—some fields less than ten. I think, all things being equal, that it will yield from five to ten bushels more than any other variety, and of a much better quality than any of the early kinds that have been introduced here lately. The extreme warm weather, and frequent showers during our harvest, somewhat injured the color."—In his letter to Mr. HARMON, Mr. SMITH says:—"I am much pleased with the sample of Dayton wheat which I received from you. I noticed it when passing your fields, just before harvest—that it was earlier than any other variety. I am satisfied that the quality is much better than any of the early varieties that have been grown here. I think that it is quite as white as the Soules was when first raised here. If I am not very much mistaken it will make double extra Genesee Flour, and if so it will be a valuable kind of wheat, both for farmers and millers, and I hope to see it very generally cultivated in Western New York."

AMERICAN INSTITUTE FAIR.—The 31st Annual Fair of the American Institute will be held in the Palace Garden, New York, commencing on the 21st of Sept. and closing on the 23rd of October, 1859. Goods will be received from the 15th to the 20th of September; and exhibitors will be allowed five days, after the 1st of November, to remove their articles from the premises. The Managers announce that the articles will be arranged with promptness—and great efforts will be made to secure competent and disinterested Judges to examine and report upon every article offered for competition—and that Premiums of Gold, Silver and Bronze Medals, Silver Cups, Books and Diplomas, will be awarded to Exhibitors of articles decided to be worthy of the same. For particular information relative to the Fair, address Wm. B. LEONARD, New York.

THE STATE FAIR.—The Albany Journal says the work on the State Fair Grounds is progressing rapidly, and that the exhibition buildings are already far advanced. Application having been made by parties for the erection of buildings on the Show Grounds, at their own expense, the committee on the arrangement of the grounds have been directed to assign places for such buildings—to be erected upon such plan as shall be approved of by them. The Railroads and Steamboats will, as usual, carry free all articles designed for exhibition at the Fair. The Executive Committee are of opinion, from what they already know, that the approaching Fair will be one of the very best the Society has ever held. The New England States, because of the facilities for reaching the locality, will be largely represented.

AG. FAIR OF THE AMERICAN INSTITUTE.—The Board of Agriculture of the American Institute announce a Grand Show of Horses, Nant Oattle, Sheep, Swine, Poultry, Ag. Implements, &c., together with a great Exhibition by the New York Horticultural Society, to be held at Hamilton Park, in New York City, on the 21st, 22d and 23d days of September proximo. A liberal list of premiums has been issued, and such arrangements made as will be likely to insure a large and successful Exhibition. Large discretionary premiums are offered for Steam Plows and other Steam Farm Machinery. The location is said to be the best for the purpose in the city, and the union with the Horticultural Society will be likely to attract thousands of visitors who would not attend either show, if held separately.

A STEAM CULTIVATOR has recently been constructed at the "Island Works" of SIBLEY, MYNERS & CO., Seneca Falls, N. Y., for Mr. FIELD of St. Louis. The machine has already been tried to some extent, satisfactorily to the inventor and practical men who have witnessed its operation. It is designed to perform the work of plowing, harrowing and sowing (by the drilling process,) all at one operation. The machine is of ponderous size, mounted on three wheels, and propelled by HOLLY'S Rotary Engine. After a public trial—to take place near Seneca Falls, in a few days, (and which we shall probably witness and notice),—the Cultivator is to be taken to Illinois, where it will compete for the great premium offered for the best steam plow exhibited at the Illinois State Fair.

THE EARLY RIPE WHEAT.—A farmer in Pickaway county, Ohio, has been growing specimens of the "Early Ripe" wheat, and sent samples to the Ohio Cultivator, containing 116 grains in each head. In his remarks the editor alludes to the same and other varieties as follows:—"The wheat called Early Ripe is the kind also known as Wiga, Dayton, &c., but the real name, we think, is bald Mediterranean. The Early Ripe has but three kernels in a side course, while this has five. The yellow and red chaff samples are both of the same species, only one is a lighter colored, from the effects of cultivation. It is the tendency of all red wheats to become whiter by cultivation."

NUMBER OF SEEDS IN A BUSHEL.—A Scotch paper gives the following table, said to be based upon actual trials, of the number of various kinds of seeds in a bushel. It also adds the weight, by which we can judge how the bushel measures compare with ours:

	No. of seeds per bush.	No. of lbs. per bush.
Wheat	10,500	55 to 64
Barley	15,400	48 to 56
Oats	20,000	38 to 43
Rye	23,000	36 to 40
Cowpea	54,000	43 to 50
Buckwheat	125,000	50 to 55
Turnip (Holland's)	125,000	50 to 55
Turnip (Orange Jersey)	125,000	50 to 55
Cabbage (Scott's Drumhead)	125,000	50 to 55
Cabbage (Drumhead Savoy)	125,000	50 to 55
Clover (Red)	125,000	50 to 55
Clover (White)	125,000	50 to 55
Rye Grass (Perennial)	125,000	50 to 55
Rye Grass (Italian)	125,000	50 to 55
Sweet Vernal Grass	125,000	50 to 55

In seeding to wheat—whatever the variety used or time of sowing—remember that good, well-prepared soil, and clean seed are important essentials.

HORTICULTURAL.

GENESEE VALLEY HORT. SOCIETY.

The August meeting of the Genesee Valley Horticultural Society was held in Rochester on Friday, the 19th inst. The show of fruits and flowers was the best made this season, with the exception of the June exhibition. The next show will be made September 23d, and this will be no doubt the best of the season. In the fruit department was shown fine summer pears, and apples, plums and blackberries. The *Red Astrachan* took the prize offered for the best dish of early apples. The prizes were mostly taken by amateurs, B. MANVEL having the prize on apples, DANIEL MARSH for the best dish of plums, (Prize's Imperial Gage), JAMES BUCHAN for the best pears, C. W. SEELYE for the best New Rochelle Blackberries. Messrs. BISSALL & SALTER also received a prize for Blackberries of almost equal merit, and LYMAN COOK for a quart of native blackberries cultivated in his garden and exceedingly fine. Messrs. BISSALL & SALTER exhibited a bunch of early grapes, nearly ripe—a very early native variety grown in this vicinity, and which we have noticed for several years ripe about the first of September.

The Floral Department was rich in bouquets, floral ornaments and flowers. Messrs. A. FROST & Co. made the best and largest show, and good exhibitions were made by C. J. RYAN & Co., and C. W. SEELYE.

The Vegetable Department was not as well represented as it should be. P. THIRMAN exhibited splendid tomatoes, and took the premium; Geo. COOPER carried off the prizes for vegetable eggs and sweet corn. E. S. HATWARD exhibited about a peck of tomatoes, mostly ripe, growing on a single stem. We counted over thirty, and then gave up. W. T. KENNEDY presented six white Pine Apple Squashes, very fine. JAMES VICK exhibited a very early seedling potato, which the Committee, having tested it by cooking, declared to be equal in quality to the *Carter, Mexican*, or *Merced*.

BLACKBERRIES AND CABBAGE.

Eds. RURAL:—I have in cultivation a few of the native *Black Raspberry* bushes, which yield a good return, and the *Yellow Antwerp*, which is doing well; but the *Pasteloff* and *Franconia*, although they increase and spread rapidly, only give now and then a straggling, worthless berry. Why is it? I shall set more of the *Native Black* next spring, after Mr. DOOLITTLE's plan. By the way, Mr. BOIRON, I think those who do not take the RURAL are losing money every year. That single article giving Mr. DOOLITTLE's system of cultivating the native raspberry, is worth more to me than the price of the RURAL for one year. But, I have just returned from the woods with a pair of blackberries, and while there, on this hot, sultry August day, sweating and scrambling through the brush and brambles, which are not slow in leaving "tokens of remembrance," the thought occurred to me, whether it would not pay better to raise my own blackberries.

And now I wish to inquire through the RURAL if the native blackberry will succeed, and pay for cultivation on our Michigan oak-openings where the soil is a sandy loam? Has any one had experience? If so, please give us the *modus operandi* of setting, and the after-culture.

You say, Mr. Editor, that the "OLD GARDENER" is a great talker when he gets started. Why then can't we have more of his garrulity in the RURAL? I, for one, would like a chapter from his valuable experience every week. And now, to set him a going, I would inquire what I shall do to diminish the number of heads on my Cabbage? There are more than the stalks can well support. They are in the shape of lice, and are something new to me, having never seen any on the cabbage before. My cabbage, within a few days, have begun to rot considerably. We are having a drouth, and I don't know whether to lay the rotting to the dry weather, or the lice, or something else. When calves get lousy it is attributed to want of car, food, &c.—Now I don't think my cabbages can complain on that score, for they had the best of nursery care, and before turning them out into the wide world, the ground was well prepared. Holes were dug, and a big shovelful of compost, consisting of horse and hen-house manure, ashes, pulverized coal, &c., thrown into each. The dirt was then thrown in, thoroughly incorporated with the manure, and raked off smoothly, leaving the hills slightly elevated. The culture, since setting, has consisted—not in contending with weeds, for under my mode of treatment not a weed has dared to invade the ground—but in continued stirring, pulverizing and loosening the soil to the depth of six or eight inches. And now, Mr. "GARDENER," under the premises, what is your verdict? Guilty or not guilty.

YOUNG GARDENER.

Prospect Lake, Mich., Aug., 1859.

REMARKS BY "OLD GARDENER."—There is no question, but as a general rule, blackberries can be grown much cheaper than they can be gathered from the hedges and neglected fields, and of a much better quality, but then "going-a-fishing" is a luxury, indulged in for the fun of the thing, and not for the profit. How many ride five or ten miles, perhaps hire a carriage for the purpose, then pay for a boat, burn their faces, spoil their clothes, and spend a day's time, and get a string of fish that no one would be fool enough to pay twenty-five cents for. So with blackberrying—in a few places they are plenty and good, but as a general thing the fruit will not pay for the damage done the clothes; but innocent pleasures, that keep the heart young, and drive from it the corroding cares of life, are cheap at almost any price.

Now, Blackberries—our common blackberries

DOUBLE WHITE PETUNIA.

All our readers are acquainted with that common and truly useful bedding plant, the PETUNIA. Though very showy, of every shade from dark-red and purple, and constant, free bloomers, making the garden look gay and bright from the first of June until cut down by the frosts of Autumn, no double flower was produced until a few years ago. The French first raised a double white, which they named *Imperialia*, which is shown in the engraving, and since that an Englishman by

from the hedges—may be so improved by cultivation as to grow to double the common size, and of the most delicious flavor, very far superior in this respect to the *New Rochelle*. At the last meeting of the Genesee Valley Horticultural Society, a quart of common, but cultivated blackberries was shown by a gentleman, and the Committee on Fruit was so well pleased with them that they awarded him a special premium—and it was well deserved.—They were about half the size of the *New Rochelle* exhibited at the same time, but vastly superior in flavor.

A sandy loam soil is the very best for the blackberry, and it should be rich to produce fine fruit. The after culture is much the same as for the raspberry. Keep the ground mellow and the weeds killed, and fasten the bearing canes to stakes, or what would be better a light wire-trellis, made by fastening wire to posts well driven into the ground. There is a great difference in our native blackberries, and it would be a good plan to mark the plants needed, when in fruit, so as to be sure you get the best sorts.

Cabbage has two sets of enemies, very numerous and very troublesome—the little fly or flea that attacks them when they are quite small and the louse. The former may be driven off by the persevering use of ashes, and soot, but I like charcoal dust better than either. Perseverance, however, is needed with either, or it will do no good. The louse described above, like most of its kind, whether upon animal or vegetable, generally attacks the feeble, the stunted, the declining—on the same rule I suppose that men when they see their fellows in trouble—going down hill—are very fond of giving them a kick to help them along in their journey. But sometimes when stunted and sickly plants cannot be found they attack the healthy. There is only one kind or so of insects or animals on this earth nasty enough to stand tobacco well. Starting with this fact, my first remedy with all new insects is a dose of strong tobacco water. If they stand that, I think they are pretty hard cases. A few doses made from strong plug tobacco which can be bought at any country store, will relieve your cabbage of the louse.

The rotting I think is caused by over-growth—too rich feeding. A good many years ago I would have used some other word for *think*, but I have learned how easy it is to be mistaken, and how mysterious are many of the operations of nature. There is a cause for everything, but sometimes it seems past finding out. Sometimes too much manure will canker the stalk and cause it to rot.—Sometimes it will cause the head to burst—the outside leaves appearing to grow too slow for those forming at the center of the head—bursting of the head is the consequence, and the sap vessels being ruptured, rot soon follows.

Inquiries and Answers.

DWARF AND STANDARD CHERRIES.—Can you, or some of your numerous readers, tell me which are the best to plant, standard or dwarf cherry trees on a first-rate clay loam, with lime-stone rock three or four feet under it? Also, how high do dwarf grow?—C. L. J., Wayneville, Warren Co., Ohio, 1859.

If you desire to obtain a good many varieties in a small garden, then plant the dwarf, though the free-growing sorts make quite a large tree, even when dwarfed. We have them growing here from twelve to eighteen feet in height, after being eight years planted. For ordinary purposes, where land is abundant, the standards are better.

DWARF TREES.—AGE OF BEARING.—Permit me to inquire through the columns of the RURAL at what age dwarf apple and pear trees commence bearing?—H. ADAMS, Mechanicsburg, Ind., 1859.

We have seen them bear at two and three years in the nursery rows. Then they will very often bear the first year they are set out, and continue to bear every year. The fact is, dwarf trees

the aid of this variety with some of the best dark single sorts, has succeeded in obtaining a number of very fine double flowers, of all colors, from white to crimson.

The beauty and value of the Petunia, however, is not in the beauty of the single flower; it is appreciated it must be seen in masses, with abundance of flowers and a fine arrangement of colors. To-day there is nothing more beautiful on the lawn than a fine bed of Petunias.

generally bear too early and too much, so as to use up the strength of the tree, and allow of but little growth of wood. It is often necessary to remove the fruit to save the trees from bearing themselves to death.

MALE AND FEMALE PUMPKINS.—I have just been told that pumpkins, squashes, and melons are of both sexes. It is said that if we would raise pumpkins, we must plant seeds taken from the female pumpkin, which may be known by the eye or calyx of the female pumpkin, being large, that of the male being quite small. I have often noticed that only a part of the vines bear fruit; but have always supposed that the barren vines produced only male blossoms. Is it true that it makes any difference which pumpkins we save seeds from? If so, it is quite important that "pumpkin growers" should know it.—H. G. S., Marango, Ill., 1859.

There is nothing in this idea of male and female pumpkins or squashes.

DEPTH OF PLANTING DWARF PEARS.—In setting some Dwarf Pear trees last spring, I set the graft about four, perhaps five, inches under ground. I did it because I had read that, in setting the pear on quince stock, the quince should be set entirely under ground. Since I set them I have read in your paper and other papers that trees should not be set deeper than they stood in the nursery. Mine have made a good growth this summer. Now, would you take those trees up and re-set, or let them stand as they are?—A. S. SCHUBERT, Suffield, Conn., 1859.

There is, it is said, exceptions to all rules, and the planting of dwarf pears is an exception to the general and safe rule to plant trees only as deep as they grew in the nursery. It is better entirely to cover the quince wood, and no evil will result, even should it be necessary to plant quite deep to accomplish this, for roots will soon be formed near the surface.

PEARS ON APPLE STOCKS, &c.—I want to know if pears will grow to be of much profit when grafted into small apple trees under ground? If any person has experience upon this point, we should feel thankful for a word of advice. My idea is to plant a small pear orchard, and as we have no pear actions, I think apple will answer. As the apple is more hardy than the pear, and will grow upon most every kind of soil, I thought probably it would be an advantage to the pear to graft it upon the apple. Is there any person residing in the Washburn Valley, in the Middle or Western portion of this State, who has tried to grow an orchard of pear trees? If there is, I should like to hear of the result. There are so many sudden changes of weather here I am not certain pear culture can be made profitable. Trees are killed and injured by the winter. If the RURAL can recommend some hardy sort of pear trees that will not winter-kill, I will give them a "bit of trial," and thank the friends of the RURAL for advice.—J. M. E., Portland, Ind., 1859.

PEARS will not succeed, &c., grafted on the apple. We hope those who, but had experience with the pear in Indiana, is the chipper correspondent the benefit of their nation because. The following are among the most barbaric:—Flemish Beauty, Buffum, Colum good will, Winter Nelis, Forelle, Fulton, Lawrie, issued from Summer, Oswego Beurre, Onondaga, and the names, and Forelle.

A NEW ENEMY TO Y: calls them "white Hubbard Squash (40 hills) every year's story." In a white grub, very similar in color to the white grub, but larger. They enter the beautiful, but the end, below the first leaves or toward the end of the stalk, very much like the peach leaf and strengthen the stalks by a warty growth of home.

On the vine; also the warts, "The eyes of old work" is finished. Half of it. If all but myself moved from the ground, the neither fine houses nor stand extracted the grub, it is a vine. This is the only circumstances suit his term present to us. If the excellent who can suit his, is similarly afflicted, and glad to bear from it.

Our Hubbards are half dead before we understand but not one in ten and half cured when we do.

EXPERIENCE WITH A YOUNG ORCHARD.

MESSRS. EDITORS:—Ten years ago I set out a young apple orchard, of several varieties, for the purpose of obtaining choice fruit for family use, and would like to know at what age certain kinds will bear. The *Gravenstein* is more than seven inches in diameter, with a fine oval top, and has never yet produced one blossom. How long should it cumber the ground before the axe should be laid at the root, laying it low, even with the ground? The *Autumn* and *Summer Strawberry* proved to be utterly worthless, and those I have grafted to better sorts. The *Fallow Bellflower* did not produce one fair specimen in a dozen, and they also have been grafted. *Ribston Pippin* proves to be water-cored, consequently is of small value. *Pek's Pleasant* is a fine looking apple, but its keeping qualities are bad, becoming mealy, and quite tasteless. The soil is a sandy and gravelly loam combined, and I should like to know what the experience of others have been with the kinds named, upon a similar soil.

The *Morris White* peach has borne but one season in ten, and were very indifferent peaches, although one of the trees stands in the yard where the hogs have run most of the time. I think I shall cut these trees down, together with a few other sorts that have not borne at all.

A. G. PERCER.

REMARKS.—Our correspondent, we regret, did not give his place of residence, and we have retained his communication some time in hopes to hear further. Here the *Gravenstein* bears early, and we think our correspondent's trees must be in a rich soil and making a vigorous growth of wood. The *Yellow Bellflower* is not grown extensively here, but its reputation is good, and there is a great demand for trees at our nurseries. We have seen it in great perfection in the Philadelphia market. *Ribston Pippin* is the favorite English apple; not so good here as some of our fine sorts, but much esteemed in parts of Canada and Maine. *Pek's Pleasant* is a fine apple, and we have heard nothing against its keeping qualities. We believe there are two kinds of peaches cultivated as the *Morris White*—one very fine, the other inferior.

HERBACEOUS PEONIES, &c.—(J. W., Holley, N. Y.)—Peonies may be transplanted either in the spring or fall, though we prefer autumn planting for all herbaceous plants. On your clay, underlaid with lime-rock, dwarf pears would do well, plums excellent, and so would the small fruits.

The grape crop around Cincinnati is said to be the largest ever grown there, and is estimated as worth one million dollars.

CAKES, SYRUPS, JAM, &c.

CRISP GINGER CAKE.—Three lbs. of flour; 1 of sugar; 1 of butter; 3 tablespoonfuls of ginger—and wet it with molasses. Roll it thin.

GINGER-BREAD NETS.—One and one-half lb. of flour; 3/4 lbs of sugar; 3/4 lbs of butter; some cloves and cinnamon pounded fine; 1 oz. of ginger—mix well together, then make it in a stiff dough with molasses, roll thin and cut in small cakes.

GINGER CUP CAKE.—Three cups of flour; 1 of sugar; 1 of molasses; 1 of butter; a tablespoon of ginger; 1 teaspoon of saleratus; 3 eggs. Bake in pans.

GOLDEN CAKE.—One-half lb. flour; half lb. of butter; the yolks of 7 eggs; the yellow and juice of 1 lemon; 1 teaspoon of cream tartar; half teaspoon of soda.

BLACKBERRY SYRUP.—Two quarts of juice; 1 tablespoon of loaf sugar; half oz. of nutmeg; half oz. of cinnamon; one-fourth oz. of cloves; one-fourth oz. of allspice. Boil a short time, and when cool add 1 pint of brandy.

CURE-ALL SALVE.—Six cents worth of Burgundy pitch; 6 cents worth of laudanum; 6 cents worth of gum camphor; 2 cents worth of wax. A piece of rosin as large as a turkey's egg. Put the Burgundy pitch, rosin and beeswax into a new earthen mug, melt over a slow fire; when nearly cool put in the camphor and laudanum, and stir it until it is cold.

ELDERBERRY JAM FOR COLDS.—One quart of elderberries; 1 lb. of loaf sugar; 1 teaspoon of water—let them boil slowly for an hour. If preferred without seeds, strain the berries after boiling a few minutes before the sugar is added. This is useful and agreeable for colds. Take it through the day or at night when the cough is troublesome. It is said also to purify the blood, and is taken to prevent erysipelas. UNKNOWN. Salom Co., N. J., Aug., 1859.

MAKING HARD SOAP.—Some, here away, make a pleasant hard soap to use, and a superior one, by this recipe:—6 lbs. of soda; 8 lbs. of stone lime,—put in a boiler with 4 pails of soft water, and simmer slow 2 or 3 hours, not boil, or it will not settle well. Skim off the clear liquid, add 1 more pail of water, 8 lbs. of grease, 1 teaspoon of salt, and boil until it becomes soap, then pour it out to cool—after which cut it up. —A. S. SCHUBERT, Gloucester Co., N. J., Aug., 1859.

HOW TO KNIT "RAILROAD" STOCKINGS.—Set up the required number of stitches in the usual way—knit two finger lengths for a woman (one and a half for a child), without seam or narrowing—then drop every other stitch and finish off the toe in the usual manner. Let the dropped stitches run down to within an inch or two of the top—fasten with a needle and thread and your stocking is done. They fit nicely to the foot and are just the thing for a hot day. Will some one tell me how to make "Cream Pies"?—C. P. M., Medina, N. Y., 1859.

Advertisements.

IMPORTANT TO FARMERS AND DAIRYMEN.

We would respectfully announce that we have become the Publishers of that Valuable and Beautiful Work,

MILCH COWS

AND DAIRY FARMING, The Best Book Extant on the Subject.

Comprising the Breeds, Breeding and Management, in Health and Disease, of Dairy and other Stock; the Selection of Milch Cows, with a full explanation of Guernsey's Method; the Culture of Forage Plants, and the Production of Milk, Butter and Cheese; embracing the most recent improvements, and adapted to Farming in the United States and British Provinces, with a Treatise upon the Dairy Husbandry of Holland; to which is added Horsfall's System of Dairy Management.

BY CHARLES L. FLINT, Secretary of the Massachusetts State Board of Agriculture; author of "A Treatise on Grasses and Forage Plants," &c.

FULLY AND BEAUTIFULLY ILLUSTRATED WITH 130 ENGRAVINGS.

12mo., 446 pp. Price \$1.75.

The chapter on the Diseases of Dairy Stock, mostly prepared by Dr. C. M. Wood and Dr. J. H. Dadd, is worth many times the cost of the Book.

OPINIONS OF THE PRESS.

MILCH COWS AND DAIRY FARMING.—Charles L. Flint, of Boston, Secretary of the Massachusetts Board of Agriculture, is the author of a new work upon a subject never before fully treated in this country, which, if we mistake not, will prove the most valuable book for universal use among farmers that has ever been published in this country. There is scarcely anything worth knowing about how to select a cow, how to treat her, and how to make butter and cheese, that cannot be found in this volume, which contains numerous illustrations, besides its concise language, carefully written from all the best authorities, and much personal observation. It is a work that was much needed, and one that in recommending we shall do good to the farmer interested. It is published on good paper, clear type, with many well-cut wood engravings, and contains over 400 pages, and we suppose, will sell for \$1.75.—N. Y. Tribune.

This work is marked by the clearness and perspicuity which have characterized Mr. Flint's previous productions. It contains an account of the most cultivated practice in this country; the details of the dairy husbandry of Holland, and the most recent and productive modes of management in English dairy farming, embracing a large amount of practical and scientific information not hitherto presented to the American public in an available form.—Salem Gas.

We recommend the work to every one who keeps a cow, or intends to do so.—Ohio Farmer.

We recommend it as a matter of economy, because, if studied, it cannot fail to impart facts of more value to most dairy-men and dairy-women than several times its cost.—New England Farmer.

It can be ranked as a standard American Dairy Book,—the best we have on the subject, and yet issued upon the subject.—Country Gentleman.

The more we examine the book the better we like it. To say that it is superior to any work hitherto published on that subject, is not enough; it is a better book of its kind than we had hoped to have an opportunity of welcoming to the shelves of our agricultural libraries.—Wisconsin Farmer.

PUBLISHED BY

PHILLIPS, SAMPSON & COMPANY,

13 Winter Street, Boston.

Sold by all Booksellers and Periodical Agents throughout the country.

N. B.—Copies will be sent, postage paid, on receipt of the advertised price. A dollar bill and eight three-cent stamps may be enclosed and sent by letter to the publisher for a single copy. Or ten copies will be sent to any address in the United States, postage, or freight paid, for ten dollars. Any Bookseller, Periodical Agent, or Wholesale Dealer, can procure a copy by mail, if requested, at the wholesale price. Agents wanted in every county in the United States, to dispose of this new and instructive work, which is in universal demand, and which needs only to be seen and examined in order to be appreciated by that numerous and intelligent class for whom it was especially designed.

IN PRESS.

And will be Published September 1st, 1859. A new and enlarged edition, uniform with the above, of another valuable Agricultural Work, by the same author, to be issued in the same elegant style, entitled a

PRACTICAL TREATISE

On Grasses and Forage Plants,

Comprising their Natural History, comparative Nutritive Value, Methods of Cultivation, Cutting and Curing, and the Management of Grass Lands, Fully and beautifully illustrated.

PHILLIPS, SAMPSON & CO.,

601-cowst 13 Winter Street, Boston.

PUBLIC SALE OF DEVON CATTLE AND SOUTH-DOWN SHEEP.

On WEDNESDAY, 7th September next, at 10 o'clock A.M., at my farm on Grand Island, near Buffalo, I will sell my large and thoroughbred Devon Cattle, consisting of upwards of 30 Cows, Heifers, Bulls, and Bull and Heifer Calves.

I will also sell at the same time 100 thoroughbred South-Down Sheep, and 100 or more choice grade Breeding Ewes, of Cotswold and South-Down crosses—the best class of Mutton Sheep. Also, half a dozen superior young white Friesian cows.

Terms will be *pound, and without reserve*. If there are purchasers to buy the Stock, as I am going out of stock breeding altogether.

On sums over \$50, and up to \$100, six months; and sums over \$100, a year's time will be allowed, approved notes, with interest; or a liberal discount will be made for cash.

The Stock will be delivered to the purchasers at either of the Railroad Stations in Buffalo, Black Rock or Tonawanda, or at the Steamboats in Buffalo, if required.

Catalogues of the Stock will be sent by mail to those who send for them.

A Steam Ferry Boat will cross the river every hour between Lower Black Rock and the Farm on the day of sale. The Stock can be seen at any time previous by calling at my residence.

Black Rock, N. Y., August 1, 1859. LEWIS F. BUCKLEY.

HOMES FOR ALL.

New York for the table lands of Tennessee the first week of August. We intend to fit out companies of persons seeking new homes in Virginia about the 1st of September. We therefore desire those who wish to unite, to furnish us with particulars of their wants, means and preferences, that the best possible provision may be made for them.

The rapid advance of the price of land, and the fact that the surplus of the Emigration is the grand, distinctive feature of our enterprise. We have the pleasure of assuring our friends of the success of those who have already gone on, and of the prosperity and perfect health which has attended them.

Please address FRANCIS W. TAPPAN, President, or JOHN L. UNDERWOOD, General Agent American Emigrant and Homestead Company, No. 146 Broadway, New York.

THE BEST GRAIN DRILL IN AMERICA!

It is so arranged as to Sow or Plant, with equal facility, all kinds of Seed, from the smallest Grass Seed to Corn or Rye, in the most perfect manner. It is also adapted to every description of Concentrated Manure, such as Guano, Lime, Ashes, Gypsum, Poudrette, Bone Dust, &c.

Outs and descriptions were given in a late number of the Rural May 14th.

Price of 7 Tube Drill, \$70

" 9 Tube Drill, \$90

" 11 Tube Drill, \$110

" 13 Tube Drill, \$130

" 15 Tube Drill, \$150

delivered on board boat or cart.

For further information, Circulars, &c., address I. W. BRIGGS, Agent, at Macedon Depot, near the Erie Railroad, Macedon, N. Y.

BICKFORD & HOFFMAN.

Guano!—The superiority of Phosphate over Ammoniacal fertilizers, is now well understood. The subscribers call the attention of Farmers to the SWAN ISLAND GUANO, which for richness in Phosphates and Organic matter, and its solubility, is unsurpassed.

It can be had at \$40 per ton of 2,000 lbs., and liberal discount will be made by the cargo.

Circulars, with directions for use, may be had on application at our office.

FOSTER & STEPHENSON,

65 Beaver Street, New York.

Agents for The Atlantic and Pacific Guano Co.

A VALUABLE BOOK FOR INVALIDS.

By mail, and not to be paid for until received, read, and approved of. If not approved, no charge. Dr. S. A. J. P. RICH'S "Lectures on the Causes, Prevention, and Cure of Diseases of the Lungs, Throat, Heart, Stomach, Bowels, Liver, Kidneys, Skin, etc., Female Complaints, and Chronic Diseases generally, on the Laws of Life, and the true method of curing these diseases, and preserving life and health to old age. A volume of 12 pages, with 25 illustrations, bound. We will forward a copy of it, post paid, to any address that may be sent us, and the price, 50 cts., may be refunded in stamps or otherwise after the book is received and approved of. If returned to advance the price is 40 cents. Apply, giving Post Office, County and State, to

B. R. FITCH & CO.,

714 Broadway, New York.

HOMES FOR ALL!

FOR SALE.

At \$125 per Acre, desirable FARMING LANDS in Western Virginia, Eastern Kentucky, and Middle Tennessee. Also, Valuable Lands in Sullivan and Elk Counties, Pa., for sale.

Apply to the AMERICAN EMIGRANT AND HOMESTEAD COMPANY, No. 146 Broadway, New York.

ASTOR HOUSE, Broadway, New York.

All the Milk used here comes from a farm carried on for the express and sole purpose of furnishing Milk, Vegetables, Poultry, Eggs and Pork to this House. The Cows feed in the best of Hay and Clover, and to Summer and Winter Pastures and Mead only. O. A. STEVENSON.

The Reviewer.

THE PROGRESSIVE PRIMARY ARITHMETIC, for Primary Classes in Public and Private Schools. By HENRY N. ROBINSON, A. M., author of a full course of Mathematics. [pp. 80.] New York: Wilson & Putnam.

THE PROGRESSIVE INTELLECTUAL ARITHMETIC, on the Inductive Plan. Being a sequel to the Progressive Primary Arithmetic, containing many Original Forms of Arithmetic applicable to a great variety of Practical Questions, and designed for the more Advanced Classes in Common Schools and Academies. [pp. 178. Same author and publishers as above.]

THE PROGRESSIVE PRACTICAL ARITHMETIC, containing the Theory of Numbers, in connection with concise Analytic and Synthetic Methods of Solution, and designed as a complete Text-Book on this Science, for use in Common Schools and Academies. [pp. 334. Same author and publishers as above.]

Under the general title of "Robinson's Mathematical Series," Messrs. Wilson & Putnam are publishing what they claim to be "the most complete, practical and scientific series of Mathematical Text-books for Common Schools, Academies and Colleges, ever issued." The series will embrace fourteen distinct volumes, the first three of which (named above), we have received from Mr. D. W. Foss, of this city, the General Agent for Introduction. The volumes before us are very handsomely executed, while the style and arrangement of the contents, and the matter itself, will bear critical inspection. We are inclined to believe that this excellent series by Dr. Robinson (aided by Mr. Foss, a teacher of much experience), will prove the most useful and popular of its class yet published in this country. The unimpaired ability of the author, and his long experience as a practical mathematician and teacher, are guarantees that the series will be completed with fidelity to the public, and in such manner as to augment his already wide reputation. We cordially commend these works to the attention of teachers, trustees and parents. For sale in Rochester by Adams & Darnett.

MILCH COWS AND DAIRY FARMING; Comprising the Breeds, Breeding, and Management, in Health and Disease, of Dairy and other Stock; the Selection of Milch Cows, with a full Explanation of Goodness of milk; the Culture of Forage Plants, and the Preparation of Milk, Butter and Cheese, embodying the most recent Improvements, and adapted to Farming in the United States and British Provinces. With a Treatise upon the Dairy Husbandry of Holland; to which is added Horatio's System of Dairy Management. By CHARLES L. FARRIS, Secretary of the Massachusetts State Board of Agriculture; and author of "A Treatise on Grasses and Forage Plants," etc. Liberally illustrated. [12mo., pp. 416.] Boston: Phillips, Sampson & Co.

This valuable work—altogether the best and most complete of its class extant in this country—has passed into the hands of two enterprising publishers named, by whom a new edition has just been issued. The important subjects enumerated in the title are severally discussed with ability, and in such style as to interest and instruct those desiring practical and reliable information thereupon. Those who wish light upon any branch of the general subject of Milch Cows and Dairy Farming, will be very likely to find it in this work, while to every one engaged in the dairy business it will prove invaluable, if not indispensable. As it is by far the best American Dairy Book published, it must speedily become the standard authority on that subject, and we not only cordially commend it to the farming community, but especially to the thousands of our readers who are either engaged in or turning their attention to Dairy Husbandry.

KNITTING-WORK: A Web of many Textures, wrought by RUTH PARTRIDGE, (B. P. SHILLABEER.) [12mo., pp. 498.] Boston: Brown, Taggard & Chase.

In this volume Dame Partridge has fully maintained her reputation as a pleasing humorist and instructive moralist—for, ludicrous as are many of her sayings, the sentiments expressed are generally imbued with kindness and humanity, and a refreshing sprinkling of wit and wisdom. Combining the sage "defections" of the dame, the funny doings of the mischief-loving but good-hearted Ika, the profundity of Dr. Brown, the jolly conceits of Old Roger, and the sober sentimentalities of Widow Wadsworth—with admirable illustrations by HERRICK—the book will amuse and entertain many who ordinarily ignore merely humorous works. Interspersed with the sayings of Mrs. P. are many fine sketches and brief poems, both humorous and sentimental, written in Mr. Shillabear's pleasant style, and worthy of being presented, as they are, in a beautiful volume. "Knitting-Work" is truly a "web of many textures," well and skillfully wrought, and will please many classes of readers. Sold by DABROW & BROS.

THE LIFE OF GEN. GARIBOLDI. Written by himself. With Sketches of his Companions in Arms. Translated by his Friend and Admirer, THOMAS DWIGHT, author of "A Tour in Italy in 1831," "The Roman Republic in 1849," etc. Embellished with a fine Engraved Portrait on Steel. [16mo.—pp. 350.] New York: A. B. Barnes & Burr.

This publication of the autobiography of GARIBOLDI is timely, for many are inquiring about the hero of Italy—the most popular and esteemed man who participated in the recent struggle for Italian independence. The translator is said to have a competent knowledge of the Italian language, to be well versed in the Italian question, and familiar with the leaders in the revolution of 1858. The work before us is certainly one of great interest, and should be perused by all who wish to understand Italy, and be reliably informed as to the life of its patriot chief. Rochester—E. DABROW & BROS.

THE ROMAN QUESTION. By E. ANST. Translated from the French by H. C. ANST. [16mo.—pp. 319.] New York: D. Appleton & Co.

This is a "stunning" work—replete with facts, wit and satire. The author is evidently not only a genius, but fully informed in regard to the question discussed; indeed he studied it thoroughly in the Papal States, and therefore speaks or writes advisedly, as well as severely, in exposing the corruptions of the Government of Rome. Treating an important question in an able and effective manner—and at a time when the attention of the civilized world is directed to Italy—this work cannot fail of exerting a wide influence. Rochester—Adams & Darnett.

PERSONAL RECOLLECTIONS OF THE AMERICAN REVOLUTION. A Private Journal. Prepared from Authentic Documents & Records. Together with Reminiscences of Washington and Lafayette. Edited by SIDNEY BARCLAY. [16mo.—pp. 351.] New York: Rudd & Carlton—1859.

This is a very interesting volume, comprising graphic and no doubt truthful pictures of what occurred on the Eastern end of Long Island during the Revolutionary war. It is the more interesting and impressive from the fact that its statements are given in the form of a diary, "written by a mover among, and an eye-witness of, the scenes described." The volume is in unique and beautiful style. Rochester—D. M. DAWSON.

THOMAS PARKER'S EXPERIENCE AS A MINISTER.—With some Account of his Early Life, and Education for the Ministry; contained in a Letter from him to the Members of the Twenty-Eighth Congregational Society of Boston. [pp. 182.] Boston: Rufus Leighton, Jr.

Mr. PARKER is considered one of the most remarkable divines of the present day, from the fact that he entertains and boldly proclaims peculiar views in regard to theology and cognate subjects. The work before us will prove of interest to those who wish to know more of the man and the religious and moral sentiments he expresses.

HARK! 'TIS THE LOWLY SIGHING.

Andante.

1. Hark! 'tis the low-ly sigh-ing 'Of ze-phyr's o'er the sea. The sea-bird swift is fly-ing Home to its mountain tree.

2. High o'er our heads is shin-ing The faith-ful orb of night: Haste, ere its rays de-clin-ing; Haste, by its mel-low light.

3. Quick-ly burst the ma-gic spell That binds thee to the shore. O, breathe the word; yes! say fare-well to those thou'lt meet no more.

4. Our home shall be the bil-low; The dark blue vault our dome; The sil-ver spray our pil-low; Our joy the soow-y foam.

5. Na-ture soft is sleep-ing; No harm to thee can come: Maiden, cease, oh, cease thy weep-ing; Fly to my o-cean home.

6. Rest-less is my bonny boat: It waits for thee and me. Swift-ly, gen-tly we will float; Float o'er the moon-lit sea.

7. Then up-on the bounding sea We'll speed our skiff a-long. Waves shall yield to thee and me A hap-py, joy-ous song.

8. Hearts like thine should know no care; Then fly, my maid, with me: Gen-tly blows the mid-night air, To waft us o'er the sea.

Spice from New Books.

Young Men in Different Countries.

EDMUND ABOUT, in his book, "The Roman Question," makes the following comparison of young men of twenty-five in different countries. After describing the education of young Roman nobles, he says:

One fine day they attain their twenty-fifth year. At this age an American has already tried his hand at a dozen trades, made four fortunes, and at least one bankruptcy, has gone through a couple of campaigns, had a lawsuit, established a new religious sect, killed half-a-dozen men with his revolver, freed a negro, and conquered an island. An Englishman has passed through some remarkable examinations, been attached to an embassy, founded a factory, comforted a Catholic, gone round the world, and read the complete works of Walter Scott. A Frenchman has rhymed a tragedy, written for two newspapers, been wounded in three duels, twice attempted suicide, vexed fourteen husbands, and changed his politics nineteen times. A German has slashed fifteen of his dearest friends, swallowed sixty hogheads of beer and the Philosophy of Hegel, sung eleven thousand couplets, compromised a tavern waiting maid, smoked a million pipes, and been mixed up with, at least, two revolutions. The Roman prince has done nothing, seen nothing, learnt nothing, loved nothing and suffered nothing. His parents or guardians open a cloister gate, take out a young girl as inexperienced as himself, and the pair of innocents are bidden to kneel before a priest, who gives them permission to become parents of another generation of innocents like themselves.

Watering Places.

"Are you going to any watering place this summer?" asked a young friend of Mrs. PARTRIDGE, on one of the rainy days the present week. She had just put up the window to keep out the damp and disagreeable air, and pulled her handkerchief up over her shoulder to keep off the chill. "Watering places," said she, with a tap on her box, at the same time looking at Ika, who was engaged in making a kite out of the last Puritan Recorder, that the dame had laid by for her Sunday reading; "watering places I don't think much of, now-a-days. There ain't no need of 'em since the lucky-motives have run off the stages; but once, as the old pumps stood by the wayside, under the ambiguous trees, with a hollow log for the cattle to drink out of, it seemed like a horse in a desert, as some of 'em used to say." "My dear madam," said her young friend, "I mean the fashionable watering places where people go to spend the summer." "O," she replied, "that's it, is it? Well, we needn't go away from home to find a watering place to-day; and them that do, depend upon it," and here she laid her mouth close to his ear, and spoke in a whisper—"they go for something else besides the water." She gave him a queer look as she said this, and pointed significantly to the little buffet in the corner, where an old-fashioned cut-glass decanter stood, surrounded by half a dozen little glasses, as if they were young decanters just hatched out; but what she meant we dare not attempt to explain. Ika just then finished his kite by burning the holes for the belly band with the small point of Mrs. PARTRIDGE'S scissors, that had been heated red hot for the purpose.—*Knitting Work, by Mrs. Partridge.*

The Transfiguration of Memory.

As there was an hour when the fishermen of Galilee saw their Master transfigured, His raiment white and glistening, and His face like the light,

so are there hours when our whole mortal life stands forth in celestial radiance. From our daily lot falls off every weed of care; from our heart-friends, every speck and stain of earthly infirmity. Our horizon widens, and blue, and amethyst, and gold touch every object. Absent friends, and friends gone on the last journey, stand once more together, bright with an immortal glow, and like the disciples who saw the Master floating in the clouds above them, we say, "Lord, it is good to be here!" How fair the wife, the husband, the absent mother, the gray-haired father, the manly son, the bright-eyed daughter! Seen in the actual present, all have some fault, some flaw; but absent, we see them in their permanent and better selves. Of our distant home, we remember not a dark day, not one servile care, nothing but the echo of its holy hymns, and the radiance of its bright days—of our father, not one hasty word, but only the fullness of his manly vigor and noble tenderness—of our mother, nothing of mortal weakness, but a glorified form of love—of our brother, not one teasing provoking word of brotherly freedom, but the proud beauty of his noblest hours—of our sister, of our child, only what is fairest and sweetest.—*The Minister's Wooing, by HARRIET BEECHER STOWE.*

Autumn Night.

I stood by the window, looking at the moon rising behind the forest—the ravaged forest that lifted its torn trunks, bereft of their summer offspring, mutely and pitifully to heaven. The moon duneoned by clouds, but gleamed through open bars, and its vast red disk seemed to set all the forest ablaze. In the morning there was a wind, and I walked forth, ushered by troops of leaves, that rushed before me and danced in my path as if I were a monarch; some came clamoring, jostling, and eager behind me, like a swarm of hungry place-seekers. But at night the wind was hushed, and upon the meadows, the garden walks, the roads, the dead leaves lay ghostly still. There was a hush everywhere. The moon came mately up, the trees silently darkened themselves against its light, the shadows crept like ghosts, the roads lay white as grave stones. So melancholy and deathlike was the scene, that I dropped the curtain, and stepping stealthily back to my chair, wheeled it before the fire, slumberously droning in the full-mouthed grate.—*"A Bachelor's Story," by OLIVER BONOM.*

Chimneys.

I love my hearth, and the fancies that come to life within its genial circle; so do I love the green sweetness of summer. But this I claim:—the great invention of man is the chimney. When that was conceived, civilization became complete; humanity was blessed; the barbaric and nomadic fled before it; peace and good will curled up in every wreath of smoke that issued from its mouth. Our chimneys open up to heaven, and through them ascend burnt incense to all the amenities of life.—An old quaint writer calls them "windpipes of hospitality."—*"A Bachelor's Story."*

We cannot all of us be beautiful, but the pleasantness of a good humored look is denied to none. We can all of us increase and strengthen the family affections and delights of home.

Dr. FRANKLIN observes, "The eyes of others are the eyes that ruin us." If all but myself were blind I should want neither fine houses nor fine furniture.

He is happy whose circumstances suit his temper; but he is more excellent who can suit his temper to any circumstances.

It is with the diseases of the mind as with those of the body; we are half dead before we understand our disorder, and half cured when we do.

YOUNG RURALIST.

POISON IVY.

SOME time since a correspondent inquired in this department for a cure for the effects of *Poison Ivy*. To this inquiry we have received many responses. NATHAN HARDING, of Lakeville, N. Y., says:—"To prevent the poison, rub the part that it is presumed will be affected, with wild or Great Celendine, thoroughly; or in winter, with a strong solution of the herb. To cure when poisoned, use a poultice of pulverized blows of hollyhock and Indian meal. Change every fifteen or twenty minutes."

A. WILSON, of Marcellus, N. Y., says:—"The poison from ivy may be cured by salt and strong vinegar. I have been poisoned twice heretofore, and cured it by three applications as above."

C. S. E., of Camillus, N. Y., gives the following remedy:—"Take a muskrat's tail (if dried the better;) cut in pieces half an inch long, crosswise; put this into one pint of sweet milk; simmer over a slow fire three-quarters of an hour; cool, and wash the part affected. After six hours, warm with warm water and apply again. Take a little pennyroyal or peppermint tea, to protect the stomach, as it may make you feel a little qualmsy."

D. L. K., of Oaks Corners, N. Y., says he knows from experience that the following is a sure cure:—"Take the juice of *Lobelia*, or Indian tobacco, and apply it to the part affected, by rubbing it on freely. It can be found in almost any field in the summer."

R. C. P., of Canandaigua, N. Y., gives the following facts in regard to a severe case of poisoning and its cure:

EDS. RURAL:—Your correspondent's inquiry for a cure for poison from ivy, is answered by the following facts:—About the year 1855, my father wishing to use an ointment for sore eyes made from bittersweet, inquired of parties who were supposed to know, where it could be found, and was shown a vine, which from ignorance was supposed to be the article required. They are both vines, though not much more similarity exists between them than between the wood and grape vine. The root was chosen from which to make the ointment, and as it was dug, my father chewed large quantities of it, swallowing the juice. The same day the ointment was made, and forthwith applied to the eyes freely. The result showed that he was fearfully poisoned, and from an early experience he was fully aware that it was from ivy. The slightest contact with it had always produced more or less irritation and symptoms of poison. Now irritation and inflammation was very great and general. The face was swollen so much that an intimate acquaintance would not have known it. The eyes were nearly or quite closed, and large masses of flesh hung down below the chin from either cheek. The sufferer was confined to the bed, and the worst results anticipated. An old recipe book was consulted, after several medical gentlemen had looked very wise and shaken their heads. Wild turnip, or Indian turnip, was pronounced a remedy by the book, and as it was much esteemed and used for its cooling, refrigerating qualities, it was decided to try it, and it alone. It was grated and taken as a pow-

der, consuming in this way all the dry ones that could be obtained, while green ones were procured and steeped for a wash, bathing particularly the face; but as every part was inflamed, the application was more or less general. In this way the inflammation was abated, and full recovery attained in a week or ten days. Hourly wash as usual, and repeated doses of a teaspoonful, proved very cooling and grateful, and were kept up until the recovery was certain. Your correspondent could hardly imagine a worse case, and yet the cure was prompt and complete.

FLOWERING SHRUBS FOR MISSOURI.—Excuse me, dear RURAL, for my presumption in making a few inquiries through your valuable paper. I see in your RURAL a short piece on gardening, but given more particularly to flowers. I should like to know more about the nature of some of them, whether they will do to stand in the garden all winter, whether it is the best to put them out in the fall or spring, and where they can be had, and what is the price of the following varieties:—*Thorns*, the Double Red and Double White, the *Horse Chestnut*, the Double White, the *Rose-colored Wigilia*, and the *Calycanthus*, and much oblige one of your many readers. As we live in the north-east corner of Missouri, I suppose it would be difficult to get those flowers here without injuring them, but I am a great lover of flowers, and having never seen any of those varieties, I am willing to risk something to procure them.—M. M. L., Lewis Co., Missouri, July, 1859.

REMARKS.—All the varieties mentioned by our correspondent are perfectly hardy. The *Thorns* are small trees, the *Double White Horse Chestnut* is of the same size and habit as the common *Horse Chestnut*. The *Calycanthus* and *Wigilia* are small shrubs. They can be obtained at almost any nursery where a good variety of ornamental trees and shrubs are kept, and may be planted either in the autumn or spring. If you have to order them from a distance it would be best to do so in the fall. As agents of eastern nurseries are now pretty generally traveling over the western country, perhaps you can order them of one of these. They may be sent a long distance safely if properly packed. The *Thorns* and shrubs will cost about fifty cents each, and the *Horse Chestnuts* one dollar.

THE SIMPLEST SECRET.—Twenty clerks in a store. Twenty "hands" in a printing office. Twenty apprentices in a ship-yard. Twenty men about a village. All want to get on in the world, and are expected to do so. One of the clerks will rise to be a partner, and make a fortune. One of the composers will own a newspaper, and become an influential and prosperous citizen. One of the apprentices will become a master builder. One of the young villagers will get a handsome farm, and live like a patriarch. But which is destined to be the lucky individual? Lucky? There is no luck about it. The thing is almost as certain as the rule of three. The young fellow who will distance his competitor, is he who masters his business, who preserves his integrity, who lives cleanly and purely, who never gets into debt, who gains friends by deserving them, and puts his money into the Savings Bank. There are some ways to fortune that look shorter than this old dusty highway. But the staunch men who achieve something really worth having,—good fortune, good name, and a serene old age,—all go this road.—N. Y. Ledger.

A good man, who has seen much of the world, and is not tired of it, says:—"The grand essentials to happiness in this life are, something to do, something to love, and something to hope for."

MOORE'S RURAL NEW-YORKER NEWS DEPARTMENT.

ROCHESTER, N. Y., AUGUST 27, 1859.

TERMS, IN ADVANCE:

One copy, 1 year,.....	21 00	One copy, 6 mo.,.....	11 00
Three copies,.....	5 00	Three copies,.....	5 00
Six copies,.....	10 00	Six copies,.....	10 00
Ten copies,.....	15 00	Ten copies,.....	15 00
Twelve copies,.....	18 00	Twelve copies,.....	18 00
Twenty copies,.....	26 00	Twenty copies,.....	26 00
Thirty-Two copies,.....	40 00	Thirty-Two copies,.....	40 00

And an Extra Copy, free, to every person remitting for a club of six or more copies; and Two free copies for every club of thirty or over. As a new Half Volume commenced July 3d, Now is the Time to form Clubs for either Six Months or a Year. All persons who form new clubs to commence with July, or introduce the Rural in localities where it is not now taken, will be liberally remunerated for their time and attention.

Back numbers from April or January can still be furnished, if desired. We will send Specimen Numbers, Show Bills, &c., to all applicants, and to the addresses of as many non-subscribers as may be forwarded.

DOMESTIC NEWS.

Matters at Washington.

The statement of the London *Herald*, that the United States Government has officially notified that of Her Majesty that the United States have resolved to abandon privateering as a provision of the maritime law, agreed upon at the Congress of Paris in 1856, is entirely without foundation. The administration strictly insists on its retention.

The Baden Government has recently made some declarations regarding the Expatriation question. It is declared that the Government of Baden does not require American naturalized citizens, who have been subjects in Baden, to perform duty in case they return, even if they have emigrated without consent—that is, if they return merely for a visit. It is presumed that the Expatriation controversy here, and the last letter of Gen. Cass, has had a wholesome influence abroad.

About five hundred illegal squatters are on the lands belonging to the Kaw Indians in Kansas.—The subject of preventing intrusions of this character, which extensively prevails, occupies the attention of the Commissioner of Indian Affairs, who contemplates the initiation of such means as will, at least, lessen, if not altogether remove these abuses, so dangerous to peaceful relations with the Indians, and from which the United States are bound to protect them under existing treaties.

The Washington *States* anticipates the resignation of Gov. Floyd, on account of continued ill health. It designates as his successor Hon. Chas. McKim, who for a long time occupied the chair of the War Committee of the House.

Mr. WHITEHEAD, who was banished from Mexico, where he had resided for many years, will now return to England in the behalf of British bondholders, and will exert himself to satisfy their claims. The church property being the basis of the transaction by which it is thought some millions of dollars will be realized for the benefit of the government, it is not thought that Serdo will make any pecuniary engagements in New York, but that he will merely take preliminary steps to that end, to be submitted to his government for consideration. His contemplated visit to President Buchanan and Secretary Cass, with a view to have a full and free talk on Mexican affairs, will doubtless have the effect to facilitate the negotiations of a treaty satisfactory to both countries.

Personal and Political.

BISHOP DAVIS, of South Carolina, has become almost totally blind. His general health is, however, good, and his vigorous mental faculties unimpaired.

POLITICIANS are promised a lively time in Kansas this fall. They have three regular campaigns in view: 1.—That on the Constitution on the first Tuesday in October. 2.—The Territorial election in November for Delegate and members of the Territorial Legislature and County Officers. 3.—If the Constitution is adopted, there is a provision by law for a State election in December. At this time a full set of State officers and Legislators are to be chosen.

An election has been held for delegate to Congress in the embryo Territory of Nevada, which resulted in the choice of a Mr. Hodge, by a vote, so far as heard from, of 253 to 103 for Judge Crane.

In the 4th Congressional district of Kentucky there is a tie vote between Jas. S. Christian, democrat, and Wm. C. Anderson, opposition. The Revised Statutes of the State provide as follows for the settlement of the votes:

If two or more persons shall be found to have received the highest and an equal number of votes for the same office, so that the election cannot be determined among candidates by a plurality of votes, it shall be determined by lot, in such manner as the board may direct, and in the presence of not less than thirty-three persons.

The Board referred to consists of the Governor, Attorney General and Secretary of State, and in the absence of either, the law provides that the Auditor or any two of them shall be a board for examining the returns.

The Times has letters from Oregon to the 14th, which state that complete returns of the recent election indicate the defeat of Logan, the Republican candidate for Congress, and the election of Stout, Democrat, by a small majority.

The Kansas Territorial Convention met on the 15th inst., at Topeka, and nominated S. W. Johnson, as delegate to Congress.

At the recent election in Oregon for Member of Congress, County Commissioners, Judges, Assessors, and Justices of the Peace, Members of the Legislature were not elected.—The Senate, elected last year, holding for four years, and the Assembly for two years. At a legislative caucus held a few days before the recent adjournment, it was found impossible for the Democracy to agree upon a candidate to fill the United States Senatorial vacancy, and no choice was made.

A CORRESPONDENT of the National Intelligencer recommends that a National Convention of the Whigs of the United States be held on the 4th of July next, at Richmond, Baltimore, or Philadelphia, for the purpose of nominating candidates for the office of President and Vice-President of the United States, or, if separate nominations be deemed inexpedient, for the purpose of selecting among the candidates already in the field such as be most eligible to a majority of the Whig party.

By later accounts from Salt Lake City we learn that the Mormons have nominated, for delegate to Congress, Captain Hooper, formerly Secretary of Utah, to succeed Dr. Bernhisel.

News Paragraphs.

By the report of the Chamber of Commerce, it appears that there is 252,000,000 pounds of brown sugar used in the refineries of New York City every year, producing on an average, 97,000 tons of refined sugar. Verily, the sweet tooth of the country is an enormous one.

The assessors in Ohio, under an act of the Legislature, have endeavored to ascertain the total number of sheep killed and injured by dogs during the year 1858. The returns from only a few counties have been published, but these disclose a fearful amount of slaughter. In eleven counties 7,054 were killed, and 9,800 wounded, the aggregate loss being \$25,000.

The St. Louis (Mo.) Gazette of the 9th instant, speaks of the arrival of a number of Mormons from Salt Lake in that city, who "report that four or five thousand recalcitrant Saints will make their exodus from the Valley this summer."

CAPT. POPE, the engineer officer having charge of the Artesian Well expedition to the waterless plains of the West, has returned to St. Louis. It is said that Capt. Pope's experiments prove successful, and that he succeeded in obtaining water by boring to a depth of one thousand four hundred feet—the water, when found, rising to within fifteen feet of the surface. He thinks it practicable to supply the desert locations he has visited with water enough to sustain all the travel that may pass them.

The steamer Spread Eagle has returned from the longest voyage on record, to St. Joseph, Mo. She went 850 miles above the mouth of the Yellow Stone, on the Missouri, which is 550 miles further than any steambot had ever gone before, and 2,500 above St. Joseph. The trip occupied over two months, and is, on account of its great length, one of the most remarkable voyages in the annals of river navigation.

The *Overland Friend* of China, in an article referring to the great rebellion in China, remarks that there was no very clear evidence that it would succeed, or no great certainty that the government would be able to subdue it. A letter from one of the provinces in partial possession of the rebels, states that the insurgents were publishing the Bible or certain parts of it, demolishing idols or certain Buddhist images, opening schools, &c.

WITHIN five years, in Indiana, there have been erected twenty-seven hundred school houses, at an expense of eleven hundred thousand dollars. In the last year six hundred and fifty school houses were built at a cost of three hundred thousand dollars. This sum is obtained by a special school tax that was paid by the people with general cheerfulness.

RUSSIAN DEMAND FOR AMERICAN BOOKS.—The New York *Evening Post* observes that few people have any idea of the extent to which some of the book publishers in New York are interested in the Russia trade. Last week one publishing firm filled an order for three hundred dozen American works, chiefly of American authors, with a few reprints, for St. Petersburg. These American books go to stock a circulating library in the Russian Capital.

The escape of the prisoners from the California State Prison is explained. The rascals were set to work originally to build their own cells. Taking a practical view of the subject, they varied slightly the plans of the architect, and laid the stones with reference to the easiest manner of breaking out; and for the greater convenience, they buried in the mortar, drills, bars, chisels, and other tools.

The *Mining Gazette*, published at Houghton, Portage Lake, Michigan, states that a new mineral has been discovered in that locality by Dr. F. A. Genth, of Philadelphia. He has christened it the "Whitneyite." It is an arsenuret, containing about twelve per cent. of arsenic.

STATE DEBT OF PENNSYLVANIA.—The Philadelphia *Inquirer* says the Treasurer of the Commonwealth advertises for a quarter of a million of dollars worth of Pennsylvania fives. The diminution of the State debt progresses quietly and steadily at the rate of about \$1,000,000 per annum. The interest is paid regularly, without borrowing, or the slightest financial difficulty.

TERRIBLE GALE.—Advices of the 2d inst. from Picton (N. S.) received at Boston on the 10th inst., state that that region had been visited by a severe gale, doing much damage, and occasioning a fearful loss of life. On the south side of Prince Edward Island, especially, the wrecks of vessels had been numerous, and the loss of life amounted to fifty.

IS NAPOLEON'S STAR ON THE WANE?—Many men now in Europe are of opinion that Louis Napoleon has reached the zenith of his good luck, and that his fall will be as rapid as his rise. Such a suggestion was made soon after the news of the peace treaty was received. Napoleon does not appear to have any very warm friends among the rulers of Europe. Even Russia, usually spoken of as his close ally, has, according to late advices, assured Prussia of her friendly disposition in any future European political complications.

ARRIVAL OF THE OVERLAND MAIL.—The Overland California mail of the 25th ult. arrived at St. Louis on the 16th inst. The papers furnish a few additional items of news. A fire had occurred at Grizzly Flats, which destroyed three buildings. Loss not stated. The political excitement in the State was increasing, and the quarrel between Senators Broderick and Gwin had reached personalities of the grossest character. Advices from the Sandwich Islands state that the new ten per cent. tariff was not to be enforced until September, 1860.

DISCOVERY OF AN ISLAND.—The New Bedford *Mercury* learns by a private letter that Captain R. D. Eldridge, of the bark Amazon, of Fairhaven, has discovered an island in the Pacific Ocean, several hundred miles from any land laid down on the charts. Captain Eldridge says of the island: "It is in latitude 0 45 N., and longitude 175 35 W.; very low and dangerous, and is, I expect, the last resting place of the crew of some of the ships which have missed in years gone by. I ran along the lee side within a pistol shot of the beach, but it was too rough to land; and after convincing myself that there was no living person upon the island, squared away again. On the highest part of the island is a house apparently built from pieces of a wreck, with a flagstaff at one end, from which still dangled the halyard block. Near the house were several little hummocks, each with a tall upright stone upon it, evidently the graves of the poor fellows who had escaped from the wreck of their vessel, and died on this dreary spot, where perhaps they had spent months vainly looking for a passing sail to relieve them from their weary prison."

FROM PORTO CABELLO.—The bark Dollett has arrived at Philadelphia with Porto Cabello dates of the 1st inst. Gen. Falcon, at the head of 600 revolutionists, had landed a few miles below Porto Cabello, and being joined by Gen. Guavara, was preparing to attack the city. He had prepared a plan to enter the city, but it had been foiled by the arrest of his accomplice in the city. Falcon was enabled to make the landing he had, through the complicity of some of the government officials.—None of the Government vessels interfered until the landing was effected. Porto Cabello was defended by 200 government troops and 6 pieces of artillery.

DESTRUCTIVE CONFLAGRATION AT OSWEGO.—The Ontario Grain Elevator, owned by Frederick F. Cunningham, was burned on the morning of the 17th, with the exception of the engine building.—The warehouse contained about 150,000 bushels of Chicago spring wheat and corn. Loss estimated at \$150,000. Insured mostly in New York Companies. A Canadian schooner, lying at the warehouse, was badly burned.

FOREIGN NEWS.

We gather the following intelligence from the files of European journals received during the week:

GREAT BRITAIN.—The English Parliament passed all estimates. It was expected to adjourn on the 13th.

Volunteers for the 30,000 naval reserve will enter for five years, and will be to the navy what the militia is to the army.

The steamship Great Eastern will be delivered by her contractors, completed, on the 18th of August.

The strike among the builders at London was more serious. It was expected that 40,000 would be unemployed the day the steamer sailed.

On the 8th the affairs of Italy were debated in both houses of Parliament. In the House of Lords the Marquis of Normandy inquired if there was any objection to produce the papers relative to the project of peace, transmitted to Austria before the treaty of Villafranca. He denounced the conduct of the government as one-sided, and as evincing no desire to maintain neutrality. Lord Woodhouse, in reply, reiterated the statement that England sent terms of peace to Austria at the request of France, but without giving any advice or expressing an opinion on the subject. He said it would be most inconvenient to produce the documents in the present state of negotiations.

In the House of Commons, Lord Elcho moved an address to the Queen, declaring that it would be inconsistent with the honor and dignity of England, after having preserved a strict neutrality, to take part in any conference settling the details of the peace, the preliminaries of which having already been arranged between the Emperors of France and Austria. He praised the neutral course of the late Governor, and censured the anti-Austrian feeling evinced by the present Cabinet. Mr. Gladstone said that Lord Elcho's motion was not relevant to the present position of affairs. The government had no intention of taking part in settling the details of the peace on the basis of the Villafranca treaty. The belligerents themselves would settle those details, and what would remain to be settled would be the great question of European policy, in which he thought England should play her traditional part. He defended the government, and called for a decisive vote against the resolution. Lord John Russell again proclaimed that the government had not the slightest intention to go into a European Congress to settle the details of the peace of Villafranca. Nobody ever invited them to do so. He admitted that there were difficulties in the way of the government entering in the Congress, and matters were in that state that no determination had been come to. He appealed to the House to leave the question in the hands of the Ministers, who would decide when the whole facts of the case were before them.

FRANCE.—A telegram from Paris says, all vessels at different ports are being disarmed, and those in Rhodes have been ordered back into port. Disarmament has also commenced at Toulon, and orders given to disband all sailors having served five years.

The one hundred and fifty millions unexpended of the late loan is to be devoted to internal improvements.

The Zurich Conference met on the 8th, according to the announcement. The Conference was fully constituted as follows:

Austria—Count Colloredo and Baron Merenberg.

France—Baron Bourquigny and Marquis Bournayville.

Sardinia—Chevalier Desambors and Chevalier Joccant.

The government of Zurich had welcomed the Embassadors, and were to give them a public dinner on the 11th. The first formal sitting of the Congress took place on the 8th, at which the Sardinian representatives assisted. The second sitting was on the 9th, but nothing transpired as to the proceedings.

The Paris correspondent of the *Times* says the Sardinian Minister of Foreign Affairs had declared to Count Russell, the French Commissioner, that Sardinia could not accede to the terms of France so far as to make efforts to have the Grand Dukes recalled, and that it would be preposterous to expect Piedmont to do so, contrary to the wishes and interest of Italy.

The Paris *Constitutionnel* has an article from the pen of M. Capagnan, entitled "Ingratitude of Italy," in which the Italians are reminded of the immense obstacles which beset the Emperor at the very beginning of the war, but which were faced and surmounted by his single will, and he reminds Italy of these obstacles. The article concludes with the following menace:—Italy must know that if the powerful hand which is extended for a moment over her is withdrawn, neither the fine speeches of the English Parliament nor the sterile sympathies of the Liberal party in Europe would hinder Austria from dominating again in Italy, and this time from Turin to Messina.

AUSTRIA.—The *Times* Vienna correspondent says the Prussian note of the 23d of August will probably put an end to the discussion between Austria and Prussia, as it is clearly proved that the Emperor Napoleon made a statement at Villafranca which was not perfectly correct. The *Journal of St. Petersburg* also declares itself in power to state "that not only were no bases for mediation agreed to, but not even discussed."—The writer adds that having had the experience that he was deceived at Villafranca, the Emperor, Francis Joseph, may probably come to the conclusion that it will be better in the future to leave diplomatic matters to his Minister of Foreign Affairs.

ITALY.—It is again stated that Piedmont formally declines entering the Italian confederacy, if Austria forms a part of it.

It was reported that an attempt was made to poison Garibaldi.

INDIA.—The Calcutta mails of July 5th had been telegraphed. The European troops were accepting their discharge in large numbers. The mutineers at Berhampore had returned to duty, except 40, who will be court-martialed.

COMMERCE.—Broadstuffs.—Richardson, Spence & Co. quote broadstuffs very dull. Flour 10@12d. Wheat very dull and quotations barely maintained. Western red 10@11d. A small parcel of new Southern white brought 11@11½d. Corn dull; mixed and yellow 5@5½d; white 5@5½d. Pork dull. Lard dull.

Clippings from Foreign Journals.

The obstinate courage of the Austrians was so conspicuous at one point of the battle of Solferino, in returning again and again to dispute an important point, that the French actually cheered them.

A Paris correspondent says of Napoleon, that he is by race an Italian, by birth a Dutchman, by school education a German, by military education a Swiss, by political studies an Englishman, and by his crown he is a Frenchman.

The Coburgs and the Lutchenbergs are the luckiest families in Europe. Poor and numerous, they have within a few years given kings, and consorts, and empresses to England, Portugal, Belgium, Sweden, Brazil, and married into the Imperial House of Russia.

VICTOR EMANUEL seems to have gained as much popularity by not participating in the peace of Villafranca as Napoleon lost by adopting it. All Northern Italy is eager to attach itself to him. Lombardy has accepted him as sovereign. Tuscany has voted in favor of annexation to his realm. Parma and Placenza have sworn allegiance to him as King. Modena has proposed to submit to him as Dictator. Bologna has petitioned him to assume the control of the affairs of the Romagna; and even Elba has sent an address praying that the island may become part of the Sardinian Kingdom.

Among the dispossessed crowned heads who solicit reinstatement at the hands of foreign Powers, a new claimant has started his grievances in the person of Gustavus Vasa, now in Vienna, who, on the death of King Oscar, (Bernadotte,) claims to ascend the Swedish throne of his ancestors. He has notified his claim to the Courts of Berlin, Petersburg, London, and Copenhagen. From the King of Denmark he is not likely to obtain recognition, inasmuch as the last news from Stockholm states the sudden arrival of his Danish Majesty on board his yacht Falk, on a visit to the new sovereign, Charles XV.

It is announced that steps are in progress for the organization of a land company in London with a capital of \$500,000, to be devoted to the purchase and settlement of lands in Illinois. The Prairie Land and Emigration Company state that a conditional purchase has been made of 250,000 acres of prairie land from the Illinois Central Railroad Company; that when the sale is completed the company will not be in any way connected with the Illinois Central Railroad or its affairs, but will hold the land by a direct tenure in freehold.

A secret manifesto, announcing the only solution to the intricate question which has been raised by the war, is said to have been distributed throughout Lombardy. This solution purports to be the election of Garibaldi as dictator, which would immediately rally the whole of Italy beneath the banner of the only chief accepted by all Italians—the only one whose disinterested patriotism has inspired confidence in all parties. Garibaldi has had no voice in the affair, which has been got up by some of the members of the ex-Municipality of Milan, who, alarmed at the revolutionary turn which affairs are taking in that city, seek to arrive at the solving of the problem at once, by accepting all its consequences without disguise, and thus avoiding the bloodshed and opposition which must arise from the false position in which all parties at present stand.

The 15th inst. was the fete day of the Emperor Napoleon, and he was to make his entrance into Paris at the head of his troops. All the regiments that took part with him in the campaign were represented in the display, which was doubtless one of the most magnificent in the annals of military triumphs. A banquet for 75,000 persons in the park at St. Cloud is a part of the programme.

The News Condenser.

- The King of Nam has named a son George Washington.
- Italy is about as large in territory as three such States as Ohio.
- The N. Y. and Erie Railroad has gone into the hands of the receiver.
- The accounts from the sugar and cotton region in Louisiana are favorable.
- There is a firm doing business in St. Louis under the name of "Liverpool & Dierich."
- A ship load of N. Y. adventurers are going to dig gold in the grave-yards of Chitiqua.
- A Boston firm announces the first direct importation of goods from Japan at that port.
- A slight frost made its appearance in the Northern and Western parts of Michigan, July 27.
- Mt. Vesuvius is still blazing away. Etna and Portici are now thought to be in danger.
- The N. Y. City authorities have determined there shall not be a pig left on Manhattan Island.
- Twenty-eight thousand dollars in premiums are to be awarded at the next State Fair at St. Louis.
- A letter from Gen. Walker announces that he will head another company for Niagara Sept. 15th.
- The Michigan State Prison for the last six months has earned \$1,725; \$23 more than its expenses.
- It is stated that plumbago, in inexhaustible quantities, has been found about Puzzle mountain, Mo.
- The Buenos Ayres Government have resolved not to molest neutral vessels or goods during the war.
- There are 211,538 free-masons in the United States, and the income of the lodges amounts to \$1,450,000.
- Fredonia, N. Y., is stated by the Gas-Light Journal, is supplied by natural gas which issues from a rock.
- Corn, says the Greenbary (La.) Imperial, sufficiently ripe to grind, was gathered on the 8th of July.
- M. DeLave, the rival of Blondin, succeeded in crossing the Genesee in this city, on a rope, Tuesday week.
- Leavenworth city, Kansas, gives its credit for \$100,000 to aid the construction of a railroad to Fort Riley.
- In Detroit, paupers who keep dogs get no aid from the poor-fund. They are expected to keep themselves Right.
- There were exported from Virginia between October 1st, 1858 and July 1st, 1859, 2,401,719 bushels of oysters.
- The Faculty of Yale College have decided to build a gymnasium for the use of the students, at a cost of \$10,000.
- A boy died last week in Plympton, Mass., in consequence of the bite of a mud turtle with which he was playing.
- President Nett, of Union College, is reported as having submitted his resignation to the Board of Trustees.
- The Cincinnati Gazette learns from the vine-growers of Ohio that the grape crop is exceedingly promising.
- A horse mackerel, weighing 614 pounds, was caught in the harbor at Marblehead, Mass., on Wednesday week.
- It is rumored that the Rothschild brothers are about to retire to private life with their literal "world of wealth."
- Florida papers state that the crops of corn and cotton in most portions of that State promise an abundant yield.
- It is currently reported that an American cannot travel in Sonora without being massacred, or robbed of everything.
- There was \$3,704,996 worth of copper taken out of the Cliff mine in Lake Superior from its opening in 1846 to 1859.
- The cholera is raging terribly in Japan. It is said that it has carried off several hundred thousand souls in Jeddo alone.
- Two brook trout have been caught in the Androscoggin river in Maine, one weighing ten and the other eight pounds.
- In Ohio, Missouri, North Carolina, Texas, &c., &c., where the grape is most cultivated, the yield promises to be abundant.
- The N. Y. City Inspector cautions the people of that city about buying pork, because so many hogs are dying with the cholera.
- The ship Ocean, Capt. Gifford, arrived at New Bedford last week with 1,900 barrels of sperm oil after 84 months absence.
- Rev. Wm. H. Channing, of Liverpool, Eng., has accepted the call of the Thirteenth Congregational Church in Boston.
- There are 810 churches in Philadelphia free from taxation, the property of which is assessed at nearly four million dollars.
- The State of Missouri is 318 miles long from east to west, and 276 broad from north to south. It contains 67,250 square miles.
- The number of applications for patents during the present year is about 8,900—within 1,000 of the number of those of 1859.
- The Papal government has allowed Mr. Edward N. Perkins, of Boston, \$3,400 damages for the robbery of his party at Perugia.
- The Milwaukee News says there is a convention of bankers in that city, to consider the subject of establishing a Clearing House.
- At the Queen's ball in London, recently, the Duchess of Richmond carried \$150,000 on her head in the shape of a diamond tiara.
- A convention of 166 delegates has assembled at Denver City to take steps to form Pike's Peak district into "Jefferson Territory."
- The Grand Trunk railway of Canada is discarding all wooden bridges, and substituting iron ones of the most durable character.
- Prof. Agassiz is expected to attend the next meeting of the British Association. The meeting will be held at Aberdeen, in September.
- The Emperor of Austria has commenced trying some of his Generals by Court Martial. Gen. Urban has been dismissed from service.
- It is announced that Charles Dickens intends to visit this country, and read and publish during the winter, as he has done in England.
- The New Orleans papers are congratulating the city upon the fact that not a single case of yellow fever has occurred this season in that place.
- The clock at Westminster, England, has cost the nation \$110,000. Punch says it is a strong exemplification of the homely truth, "Time is Money."
- The taxes laid by the British Government this year amount to \$445,000,000. Interest on the National Debt \$140,000,000; army and navy \$180,000,000.

PAGE

The based at \$3.75 barrel for superfine, \$3.35 for fancy, \$3.00 for extra. It is retailing at \$5.75 to \$6.00 a bushel.

GRAIN—A good deal of caution continues to be exercised by buyers in view of the recent disastrous crop reduction in the market. The wheat now brought forward for sale is mostly from the good and medium crops of the previous year, with a little extra in market. About 7.0 bushels changed hands yesterday at \$4.10 to \$4.10—the outside limits for the past year. Locally yesterday, Spring wheat has been paid for at \$4.10 to \$4.10. The new crop of wheat in the New River has been bought at \$3.75 a bushel. Barley will, however, be offered in much larger supply this year than last. The high grade of the year, having little or no frost, is not nearly so abundant as the lower grades, which changed hands yesterday at \$4.00 to \$4.10 bushel. Oats were yesterday selling at \$2.50 a bushel in lots of 100 bushels, also at \$2.50 a bushel for small quantities.

MEAT—Gloucester from Milwaukee having decreased the price to \$10.00.

supplies. Machines can be obtained of the Agricultural
Hardware Dealers in most of the principal cities.

VOL. X. NO. 36.]

ROCHESTER, N. Y.,—FOR THE WEEK ENDING SATURDAY, SEPTEMBER 3, 1859.

[WHOLE NO. 504.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

RURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

TERMS, IN ADVANCE:

Two Dollars a Year—\$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for \$5; Six, for \$10; and one free to club agent, for \$10; Ten, and one free, for \$15; Sixteen, and one free, for \$22; Twenty, and one free, for \$28; Thirty-two, and two free, for \$40; for Thirty for \$37.50; and any greater number at same rate—only \$1.25 per copy—with an extra copy for every Ten Subscribers over Thirty. Club papers sent to different Post-offices, if desired. As we pre-pay American postage on papers sent to the British Provinces, our Canadian agents and friends must add 12½ cents per copy to the club rates of the RURAL.—The lowest price of copies sent to Europe, &c., is only \$2.50—including postage.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

HARVESTING CORN, &c.

CORN, BEANS and POTATOES are the principal crops that now remain to be harvested. A few weeks since we gave the best methods of harvesting beans, so far as we have learned it from observation and experience, for we have spoiled a great many by bad weather and bad management at harvest. As this is a matter of a good deal of importance, now that this crop is being pretty largely cultivated, and is not very well understood, we ask any of our readers who may have been successful, or who may know of a better plan than that recommended, to give us the benefit of their experience.

The large potato growers we know are looking anxiously for a machine that will dig potatoes by horse power, but though we have seen several, and have endeavored to use some of them, we know of none that we can now recommend for this purpose. We saw half-a-dozen, perhaps, at the last State Fair, but of the working of most of them we have seen nothing, nor have we received any favorable reports. Digging forty or fifty acres of potatoes with the hoe, fork, or potato-hook, is a slow, tedious, and expensive operation, and there is a great necessity for a cheaper and more speedy way. Improvements have been made on some of the patent "potato diggers," during the past season, and they will be exhibited, no doubt, in large numbers at our State Fair at Albany, and at other Fairs. Committees, before awarding a premium to any, we hope will demand a trial in the field, the same as with reapers and mowers.

In this climate, and in fact in all the Northern States, the whole of a fair season is required to ripen corn, and it is often injured by the late frosts of Spring and the early frosts of Autumn. The ripening of corn may be hastened by cutting off the tops above the ears, but we have no doubt the earlier ripening is obtained at the expense of the crop. Many of the leaves that prepare the crude sap that passes up the stalk for making corn, are above the ears, and the removal of any large portion of these before the ears are perfectly formed, deprives them of their nourishment and detracts from their value. Sometimes, however, where corn is late and frost almost certain before ripening, it may be good economy. Removing the tassels only might hasten ripening a little, without any injury.

When the season will permit, there is no better way for the grain than allowing the corn to grow unmolested until fully ripe. The stalks by this method are of less value than if cut earlier at the root and placed in stacks, but no doubt more is gained in grain than is lost in value of stalks. As a general rule, however, we think the best way is to cut the corn at the surface of the ground when the grain has become glazed, or hard upon the outside, and put it immediately into stacks, where the grain will ripen off well and the stalks will cure slowly. By this plan the grain is in a great measure protected from early frosts, and it no doubt appropriates to its use a portion of the sap already in the plant, and some even contend that the plant absorbs nutriment from the atmosphere to aid in the perfection of the grain.

The time of cutting corn is a matter of great importance. If cut too early shrinkage is the consequence, and it loses weight and nutrition,

and if allowed to remain in the ground until after frost, unless fully ripe, the sap becomes vitiated, and great loss of both grain and stalks is the effect. It is better to cut too early than to run too great a risk; and where appearances indicate severe weather, harvesting should commence. We allude to this subject only to give a few practical hints, and our correspondents can write on no more useful subjects at this time than the best means of securing the crops that remain to be harvested.

YOU'RE GOING, OF COURSE.

"GOING WHERE?" Why, to the Fair. September is with us once again, and the season of Agricultural Exhibitions has fully set in. Years ago we asked if you were ready—if the stock was in condition to be looked at and admired—if you were not possessed of the best samples of grain and roots in the country, and intended to take "First Premiums" for the same—if the "better-half" had not completed such specimens of her handiwork as would make the hungry crowd look with longing eyes, and such "comfortables" as would compel bachelorhood to envy your happy possession, and drive them to matrimony. But the day for such a query is over; you acknowledge the utility of these annual gatherings, and we take it for granted that you will be there—the boys expect it, and you're going, of course.

"What's the use? I've been there time and again, and all is hurly-burly. I could never get any good, and don't believe I ever benefited any one by my presence," remarks my left-hand neighbor. Then you are the very individual that needs to go once more, and when you do, just alter your usual mode of procedure on such occasions. We write it your mode, for if your statement be not at variance with fact, the evil lies at your own door. If there is one place more than another at which the farmer may drink from the fount of agricultural knowledge, and one period possessing superior advantages, that place is at your County Fair, and that time during any of these Farmers' Holidays. It is the duty of the farmer to create a desire for investing his home Exhibition with those features that will aid in the promotion of its interests, and will redound to the welfare of the section which claims him as a resident, and he cannot perform this duty acceptably as long as he deprives the Society of the influence exerted by his presence.

In addition to being there himself, the family have "rights" which should be recognized. The household need relaxation from every-day cares, and such opportunity for recreation as the occasion affords. If the "head" never received any valuable information, who can say but the perceptive organs of the wife are better developed, and that her bump of acquisitiveness will appropriate an idea worth many dollars to the domestic circle in coming time. A nice roll of butter, a loaf of excellent bread, or any of the *delectables* so dexterously produced by female fingers, are wonderfully promotive of a healthy ambition, and your wife and daughters will soon be rivaling those who bore away the prize.

Having made a special plea for the "last best gift," we can't pass over the boys. That would never answer, as we have a good deal of youthful blood in our veins, though some ill disposed persons contend that the indications of age are plainly observable. No, we will not forget those who are to be the farmers of the future, and if the father overlooks their title to recognition on these particular occasions, we hold ourselves in readiness to get up a revolution. What has your son to bring forward as the result of his toil and care? Has he had a spot of ground on which to expend his energies in the development of any product? Did you give him a colt or a yoke of steers to train and "educate for good?" If there is something on the farm known as "his," then we say 'tis well; but if not, you are behind the times, and the sooner you get steam up and propel, the better. Where boys are thus led to take an interest in things around them, we seldom, very seldom, hear of their forsaking the "homestead" and seeking a livelihood amid the artificialities of city life. Boys that are rightly used, will, nine times out of ten, stick to the farm; it is those who are abused that leave the spot which to them was a home only in name. The agriculturist whose lads perform any of the labors of the farm, and who does not give to them something as a return therefor, something to call forth energies that would otherwise remain latent—bands that unite the young heart to the interests of the hearthstone—commits not only a grievous error but wrongs his children.

As the propriety and utility of attending our Agricultural Exhibitions have been admitted, a few words relative to a course of action, upon the grounds may prove practical, at least to that class who "have never been benefited." With the majority of our shows, it is utterly futile to at-

tempt obtaining a view of all there is to be seen. He who makes this experiment, sees nothing, hears nothing, and knows nothing, compared with what he might see, hear, and learn, if he devoted the greater portion of his time to some specialty. Passing through the varied departments with a rush, the glance can be but superficial, and the information acquired imperfect. Before setting out, just look over the farm and find out in what particular branch a change for the better is most needed. If defects are most apparent among the stock, scrutinize very closely the animals upon exhibition, and find out all that is possible in regard to blood, rearing and keeping; if in grain, look well at the samples offered in competition and ascertain varieties, modes of culture, yield, period of ripening, hardiness, enemies, etc. Thus passing away the time, and interchanging experiences frankly and fully, a thousand-fold of good may be acquired, and the County Fairs will attain the position they ought to occupy, becoming avenues of intelligence for those whose interests they were intended to protect and advance.

ICE-HOUSES.

In previous years we have given directions for building Ice-Houses and keeping ice, but there is still a great demand for information on the subject from the thousands who have become readers of the RURAL within the past year or two. We are therefore constrained to give full information on this subject, and in doing so we shall give some things that have heretofore appeared in our columns.

It would be useless at this time to talk of ice as a luxury, for of late years it has become almost a necessity. One pound of good hard butter is worth more, when placed on the table, than two pounds of warm, oily stuff, such as those have to content themselves with who cannot procure ice. Then there is nothing more refreshing of a warm day than a glass of ice water. It also enables us to preserve meats, &c., from becoming injured in the warmest weather, giving us in the ice-house the temperature of the frozen regions, while without we are enduring an almost tropical heat. This catching and imprisoning Jack Frost, and compelling him to do us good service in hot weather, is a grand idea. If left in freedom he would leave us at the time his services were needed, and the only time when his company is particularly agreeable. To answer some inquiries as to the surest and cheapest method of keeping him with us all the summer, is our present object. Those who live in cities or large villages can generally procure ice from the dealers who save it in large quantities, in supply every day sufficient for family use, at from \$3 to \$10 the season, according to the quantity used. This is of course the cheapest way of obtaining ice, but farmers are compelled to save their own or do without it. As a store-room for meat and other perishable provisions, the ice-house is of great value to the farmer.

Building a house for preserving ice is a very simple work, and yet there are a few important facts that all should learn before commencing, or their labor may be in vain. We shall endeavor briefly and plainly to point out the most important of these. Damp and heat are the two great agents of thawing, and the first endeavor must be to counteract these by every means in our power. For the first, ventilation is necessary, and for the latter, the most non-conducting material available must be used for the house. The old plan of building ice-houses under ground was bad, as it was almost impossible to secure good drainage and sufficient ventilation to arrest the dampness which is sure to exist in all underground rooms or houses. Then the ground is too good a conductor of heat, and communicates its heat very readily to other bodies, much more so than even the air.

The best place for an ice-house is above ground, on a gravelly subsoil, where good, natural drainage can be had, so that the water that forms as the ice melts will pass off freely. The best material is wood, though brick is good enough where it can be obtained more readily than wood. The walls should be made double, by boarding both on the outside and inside of the frame timbers. The space between the inside and outside boards should be filled with some non-conducting material. Charcoal dust is an excellent non-conductor; dry tan-bark, or sawdust, will do very well, and if neither of these can be procured, straw will answer a very good purpose. Where the natural drainage is not first-rate, drains must be dug and filled up with stones. If left open the cold air will pass through them very freely, and its place be supplied by warm air from above. Ice keeps best in large masses, and for several reasons. In a large body there is much less surface exposed in proportion to the whole. Melting

ICE-HOUSE—ELEVATION

ice absorbs and renders latent a large amount of heat, so that the thawing of a part helps preserve that which remains. Those who have built ice-houses that failed to furnish a supply all the summer, will find that by simply enlarging the house say one-third, the additional quantity of ice will be preserved, unless there is some radical defect in its construction, of which they can judge on reading the principles we have presented. A house twelve feet each way on the ground, and eight or ten feet high, is large enough for any family, and even for two or three families, and yet it is as small as we would recommend any one to build, as the cost and trouble is but little more than for a house just large enough, and the supply is certain.

Where the drainage is good a board floor is not necessary, and we think they are not used in any of our large ice-houses, though in most cases it would be best to lay down a loose floor a few inches from the surface of the ground. If a quantity of brush was first laid down and covered with straw, and the floor put over this, it would make the work complete. If a board floor is not used, there should be at least a foot or eighteen inches of straw, but a few inches on the boards will be sufficient. The ice made in the early part of the winter, and that which has been subjected to no change from freezing to thawing, is the best. It should be sawed out in square cakes as uniform in size and thickness as possible. All snow, and ice formed from half-melted snow, should be rejected, as it will not keep. After one layer is put down, the crevices should be filled with pounded ice, and this should be continued until the house is filled, when the whole will freeze into a solid mass. A few inches of straw should be placed between the walls of the house and the ice, and this should be done while the house is being filled. Then cover the whole with a foot or so of straw, and the work is done. An opening must be made in the roof for ventilation.

For the sake of convenience, the ice-house should be near the dwelling, and where desirable it may be made quite ornamental at a very little expense. In this connection we give a plan of a very pretty house built by Lewis F. Allen, of Buffalo. The posts of this house, it will be seen by the plan, are on the outside. This makes a very strong building. When the boards are nailed outside of the posts, they sometimes burst off, particularly when filled with any fine material, like charcoal or tan-bark. The following is Mr. A.'s description of the manner of building his house:

"Mark out your ground the size you require for the house; then, commencing at the one corner, dig, opposite each other, a double set of holes, one foot deep, and two and a half feet apart, on each side of the intended building, say three feet equidistant, so that when the posts stand up they will present a double set, one and a half feet apart.—Then set in your posts, which should be of oak, chestnut, or some lasting wood, and pack the earth firmly around them. If the posts are sawed, they may be 4 by 6 inches in size, set edgewise towards each other. If not sawed, they may be round sticks cut from the woods, or split from the body of a tree, quartered—but sizable, so as to appear decent—and the insides facing each other as they stand up, lined to a surface to receive the plank-ing. Of course, when the posts are set in the ground, they are to show a square form, or skeleton of what the building is to be when completed. When this is done, square off the top of each post to a level, all around; then frame, or spike on to each line of posts a plate, say six inches wide, and stay the two plates together strongly, so as to form a double frame. Now plank, or board up closely,

the inside of each line of posts, that the space between them shall be a fair surface. Cut out, or leave out a space for a door in the centre of the side where you want it, two and a half or three feet wide, and six and a half feet high, and board up the inner partition sides of this opening, so as to form a door-casing on each side, that the space between the two lines of posts may be a continuous box all around. Then fill up this space between the posts with moist tan-bark, or saw-dust, well packed from the ground up to the plates; and the body of the house is inclosed, sun-proof, and air-proof, to guard the ice.

Now lay down, inside the building, some sticks—not much matter what, so that they be level—and on them lay loose planks or boards, for a floor. Cover this floor with a coating of straw, a foot thick, and it is ready to receive the ice.

For the roof, take common 3 by 4 joists, as rafters; or in place of them, poles from the woods, long enough, in a pitch of 35° from a horizontal line, to carry the roof at least four feet over the outside of the plates, and secure the rafters well, by pins or spikes, to them. Then board over and shingle it, leaving a small aperture at the top, through which run a small pipe, say eight inches in diameter—a stove crock will do—for a ventilator. Then set in four posts, say two feet high—as in the design—throw a little four-sided, pointed cap on to the top of these posts, and the roof is done. If you want to ornament the under side of the roof, in a rude way—and we would advise it—take some pieces of 3 by 4 scantling, such as were used for the roof, if the posts are sawed stuff—if not, rough limbs of trees from the woods, to match the rough posts of the same kind, and fasten them to the posts and the under side of the roof, by way of brackets, as in the design."

VERY CHEAP ICE-HOUSE.—A subscriber of Rockford, Illinois, sends us the following plan for a cheap Ice-House:—"For the benefit of those who wish to enjoy a little cool luxury during long, hot summer days, I send you the plan of a cheap Ice-House in which I kept ice from February to October, using from it every day during warm weather commenced. Nailed up a pen, 10 by 12 feet, four feet on the ends, seven feet on the sides, leaving the gable ends open—the ground descended about one foot in twelve—filled in saw-dust about six or eight inches deep—sawed the ice as square as possible with a cross-cut saw, and packed it in, leaving a space of a foot on the sides all around. Pounded the cracks between the ice full of fine ice; filled the space around with saw-dust, stamping it down so as to make it close as possible; then covered the whole 12 or 16 inches deep with saw-dust and put on the roof. After warm weather commenced I generally went over it once a week to see if there was any melting; if there was I pounded the place full of saw-dust. This house will hold from 2½ to 3½ cords. If it is allowed to freeze solid, more will be wasted than used. I have tried that plan, but if left as it is packed you can roll out a block and saw off with a hand-saw as much as is wished."

A friend in Seneca Falls writes—"We have kept ice for two seasons past in our wagon-house, taking up the floor in one corner and making what you might call a large bin, about nine feet square, extending from the ground up to near the chamber floor, but not quite, leaving room for a free circulation of air above the covering of the ice and the floor overhead.

There was slope enough to the bottom for thorough drainage, which is an important matter, in my opinion, as well as the open space above. We placed in the bottom about a foot thick of saw-dust and turner's shavings, then some loose boards for

[illegible]

HORTICULTURAL.

ABOMINABLE DIRECTIONS TO ORCHARDISTS.

The above is the heading of an article in a recent number of the *Massachusetts Ploughman*, criticizing directions which we gave in answer to a correspondent, who asked for the best known remedy for destroying the *Apple Bark Louse*.—"We copy the whole that our readers may see what value there is in many of the" criticisms given in the agricultural press.

"On looking into the *Rural New-Yorker*, we see directions given for killing the *Apple Bark Louse*. We copy the whole that our readers may see what value there is in many of the directions given to the cultivators of the soil.

"THE APPLE BARK LOUSE.—From several friends, mostly at the West, we have received pieces of apple bark completely covered with the *Apple Bark Louse*, with inquiries for a remedy. The scales are rolls of the bodies of female insects, covering and protecting their eggs. The eggs are so minute that these small scales sometimes cover more than a hundred. The time of hatching is from the middle of May until the first of June. We will give two of the best remedies known. 1st. Prune early in the spring. Mix tar and kerosene oil together, and apply with a paint brush to every limb. This, when dry, cracks and peels off, bringing away the scales and the eggs with it. Trees thus treated will show the benefit received by a vigorous growth. 2d. Boil leaf tobacco in a strong lye until it is reduced to an impalpable pulp; mix this with soft soap (which has been made cold, and not the jelly-like boiled soap), to make the mass about the consistency of thin paint. Prune the trees and apply this preparation with a brush, to every limb and twig. This will take time, but the remedy is effectual. A gentleman in the Western part of this State wrote us last season that he had entirely rid his orchard of this pest, by simply throwing unleached ashes over the branches and trunk when wet. Care must be used that the ashes do not touch the leaves. The best time for this operation would be early in the spring, before the buds push."

Tar and linseed oil are to be mixed together and applied warm to the limbs to kill lice!

Tar and oil! Of all the washes that we have ever heard of for trees, this is the grossest. Trees have been killed outright by a wash of greasy matter. Some years ago a man in Maine took a fancy to wash his trees with fish oil, and he killed them all in a short time.

Tar is well known in New England to be so injurious that those who apply it to head the canker-worm take care to coat the tree with canvass before the tar is put on.

Another remedy is, tobacco and strong lye! But why have any tobacco in the lye? Tobacco poisons the lye and makes it less efficacious than without it. Tobacco is a poisonous herb and should never be named to make up a mixture of items as it seems to be here. Lye alone may be made so strong as to be injurious to young trees. Why then put in it a poisonous quid? Is this to dilute or weaken the lye? But lye may be made weak as one pleases without poisoning it.

More absurd advice than this we do not often see from those who profess to teach farmers.

But we obtain a little relief in the third prescription, which was the relation of a gentleman in the western part of New York. Unleached ashes scattered on the limbs of a tree, troubled with lice, killed them. Well, what was this, more or less than a simple application of lye? The tree must be wet when the dry ashes are thrown on. Ashes made wet, produce lye. And this wash answered without oil, tar, or tobacco. Is not this in substance what we advocate?

Lye alone will kill lice and all other vermin on trees. It may be made strong or weak to suit the taste of the one who uses it. We find that lye just strong enough to make soap will not injure the youngest tree. Lye is the article without mixture to kill vermin.

We think the writer of the above has had little experience with the *Apple Bark Louse*, or he would not talk so flippantly of killing it with weak lye, or lye of any strength. The Louse is not a live kicking insect, easily affected or destroyed, but a hard horny scale, firmly glued to the tree, covering and protecting from injury from a dozen to over a hundred eggs, and these eggs it is the object of the cultivator to destroy. We have known trees washed with lye a dozen times without any effect, and the case which we gave was the only one we ever heard of where sprinkling dry ashes proved of any avail. Such remedies are only effectual when applied to the young and newly hatched lice, about which, as yet, we know but little.

The remarks against using tobacco because it is a "poisonous herb" is childish, and to call the directions given "abominable" on this account is worse than foolish. To destroy the green fly on our plants we have to fill houses with the poisonous fumes of tobacco, and to kill the red spider with the still more poisonous fumes of sulphur.—It is "abominable," perhaps to cut off a man's leg or arm, or to feed him with calomel, and strychnine and a score of other poisonous things in both the vegetable and mineral world, but this, it is generally conceded, is sometimes necessary.

Thousands of trees, indeed whole orchards have been destroyed at the West by this insect, and all the remedies, such as weak lye, recommended by the *Ploughman*, as well as soap-suds, tobacco-water, &c., have been tried in vain. Those who have no experience with this insect—those who have not learned how hard it is to rid an orchard when once infested—may recommend them, and talk very wise, but we have seen trees to which these remedies had been applied a score of times, so thickly covered with the scales that it was almost impossible to find a space where a pin's head could be placed without touching them.

Dr. Fitch, the entomologist, has given some attention to this insect, and closes his paper on the subject, with the following paragraph, giving the experience of Western men, and what he saw of the effects of their practice:

"A. G. HANFORD gives a very favorable account of the effects of tar and linseed oil, beat together and applied warm with a paint brush thoroughly, before the buds begin to expand in the spring.—This, when dry, cracks and peels off, bringing off the dead scales with it. Trees which were thus treated grew from two to two and a half feet last summer, which had advanced only a few inches in previous years. The remedy to which Esq. KIMBALL, of Kanawha, resorts, is probably one of the most efficacious, and as convenient as any; he boils leaf tobacco in strong lye till it is reduced to an impalpable pulp, which it will be in a short time, and mixes with it soft soap, (which has been made cold; not the jelly-like boiled soap), to make the

mass about the consistency of thin paint, the object being to obtain a preparation that will not be entirely washed from the tree by the first rains which occur, as lye, tobacco water, and most other washes are sure to be. The fibres of the tobacco, diffused through this preparation, cause a portion of its strength to remain wherever it is applied, longer than any application which is wholly soluble in rain water can do. He first trims the trees well, so that every twig can be reached with the paint brush, and applies this preparation before the buds have much swelled in the spring. Two men, strictly charged to take their time, and be sure that they painted the whole of the bark to the end of every twig, were occupied a fortnight last spring in going over his hundred and fifty young trees. When I saw his trees, the latter part of September, this composition was still plainly to be seen upon the rough bark of their trunks and upon the under side of their limbs, resembling a whitish mouldiness of the bark. The trees had grown very thriftily, and yielded well, whilst only a single scale could here and there be found upon the twigs of the present year's growth, all the other parts being entirely free from them. Although trees perishing with lice were standing in the adjacent yards and gardens, it seemed these insects preferred starvation at home rather than being poisoned by invading these trees, hence it appears that one thorough application of this preparation is sufficient to destroy all the insects upon the trees, and to protect them from invasion from neighboring trees for a period of two years; for free as the trees were from these insects in September, there can be no call for a renewal of this composition upon them the coming spring."

We would not recommend the use of any composition, under ordinary circumstances that would form a coating on the bark and stop the pores, but desperate diseases require desperate remedies, and when a tree is literally covered with scales of the *Bark Louse* firmly glued to its surface, the composition recommended we are satisfied will do no injury, and the evidence is clear that it does good, removing the evil which causes the tree to languish and die, and inducing a new, vigorous and healthy growth.

BEST PLUMS FOR LONG ISLAND.

EDS. RURAL:—I deem it of great importance to communicate through you to the public a list of such varieties of plum trees, grown on this Island, as are here free from the depredations, unless in some solitary instance of that pernicious insect which makes its attack on the branches by perforating and stinging the wood, thus poisoning the sap, and producing as a result the excrescences which are so numerous on the Late Purple Damson and on some other varieties:

Bleeker's Gage,	Imperial Violet,
Blue Imperatrice,	Italian Damask,
Brevort's Purple,	Italian Prune,
Bradshaw,	Jefferson,
Cherry or Myrobalan Red,	Magnum Bonum White,
Yellow,	Yellow,
Clatsaw Early Red,	Nectarine,
Late Red,	Orange,
Orange,	Orange Egg,
Orange,	Peach,
Coe's Golden Drop,	Prince's Yellow Gage,
Coe's Late Red,	Prunus Americana, all
Dane's Purple,	varieties,
Elfre,	Prunus Maritima,
English Yellow Gage,	Prunus Publiceana,
Hurling's Superb,	Tomlinson's Charlotte,
Imperial Gage,	Washington,
Imperial Ottoman,	

The following varieties are the least affected by attacks of the Curculio on the fruit, yet they frequently suffer partial loss:

Guthrie's Apricot,	Imperial Gage,
Italian Prune,	Small Drop d'or,
Flushing, Long Island, 1859.	Wm. R. PRINCE.

PACKING FRUITS.—A correspondent of the *English Cottage Gardener*, who says he has had twenty years' experience in the packing of various fruits, sent to distances varying from fifty to five hundred miles, describes the course pursued by him, as the best with which he is acquainted. It is thus:—A box is chosen, in size according to the quantity to be sent. A layer of bran is put on the bottom; then each bunch of grapes is held by the hand over a sheet of soft paper; the four corners of the paper are brought up to the stalk and nicely secured, then laid on its side in the box, and so on until the first layer is finished. Then fill the whole over with bran, and give the box a gentle shake occasionally. Begin the second layer as the first, and so on until the box is completed. Thus, he remarks, with neat hands, the bloom is preserved, and the fruit may be sent to any distance with safety, provided as much care be used in taking them out of the box, as in packing and unpacking there is very great liability to injury. Sixty to eighty bunches of grapes and fifty to sixty dozen of peaches or apricots are invariably, in his practice, packed in a box.

CRYSTALLIZING GRASSES.—Will you please inform the inquirer through the columns of the *RURAL* of the best process of crystallizing grasses?—M. M. H.

DISSOLVE eighteen ounces of alum in a quart of soft water, (observing this proportion for a greater or less quantity,) boiling it over a slow fire in a close tin vessel, stirring it occasionally with a stick until it is dissolved. When it is nearly cold suspend the subject to be crystallized by a thread from a small stick laid horizontally across the aperture of a deep glass or earthen jar, into which the solution must be poured. The articles should remain in the solution twenty-four hours, and then be taken out and suspended in the shade to dry. If the subjects to be crystallized are put into the solution when it is quite cold, the crystals are apt to be formed large, and the warmer the solution the smaller will be the crystals. Its strength may be tested by putting a drop on a blade of grass, and observing it crystallize as it cools. Almost any flower or vegetable substance may be operated upon. Fancy baskets may be made in this way, by first making a wire frame of any desired shape, twisting woolen yarn around the wires, and immersing it as directed for grasses.

EARLY BLACK GRAPE.—We had the pleasure of receiving on the 27th ult., from Mr. L. B. KING of this city, some bunches of a small grape, fully ripe. The berries are round, the skin thick, color black with a bluish bloom. The bunches vary, some being loose and some very compact. It is somewhat foxy in flavor, but very early and productive.

FLOWERS AND FRUITS IN SEASON.

A few weeks since we urged our friends to visit all good gardens in their vicinity for the purpose of gaining information, and invited all who could make it convenient to pay Rochester a visit, to look at our large and neatly kept nurseries, and our fine specimen trees, laden with fruit. We then stated that early in September was as late as any should make this visit, as after that time our nurserymen will be so busy with their fall work as to be able to give visitors but little time and attention. The work of taking up and shipping trees is confined to a few months in the fall and spring, and during these months the labor is very severe, taxing both body and mind to the utmost.

In our rambles to-day (August 29th), we have taken notes of a few things worthy of remembrance. The BEDDING PLANTS, such as *Pelunias*, *Verbenas*, &c., are now in perfection, covering the beds, and making them one blaze of brilliant colors. The *Annals*, and many of them are truly fine, could never be seen to better advantage.—The *Pony Astras* are superb. We never saw better. One new variety with a white center, and the outer row of petals, dark purple, is beautiful and unique. The *Japan Lilies* are in flower, and we think all who see them will order a few of the bulbs of this, the finest of all hardy lilies, for fall planting. The *Glaucolus*, too, occupies a very prominent position among the finest of the fall flowers. The *Dahlias* are beginning to flower, and we observed some fine specimens, but in a week or so they will be better.

The *Favr*, is abundant and unusually fine. For many years past we have not had as good a crop of *Plums*. Every tree, almost, is loaded, and many neglected ones we notice bearing a fine crop. The curculio seems to have stayed in its ravages.—Among those that are now ripe we notice the following as the best:

RED DIAPER PLUM.

Diapres Rouge, or *Red Diaper*, a large and handsome reddish purple plum, which we consider first rate in all respects. Tree grows rather slow, branches smooth. The size and form of the fruit is shown in the engraving. Skin of a reddish-purple, with a few golden specks, and a light blue bloom easily rubbed off. Stalk three-fourths of an inch long, slender, hairy, slightly inserted. Flesh pale-green, juicy, very melting, rich, and delicious; separating from the stone, which is quite small.

Nelson's Victory is a beautiful, rich, juicy plum, of medium size. Skin yellowish russet, with a light bloom.

NECTARINE PLUM.

Nectarine is a fine, showy fruit and of fair quality. Some would call it first rate. Our engraving shows the form and size. Skin purple, with a blue bloom. Flesh, greenish yellow, tinged with red, with a rich, lively flavor. A first rate bearer.

Goliath, larger than the preceding, which it resembles, but distinguished from it by its gray, downy shoots. It is also a few days later in ripening.

OF PEARS we notice quite a number ripe, but of these we will defer remarks until next week, when we will give drawings and descriptions of a few of the best sorts ripe.

JUDGING OF GRAPES BY THE LEAVES.—I wish to inquire whether there is a marked and plain distinction in the form of the leaf of the different varieties of grapes? Can the different varieties be told by the leaf? BRISSELL & SALTER, of your city, have given some drawings of leaves in their last catalogue. But they are not distinct. If there is a clear difference in the leaves of the different varieties, can you not give us some illustrations and drawings in your paper? The subject of grapes has become one of great interest generally, especially among those who read agricultural papers, and the inexperienced are liable to deception and imposition.—C. TRIMSTON, *Albany, Pa.*, 1859.

THERE is a difference in the leaves apparent to the practiced eye, quite marked in some varieties, but much less so in others. We could give no drawings that would assist our correspondent in distinguishing varieties by the leaf—nothing but close observation and experience will do this. The color and veining of the leaf is as marked as the form, which could not be shown without colored drawings.

STRAWBERRY CULTURE.

MASSAS. EDITORS:—I see by a letter in the *RURAL* of Aug. 18th, by I. W. BRIGGS, that he recommends that Strawberry plants should be set in August, if the grower expects to get any berries from them the following season. I am a Strawberry grower myself, and that for market, and my experience is a little different from his. I will give you the result of my planting. Many persons would infer by reading this letter that Strawberry plants should not be set later than August, and if that is his meaning I think his letter will do more harm than good. I plant from one-half to one acre every fall, and intend to set from the 10th to the 20th of September, so as to get the benefit of the equinoctial rain, and likewise have the benefit of obtaining strong rooted plants from this year's runners, (old plants being of no value,) which commence to grow immediately, and I have invariably had them bear the next season, even to the number of from 50 to 100 berries, and those of the largest size, measuring from two to four inches in circumference, and those of the *Wilson's Albany Seedling*. The last season being very dry here, I was not able to grow my plants of sufficient size to set until the 10th day of October, and of 9,000 set at that time I did not lose 50 out of the whole, and they all bore as many berries the next season, according to the number of roots, as my plants did that were a year older, and berries of a larger size.

LEE WELLS.

Cedar Lawn, near Chittenango, N. Y., 1859.

MASSAS. EDITORS:—The season of the Strawberry is past, and as it is the proper time to set out new beds, I thought that some whose experience and observations would show and indicate the successful manner in its cultivation, should communicate to the world through your valuable paper the means and the results of such practical experience. And as an inducement to hear from others, and an earnest desire to add my mite for the good of all, I will relate my own.

Two years ago this month (August), I had a bed in my garden, principally clay soil, spaded and pulverized two and a half feet deep, and intermixed with some six two-horse loads of stable manure and three like loads of loam sand, making a bed of fifteen feet by twenty-six feet, at an expense of about ten dollars for labor and materials. In this bed I planted Strawberries, the same month, in rows sixteen inches apart, the *Scarlet Pine*, *Hooker*, *Hovey*, *Black Prince* and others intermixed, cultivated them well last year, allowing them to run together but not too thick, upon the principle that shade was essential to the growth and perfection of the fruit.

On the fifth of June last I commenced picking Strawberries, and continued doing so daily until July tenth, and with the exception of a few at the first and last of the season, and what the birds took daily, I kept an accurate account by measurement of the amount each day gathered during the time above mentioned. On the eleventh day of July I found the amount gathered from the bed to be two bushels and a half. Others who have kept a like record may have done better, and that fact, and the causes, given to the public, would contribute to benefit mankind.

S. N. HOLMES.

Syracuse, August, 1859.

PLANTING LOCUST SEED, &c.—I have a prairie farm, and being destitute of shade, have decided to plant locust and other trees upon it. Will you, in your valuable paper, inform me how and when *Black Locust* should be planted, and whether adapted to the prairie or not? Also, when and how to plant *Horse Chestnut*? Also, is it advisable to cover the tips and shoots of winter squab, that the fruit may reap the benefit after having set?—W. W., *St. Paul, Minn.*, 1859.

LOCUST SEEDS may be sown either in the autumn or spring. Before sowing they require soaking to soften the horny covering, without which few will germinate. Pour over them water a little below the boiling point, and allow this to stand for twenty-four hours; then sow in drills, the seeds an inch or two apart each way. Cover about half an inch deep. After one season's growth, the young trees may be placed in nursery rows, or be planted where they are to remain. They will grow well on the prairies. *Horse Chestnut* seed should be planted in the fall, or kept in earth during the winter. The *Horse Chestnut*, we have been informed, does not succeed on the prairie. All the specimens we saw on our last trip around Chicago seemed sickly. Stopping the ends of the squash and melon vines after sufficient have "set" hastens the ripening and improves the size.

MISTAKES IN GARDENING.—In so far as instruction is concerned, I esteem my mistakes to be more valuable than my successful efforts. They excite to attention and investigation with great emphasis. One mistake, which I record once for all, as it will probably occur every year, has been the attempting of more than I could do well. The ardor of spring, in spite of experience, lays out a larger garden than can be well tended all summer.

In selecting the *largest Lima* beans for seed, I obtained most luxurious vines, but fewer pods. If the seasons were longer, those vines would be ultimately most profitable; but their vigor gives a growth too rampant for our latitude. If planted for a screen, however, the rankest growers are the best.

Of three successive plantings of corn, for table use, the first was the best, then the second, and the third very poor. I hoed and thinned the first planting myself, and thoroughly; the second, I left to a Dutchman, directing him how to do it; the third, I left to him without directions.—Henry Ward Beecher.

GARDENERS' SOCIETY.—The practical gardeners of this city are about taking measures for the establishment of a Society, with a library, reading-room, and other means of improvement. A meeting will be held next week, for the purpose of effecting an organization. Perhaps there is no city in the Union where there are so many men employed in the cultivation of fruits and flowers as in this, and we are glad to see this movement. They have our very best wishes for their success. The meeting for organizing will be held at the Court House on Thursday evening, Sept. 6th.

GREEN CORN FOR WINTER, PICKLES, &c.

EDS. RURAL:—Your lady readers will find the following recipes good. Please try them:

GREEN CORN FOR WINTER USE.—Take the ears of corn, remove the husk, all but the last one; get a tight cask, put in a layer of corn and a layer of salt, another of corn, and another of salt, and so on until the cask is full; pour in a little cold water, and cover tight. When you wish to cook it, take it out of the brine, remove the husk, cut it off from the cob, and soak till fresh. This is better than drying, and not as much trouble. Green corn will not keep in glass jars or tin cans. This is our experience; perhaps some one has been more successful.

ROAST BEEF PIE.—Cut the cold roast beef left from a previous meal into thin slices; lay some of the slices into a deep dish which you have lined on the sides with a good puff paste; sprinkle over this layer a little pepper and salt, put in a few slices of tomatoes; another layer of beef, another of seasoning, until the dish is filled; cover the whole with paste, and bake half an hour.

CITRON PICKLES.—Take the rind of ripe citron, pare it and cut into slices; take half a pound of sugar to one of fruit and boil it till soft; add cinnamon and cloves to taste; put in one pint of vinegar to six pounds of fruit. Scald the whole together.

GREEN APPLE PIE.—One and one-half cups bread rubbed fine; 3 cups of warm water; 2 cups of sugar; 1½ cups of vinegar; 1 tablespoonful of butter;—spice to your taste.

WASHINGTON CAKE.—One pound of sugar; ¾ths of a pound of butter; 4 eggs; 1½ pound of flour; 1 teaspoon of milk or cream; 1 teaspoonful soda; 1 pound of raisins.

CLAY CAKE.—One pound of flour; 1 pound of sugar; ½ pound of butter; 1 pint of sour cream; 6 eggs; 1 teaspoonful of soda; the rind and juice of one lemon.

SODA CRACKERS.—One pint water; ½ pint butter; 1 teaspoon soda, 2 teaspoons cream tartar,—bake in a hot oven.

SOFT GINGERBREAD.—One cup of molasses; 1 cup of sugar; 1 cup of butter; 3 eggs; 4 cups of flour; 1 cup of buttermilk; 1 spoonful of ginger; 1 teaspoonful of soda.

Indiana, Aug., 1859.

ECONOMICAL RECIPES.

THINKING pies indispensable at any time of the year I concluded to send some recipes for every-day use, as many of those in the *RURAL*, though good, might be too expensive for some.

As the *pumpkin pie* is the cheapest of all pies, and the season for them approaching, I give a mode of making an excellent pie of grated raw pumpkin, for a change, as it does not taste like a stewed pie, which all know how to make. About a teaspoonful of grated pumpkin; 1 pint of good milk; 1 egg; a little salt; 2 large spoons sugar; cinnamon, spice or nutmeg. Line the tin and bake until done. The remainder of the pumpkin can be cleaned out and kept in a cool pantry for several days, and new pies baked each day if you wish, with a little trouble.

All who have pumpkins in the fall ought to dry some for the next summer's use, and the best method I know of is to stew pumpkin down very dry, then spread it on plates or tins, if not old and rusty, to dry. It can be dried in an oven, or in the sun—just which is most convenient. While drying, cut it as you would a pie and turn it daily until dried enough. It should be spread about an inch thick, and when dried, tied up in a clean bag and hung up so that moth or miller cannot get in to injure it. When wanted, soak over night in warm milk and sift.

A cheap pie can be made of rice. Every one ought to keep rice on hand all the time, as it is a cheap and healthful food. One cupful, when boiled in water with a teaspoonful of salt until tender, will make 3 cups of rice; this, with sufficient milk, a teaspoon of sugar, 2 eggs, and a little seasoning, will make 8 pies in large tins, which are good enough for those who have a good appetite.

A cheap way to make *apple pies*, where there are no apples or pie-plant, (which all should raise who have a few feet of land.) For a common pie, take half a teaspoonful of tartaric acid and dissolve it in 2 cups warm water, crumb up 1 cupful of light bread and soak in the water, half cup of sugar, a little salt; season as you like, and bake with two crusts. If you wish a better pie, put in twice as much sugar and acid and a little butter. Tartaric acid is not expensive, and is very handy to keep in the house. It makes a good and cooling drink in summer. Sweeten a pitcher of water, put a few drops of extract or essence of lemon, then add acid until it is agreeable. A FARMER'S WIFE.

Ionia, Mich., Aug., 1859.

TO DESTROY COCKROACHES.—The following is said to be effectual:—These vermin are easily destroyed, simply by cutting up green cucumbers by night, and placing them about where roaches commit depredations. What is cut from the cucumbers in preparing them for the table answers the purpose well, and three applications will destroy all the roaches in the house. Remove the peelings in the morning, and renew them at night.

PINE-APPLE CHEESE.—Will some of the *RURAL* friends give us directions for making *Pine-Apple Cheese*? We have heard it spoken highly of, but have never seen any.—Mrs. G. R. CHANDALL, *East Pierpont, N. Y.*, 1859.

COUNT your clothes-pins, knives and forks, towels, handkerchiefs, &c., at least once a week.

WASH your tea-trays with cold suds, polish with a little flour, and rub dry with a cloth.

Written for Moore's Rural New-Yorker.
THE GATHERINGS.

Two family groups are gathered,
And all are happy now,
Love's sunshine lends a golden ray
To deck each youthful brow;
To an unknown household band,
And, as they gather there,
Life seems very joyous,
Each earth-peace very fair.

The father's glance is brighter,
The mother's smile more sweet
As they listen to the music
Of the tread of busy feet—
To the merry laughing laughter,
To the pleasant voice of cheer,
To the glad songs sweetly flowing
From the lips they hold most dear.

Again the group is gathered,
But now an empty space
Proclaims the absence of our band
Come not to fill her place—
Where the morning light first beamed
In the grave-yard on the hill—
Where the setting sun last shone,
The lying cold and still.

There, where merry tones were ringing,
Now a mournful wail is heard,
For a deep, a sudden sorrow
Every loving heart hath stirred,
Bitter, bitter tears are falling
Yet they know, with harp in hand
Robed with light and crowned with glory,
She is with the angel band.

From each heart there goes upward
To "Our Father's" Throne this prayer—
When our day of life is ended
May we join our lost one there!
May we gain a happy entrance
To that glorious land of light,
Dwell within the "Golden City,"
Where there never cometh night!

E. M. B.

Written for Moore's Rural New-Yorker.
OUR AMUSEMENTS.

On no one subject, perhaps, is there a greater diversity of opinion, than in regard to what pleasures may or may not be innocently indulged in. Some, even thoughtful persons, take the broad ground that nothing can be morally wrong that is not positively condemned in holy writ; while others, with what seems to themselves a better show of reason, contend that it is a sinful waste of time to do anything that does not serve some purpose of practical utility, and that nearly every species of recreation has a tendency to weaken and dissipate the mind,—to create a distaste for the practical business of life,—and is, consequently, demoralizing and evil in its effects. With this view, many of the most conscientious persons in community consider it a duty to repress, as far as possible, everything like gaiety, or a taste for the fashionable amusements of the day, in those who come within the circle of their influence. Are they wholly right—or are they partly wrong?—Has not "He who doeth all things well" given us the love of pleasure for a wise and benevolent purpose, and is it not more in accordance with the dictates of reason to endeavor to direct the propensity in proper channels, than to seek to eradicate what is inherent in our nature? We all have physical as well as moral and intellectual natures, and who that has ever watched the gambols of the lower animals—from the noble horse bounding over the fields in a wild ecstasy of enjoyment, to the tiniest insect that sports in the sun on a summer day—can doubt that sportiveness is an element that enters largely into almost every form of animated life?

And who that has seen the man of business, allowing himself to be wholly engrossed by the cares and duties of life, and counting every moment lost that is given to recreation, as he grows every day more moody, irritable and ungainly; or the care-worn wife and mother of the family, devoting every energy and employing every moment of her time in ministering to the wants of her household, who hardly ever ventures from beneath the shadow of her own roof lest she neglect some domestic duty—to whom the Sabbath is scarcely a day of rest—and marks how every year finds her more heavy-hearted, morbid and melancholy than the last, can doubt that amusement is a necessity of our nature? Or, if he do, let him beguile the sordid worldling from his all-engrossing business, or entice the worn matron from her heart-wearying cares, to engage in some healthful and harmless recreation, where, for a brief period, the burden of life can be laid aside, and its wearing duties forgotten. Let him note how the contracted brow grows smooth, the dull eye lights up with animation, and the discontented, peevish and unsocial man or woman grows cheerful, genial and companionable, and instead of being unhappy and a source of discomfort to those around them, prove not only that they are capable of enjoying life, but also of contributing happiness to others. Then, let him question, if he can, that the love of pleasure is implanted in the human heart for a wise and benevolent purpose, and that its mission is to enliven and beautify life, and not to enervate and debilitate humanity.

But, perhaps, some one asks—what would you do, make a splendid and substitute pleasure for duty? Give our youth license to revel in dissipation, and pass the most valuable portion of their lives in the club-house, the billiard room and the ball room? Far from it. On the contrary, I would permit them to enjoy whatever of innocent and healthful recreation is to be found without exposing them to tainted atmospheres, and by providing them with harmless pleasures in the domestic and social circle, refrain from driving them to places of resort where they will be exposed to demoralizing influences, in quest of the recreation that is a necessity of their nature.

Were children permitted to learn and practice dancing as unrestrainedly as singing—allowed to dance as they would play at ball, or skipping the rope, during recess at school—to dance at home by their own quiet firesides or those of their friends—to dance on the velvet green beneath the azure canopy of Heaven, as is practiced among the peasantry of Europe—to dance, in short, anywhere and everywhere, such an amusement might with propriety be indulged in. Few, I think, of our well-trained youth would care to mope, and furt, and play the fop or coquette in a hot, crowded ball-room, where virtue and vice, purity and depravity, refinement and vulgarity, meet and mingle. And what is true of dancing is equally so of a score of other amusements alike innocent in themselves, but at present surrounded with a host of unhealthy associations. Our earth has not yet reached its prime, and it may be long before we can expect to see a perfect world, but before that good time arrives those who would reform the vices of society and mend the morals of communities, will have found that one of the most means of accomplishing so desirable an efficient end, is the providing of proper amusement for the young.

MY BELIEF.

Oh! if woman's beauty, power, and witchery, were often exerted for a high and holy purpose, how many who now bend a careless knee at her shrine, would hush the light laugh, the irreverent jest, and almost feel as she passed as though an angel's wing had rustled by.—*Funny Fern.*

That misty images, that vague fancies, and the gaudy trappings of pleasure, should blind the eyes of common sense, or that which is noble and worthy of attainment, is a fact which would appear too absurd for belief, did not daily experience afford unimpeachable evidence of its reality. And woman, from her peculiar constitution of mind, being gifted with a more vivid imagination and less of that untiring energy which characterizes man, is consequently more prone to indulge in those day-dreams and visions of future happiness which steal away from real life all its beauties and pleasures, though leaving the unfortunate, deluded one to all the distress of present toil and trouble. Away, then, with these hours of reverie—arouse yourselves to the duties and requirements of today, recollecting that

"That life is long which answers life's great end." Excite those God-given faculties to action, and become an humble but devoted worshiper at the shrine of Truth, who, though she is ever unpropitious to the thoughtless and foolish, yet will always twine the brows of those who earnestly seek her, with crowns whose brightness never fades and whose lustre never dims. A soul which only goes out to pure and elevated thought—a soul strung in unchanging union to that which is high and holy, and finds within no chord to vibrate in harmony with that which is base and groveling—will ever remain a "thing of beauty and a joy forever;" and though the world, with all its evanescent joys and pleasures, may pass away, yet it will stand like a column, erect amid ruins—an edifice unshaken and undefaced, amid the surrounding overthrow of palaces and temples—appearing like the magnetic rod, around which the lightnings of Heaven may play but cannot harm; and the lamp of its glory, like the pharos of the world, shall ever burn immortal and undimmed! Winchester, Tenn., 1859. W. E. W.

WILL THERE BE FLOWERS IN HEAVEN?

BRIGHTLY the sun of a clear, cold December day shed its slant rays through the half closed blinds of a sickroom, glowing upon the rosy curtains, and playing in fantastic shapes upon the carpet, but brought no gladness to the sorrowing hearts of the mourners there. A mother sat with bowed head and breaking heart by the bedside of her darling first-born son; and that dark-eyed little girl moved slowly about the room, gazing thoughtfully for a while into the bright fire, then kissing the pale cheek of her brother, and wondering "how long he would sleep." For hours he had lain with closed eyes and white lips, and a breath so short and low that it scarcely stirred the white cover. The fever had left him, but nature was exhausted, and they told us that our CHARLIE must certainly die.

Sunlight faded, and in the gray twilight we sat watching the little one passing so gently from our circle. At last the eyes slowly opened, and a soft voice spoke the sweet words:

"Mother, how long till summer time?"

"Six months, my darling."

"Then your CHARLIE will not see the flowers again. Don't cry, mamma, I must go pretty soon, but I wish I could see the flowers once more. Will there be any in heaven? Kiss me, mamma—Cousin AUNT, good night; sweet sleep"—and CHARLIE was with the angels.

We then crossed his white hands over his still heart, and smoothed back his golden curls from his temples, and there laid our faded lily upon the stainless snow. Our boy was too frail and fair for earth, and God has taken him to a holier clime.

Yes, there are flowers in heaven, sweet child; such flowers as thou. Their petals cannot bear our wintry winds, so angels gather them, and they go to bloom in fadeless beauty in the garden of our Father in heaven.—*Selected.*

POLITENESS. In politeness, as in many other things connected with the formation of character, people in general begin outside, when they should begin inside. Instead of beginning with the heart, and trusting that to form the manners, they begin with the manners, and trust the heart to shape the manners. The *Golden Rule* contains the very life and soul of politeness. Children may be taught to make a graceful courtesy, or a gentle bow, but unless they have likewise been taught to labor what is selfish and always prefer another's comfort and pleasure to their own, their politeness will be entirely artificial, and used only when it is their interest to use it. On the other hand, a truly benevolent, kind-hearted person, will always be distinguished for what is called native politeness, though entirely ignorant of the conventional forms of society.

WAR AND FROST.

Far beyond Atlantic's waters,
Sounds were heard of earthly strife;
And the ocean's restless bosom
Were with tales of courage rife—
All the blood of mighty Europe
Leaped to join the warlike fray;
Crews of ships and on the land,
Marking kingdoms for their prey.

From Sardinia's vale of beauty
Escaped a wild and stern man,
And the glees of suffering Hungary
Echoed all its mournful tone;
While o'er Europe's vast dominions
Rang a shriek of wild despair,
Marked with the agonizing wail,
And the lonely widow's prayer.

As it floated o'er the waters,
To our beautiful land of light;
Hill and valley caught the story,
Sending it to mountain height.
But we thought not of their suffering,
Of their thousand hopes laid low;
But the demons of Mammon
Drowned the wail of foreign woe.

As I passed from eastern borders
To the wide and beautiful West,
Oh! I heard our noble foremen
Cult our land supremely blest;
For, said they, "our fields, wide spreading,
Promise give of plentiful store;
And this bloody war will bring us
Golden gains from Europe's shore."

He who from his lofty dwelling
Reads the silent thoughts of man,
Who through every secret channel
Doth the inmost purpose scan,
Saw, that o'er our fallen natures
Pity held no sweet control,
But the lust of mere earthly
The bright image of the soul.

Of our harvest fields we boasted
In a sort of heartless tone,
Never thinking the Great Giver,
Counting treasures all our own.
Then He sent a chill at midnight,
O'er our fields of waving grain,
And the Frost King's icy arrows
Fell alike on hill and plain.

Drooped the flower buds in their beauty,
Darkened all our sunny bowers;
Turned our hopes of gain to ashes,
In the dark and silent hours.
Then remembered we the lesson,
Man may sow the golden grain,
One may plant—another water—
God alone can count the gain.

He who holds the fate of nations,
Pities all his children here;
Bows to soothe and Europe's anguish,
Bids us heed the silent warning,
Let us heed the silent warning,
Ere our land is scourged again,
Know we this, the God of Heaven
Bleth o'er the homes of men.

THE EVILS OF WAR.

There are few subjects in regard to which the imagination is more apt to lead the reason astray than that of the lawfulness of war. Poets and orators have often thrown such a charm around the hero, as to greatly obscure the real deformity of his character, and to cause those who listened to them to forget that he is, at best, only a mighty murderer. But if we will regard the voice of reason, she will teach us to look upon war as a curse. The origin ascribed to war, by the Scriptures, is not very flattering to the military chieftain, for we learn it was man's failure to exercise a proper government over his lusts. (See James 4: 1-2.) And is not this correct? Has there ever been a war that was not caused by pride, avarice, or an undue love of power? Teach all men to bring their passions under the control of reason, and every army in the world will soon be disbanded. Rob war of the false honor that the populace are accustomed to bestow upon the victorious chieftain, and the number of heroes would rapidly decrease.

If war is evil in its origin, it is not less so in its effects upon the morals of those who engage in it. It is not to be supposed that military men are naturally worse than the rest of the human family, but if we find them distinguished for their vices, must we not conclude that there is something in the profession, itself, that vitiates the mind? And have not nine out of ten of the heroes, of both ancient and modern times, been distinguished for their corruptions? ALEXANDER died from the effects of a debauch, and BUCHANA was seldom sober. England boasts of NELSON, but his connection with Lady HAMILTON is a sufficient blot upon his reputation. While the countrymen of WALLINGTON are loud in their plaudits, they cannot conceal the fact that selfishness was one of the most strongly marked traits of his character. A recent writer has spent much time in endeavors to prove that NAPOLEON the First was possessed of almost every virtue that ever fell to the lot of any man, but most persons are still inclined to consider him anything but a paragon of uprightness.

If such be the character of the leaders, are the common soldiers purer than their commanders?—Commanders often put forth direct efforts to morally enervate those that serve under them, lest their virtues should render them less efficient in carrying out the designs of their masters. And are not their efforts generally crowned with fearful success? A camp is generally the school for every vice. Who would think of sending a youth into the army, to learn honesty and sobriety? But how much wickedness does war bring upon the victims of the hero's ambition. He is the greatest hero who does the most harm. His march is over the ruins of monuments created by genius, and he writes his name amid the ashes of burning cities.

Desolation follows in his train, and nations groan beneath the miseries that he has brought upon them. Thousands of widows and orphans bewail the death of husbands and fathers who have been sacrificed at the shrine of his love of power or greed of gain. How often has the battle-field been the death bed of civil and religious freedom? And what becomes of the millions, who pass from the field of carnage into eternity? Is there not a thick gloom that gathers around the exit of the soldier from this world? Can the soul pass directly from the strife of the mortal conflict to those bowers of bliss where love binds all hearts in sweet communion? Who is accountable for all these evils? The hero is not alone criminal. Is not the man of genius who throws a charm around the battle-field, and sings the praises of the hero, fearfully guilty? Is he not doing much to perpetuate the evils of war by begetting a love for military glory in the minds of his fellow-creatures? Are those the real friends of their race who advocate war in the halls of legislation? But, reader, you have a duty to perform in this matter. Are you exerting all your influence to hasten that happy time, when "the nations shall learn war no more?"

Bauer, Wis., 1859.

S. L. LEONARD.

THE HISTORY OF LIFE.

How truly does the journey of a single day, its changes and its hours, exhibit the history of human life! We rise up in the glorious freshness of a spring morning. The dew of night, those sweet tears of nature, are hanging from each bough in the refreshing morning. Our hearts are beating with hope, our frames are buoyant with health.—We see no cloud, we fear no storm, and with our chosen and beloved companions clustering around us, we commence our journey. Step by step, the scene becomes more lovely; hour by hour, our hopes become brighter. A few of our companions have dropped away, but in the multitude remaining, and the beauty of the scenery, their loss is unfelt. Suddenly we have entered upon a new country. The dew of the morning are exhaled by the fervor of the noon-day sun; the friends that started with us are disappearing. Some remain, but their looks are cold and estranged; others have laid down to rest, but new faces are smiling upon us; and new hopes are beckoning us on.—Ambition and fame are before us, but youth and affection are behind us. The scene is more glorious and brilliant, but the beauty and freshness of the morning have faded, and forever.

Onward and onward we go; the horizon of happiness and fame recedes as we advance to it, the shadows begin to lengthen, and the chilly airs of evening are usurping the noon day. Still we press onward; the goal is not yet won, the haven not yet reached. The orb of hope that had cheered us on, is sinking in the west; our limbs begin to grow faint, our hearts to grow sad; we turn our gaze upon the scenes that we have passed, but the shadows of the twilight have interposed their veil between us; we look around for the old and familiar faces, the companions of our travel, but we gaze in vain to find them; we have outstripped them all in the race after pleasure, and the phantom has fled; and caught, in a land of strangers, in a sterile and inhospitable country, the night-time overtakes us; the dark and terrible night-time of death; and weary and heavy laden, we lie down to rest in the bed of the grave! Happy, thrice happy, is he who has laid up treasures for himself, for the distant and unknown to-morrow.—*Knickerbocker.*

PARENTAL SYMPATHY.

PARENTS express too little sympathy for their children—the effect of this is lamentable.

"How your children love you! I would give the world to have my children so devoted to me!" said a mother to one who did not regard the time given to her children as so much capital wasted. Parents err fatally when they grudge the time necessary for their children's amusement and instruction; for no investment brings so sure and so rich returns.

The child's love is holy; and if the parent does not fix that love on himself, he deserves to lose it, and in after life, to bewail his poverty of heart. The child's heart is full of love; and it must gush out toward somebody or something. If the parent is worthy of it, and possesses it, he is blest; and the child is safe. When the child loves worthy persons, and receives their sympathy, he is less liable to be influenced by the undervaluing; for in his soul are models of excellence, with which he compares others.

Any parent can descend from his chilling dignity and freely answer the child's questions, talking familiarly and tenderly with him; and when the little one wishes help, the parent should come out of his abstraction and cheerfully help him. Then his mind will return to his speculations elastic, and it will act with force. All parents can find a few minutes occasionally during the day, to read little stories to children, and to illustrate the respective tendencies of good and bad feelings. They can talk to them about flowers, birds, trees, about angels, and about God. They can show interest in their sports, determining the character of them. What is a surer way than this of binding the child to the heart of the parent? When you have made a friend of a child, you may congratulate yourself you have a friend for life.—*Life Illustrated.*

How many thousand stitches are there in a garment! Yet when you look at it, you don't see one—all you see is the garment; but every one of them was necessary. So events are but separate stitches in the great garment which God is making; and, though now all that we see is the events as they transpire, yet when it is done we shall not observe the stitches, though they were all necessary.—*Becher.*

How easily one can tell whether a man is glad from within; or whether it is only the play of the countenance that chance to fall upon him. Happiness is not the work of a chisel and mallet; not mortified into the soul—it is "put out" like the arms of a tree, whose green untraveled sleeve flutters with the life it shares.—*Taylor.*

NOTHING BUT LEAVES.

Nothing but leaves; the Spirit grieves
O'er a wasted life;
Sin committed while conscience slept,
Promises made but never kept,
Haired, battle and strife;
Nothing but leaves!

Nothing but leaves; no garnered sheaves
Of life's fair, ripened grain;
Words, idle words, for earnest deeds;
We sow our seeds in tares and weeds;
We reap with toil and pain
Nothing but leaves.

Nothing but leaves; memory weaves
No veil to screen the past;
As we trace our weary way,
Counting each lost and mis-spent day,
We find sadly at last,
Nothing but leaves.

And shall we meet the Master so,
Bearing our withered leaves?
The Savior looks for perfect fruit—
We stand before Him humble, meek;
Waiting the word to breathe—
Nothing but leaves.

CHRISTIAN EXPERIENCE.

"OLD THINGS ARE PASSED AWAY."—To the truly renewed soul, this is most emphatically true. The old rebellious heart, the home of conflicting passions,—the abode of envy, strife and hatred has become mellowed and refined, by grace Divine, and "rendered a fit temple for the indwelling of the Holy Spirit." Earth's transitory pleasures, once so fascinating, sink now into insignificance, eclipsed by the glorious effulgence of the Sun of Righteousness, and the renewed soul becomes all enraptured by the transcendent beauty there is in Christ. The Cross is all his theme. He inhales a new atmosphere,—earth, air and water team with beauties all unseen before. The commandments of God, once so grievous to be borne, are now observed with cheerful obedience. "His yoke is easy, and his burden is light." His obligations, so afflicting to the natural heart, are now welcomed as strokes of love from His Fatherly hand. The subdued heart cries out, "Thy will be done," "kisses the rod," joyfully exclaiming, "Whom the Lord loveth, He chasteneth," yet "Though He slay me, I will trust in Him."

"ALL THINGS ARE BECOMING NEW."—His former pursuits and treasures, Oh! how valueless do they now appear. He sees now that he was formed for a nobler purpose than to "labor for the meat which perisheth." He feels that "he is not his own,—that he is bought with a price," and a story turn of life his earnest inquiry is, "Lord what wilt Thou have me to do?" The great aim is to glorify God, in body and spirit. The precious hours of the Sabbath, once so irksome, are now welcomed with delight, and enjoyed as a slight prelude of that eternal Sabbath, the inheritance of the faithful.

In nothing is the great change more marked than in the choice of society and friends. The gay, thoughtless beings, who thronged with him the "broad, frequented way," who bowed with him at Pleasure's shrine, and quaffed with him from her poisoned chalice, have ceased to charm with their allurements. The humblest child of God now has the preference. How lovely now appears one who perfectly reflects the Divine image. Though divested of all that might gain the favor, the admiration of a sin-blinded world, he is greeted as an heir of the same inheritance, and pulse beats to pulse as they mutually recognize in each other the image of their crucified Redeemer.

"Blest be the tie that binds
Our hearts in Christian love;
The fellowship of kindred minds
Is like to that above."

More valued is one such friend than all the flattered, glittering multitude that throng the halls of Fashion. But he possesses a dearer friend,—one whom he is wont to meet and hold converse with. When buffeted by the world; when forsaken by friends; when afflicted, and tempest tossed, there is One upon whose sympathizing breast he may ever pillow his weary head; One whose ears are ever open to hear, and who is ever ready to soothe all his griefs—even the precious SAVIOR—the bleeding Lamb of Calvary. Let lowering clouds gather,—let surging tempests beat against his bark,—let the dark pall of disappointment fall in sombre drapery over all his earthly hopes,—let disease and pain rack his clay tenement,—let foes malign and friends forsake, if he but feels the em-kindlings of a SAVIOR'S love in his soul, exuberant joy may beam from his sorrow-dimmed eye, and exultant songs resound above the raging tempest, for "If Christ is for him, who can be against him?"

To the true child of God, "old things are passed away; all things are become new." Yet it is a fact undeniable, that multitudes who have "named the name of Christ," disprove this in practice, if not in theory. Very many there are who would willingly possess religion enough to take them within the Pearly Gates,—would wish the SAVIOR to make their bed.

"Soft as downy pillows are,"—would take His hand to sustain them through Jordan's chilling waves, His presence to illumine the Dark Valley, and His welcome to a seat at the right hand of God. Yet the world must furnish their enjoyment—their society—their employment. "They see no beauty in Christ that they should desire Him" only to save them from eternal punishment. And his children have no attraction to them unless tinged with the dross of earth.—They follow the same passions, the same spirit, and are the stars of the same church. A stranger, those without the pale of the church, the heir of eternal glory with difficulty and the trappings of earth. The question is one of individual interest to every eternally bound soul.—Have "old things passed away; have all things become new?" Cleveland, N. Y., 1859. GEORGE DE GARY.

TEACHERS' ASSOCIATIONS.—ANNUAL MEETINGS.

The Annual Meeting of the National Teachers' Association was held at Washington during the second week of August. The Association was welcomed to that city by the Mayor, who gave a history of the free school system at Washington. A committee was appointed to confer with the Secretary of the Interior, to ascertain what additional statistics on the subject of education, may be obtained when taking the census.

The various addresses were delivered, as announced, after which officers were chosen for the ensuing year, as follows:

President—J. W. BULLEY, of Brooklyn, N. Y. Vice-Presidents—T. W. Valentine, N. Y.; D. B. Hagar, Mass.; Wm. Roberts, Penn.; T. C. Taylor, Del.; Elbridge Smith, Conn.; Daniel Read, Wis.; Isaac Stone, Ill.; A. K. Rikoff, Ohio; C. S. Pennell, Missouri; J. N. McJilton, Md.; Sylvester Scott, Va.; C. C. Neelverde, Iowa. Secretary—Z. Richards, District of Columbia. Treasurer—O. O. Wight, District of Columbia. Counsellors—James Cruikshanks, N. Y.; J. W. Allen, Conn.; H. C. Hickok, Penn.; Wm. McCathran, D. C.; John G. Elliott, N. C.; S. J. C. Sweezy, Ala.; Wm. E. Thelton, Mass.; Daniel Reed, Wis.; J. D. Yeates, Md.; F. M. Edward, Va.; D. McNeil Turner, Fla.; A. Drury, Ky.; Wm. B. Stark, Mo.; Asael Elmer, Ill.; L. C. Draper, Wis.; B. W. Smith, Ind.; R. McMillan, Ohio.

The Wisconsin Journal of Education, in commenting upon the recent gathering of teachers at Madison, remarks as follows:—"It was pleasant and profitable, was largely attended by teachers, school officers, and friends of education, and we believe will be productive of much good in uniting together the various parts of our educational system, in giving point and efficiency to the efforts hereafter to be made in the direction of progress and reform, and in establishing and promulgating correct views of the teacher's profession, proper estimates of the nature of his work, and an acquaintance with the best means to be employed in its successful prosecution."

The weather was all that could be desired, the citizens of Madison extended a generous welcome to the members of the Association, and the exercises were generally very interesting and profitable. The inauguration of Chancellor BARNARD was a special feature of the occasion, and was witnessed by an audience which filled the City Hall to its utmost capacity. Dr. BARNARD'S inaugural address was characteristic of the man, giving in earnest, eloquent language, broad and comprehensive views of education and educational systems, pervaded all through by strong common sense, and a practical adaptation of general views to the particular circumstances surrounding the field in which he expects to work.

The address, on behalf of the University, by CARL SCHURTS, Esq., was worthy of the reputation this gentleman has acquired as a profound thinker and finished scholar, and that of J. T. OLANS, Esq., on behalf of the Normal Regents, was well written, in good taste, and appropriate to the occasion.

The address before the literary societies by Rev. Dr. SMITH, of Lane Seminary, Cincinnati, the subject of which was "Decision of Character," secured the unqualified approbation of all who heard it, as a powerful and scholarly production, worthy of the reputation of the speaker, and abounding in valuable thought. The week will be remembered by many a teacher as an epoch in his or her educational life, and the knowledge gained and acquaintances made will exert a happy influence, inducing more rapid growth, a broader development, and an increase of zeal in the good work."

Written for Moore's Rural New-Yorker.
TEACHING THE A B C'S.

Nor long since I observed in the Educational Department the account of a very learned and talented gentleman teaching the usually uninteresting and much dreaded A B C's to a large class, by drawing upon the blackboard a representation of some familiar object, printing its name and telling the letters of which it is composed. A district-school teacher with from thirty to fifty scholars,—nearly all having different books,—would scarcely find time to draw horses, dogs, fishes, etc.,—neither are there many who could surpass the idea of them already stamped upon the child's mind, if time would allow. I have tried a similar, and, I think, a more simple way. At the commencement of my spring term, I had a class of ten small children, mostly those who had never learned a single letter. I tested several ways to gain their attention, but while I was teaching one, the others would look around or play with each other, and then, before I could get back to this one again, he would forget what it was. At length, when almost discouraged, I hit upon this plan—I arranged them in front of the blackboard, and asked how many of them had a cat at home. They all raised their hands (my usual affirmation.) I then asked what colors they were, what they were good for, etc.—each answering accordingly. After talking a few moments about them, perhaps telling a short, amusing anecdote, I told them I would print out upon the blackboard, and wanted them to look and see which could learn it first. Now they were all animation, their before expressionless eyes glinted with pleasure, and every nerve seemed stretched to its utmost—each tried to vie with the other in being the first to see it.

After they were able to tell the word upon seeing it in any book, I told them it was composed of letters, and they must learn those too. I next asked them what a cat would do if it saw a mouse? Some answered it would catch it; others, it would run after it. I then printed run, and in the same

manner they soon mastered that, together with the and am. They had then learned and could put together the sentence, "The cat can run." I next bestowed a little praise, (which is far better than the "beechen rule,") dividing a little fruit among them, saying I would do the same the next time they read as well. As they went quietly to their seats, prouder people lived not, for they had not only taken one step towards conquering the world of letters, but had also gained the approval of their teacher. I afterwards proceeded in the same manner, and in a few days they could read in the Readers, thus avoiding a summer's drill in the A B C's and abs, which to them contained as little sense as does the Japanese language to us. Bodus, Wayne Co., N. Y., 1859. B. R.

THE DUTY OF OWNING BOOKS.

We form judgements of men from little things about their house, of which the owner, perhaps, never thinks. In earlier years, when traveling in the West, where taverns were either scarce, or, in some places, unknown, and every settler's house was a house of "Entertainment," it was a matter of some importance and some experience to select wisely where you would put up. And we always look for flowers. If there were no trees for shade, no patch of flowers in the yard, we were suspicious of the place. But, no matter how rude the cabin, or rough the surroundings, if we saw that the window held a little trough for flowers, and that some vines twined about strings let down from the eaves, we were confident that there was some taste and carefulness in the log cabin. In a new country, where people have to tug for a living, no one will take the trouble to rear flowers, unless the love of them is pretty strong—and this taste blossoming out of plain and uncultivated people is, itself, like a clump of bare-bells growing out of the seams of a rock. We were seldom misled. A patch of flowers came to signify kind people, clean beds, and good bread.

But, other signs are more significant in other states of society. Flowers about a rich man's house may signify only that he has a good gardener, or that he has refined neighbors, and does what he sees them do.

But men are not accustomed to buy books unless they want them. If, on visiting the dwelling of a man of slender means I find the reason why he has cheap carpets, and very plain furniture, to be that he may purchase books, he rises at once in my esteem. Books are not made for furniture, but there is nothing else that so beautifully furnishes a house. The plainest row of books that cloth or paper ever covered is more significant of refinement than the most elaborately-carved chalice or side-board.

Give me a house furnished with books rather than furniture! Both if you can, but books at any rate! To spend several days in a friend's house, and hunger for something to read, while you are treading on costly carpets, and sitting upon luxurious chairs, and sleeping upon down, is as if one were bribing your body for the sake of cheating your mind.

Is it not pitiable to see a man growing rich, and beginning to augment the comforts of home, and lavishing money on ostentatious upholstery, upon the table, upon everything but what the soul needs?

We know of many and many a rich man's house where it would not be safe to ask for the commonest English classics. A few garish annals on the table, a few pictorial monstrosities, together with the stock of religious books of his "persuasion," and that is all! No range of poets, no essayists, no selection of historians, no travels or biographies—no select fictions or curious legendary lore; but then, the walls have paper on which cost three dollars a roll, and the floors have carpets that cost four dollars a yard! Books are the windows through which the soul looks out. A house without books is like a room without windows. No man has a right to bring up his children without surrounding them with books, if he has the means to buy them. It is a wrong to his family. He cheats them!—Children learn to read by being in the presence of books. The love of knowledge comes with reading, and grows upon it—and the love of knowledge, in a young mind, is almost a warrant against the inferior excitement of passions and vices.

Let us pity those poor rich men who live barrenly in great bookless houses! Let us congratulate the poor that, in our day, books are so cheap that a man may every year add a hundred volumes to his library for the price of what his tobacco and his beer would cost him. Among the earliest ambitions to be excited in clerks, workmen, journeymen, and, indeed, among all that are struggling up in life from nothing to something, is that of owning, and constantly adding to, a library of good books. A little library growing larger every year is an honorable part of a young man's history. It is a man's duty to have books. A library is not a luxury, but one of the necessities of life.—Henry Ward Beecher.

EDUCATION IN IRELAND.—The 24th Report of the Commissioners of National Education in Ireland shows that at the end of 1857 there were 5,337 schools in operation, an average daily attendance of 268,187 children, the average number in the rolls being 514,445. There were thirteen district model schools and 106 national agricultural schools. The total receipts of the commissioners amounted to £202,224 and their expenditure to £269,425.

AMERICAN BOOKS.—Mr. Hilliard, in a letter from Liverpool to the Boston Courier, states that in the examination of traveler's luggage by the officers of customs, American reprints of English books are absolutely excluded; they are taken away and destroyed. Thackeray was in this way deprived of his copies of the Appleton's reprints of his own works.

DISCIPLINE not one faculty exclusively, for thou hast many. If thou canst not use the optic glass in the dark, take the ear trumpet—by day reverse them.—Jean Paul.

EDUCATION makes more difference between man and man, than nature has made between man and brute.—John Adams.

A MAN passes for a sage, if he seeks for wisdom; if he thinks he has found it, he is a fool.

HORACE MANN, LL. D.

In the issue of the RURAL for August 18th, we made brief mention of the decease of the Hon. HORACE MANN, at the same time furnishing our readers with such an epitome of his life and labors as space would permit. It was our intention to again recur to the subject in detail, and we now gladly avail ourselves of the present opportunity to present (in connection with a life-like portrait,) a biographical sketch of one who has probably done more for the educational interests of our country than any individual now upon the stage of active life.

HORACE MANN was born in the town of Franklin, Mass., May 4th, 1796. His father, THOMAS MANN, who was a farmer, died when the subject of our remarks had attained his thirteenth year, leaving his family little beside the example of an upright life. The educational advantages of the children were very limited. In commenting upon this point, the editor of *Life Illustrated* remarks:—"They were taught in the district common school; and it was the misfortune of the family that it belonged to the smallest district, had the poorest school-house, and employed the cheapest teachers in a town which was half both small and poor. When the obscure boy of this obscure school afterwards became Secretary of the Massachusetts Board of Education, it is well known with what earnestness he used to dwell upon the importance of school-house architecture, and with what graphic touches of description he would paint the houses which had never been painted in fact. Doubtless, many of his pictures were drawn, not from fancy, but from memory."

The early life of Mr. Mann was spent in an obscure country town, where opportunities for the acquirement of knowledge were exceedingly meagre. While thus employed an itinerant school-master came into his neighborhood and opened a school. The specialty of the instructor was Grammar—English, Greek and Latin. Here Mr. Mann first saw a Latin Grammar. Having obtained a reluctant consent from his guardian to prepare for College, with six months schooling he learned his Grammar, and entered the Sophomore class of Brown University in September, 1815. This hurried preparation left him with many deficiencies, and extra study was the only means by which he could successfully cope with his fellow-students. Self-imposed labor gained the victory, but at what fearful cost! Youthful ambition heeded not the claims of Nature, and, like thousands of others in the land, he left his *Alma Mater* physically wrecked. When his class graduated, in 1819, the place of honor in the Commencement Exercises was awarded to him, with the undivided approval of both faculty and classmates.

At the close of Commencement he entered the office of Hon. J. J. FISKE, of Wrentham, as a law student. Only a few months was he thus engaged, however, as he was invited back to College, and became a tutor in Latin and Greek. In 1821 this post was resigned, and he entered the law school at Litchfield, Conn., and was admitted to the bar in 1823. Space will not permit a review of his legal labors; suffice it to say, his powers as an advocate were acknowledged to be of the highest order, and the success with which he met (gaining at least four-fifths of all contested cases,) brought business to him in a copious stream. In 1830 Mr. M. married Miss CHARLOTTE, youngest daughter of the late Rev. Dr. MESSER, for many years President of Brown University. In 1832 he was called to mourn the death of this lady, and in 1843 he was married to Miss PEABODY, in whom he found not only a most affectionate and worthy companion, but an earnest assistant and sympathizer in all his educational labors.

The political career of Mr. Mann began in 1827, when he was elected a Representative to the Legislature of Massachusetts. In 1833 he removed to Boston, and at the first election after becoming a resident of that city, he was chosen to the State Senate. By re-elections he was continued in the Senate for four years. In 1836 that body elected him its President; and again, in 1837, in which year he retired to enter upon a new and more congenial sphere of labor, and in June, 1837, accepted the office of Secretary of the Board of Education. Immediately on accepting the office he withdrew from all other professional and business engagements whatever, that no vocation but the new one might burden his hands or obtrude upon his contemplations. He resolved to be seen and known only as an Educationist.

In 1843, under the auspices of the Board of Education, (but at his own private expense,) Mr. Mann visited Europe, to examine the schools, and to ob-

tain any such information as could be made available at home. It is impossible for us to detail his labors while acting as Secretary of the Educational Board. He wrote twelve long Annual Reports, of one of which—the tenth—the *Edinburgh Review* says, "This volume is indeed a noble monument of a civilized people; and if America were sunk beneath the waves, would remain the fairest picture on record of an Ideal Commonwealth."

On the 23d of February, 1848, Mr. JOHN QUINOR ADAMS, who was a Representative from the Congressional District in which Mr. MANN resided, died in the United States House of Representatives, which for almost twenty years had been the theatre of his labors. A successor was to be chosen and the task devolved upon Mr. MANN. On the 20th of June he entered Congress, and in the ensuing November he was re-elected by an overwhelming majority, receiving eleven thousand out of about thirteen thousand votes, and was re-elected again in 1850, against two opposing candidates.

In September, 1852, Mr. MANN was chosen President of Antioch College, at Yellow Springs, Ohio. He was also President of the Northwestern Christian University of Indianapolis. Thus employed he received the final summons—and a well-spent life was fittingly closed in labors calculated to stimulate Educational Progress and Christian Knowledge.

ICEBERGS.—DANGERS OF THE SEA.

A GENTLEMAN who was a passenger on the July trip of the *Persia*, writing to a friend in Mobile, gives a vivid description of the dangers of Atlantic navigation. His letter is dated "Mid-Ocean, July 4th," and he remarks:

"Then came fog, fog, for three days and nights, until one thousand miles were passed, Cape Race and New Foundland Banks. Here the air began to be very cold, requiring thick winter clothing, indicating that we were approaching the region of icebergs. Sure enough, on the afternoon of the 9th, while we were at dinner, the cry of 'icebergs' was heard through the cabin, (a convenient excuse for many to leave the table, as it was a little rough; this cry was well understood afterwards, when it became necessary for any one to leave before meals were over, and often accompanied with considerable amusement;) but to the icebergs. We rushed on deck, and there, far, far away over the sea, was a dim mass of white substance, which we could not distinguish from land, then another came, very large and grand, about ten miles distant—a great mountain of ice like a huge, bold promontory, jutting out into the wild waste of waters, while the waves dashed in foam and spray upon its cold and barren sides.

"Then the sunlight flashed over glassy heights with a dazzling brilliancy, reflecting all the colors of the rainbow from peak to peak, until the mass passed into a shadow, and then appeared like a great mountain of snow, of the purest whiteness untouched by that which defiles and darkens.—Ooo, we passed within half a mile, and could with great distinctness see its huge sides, cut into ridges and gullies by the streams that were trickling down to the ocean; on the summit there seemed the form of a house, indeed there was anything there that the imagination could picture out of such fantastic shapes and strange appearances. The cold gusts of wind that swept the ice fields came over our vessel like a wintry blast, producing the intensest cold. They say sailors can tell when they approach icebergs, even in the darkest night, by the change in the temperature of the atmosphere; in their own language, they 'can smell them.'"

HOW A RAIN CLOUD FORMS.—Prof. Wise, describing his last balloon voyage, says:—"We plainly saw that the southeast wind below, which drove us to the northwest at starting, had now supplied the atmosphere with moisture enough to make a growing rain cloud. Slowly, but interestingly, the vapor assumed a milky hue. Presently it assumed the appearance of a vascular cloud; then it spread out and bulged down in the middle, and soon it had the appearance of a great udder, with the water oozing through it, but more copiously at and around its protuberant centre. It was an interesting phenomenon, and it seemed as though nature was unbosoming her mammal to give the earth some sustenance. I have noticed these udders and water spouts before.

It is less pain to learn in youth than to be ignorant in old age.

THE "CHILDREN'S MINISTER."

L. B. TOWNSLEY, for more than a score of years has labored in Western New York for the good of the children and the Sunday Schools, as Agent of the American Sunday School Union, during which time he has endeared himself to the hearts of thousands of little ones, and earned the title of the "Children's Minister," though only a lay preacher. In removing an old barn about a year since, he was struck by a falling timber, and so injured in the spine as to be helpless, and his life was for a long time despaired of. He still lives, but is unable to perform labor of any kind. The children, to show their gratitude to one who loved them so much, and had served them so long, and to alleviate his great affliction as much as possible, raised in the various schools over one thousand dollars, which they presented to Mr. TOWNSLEY. In stating this fact, it seems, by the following note from an associate of Mr. T., that by some freak of the figures, which are said usually to tell the truth, the sum was made altogether too large:

ESS. RONAT:—In your paper of the 18th of June, appears the following:—"L. B. TOWNSLEY, the Children's Minister, has received, since the injury which disabled him, the sum of \$13,197, contributions from various Sunday Schools." While our Brother TOWNSLEY feels deeply grateful for the numerous and substantial tokens of interest and sympathy received from the children in every part of the State, where he has so long and efficiently prosecuted the work of the "Children's Minister," and will ever be ready, so far as figures can do it, to acknowledge to the full extent these favors, he may well be pardoned for being unwilling to have a statement so wide of the mark as the above, go uncorrected.

The facts in this case are, as I recently learned from Bro. TOWNSLEY, that the "contributions of the various Sunday Schools" above alluded to, at this time (August 3d) amount to thirteen hundred and eleven dollars, (\$1,311,) instead of thirteen thousand. By giving publicity to this statement, you will greatly oblige all concerned.

P. G. COOK, Missionary of the Am. S. S. Union.
Buffalo, N. Y., August 4, 1859.

A LITTLE SYMPATHY FOR DOGS.

FRIEND MOORE:—There have been two or three articles written and published in the *RURAL*, in favor of the total destruction of dogs. I differ from the writer, for this reason; if no other, God made all things and pronounced them good. I think we poor weak mortals ought to stop and think whether we have any right to wish the total destruction of anything, much less for the reasons that friend P. gives. They kill sheep and do other mischief. Take that as the true principle to judge from, and what would become of even the human family? Don't they steal and kill sheep, besides being the cause of a great many other serious evils? "They bow-wow-wow, and disturb us nights and bark at us when we travel." I have traveled lately, some two or three hundred miles by my own conveyance and I have no recollection of a single dog coming out to bark at me. Perhaps they did, but I seldom if ever notice them, and if I did I should say that nine times out of ten their masters were more to blame than they. I have no doubt that there are a great many so nervous that if they could, they would pull a chimney down to kill a cricket, so their noise would not keep them awake. It is better to let ninety and nine guilty go unpunished, than to punish one just person, and why not carry a little of that principle to dogs, and punish the guilty even with death, but to couple the innocent with the guilty, it would lack the true principles of humanity and justice.

Friend P. thinks occasionally there is a dog that is of some benefit to his master. I think so, and I will name two or three circumstances known to me. I have frequently heard my father and mother speak of a dog they had when they first commenced keeping house. My father's business called him away from home a great deal, and to stay all night, and that dog was never known to be off the door step at night, when he was gone. I have heard my father say that he has been twenty miles from home and that dog was with him when the sun was not more than half an hour high, and that same night by the time it was fairly dark he would be home on the door steps. My mother always thought he saved her life and all the property they were worth in the world, for it was then in the house in money. In the dead of night she was awakened up by the dog, who seemed to be in a fight with something; she got up and looked out of the window, and there saw two men trying to beat the dog away from the door. She encouraged the dog and they left. I have had dogs that would drive pigs or anything out of mischief, and watch to keep them out, and not a word said. I had a neighbor that had a dog, that if he left or lost any thing that he could carry, would send him after it, and he would bring it to him. A short time ago I staid all night at a gentleman's house and in the morning when they went out to milk, knowing he was celebrated for keeping good stock, I walked out to the yard with him. After we got there I discovered a dog walking about among the cattle, but nothing unusual until an old sow ran up to a calf there was in the yard as if to bite him or drive him away. She had not more than got to where the calf was before the dog was there and started her out of the yard in a hurry. The gentleman said he did not allow any thing to fight on the farm, and the dog knew it, and helped him keep order.

Springport, August, 1859.

PERFECT HAPPINESS.—It is heaven upon earth to have a man's mind move in clarity, rest in Providence, and turn upon the poles of truth.

It is reported that the Emperor of China is dead.

The yellow fever at Havana has become epidemic.

New wheat is coming in Muscatine, Iowa, at sixty cents per bushel.

Bloody battles are reported between the Sioux and Arkansas Indians.

There is a child in St. Louis, two years old, that weighs 145 pounds.

The number of visitors in Saratoga was never greater than at present.

Pears are a drop in California, so are blackberries—three lbs. for 80 cents.

A State Military Convention is to be held in Iowa on the 6th inst., at Muscatine.

Baltimore enjoys the notoriety of having the worst cowdies of any city in the Union.

A movement is on foot in Chicago for a Reform school for girls. A noble project.

The taxable property of Georgia is said to have increased \$50,000,000 the past year.

The venerable widow of ex-President Harrison is very ill at her residence in North Bend.

It is said a revival of a very gracious and interesting character has commenced in Jerusalem.

It is calculated that the books in the Library of the British museum occupy 12 miles of shelf.

The Vigilance Committee of Napoleon, Ark., are violently expelling all gamblers from the town.

The excitement at the isthmus in relation to the golden images in the Indian mounds is dying out.

A bear attacked Cyril Randall, his keeper, in Providence, R. I., recently, and nearly tore his leg off.

Twelve hundred passengers sailed for foreign ports by the alcazers leaving New York on Saturday week.

A little boy at Lexington Ky., running with a knife open, stumbled and fell, the blade piercing his heart.

The blackberry crop of Indiana is estimated to have yielded nearly a half a million of dollars this season.

A Homoeopathic Medical College is to be established at St. Louis. It will be open on the first day of October.

Since the first of June, in Boston, no less than fifteen hundred and twenty-eight dogs have been hanged.

Jose Joaquin Fernandez, aged 99 years, and for years a citizen of New Orleans, died in that city on the 6th ult.

The Cincinnati, Dayton, Toledo, and Detroit Railroad was opened, on Thursday last, between Cincinnati and Toledo.

An old advertisement, of 1848, reads:—"Wanted A stout, active man, who fears God, and can carry 90 pounds."

Twenty-seven thousand bags of coffee, lately imported from the West Indies, are lying in the warehouse of Baltimore.

The Arcticon Well of Columbus, O., has reached a depth of 2,055 feet, the auger going down at the rate of an foot a day.

More than 5,000,000 feet of lumber and 40,000,000 shingles were received at West Troy by canal during the past week.

The Gonzalez Inquirer says that 250,000 sheep have been brought into Texas, from Mexico, since the 1st of January.

Over fifteen million baskets of strawberries are estimated to have been brought to New York during the recent season.

Chief Justice Taney, of the United States Supreme Court, is eighty-two years old. Some of the other Judges are over seventy.

Extensive fires are raging in the woods west of Rome, N. Y. Between Rome and Verona, the fire is becoming alarming.

The list of lands in Erie Co., N. Y., to be sold for non-payment of taxes, fills nearly 12 columns of the Courier, in small type.

The American bull frigate General Admiral excited particular attention at a grand naval review held at Constantinople on the 25th of July.

A French cook has stated that there are precisely 11 different kinds of wine which a gentleman may put on his table without a blush.

Some eighty Europeans have been massacred by the natives on the Island of Bornoe. Among them are five German missionaries.

London is about to spend \$20,000,000 on draining the streets, on keeping filth from flowing into the Thames and on saving it for agriculture.

Letters received at Portland give full assurance that the mammoth steamship may be expected to arrive about the present month.

Metallic window blinds are coming into use in New York. The frame is made of malleable iron, and the slats of corrugated sheet iron.

Mme. de la Baronesse de Pierres, *dame d'honneur* of the Empress of the French, is a daughter of Herman Torne, just deceased in New York.

Two bars of gold, weighing 1,200 pennyweights, the product of the labor of fourteen hands, seven weeks in a mine in Lincoln Co., Ga.

The Providence Journal says there are "a great many lovely women at Newport." Very likely. But there are a great many more at home.

Four men went out sharking from Keany's Stone Bridge House, R. I., last week, and in a few hours caught 93 sharks, from 4 to 8 feet long.

Vigilance Committees have been formed in several places of Louisiana, but the Governor has issued a proclamation ordering them to disband.

The Jackson gold snuff-box was presented by a bill to Gen. Burnett, at Nashville, on the 15th ult., by a fellow representing Gen. Burnett.

The papers suggest that hereafter duels be done by writ, and that quarrelers be invited to walk across a judge's rope instead of standing fire.

Zinc is found in immense quantities in Southern Wisconsin and Northern Illinois, and shops have been started at La Salle, Ill., for smelting the ore.

Alabama papers are exultant over the success of copper miners in the Northern part of that State, and rich veins have been found in Coosa Co.

A spring has recently been discovered at Little Falls, N. Y., the water of which contains all the character of the White Sulphur Springs in Virginia.

Thirty-six bank note plates and \$13,000 in counterfeits were found recently in the house of two men, Miller and Clark, who were arrested in New York.

The frigate Chesapeake, captured by the Shannon 12, has been enlarged and converted into a propeller and is now the British flag ship in the China seas.

LABOR.

Tell, swings the axe, the forests how,
The apples break out in radiant bloom;
Rich harvests smile behind the plow,
And elms cluster round the loom;
Where towering domes and tapering spires,
Adorn the vale and crown the hill,
Blow labor lights its beacon fires,
And plumes with smoke the forge and mill.

The monarch oak, the woodland's pride,
Whose trunk is scarred with lightning scars,
Toll launches on the restless tide,
And there unrolls the flag of stars;
The engine with its lungs of flame,
And rib of brass and joints of steel,
From labor's plastic fingers came,
With ebbing valve and whirling wheel.

The Labor works the magic press,
And tows the crank in hives of toil,
And hatches angels down to bliss,
Industrious hands on sea and soil,
Hero unbowed Toll with shining spade,
Links lake to lake with silver weas,
Strung thick with palaces of trade,
And temples towering to the skies.

DELICATE HANDS.

Chapter I.—The Accomplished Lady.

It was "house-cleaning day" at Mr. Leon's—a busy day for young and old. Up stairs and down, from garret to cellar, from kitchen to parlor, mops, brooms and suds were in successful operation; while Mrs. LEON and NORA, armed with brooms and dusters, were battling the "enemy to all cleanliness" with an energy which would have done credit to the army of ALEXANDER. Windows were washed, floors were scrubbed, ceilings cleaned, and still busily they worked, from early dawn until the sun was low in the western sky; when Mrs. LEON suggested that they would pause in their house-cleaning duties for that day, and make ready the tea-table before Mr. LEON should arrive. Busy then was the ever active NORA, and her fingers flew more nimbly than ever, as from pantry to kitchen and kitchen to cellar, she plied her task, while the graceful motions of her beautiful form would have been a study to a sculptor. No wonder Mr. LEON was proud of his daughter, and wondered if the land could produce another like his "bonny, black-eyed NORA."

Tea was ready and waiting, when a light tap was heard at the door, and Miss CLARA MELVILLE entered, and seating herself with an air of nonchalance upon the sofa, exclaimed:

"Oh, dear! Mrs. LEON, I am tired to death!"

"Tired to death? not quite, I hope; you must have been very hard at work to-day?" responded Mrs. LEON.

"Work? no, indeed, not I!" replied Miss CLARA, with a haughty curl of her lip. "I hope you don't think that I, the daughter of Col. MELVILLE, would kill myself over house-work."

"What has made you so tired then? I'm sure I don't see how you occupy your time these long days."

"Oh! I do a great deal, I practice, and embroider, and go calling,—and—and practice—and—and,—Oh! I can't tell all, and have a great deal of time besides when I don't know what to do with myself," she added with a languid sigh.

"You'd know very soon if you were my daughter," responded Mrs. LEON. She was an open-hearted woman, and never spared her own opinions, generally expressing her thoughts in full, let it cost what it might. (A contrast to those whose words are "smoother than butter to a person's face," who in his absence will not hesitate to discourse largely on his failings.) CLARA arose and walked to the opposite side of the room, to examine the pictures hanging on the wall.

"What beautiful drawings!" she exclaimed.

"Nora, where did you get them?"

"I drew them!" Nora quietly replied.

"You! when did you get time to do all this? I commenced learning to draw a great while ago, but got sick of it—I can't endure anything confining."

"Do you want to know how I did it?" asked NORA. "I have a certain time set apart every day for work, a part of the day for sewing, and a part for drawing; and by doing a little every day, I find I can accomplish a great deal. It is a great deal easier to work by rule and system—to have a time for everything and do everything in its time."

"Oh! mercy!" ejaculated Miss CLARA. "I would sooner be shut up in prison, than be chained down to such a prosy life. Why, as it is, I have the blues half the time. I'm sure I should think you would—don't you, NORA?"

"Why, no, I don't know as I do," replied NORA, as if an entirely new idea had struck her mind.

"No, indeed!" interrupted Mrs. LEON. "Nora is as merry-hearted as a bird, and sings like a lark from morning till night. There's no use in any one being sad in this beautiful world, and there's no medicine to cure 'the blues' like having something to do. Suppose you try house-work awhile, Miss CLARA—be an apprentice to our NORA."

"Oh! mercy! I should die in a week, besides mama says I am too delicate to work."

"Well, toughen yourself then. Try it, and you'll find in a fortnight that you are as rosy and healthy as our NORA."

"O, Mrs. LEON! what would be the use to me?—you know I'll never be obliged to put it into practice."

"Miss CLARA, you don't know," slowly replied Mrs. LEON; "you think that because your father is rich, and you can have servants to wait on you now, it will always be so, but you don't know. Besides, every woman, rich or poor, should understand well the affairs of her household."

Miss CLARA laughed languidly. "At any rate

it isn't much to learn. There's no science nor art in house-keeping; ridiculous any one should think so! Now, music is a science which it takes a lifetime to learn, so with mathematics, and so with painting, (I hate 'em all,) but house-work, hump! it's no science, that's nothing to learn."

Just then the door opened, when the portly Mr. LEON entered, and seated himself with a smile at his well-furnished table.

"Well done!" he exclaimed when all were seated, "is there another girl of eighteen in the country that can make such biscuits as my black-eyed NORA? I'll venture to say you can't, Miss CLARA?"

She blushed slightly, and remarked,—"Mama says my hands are too delicate."

"I think," replied Mr. LEON, "that a slight application of dish-water would be good for them."

"Now, Mr. LEON!" exclaimed CLARA, "if that had been said by any one but you I should take it as an open insult."

"But seeing its only I, you don't care, of course," laughed Mr. LEON. "Ah! Miss CLARA, you'll find out sometime that nothing will sour your husband's disposition like sour bread."

"You forget, Mr. LEON, that my husband is among 'the things to be,' and, besides, I don't expect to be troubled with any such appendage."

"I don't think there's any danger, unless you learn to make good biscuits,—eh, Miss CLARA? By the way, young CLEMENT AMBROSSE has arrived in town, just graduated from college, you know. Rumor says that he has come after a wife, and I'll venture to say you girls will all be setting your caps for him. At any rate," he continued, with a sly wink at CLARA, "I shall recommend to him my black-eyed NORA as a young lady of high accomplishments, one that can make good biscuits, eh, Mrs. LEON?"

"Well, father," responded NORA, "I suppose CLARA will be recommended to him as a young lady of fine education, for we all know how well she plays."

"Aye, aye, I'll tax the young collegiate's brains for an oration on the uses of young ladies' fingers—whether they were manufactured to thump piano keys, or guide the broom handle."

"Oh! he'll say the piano, of course," rejoined Mrs. LEON, "young gentlemen are all for fashion now-a-days."

"It's my opinion," remarked Mr. LEON, "that young gentlemen of this age are not in that point so very far behind the young gentlemen of my day—ahem! Even sensible young men found their plans a little on policy."

Chapter II.—The Party.

The brilliant halls were lighted in the spacious mansion of Col. MELVILLE, and merry voices were gaily ringing there, for a pleasant company were gathered for an evening social, all gay with youthful life and animation. Among the group we easily recognize our friends CLARA and NORA. It was difficult to tell which of the two was the belle on this occasion. Both were beautiful, but the former, with pale, white face and dreamy blue eyes, speeding gaily through the apartments or seating herself by the piano, her jeweled fingers passing lightly over the notes, and her voice uniting with the strains, fascinated many; the other, the picture of health, the jetty curls encircling her finely moulded shoulders, seemed more modest and dignified, yet, though she spoke but seldom, wit sparkled in her dark eye and played on her finely-cut lips, and her words were heart-cheering and gladdening to all. There, too, among the rest, was CLEMENT AMBROSSE, dignified, yet graceful and courteous, his fine features beaming with intelligence and true nobility.

But the evening passed away, and while the summer days were passing, Mr. AMBROSSE found himself ever a welcome visitor among old acquaintances in the village—ever gladly greeted by young and old, rich and poor. Bright eyes twinkled before him everywhere—pretty faces were scattered over the scenes of his vision—and, not the least, white fingers played before his eye—but being a sensible young man, he was not to be won by appearances. If at first the charming and gay CLARA MELVILLE, while she lightly touched her piano with delicate fingers, or laughed in the glee of her youthful fancy, had filled his eye, the scene vanished like a dream before the modest and true-hearted NORA. The one would bring him jewels and gold, the other a wealth untold of the jewels of mind—the one would afford him a few hours' gay recreation, the other might (?) gladden his lifetime with ever-increasing joy. When, with light step, the gentle NORA accomplished so many a task, gliding with graceful motion from one object to another, mingling with her duties the songs of her sweet voice, which gushed forth like the melodious music of her heart, it was not long before he knew what hands would best adorn his parlor,—what hands would most neatly arrange his kitchen,—what delicate fingers would best smooth his life's pathway—and ere long "our NORA" was the bride of CLEMENT AMBROSSE.

Chapter III.—The Mansion and the Cottage.

Years bring changes, and fifteen years from the date of our first sketch found NORA AMBROSSE the mistress of a fine mansion,—a country seat of one of our flourishing Western cities. Mr. AMBROSSE had risen in his profession, and aided by the frugality and industry of his NORA, had gradually increased in wealth, till he ranked as one of the first citizens of the West, and was elected to the State Senate. Time had not dimmed the light in NORA's eye; still buoyant and happy-hearted, she was the joy of his hearthstone.

Changes had also come over our friend CLARA. Early in life she had married a young lawyer of considerable wealth, but unaccustomed to economize, and a stranger to labor and management, it was not many years before their property was wasted, and they were obliged to exchange their spacious residence for a little cottage in the same city where dwelt Senator AMBROSSE, though each family was unconscious of the presence of the other. Even here Mr. WILLARD and CLARA might have dwelt in comparative ease and happiness, had the latter learned in early life the habits of contentment and industry so essential to good home, but poor Mr. WILLARD being obliged to

work against wind and tide, and having no cheering voice at home to encourage and strengthen him, his courage gradually failed, his resources were one by one cut off, until poverty almost stared them in the face. CLARA was at last obliged to dismiss her only remaining servant, and as a necessary resort, turn her own delicate hands to the labor of the kitchen.

Let us take a peep at CLARA's house. Breakfast is just over, consisting of burnt beefsteak and scorched coffee. Mr. WILLARD, with a heavy heart, has returned to his day's labors, while CLARA, with a heart no lighter, proceeds to the domestic duties. Everything goes wrong all through the day—nothing is done as it should be—dust is on the floor, cobwebs on the ceiling, the stove is unblackened, and the room is in dire confusion. She burns her fingers in attempting to cook,—she can't find her spices nor her cook book, because she never had a place for them, and, finally, when Mr. WILLARD comes home at noon, dinner is not ready. When at last the table is set, the meat is raw and the gravy burnt, both void of salt, and, to "cap the climax," she has forgotten the salt-rut, and her biscuits are sour! Poor Mrs. WILLARD! Her husband returned to his duties with a disposition not very much sweetened by his dinner. It is Saturday afternoon, and the week's ironing is yet untouched. But it must be done, and there is no alternative. Misfortunes attend her here as elsewhere,—the flat-irons will stick to the starch; wet the cloth and wax the iron as she will, still it's a "no-go," and she gives up at last in despair. Just then she hears the sound of music in the distance; she listens, and the soft melody of "Sweet Home" is borne upon the air, accompanied by sweet strains of a piano. It proceeds from the lofty mansion of Senator AMBROSSE; she knows it not, but still there is something in the sweet tones of that voice which forcibly remind her of other days. "I wonder who lives there," she exclaimed. "Some rich old fogey of a lady, I suppose, that doesn't have to mope over this despised drudgery as I do." She leaned her head on her hands and wept. The music ceased, but long she sat there musing of the past, and coming at last to the conclusion that, after all, housework is something of an art. Presently a ring was heard at the bell, and Mrs. AMBROSSE was announced. The two gazed into each other's eyes, and though time had marked the brows of both, they recognized in each the friend of former years, and united in cordial embrace.

"I did not expect to find you here, CLARA!"

"And still more surprised am I to see your face once more, NORA AMBROSSE!"

"But none the less are we rejoiced at this unexpected meeting; and how do you prosper, friend CLARA? How do you relish household duties?"

CLARA WILLARD looked down; she could not think what to answer; she was chagrined and confused, but at last replied that she was now without help, left alone with her cares, and, to tell the truth, was quite a novice in the business.

"Indeed!" exclaimed Mrs. AMBROSSE; "but it isn't much to learn—there's no science nor art in house-keeping."

This was too much for CLARA. It carried her mind back to the sunny days when at Mrs. LEON's table she had first carelessly made the same remark; and she burst into tears.

"Do forgive me, CLARA," said her friend, "if I have wounded your feelings. Indeed, I remembered that it was your former opinion, and was not aware that you had changed it of late."

"NORA AMBROSSE," spoke Mrs. WILLARD at last, "will you forgive me for these careless words, spoken so many years ago? Alas! how often since then have I learned by sad experience what your mother told me that day, and which I heeded not then. I was too proud then to work, too proud then to acknowledge you my superior in anything, too proud to own that this embraced any art or required any skill. Now, as your good mother predicted, I am obliged to work, and find myself ignorant and awkward in what I should know. I confess it all, and I have one great favor to ask,—if you will regard it from one so poor and humble as I,—and that is, that you will instruct me now in what you learned so well in youth."

"CLARA," replied Mrs. AMBROSSE, "most willingly and gladly will I assist you in all that lies in my power, if you will accept of me as a teacher. And now let us cheer up and be warmer friends than ever in youth. First, let us proceed to the kitchen, and there commence in earnest what are among the first true duties of woman, be she exalted or lowly, rich or poor."

One year has passed since then, and through her own perseverance, and the patience of her teacher, CLARA WILLARD has become a thrifty and successful housekeeper. She has learned now what nothing but bitter experience could teach her, that delicate fingers are not made only to flourish bobbin and sweep piano keys, and that the true accomplishments of woman consist not alone in embroidery and fancy branches, but in filling nobly that station in life in which it has pleased God to place her. She has learned at last, that even delicate hands can work—if they will.

Nunda, N. Y., 1859.

No man can be a medium for sending forth a healthful and regenerating influence into the public mind, except so far as he lives in peace and quietness with his own family, and those friends who are immediately about him. Nor can anyone be really at peace with his intimate friends and associates, except so far as peace and quietness dwell in his own breast; and these heavenly qualities can be implanted there in no other way than by cultivating the habit of shunning, as sins against God, every evil and disorderly affection, thought or action.

Helmes beautifully indicates the difference between morning and night, when he says:—"Our old mother Nature has pleasant and cheery tones enough for us when she comes to us in her dress of blue and gold over the eastern hill-tops; but when she follows us up stairs to our bed in her suit of black velvet and diamonds, every creak of her sandals and every whisper of her lips is full of mystery and fear."

MYTHOLOGICAL ENIGMA.

I AM composed of 41 letters.
My 1, 17, 6, 2 was the daughter of Saturn.
My 3, 4, 9, 16, 20, 5, 31, 4 was the daughter of Mars and Venus.

My 6, 31, 18, 17, 11 was a king of Megaris and the father of Scylla.
My 7, 4, 21, 24, 31, 18 was a son of Aegle.
My 9, 17, 30, 31, 4 was the goddess of Infanta.

My 11, 4, 14, 17, 9, 6 was the father of Jupiter.
My 13, 24, 21, 17, 11 was the goddess of health.
My 15, 14, 23, 18 was a son of Neptune.

My 17, 9, 4, 6, 31, 24 was the goddess who presided over Astronomy.
My 21, 4, 30, 20, 25, 24 was the mother of Apollo.
My 23, 9, 4, 7, 7, 8, 17, 19 was the name of an illustrious Roman family.

My 25, 31, 18, 17, 11 was transformed into a marine eagle.
My 27, 34, 40, 10, 12, 23 was a giant who was slain by Hercules.
My 29, 30, 40, 36, 31, 24, 18 was a celebrated sophist and orator.

My 29, 24, 25, 30, 4, 21, 17, 18 was a son of Jupiter.
My 31, 18, 33, 11 was a celebrated Egyptian goddess.
My 33, 4, 5, 14, 8, 24 was the beautiful 19, 31, 23, 34 of Iphis.

My 35, 4, 7, 7, 8, 17, 19 was the god of wine.
My 37, 40, 34, 14, 8, 33, 39 was queen of the 39, 30, 23, 33, 15, 25, 18.

My 41, 8, 4, 32, 31, 39 was one of the nine muses.
My whole is the name of a celebrated music composer, who was born at Salzburg on the 25th of January, 1756. He was the son of a book vender of Augsburg, who having much musical talent, went to Salzburg to pursue his studies.

ENIGMA.

AAAAAHHNNPPETZ

No name of nation or of place

I by these letters mean;

But if you do them rightly trace,

And put each letter in its place,

A word will then be seen.

To show you where these letters dwell,

Read your bible, for it will tell;

And when you've searched the scriptures round,

It only once can there be found.

Rose, Wayne Co., N. Y., 1859.

THE PROGRESSIVE ARITHMETICS.

THESE BOOKS have just been published, and constitute a part of ROBINSON'S entire course of Mathematics. They contain a full and complete system of Arithmetic, and all the other books of the kind.

Improvement upon it in no superiority over other similar works is claimed for them in the following particulars:—1. A full and complete system of Arithmetic, and all the other books of the kind. 2. A full and complete system of Arithmetic, and all the other books of the kind. 3. A full and complete system of Arithmetic, and all the other books of the kind.

ROBINSON'S NEW ELEMENTARY ALGEBRA, Will be ready for use September 25th. It will be a clear and simple treatise, and contain besides a very large number of practical examples, an introductory chapter combining the principles of Arithmetic and Algebra, in which the student will find a full and complete system of the whole of the subject. It is a most useful and popular text book.

ROBINSON'S UNIVERSITY ALGEBRA—REVISED. This book requires only to be known to be almost universally used. No book of the kind has ever been so favorably received or so enthusiastically admired as this. It is filled with gems, and most of them original with the author. Single copies of the above books will be sent prepaid to teachers for examination, with reference to introduction, on the receipt of the following prices by stamps or money, viz:—

THE PROGRESSIVE PRIMARY ARITHMETIC, 12 cts.
THE PROGRESSIVE INTERMEDIATE ARITHMETIC, 14 cts.
THE PROGRESSIVE PRACTICAL ARITHMETIC, 16 cts.
ROBINSON'S NEW ELEMENTARY ALGEBRA, 35 cts.
ROBINSON'S UNIVERSITY ALGEBRA, 45 cts.

ROBINSON'S GEOMETRY AND TRIGONOMETRY, revised and enlarged, will be ready November 1st.

SANDERS' ANALYSIS OF ENGLISH WORDS, price 50 cts. Just published and enthusiastically a practical book. It contains the highest style of exercises in orthography, and is designed for older scholars and advanced classes. Every teacher should examine it.

A NEW DESCRIPTIVE CATALOGUE, containing 100 pages, of books, pamphlets, and reviews, &c., of the American Educational Series, will be sent to any address, free of charge, upon application.

The most liberal terms will be given for the first introduction of any of the books belonging to said series.
Books may be obtained for examination, or introduction, or a full information pertaining to the same, by addressing the Publishers or their General Agent for Introduction.

IVISON & PHINNEY, Publishers,
48 and 50 Walker street, New York.
D. W. FISH, Agent, Rochester, N. Y.

PATENT TURN-TABLE APPLE PARER.

This Machine is on an entirely new principle. It has no snapping or reverse motion; it is made of iron and not liable to get out of order; it is so simple in construction, that children can use it with safety, and to place an apple on the fork and turn a crank, can operate it as readily as adults. It will pare apples of any size and shape, working perfectly over uneven surfaces and doing the work with great rapidity. It is a most useful and popular text book.

To give satisfaction, and will be sold at reasonable prices. A supply of any of the books belonging to said series, or of any of the other books of the kind, can be obtained of the principal cities, or of LOCKEY & HOWLAND, Leominster, Mass., 503-4.

HICKOK'S PATENT PORTABLE CIDER AND WINE MILL AND PRESS. This Machine, which from the test of several years has proved itself superior in point of simplicity and efficiency to anything in the market, is now ready for the apple harvest of 1859.

It is made of the best material, and where there are no apples, farmers will do well to send to the manufacturer early for a circular. We also make large iron press screws from 8 inches diameter and 4 feet long, to 6 inches diameter and 8 feet long, at reasonable prices. Address W. O. HICKOK, Leominster, Mass.

600-91
Hartford, Pa.

KEEP IT BEFORE THE PEOPLE

THROUGHOUT THE UNITED STATES.

GEORGE G. EVANS.

No. 439 Chestnut Street, PHILADELPHIA.

ORIGINATOR OF THE

GIFT BOOK BUSINESS,

AND PROPRIETOR OF THE

GIFT BOOK ESTABLISHMENT

IN THE WORLD.

Call attention to the fact that he has made such arrangements with other publishers and manufacturers, that it gives him pleasure to offer

GREATER INDUCEMENTS than ever, and such that

CANNOT BE EQUALLED by any other Gift Book House in the world.

ALL BOOKS are sold at the PUBLISHERS' PRICES, AND A

SPLENDID GIFT, WORTH FROM

50 CENTS TO \$100, IS GIVEN WITH EACH BOOK.

You can select from the LARGEST STOCK OF BOOKS IN THE COUNTRY.

And by complying with the directions as given in the Catalogue, you will receive your Book FREE OF EXPENSE for carriage or mailing, and a guarantee of NO RISK OF LOSS BY MAIL.

To give an idea of the extent and the honorable method of transacting business, we would state that 225 GOLD AND SILVER WATCHES, AND OVER

250,000 DOLLARS WORTH OF JEWELRY, have been

GIVEN AWAY during the past six months, each article of which has been of the finest quality, and has given satisfaction in every instance.

SEND FOR A CATALOGUE, which will be sent gratis, and which contains a list of Books in every department of literature. ONE TRIAL WILL ASSURE YOU of the honorable business transactions of

GEORGE G. EVANS, NO. 439 CHESTNUT STREET, PHILADELPHIA.

AGENTS WANTED, Who can, with GEORGE G. EVANS' Catalogue, obtain more subscribers than by any other, as the Books and Gifts enumerated are superior to those of any other House. Any one, either male or female, who desires to engage

IN AN HONORABLE AND PROFITABLE EMPLOYMENT, and one that requires but little time, is requested to address G. G. EVANS, and they will receive every information relative to the business.

BEWARE OF SENDING TO ANY BOGUS NEW YORK CONCERN, As there are unprincipled parties who have taken advantage of the similarity of names, and are practicing a deception upon the public. We caution all persons against them, as we have no connection with them whatever.

DO NOT FAIL TO ADDRESS GEORGE G. EVANS, ORIGINATOR OF THE GIFT BOOK BUSINESS, NO. 439 CHESTNUT ST., PHILADELPHIA.

TO HOUSEKEEPERS.—SOMETHING NEW. B. T. BABBITT'S BEST MEDICINAL SALERATUS, 68

Is manufactured from common salt, and is prepared entirely different from other Saleratus. All the deleterious matter extracted in such a manner as to produce a pure, sweet, and healthy article of Sale, without containing a particle of Saleratus when the Bread or Cake is baked; thereby producing wholesome results. Every article of Saleratus is tried to see, and found through the Bread or Cake while baking, consequently nothing remains but common Salt, Water and Flour. You can readily recognize the taste of this Saleratus that is entirely different from other Saleratus.

It is enclosed in one pound papers, each wrapper branded "B. T. BABBITT'S BEST MEDICINAL Saleratus"; also, picture, twisted lump of bread, with a glass of overflowing water on the top. When you purchase one paper, you should preserve the wrapper, and be particular to get the next exactly like the first—brand as above.

Full directions for making Bread with this Saleratus and Sour Milk or Cream Tartar, will accompany each package of Saleratus, for making all kinds of Pastry; also, for making Soda Water and Saleratus Powder.

MAKE YOUR OWN SOAP, WITH B. T. BABBITT'S Pure Concentrated Potash. 70

Warranted double the strength of ordinary Potash. Put up in cans—1 lb., 3 lbs., 5 lbs., 10 lbs., and 25 lbs.—with full directions for making Hard and Soft Soap. Consumers will find this the cheapest Potash in market.

Manufactured and for sale by B. T. BABBITT, Nos. 69 and 70 Washington St., New York, and No. 38 India St., Boston.

MAKE YOUR OWN SOAP, SAPONIFIER, PURE CONCENTRATED POTASH. 70

Warranted double the strength of ordinary Potash. Put up in cans—1 lb

MOORE'S RURAL NEW-YORKER

AGRICULTURE HORTICULTURE RURAL LIFE EXCELSIOR LITERATURE SCIENCE ARTS NEWS

TWO DOLLARS A YEAR.

"PROGRESS AND IMPROVEMENT."

[SINGLE NO. FOUR CENTS.]

VOL. X. NO. 37.

ROCHESTER, N. Y.,—FOR THE WEEK ENDING SATURDAY, SEPTEMBER 10, 1859.

[WHOLE NO. 505.]

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

RURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

TERMS, IN ADVANCE:

Two Dollars a Year—\$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for \$5; Six, and one free to club agent, for \$10; Ten, and one free, for \$15; Sixteen, and one free, for \$20; Twenty, and one free, for \$25; Thirty-two, and two free, for \$40, (or Thirty for \$37.50,) and any greater number at same rate—only \$1.25 per copy—with an extra copy for every Ten Subscribers over Thirty. Club papers sent to different Post-offices, if desired. As we prepay American postage on papers sent to the British Provinces, our Canadian agents and friends must add 12½ cents per copy to the club rates of the *Rural*.—The lowest price of copies sent to Europe, &c., is only \$2.50—including postage.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

RURAL LETTERS FROM EUROPE.—4.

By SANFORD BOWARD.

Yorkshire: Purchase of a Cleveland-bay horse—Show of the Highland and Agricultural Society, at Edinburgh—The polled Angus, Aberdeenshire and Galloway Cattle—Measurement of Prize Animals—The Show of Short-horns, Ayrshires and West Highlands—Sheep Exhibited; the Cheviots described, and compared with the Black-faced and Leicester breeds—Implement Department; American Reaping and Mowing Machines—Edinburgh and its Attractions—Visit to Ireland.

LIVERPOOL, Aug. 19, 1859.

I think my last letter to the *Rural New-Yorker* was written in Yorkshire. My chief business there was to obtain a Cleveland-bay (entire) horse, and after a long search, I succeeded in finding a very superior one, which I have shipped to Dr. JOHN R. WOODS, of Joy Depot, Albemarle county, Va. If he reaches his destination in safety, I think he will prove a decided acquisition to that section, especially for the purpose of breeding large coach horses, which will be also calculated to do much farm work.

I attended the Show of the Highland and Agricultural Society of Scotland, held at Edinburgh from the 1st to the 5th inst. It was the first exhibition of this "ancient and honorable" association I have ever attended, and, as I expected to be, I was much gratified. There were some things here of which I had not previously a sufficiently clear idea. Such, particularly, were the polled Angus and Aberdeenshire cattle, and the Cheviot sheep, of both which there was a large display.

The cattle alluded to comprised a class by themselves—their congeners the Galloways, forming another class. They are larger than the Galloways, but not as compact, and especially not as round in the first ribs. They are also thinner in the hide and lighter in the coat—traits which indicate that they are not as well adapted to exposure and hard fare. Their quality of flesh, though generally good, appeared not equal to that of the Galloways. The first and second prize bulls in the Angus and Aberdeenshire aged class, each three years and six months old, girthed, respectively, 8 feet and 8 feet 2 inches. The first prize bull in the aged class of Galloways, four years and four months old, girthed 7 feet 9 inches; and the first prize bull in the next class, two years and four months old, girthed 7 feet 2 inches. As I took these measurements myself, I know them to be correct. The weights of none of these animals were given, but they were certainly heavy in proportion to their girth.

There was a pretty large show of Short-horns, but less good ones in proportion to the number than at Warwick. There were some that would stand well in the breed anywhere, but as a class they were decidedly inferior in symmetry and quality to the polled cattle. The leading prize-taker was Mr. DOUGLAS, of Athelstaneford, who, however he may have failed of obtaining justice at Warwick and Dundalk, (Ireland,) I think obtained it in most cases here, though he got no more than the scale of merit actually indicated.

The Ayrshires made nothing like the display they did at Glasgow (of which Show I have given you an account,) owing chiefly to the remoteness of the locality from their main breeding-ground. People who have not seen this fine dairy breed on its own territory, would have been likely to form

a very inferior idea of it from the specimens shown at Edinburgh, although several of the prize animals were of superior character.

The West Highland breed comprised upwards of sixty head, and many of the cows and heifers were of almost unexceptionable shape and quality, though I was somewhat disappointed at not finding more good bulls in the class—there being none equal to some which I mentioned as being at the Glasgow Show. I will just say, in passing, that while walking, some weeks since, through the old Cadzow Park, the property of the Duke of Hamilton, I saw a West Highland bull and two heifers which the Duke was about to send as a present to the Emperor of the French. They were fine—one of the heifers almost perfect. But I have spoken so fully of the characteristics of this breed in a previous letter, that there is no necessity of further remarks in regard to it here.

Great numbers of sheep were exhibited, comprising specimens of the two Scottish, and the leading English breeds. The Cheviots were the only class that I was particularly desirous of examining. I had previously seen the breed in considerable numbers, in various localities, but never so large a collection at a show. They are a long-bodied race, and in comparison with the Black-faced breed, the old name by which the former were called—"the Long Sheep"—was not inappropriate. They are inclined to be loose about the shoulders and hollow at the chine. But it is evident that an attempt has been made to correct this defect, and the perfection of some of the sheep shown here, proved that the attempt has been to some extent successful. The superior quality of the wool of the Cheviots, considering that they belong to a mountainous district, is quite remarkable. It is of medium length, and as fine or finer than that of the Leicester, and of nearly uniform quality over the whole carcass. They are very white in their faces and legs, generally without horns, though some of the rams have little knobs an inch long, which might, perhaps, be cultivated into horns. I mention these two last points, because some people in America have thought they had Cheviot sheep, though their faces were speckled, and their horns of considerable length.

The meat of the Cheviots is not so good as that of the Black-faced breeds—so at least I am told by several butchers to whom I have spoken on the subject, and they say, also, that the cross of the Cheviot and Black-faced does make as good meat as the cross of the Leicester and Black-faced. Still the Cheviots are a hardy (though less hardy than the Black-faced) and valuable breed. They are kept chiefly on the hills from which they take their name, and along the lower parts of the South Highlands.

I did not make a critical examination of the implement department, but I neither saw nor heard of any special novelty in it, although it was a large and fine display. The reaping and mowing machines, as usual, attracted much attention, and several of the popular American machines were exhibited. I have had no opportunity to attend a set trial of these machines this season. So far as I can judge from what I have seen and heard, McCormick's Reaping Machine, with the apron and screws added by BURGESS & KAY, is best adapted to heavy grain, especially when it does not stand upright. MANN'S Machine with Wood's Improvement, maintains a good position as a combined machine, and has given good satisfaction in most cases as a mower. The particular causes of its failure at Warwick, I have not learned. The ALLEN machine which took the first prize as a mower there, is said to have had an important improvement added to it since it came into the hands of BURGESS & KAY, by whom it was exhibited.

I might write of many things which have interested me, in the neighborhood of Edinburgh—the beauty of its location, and the surrounding scenery—the quaint style of the "old town," with its narrow streets, "closes," "wynds," and houses of ten stories in height—the neat style of the "new town," its broad streets lined with buildings of tasteful architecture, and the general aristocratic appearance of the place and its inhabitants—the numerous monuments to the great men who have aided to render the city worthy the undisputed appellation of "Modern Athens"—the beautiful public Garden which occupies what was once a gulf of the sea, and separates the city into the two main divisions before alluded to—the former Parliament-House of Scotland—the ancient Castle where the regalia of the Kingdom is still kept and shown to the people, and where the unfortunate MARY gave birth to that Prince on whose brow was first placed the royal diadem of both Scotland and England—the old palace of Holyrood, with its numerous relics of the former rulers of the Kingdom, particularly those relating to the beautiful Queen whose fate is still mourned by many a maiden—the ruins of the once magnificent Abbey

of Holyrood, with its monuments to the mighty dead of olden time—the splendid institutions of modern times devoted to the teaching of science in all its branches, or the still more splendid ones founded by liberal philanthropists for the benefit of the poor—all these I have visited, and might speak of at length, but it would hardly be appropriate to the original design of these letters, and they must be passed by.

From Edinburgh I passed via Stirling over the classic land and water of the Trosachs and Loch Katrine and Loch Lomond to Glasgow and Greenock, thence to Belfast, (Ireland,) thence to Dublin, and thence to Killarney, the neighborhood of which is so noted for its mountains, lakes, and *Kerry Cattle*. I purchased some of the latter, of which as well of other matters relating to the Emerald Isle, I may give some account in a future letter.

KOHL-RABI AS FEED FOR STOCK.

It is well known that our climate is not as favorable as that of England for the cultivation of the turnip—our hot, dry weather often making it a partial failure. It has often occurred to us that in the *Kohl-rabi* we have a plant that is peculiarly suited to our climate, and that may prove as valuable to the farmers and stock growers of this country as the turnip is to those of England. Even in England it is somewhat taking the place of the turnip for heavy lands, and is found to succeed much better in dry summers. MONROE says, "Kohl-rabi is the bulb for dry summers—heat and drouth are congenial to it, and the plant grows, prospers, and yields an enormous crop under circumstances wherein white turnips and Swedes could barely exist. It is extraordinary that so few farmers avail themselves of a plant that in the driest seasons, if properly treated, will rarely fail to bring the largest return of sound and excellent food. During the parching summer of 1847 the plants grew on, and retained the highest verdure. Sheep were found to thrive particularly well upon the plant in the succeeding winter; and we know that ever since that year beasts have been fattened upon the bulbs. The horse-hoes must be put in requisition several times, so as to keep the spaces clean and open, till the expansion of the leaves renders their operation impossible. Labor and pains, directed by a vigilant eye, are indispensable; but, where these conditions are strictly observed, the weight and quality of the bulbs are astonishing. Perhaps it would not be too much to estimate the average of the former at eight pounds per root; and, certainly, the weight of some has, in many cases, amounted to from fourteen to sixteen pounds. As to disease, who ever saw mildew upon *Kohl-rabi*?"

STEPHENS says, in the *Book of the Farm*:—"The *Kohl-rabi* is an excellent food for cows and horses, and, when boiled with grain for their use, will afford them true nourishment. The leaves may be also used, having entirely the character of a true cabbage; but they should be removed with a sparing hand, else the enlargement of the bulb will be prevented. The advantages which it is said to possess over Swedish turnips, by those who have cultivated it in England and Ireland, are these:—Cattle, and especially horses, are fonder of it; the leaves are better food; it bears transplanting better than any other root; insects do not injure it; drouth does not prevent its growth; it stores quite as well, or better; it stands the winter better; and it affords food later in the season, even in June."

Few, we think, will read these statements without feeling that this plant is peculiarly adapted to this country, where our hot summers make our turnip crop uncertain, and where cheap food for stock is so much needed. Of the amount or weight of bulbs that can be produced on an acre, we cannot state, but it must be enormous, as we lately saw a crop that exceeded anything in the way of a crop of bulbs that we ever beheld. They were as thick upon the ground as they could well stand, many standing out of the ground from eight to twelve inches, and one specimen measured over eighteen inches in circumference. The fact is we never saw a failure with this crop, under any reasonable treatment. Then it will bear transplanting better than anything of the kind we know

NIVEN'S POTATO DIGGER.

ABOVE we give a representation of a Potato Digger, recently patented by Mr. ROBERT NIVEN, of Gates, near this city, and which has been tried to the general satisfaction of the inventor and others who have witnessed its operation. The inventor furnishes the following brief description of the machine, its capacity and operation:

"This machine is light, portable, economical in cost, yet very strong and durable—making it reliable and valuable. With one man and a team from five to eight acres of potatoes can easily be dug in a day. The operation of the machine is very simple. The team is driven so that the row is between the truck wheels, when the plow passes under the bills, and the endless screen receives the dirt and pota-

atoes—the dirt dropping through the screen, while the potatoes are carried to the rear of the machine and left upon the ground. The screen, composed of iron bars, is very effectual in separating the dirt from the potatoes while passing from front to rear. By means of a lever, the operator can easily raise the working apparatus (plow and screen) from the ground and throw it out of gear whenever desired. It can be gauged so as to go any desired depth."

Any further information relative to this Digger may be obtained by addressing the patentee and manufacturer, ROBERT NIVEN, Rochester, N. Y. We shall endeavor to witness a trial of the machine soon, and report the result for the information of *Rural* readers.

of. Seed may be sown early, in a bed as for cabbage, and the plants grown in this until about six inches in height, and then transplanted like cabbage.

THE WORN OUT LANDS OF VIRGINIA.

ADVICE about Purchasing Virginia Lands—Where Northern People are Located—The "Worn out Lands;" how they are Reclaimed, and what they Produce—Occupations of Northerners in Va.—Markets and Marketing—Schools—Labor honorable; example of the Quakers—Climate. Timber, Water Power, &c.

ENS. *RURAL*.—In a recent number of your paper I noticed some inquiries in regard to the "worn out lands of Virginia," and as I formerly resided in the "Old Dominion" over four years, and had some practical experience in reclaiming those lands, I am willing to contribute my small stock of information if it will prove of any value to persons disposed to locate there.

The first question asked is, "Would it be advisable to go there with small capital only?" Most of the Northern men who have settled there were men of small means, and their success has been in proportion to their sagacity and well directed efforts. A great mistake with many of them was in investing all their capital in land, and not reserving sufficient means for making improvements, and hence they could make no progress. No man should expend more than half his capital in those "worn out lands;" he should reserve the balance for improvements, and then, if his money and labor are well directed, his chance for success is good.

I think there are more Northern people in Fairfax than in any other county in the State, and perhaps in all others together; in fact, I believe a majority of the inhabitants of that county are from the Northern States. There are a few in the adjacent counties of Prince William and Loudoun. I am acquainted with some who have been in Fairfax over fifteen years, and are doing remarkably well.

The next inquiry is, "Are these cheap lands overgrown with weeds, or grass, or are they barren? And can they be 'brought to' by raising clover to enrich them?" In the first place, these lands were mostly owned by Lord FAIRFAX, and rented to settlers who raised tobacco, corn, oats, &c., following the exhausting system until they became barren and were "turned out." On some land thus treated there is now a growth of pines thirty feet in height, and frequently the corn and tobacco rows can be distinctly traced. Other lands that have been more recently "turned out," have a growth of tall coarse grass, called "brown sedge," and much of the land is almost entirely naked, and where it is uneven is badly washed and gullied. Some of these lands can be reclaimed with clover and plaster, but at the commencement the best way is to purchase some good fertilizers, and with them you can at once raise good crops on the poorest lands. For a crop of wheat use 200 lbs. best Peruvian Guano per acre, mixed with a half bushel of plaster sown broadcast and plowed in, which will

cost about five dollars per acre. Then, if you wish to seed your land to grass and have a good crop, sow broadcast about five dollars worth of bone dust per acre and harrow it in; sow timothy seed in the fall and clover in the spring, and if the season is favorable you may expect a good crop of wheat and grass, and my word for it that field will not soon forget its treatment. I have seen fair crops raised without any manure on some of the lands, and on others with less than half the quantity named; but the treatment I have recommended above is for the poorest land, though it will not injure the best. There is a great variety of soils, from light and sandy to the heaviest clay, and they vary in color, being white, black, red, gray, &c. Some of the best crops of corn and grass that I ever saw were on the "bottom lands" that had been cropped continually for fifty years.

The Northern people there are engaged in various occupations. Some are gardening and raising fruit for Washington, Georgetown and Alexandria markets, with good success. Others have purchased timber lands, and are clearing and selling wood at remunerative prices in the above named cities. A few are engaged in the nursery business, which is said to pay well. Some are clearing the "old field pines," and converting them into charcoal, which sells readily in those markets. Others still are keeping cows and selling milk to advantage. Good butter can be sold at Washington by contract for twenty-five cents per pound during the whole year, (if carried regularly to market,) and by keeping cows and feeding them the produce of the farm, the land is constantly improving. By sowing corn a good supply of feed through the summer can be kept up, and turnips, carrots, beets, ruta bagas, &c., grow remarkably well on land that is well manured. A few hogs can always be kept to advantage on a dairy farm, to consume the refuse milk and buttermilk, and they will aid materially in enriching the soil. Poultry always brings a good price in Washington market. Sheep husbandry can be carried on profitably, the only impediment being the dogs, but they are rather decreasing. Those living within a few miles of market, and in fact farmers in most parts of the country, take their produce to market with their own conveyances. There is one railroad in operation, and two others in course of construction, diverging from Alexandria in various directions, and when these are completed the facilities for marketing must be good.

There are some first class Seminaries in Virginia, particularly in Alexandria, but Common Schools have been much neglected. The law of the State furnishes means to defray the expense of tuition of indigent children, if they will avail themselves of the benefit of it, yet but little attention is paid to the subject, except in neighborhoods settled by Northern people, where there are some good schools.

The time has been when those who labored were considered as belonging to the second class, but a different feeling now prevails. An honest, in-

doctrines are as much respected there as here, (so far as I have been able to discern.) Labor is not confined to the Northern people exclusively; there are many Virginians who "put their hand to the plow," and think it no disgrace. There has been a settlement of the "Friends" or "Quakers" in Loudoun county for over half a century, (originally from Pennsylvania,) who have always employed free labor and labored themselves, and their general intelligence, good schools, highly cultivated farms, valuable buildings, fine stock, &c., afford a strong argument in favor of the "dignity of labor." Their example has had an influence on those around them, and although they are nearly forty miles from Washington, their farms sell from \$10 to \$20 per acre. No person need have any fears of being despised on account of labor in Northern or Western Virginia.

As to the climate, away from large or sluggish streams it is emphatically healthy; but near such streams, agues and fevers prevail in the latter part of summer and in autumn. The weather is not subject to such extreme changes as in more northern latitudes. Spring opens at least a month earlier than in Western New York, and winter commences a month later. The winters are frequently so open that farmers do much of their plowing for spring crops. The summers are a little more subject to drought than in New York. Fruit culture has not received the attention that its importance demands, but the people are awakening to the subject, and many fine orchards have already been planted. Apples, pears, peaches, cherries, quinces, grapes, &c., succeed well.

There is considerable of the original growth of timber yet standing, and the land after being cleared is productive. Wood and timber is in demand, and new facilities are opening for conveyance to market.

There is a vast amount of water power in Virginia that is not applied to any purpose. At the "Great Falls" of the Potomac, about ten miles above Georgetown, is power enough (if applied to manufacturing purposes,) to employ hundreds of people, yet only sufficient is used to carry one saw-mill. It is beginning to attract the attention of Northern capitalists, however, and will no doubt ere long, be converted to some useful purpose.

To persons contemplating locating in Virginia I would say, go and see the country; mingle with Northern people who have settled there; go through Fairfax, Loudoun, and if you want to see a very fine country, go through Clark and Frederic counties, where land is worth as much per acre as in Western New York. But remember and not buy too much "worn out land" because it is cheap. I will cheerfully answer any further inquiries if addressed to me at West Brighton, Monroe county, New York.

THOMAS HAZARD.

[ADVERTISEMENT.] From the New England Farmer.
H. E. HILLES.

I HAVE put off re-writing the article on bee-hives that I mailed to your address some months since, hoping that it might turn up. Not seeing it in the Farmer, I suppose the little money enclosed for the advertisement tempted some thief among the mails, who took the money and destroyed the article. The article referred to, was in reply to "Norfolk," on a charge of inconsistency, wherein he accuses me of "preaching what I do not practice." That my instructions are not for myself, &c. This, as far as myself is concerned, amounts to but little, but perhaps some readers of the Farmer might wish to know as well as "Norfolk," what right I have to recommend one hive, and afterwards use another. I intend to make a full confession, and if it does not fully exculpate me from blame, it may somewhat modify their feelings. I would say first, that I cannot be charged with altering some simple thing about a bee-hive, then obtaining a patent, and charging all a few dollars, who can be persuaded to use it. All that the bee needs in a state of nature, is a cavity suitable for rearing her broods, and depositing her stores for winter. All that man requires in addition, is an apartment that can be removed with surplus stores. A single box in the plainest form was used for twenty-five years, and nothing found to surpass it in convenience, safety, economy or profit. Believing it the best for the apianist of any class, I recommended no other in the work alluded to by "Norfolk." And now for the sake of being consistent, must I adhere to this throughout, and deny myself the advantages that may arise from the minds of others? I think I would rather risk his charge of inconsistency. "The best way is as good as any," and the moment that a man settles down into the belief that he has arrived at the summit of improvement, there is a vast difference in the ability to discriminate between what is an improvement, and what is said to be.

The Rev. L. L. Langstroth presented me with the movable frame, or movable comb-hive; I saw at once, that I could, if I chose, still use the simple box with the addition of the frames, and I could take out and return to the hive all the combs without injury to a single bee. I transferred bees and combs into some of those in the spring of '56. In '57 and '58, I introduced new swarms in a large number, and have found the following advantages.

Most apiarists know that their stocks are quite liable in some seasons to overwinter, and have witnessed with regret, swarms too small to be worth anything alone, continue to issue till the parent stock was reduced too much, to contend successfully with the worms. And as a consequence, both old and new colonies would be lost. With the help of the frames, such ruinous operations can be prevented. A few days after the first, and just before the second swarm, the comb can be examined, and all the queen-cells removed but one. When the queen-cells are removed, it tends to suppress the quantity of swarms, and soon becomes the mother in the old stock. I will presume that the natural history relative to this point is understood. This operation cannot be performed with a hive, in which the combs are fast.

Artificial swarms are sometimes made, but very little like, as far as I know, when the bees are put in the hive, and of the day taken, and the frame looking them over carefully on the

queen is found, when the frame containing her is put in an empty hive, setting that on the old stand; and putting the old stock in a new place. Enough bees will return to the old queen to make the swarm. If done at the proper season, enough brood will be in the combs, together with those just matured, to keep the old stock sufficiently strong. If no queen-cells about the queen are present in the stock, it is nearly always practical to procure one from some other, with a queen nearly matured, to introduce, and thereby gain several days in breeding.

If, from any cause, a stock or swarm is weak, but otherwise healthy, it may be assisted by some strong colony, merely by taking a comb or two filled with brood, and giving it to the weak one. In a few days, the maturing brood will add materially to its strength. In the same way, their winter stores may be equalized in the fall; some stocks will have too much, and others too little. The changing of a few combs will make all right and benefit all.

Nature had to provide drones for isolated colonies, and when we bring together a large number, this instinct for rearing drones is retained, and each produces its number; when in reality there is no necessity in an apiary of fifty or a hundred stocks for any more drones than two or three colonies might produce. So many drones cannot be reared without much labor of the working bees, and cannot be supported afterwards without a great consumption of honey. Several patents have been granted, the chief merit of which is a trap to catch and destroy them. But with the movable combs, we can take the matter into our own hands, and say in the spring whether we will have thirty, three hundred, or three thousand, reared in any stock. It is done by removing the drone comb, or any part of it, and substituting worker combs instead. Without these cells the bees cannot rear drones if they would. It is now pretty well demonstrated, that the eggs of a healthy queen are all alike, and the sex of the future bee depends on the cell in which it is deposited. If every drone we have reared was a worker, it would not only support itself, but would be likely to add to the common stores. The advantages would be, in having just enough.

The size of the hive can be graduated to suit the wants of any colony. If there are too many combs to be properly protected from the moth, a part may be taken away, and returned as needed.

The loss of queens in most apiaries is a serious damage. Except within the first few days after its occurrence, there is no further means of ascertaining this fact, short of several weeks; by which time it is often too late to save the stock. But with the frames it can be ascertained at any time; and after the young queen commences her maternal duties, only a minute or two is required to examine the brood combs; any cells containing eggs or brood indicate her presence. If she is lost, another can be provided in time to save the stock.

These are some, but not all the advantages that I have found in the movable combs. Suppose that I had recommended this movable comb hive immediately on being satisfied that I could make it profitable; and then, as with many other beautiful theories, failed in practice. I should have been worse off, than to be accused of "preaching what I did not practice." Prudence should prevent any one from recommending an improvement based on theory alone. "Consistency" dictates a different course. I have now used these frames three summers, and know from experience what I say respecting them. Having found them beneficial for myself, I think they might be so to others, and consider it a duty to give the public all the knowledge I possess in bee-culture. I have, therefore, added an appendix to my treatise, giving directions for making and using these frames, an advertisement of which is enclosed.

"Norfolk" calls the "movable comb hive, unwieldy." I have seen some that I think are so. But I apprehend this to be a matter of taste; as I make the hive, there will be no complaint in this respect. The principal of the movable combs is the point that I consider constitutes the advantage. In the controversy about the triangular guide, I have but little interest, further than I should be pleased to have all admit that it was public property. Whoever succeeds in establishing a claim, should give us something a little more reliable—something that would give us straight combs with certainty; because now a colony will occasionally make their combs crooked, and are of no value as movable combs, on that account.

I have given what to me are valuable points in the movable comb hive, and the reasons why they are so. Now will "Norfolk," "Clark," or any one give us through the Farmer as minute an account of the "Union hive"—in what consists its superiority? It will hardly be satisfactory to say it is better, without pointing out what particular makes it so. I am willing to adopt anything that is shown superior to what I already possess. My likes and dislikes are governed by what appears the utility of the thing.

In criticisms on this subject, it is best to avoid personalities. I shall consider I am not called upon to answer anything of the kind.
St. Johnsville, N. Y.

A GOOD FEED CUTTER.

EDS. RURAL:—W. E. S., of Ogden, N. Y., after advising farmers to cut their feed, says he don't know as they have the machines used. For two winters I have used one of D. C. CRANE'S patent, for which I paid \$30. It runs by hand or horse power, and I consider it almost a perfect machine. I have cut two winters by hand for about thirty head of cattle and horses, and feed in mangers. It has four knives, and cuts about three-eighths of an inch in length. For hay I take out two of the knives, which makes it about seven-eighths of an inch in length; this I think is short enough for hay, while the machine runs a good deal easier. For corn stalks I use all four of the knives, as stalks must be cut short to make it pay. My stock eat them readily, without anything on them—all up clean on fall feed. I consider it a saving of at least 100 per cent. to cut corn in the feed; then the manure is worth double what it would be if the stalks were fed without cutting.

—CHARLES TRIMWELL, Ann Arbor, Mich.

MAKING CHEESE FROM A SMALL DAIRY.

EDS. RURAL:—I think good cheese may be made from a small quantity of milk, in the same way we make our large dairies. Three requisites are necessary to the manufacture of a mild, rich, sound and even dairy of cheese, viz.:—Cleanliness, Carefulness, and Common Sense or Judgment. The milk should be strained at night in a tub or vat in as cool a place as convenient, in order to keep sweet. In the morning the cream must be taken off, and if desirable to add to the cheese, must be put into warm milk, and then strained in with the night's milk. The milk, when prepared for the rennet, should be about 75 to 78 degrees Fah. The rennet should be in quantity and strength to bring the curd sufficiently to commence the cutting or breaking up process in from 30 minutes to an hour. After setting, the milk should be covered, unless the temperature of the room is about the same; otherwise the curd will not come even, i. e., the top will be milky and whey white.

To expedite operations a cutter made of knives, wire, or tin, is used to break up the curd, but it can be done as well with the hands, by carefully pressing the curd through the fingers with the thumb. It should be broken up fine, and not suffered to settle together hard again until put into the press. We have less trouble with a soft curd, and with careful handling make a better and larger cheese than when it is heavy and hard. They may be taken off for scalding, which should be heated without scorching, and poured back gradually till the temperature is brought up to about 100 degrees, or until the curd squeaks a little in biting. Half an hour will suffice to draw off the whey. Cool and salt the curd, adding a tea cup of salt to 15 pounds, or more or less to suit the taste. When the curd is suffered to become hard, at any time from the first breaking up till put into the press, on breaking again the whey will be white, and a lighter and poorer cheese will be the result.

The cheese should be put in the hoop in a clean cloth, and the weight put on gradually for an hour, when it should be turned, and again at night, when more weight should be added. Some press 24 and some 48 hours. Cheese should be cured in a dry place, but not too cool. The process of making occupies from three to four and a half hours.

Care is necessary in the curdling and preparation of rennet. We let the calf suck in the morning and kill it about 3 or 4 o'clock, emptying the rennet of what may be in it, and salting them together in a jar. Ten days before using, we put four or five in two gallons of tepid water, salt enough to keep sweet. We then pour off the liquid, which is ready for use, soaking the rennet again. Half a pint of liquid thus prepared will bring, or change to curd, from 40 to 60 gallons of milk.

Mr. Moore, this is a queer way to write in answer an inquiry from Indiana. If you get better directions, and don't use this, it will be well, and I shall not feel injured. We love your paper; it is sound, reliable, useful and welcome.
Madison, N. Y., Aug., '59. SAM'L G. CLEVELAND.

AN IMPROVED HORSE-SHOE.

EDS. RURAL:—I notice a correspondent wishes to know the cause of so much lameness in horses. My experience has convinced me that it is in a great measure owing to the prevailing mode of shoeing, which has a decided tendency to contract the heels, and the little care taken by the owners in not having the shoes removed sufficiently often to have the natural accumulation of the hoof and sole pared away. Another great fault in the smith is cutting away the frog, which should never be cut. I am much pleased to see introduced in Albion, "Henderson's Improved Shoe," (which is well calculated to prevent the contraction of the hoof,) of which the following is a description:—The shoe is so formed upon the foot side as to correspond with the natural form of the foot, with a level, flat surface on the outer portion of the shoe supporting the wall as far back as the quarters, continuing the level across to the inner part near the heel of the shoe, the outer part being sloped off, outward, downward and backward to conform with the inward and forward inclination of the quarters and heels of the hoof above, by which the corresponding angles form a square bearing for the support of the quarters under the weight of the horse, which will prevent the contraction of the heels and all the evils attendant thereon. Should this shoe be brought into common use the lameness of the forward limbs now so general would shortly disappear to a very great extent, if not entirely.
Albion, N. Y., Aug., 1859. H. L. ACHILLEA.

WILL IT PAY?

THE above is a very common question,—a very proper one, too,—as every one admits. We purpose to notice some things that "won't pay." It won't pay to "make haste to be rich" at the expense of health, happiness and intellect. The man that starves his mind because he is too stung to purchase books, will find out by-and-by that it won't pay. The man who denies himself of the luxury of good family papers, because, as he says, he is too poor to afford them, will find he is pursuing the wrong course—it won't pay. The man who works like a slave from morn till night, year in and year out, makes his children do the same, and never takes any recreation, must find to his sorrow, sooner or later, that it did not pay. The man who cheats his neighbor to increase his own store, and oppresses the fatherless and widow, will find that it didn't pay.

The man who cultivates the soil with the same implements his father used forty years ago, will find it won't pay. It won't pay to plant crops on "hard-pan," or whortleberry knobs, without mending the ground well, which is scarcely ever done. It won't pay to invest money in "western lands," to the neglect of the home happiness and comfort of your family. It won't pay to scowl at your children till they get tired of home and inconvertible to all the finer feelings of the heart.

Trusting that these few thoughts may be of benefit to some, I leave this inexhaustible subject, hoping that my readers may be prosperous and happy, and never do anything that won't pay.
Western Pennsylvania, 7th mo., 1859. E. E.

Rural Spirit of the Press.

How to Use Lime.

IN an article upon this topic, the Working Farmer remarks—Lime as a food for plants, is required in very small quantities, and for this purpose should be applied in very minute doses, and frequently. Still lime is better than stone lime when wanted for manure. When required not to feed plants, but to decompose other materials in the soil, such as inert organic matter, then larger doses may be given, and this should never be mixed with any nature of a poisonous kind—such as night-soil, phosphates, guano, or barn yard manure. Lime may be mixed with salt in the manner we have so often recommended, or with sour milk, or any other organic matter not readily decomposable. Never apply lime to the soil, within a day or two of the time when manure has been applied. When barn-yard manures have been deeply buried in the soil, a light top-dressing of lime may be used after plowing. This will gradually sink, and when it meets with and assists in decomposing the manure, the gases in rising, will be absorbed by the incumbent soil.

Unruly Animals.

S. W. CASE, of Delaware Co., Ohio, writes thus to the Ohio Farmer:—I will tell you how I avoid having unruly animals. I believe that as a general rule our domestic animals are never unruly, except as they are taught by their owners, or those having the charge of them. Some persons, when removing stock from one field to another, will let down a few of the top bars; or if they don't happen to have bars or a gate just where they wish to turn through, they will throw off a few of the top rails, and force the animals to jump the balance; and after thus driving the stock over, they will put up a part of the barn or rails thus thrown down, leaving the fence lower in that place than any other, as a temptation to the stock to jump back at the place where they have been learned to go over. Now, sir, my practice is the reverse of all this; if I wish to turn hogs, sheep or calves through a common rail fence, I make what is termed a slip-gate, letting down just enough of the bottom rails to let the animals pass, thus teaching them to go under, rather than over a fence; and in letting large cattle through bars, I prefer to have a bar at the top, letting them pass under; and if it rubs their backs a little, all the better. But there is another fault, too common with some farmers. If fences are poor, in consequence of a scarcity of material, they should be the more carefully watched; if a rail gets thrown off, put it on immediately; if weeds, grass or anything else grows near the fence, on the opposite side from where your stock run, tempting them to reach over, and by this means push the fence down, remove the difficulty immediately out of the way. I am well satisfied that with proper care there is no necessity of having unruly stock, even with poor fences. Give them plenty of food and water; keep them comfortable, and they will not be unruly, unless you teach them. I have raised several bulls within the last few years, some five or six of which I have sold; none of them have, to my knowledge, ever jumped a fence. One of them, now four years old last spring, is owned by a man whose fences are very poor; and altho' a bull owned by a near neighbor of his, two years younger, is in the habit of jumping any fence that comes in his way, in the neighborhood—even in or out of the field where this bull was at the time—he still maintains his orderly character.

Corn and Corn Fodder.

A CORRESPONDENT of the New England Farmer thus answers an article on "Corn and Corn Stalks," which appeared in the previous issue of the same Journal, in which the writer favored topping corn, both on account of the grain and the fodder, and also the labor of harvesting. He says:

I have tested the matter to my entire satisfaction by cutting up at the roots and shocking a part of my corn each year for several years past. When severe frost is apprehended, the "new way" may be advisable, but in all other cases I much prefer that my corn should ripen the "natural way."

I place a high estimate upon the value of corn fodder for stock, and much has been said and written upon the best mode of curing it. The way which I prefer and practice is this:—When the tassels have become dry and the kernel well glazed, I cut off the stalk above the ear, laying the stalks of two hills together. When wilted I bind and pike them in the field, letting them remain, if the weather be favorable, ten or twelve days, then cart to the barn, hanging them on poles or setting up under the roof. I find that my cattle eat them better if cured in this way, than if hung up in the barn as soon as bound, or if dried wholly in the field. As I huck my corn mostly evenings, I begin so early in the season that the husks and butts would mould too much, if I did not mix with them a quantity of straw or poor hay. I also salt them freely.

My cattle being judges, the fodder is better cured in this way than when all is cut up together and exposed to the weather the usual time allowed in such cases. Perhaps it is because they have failed to "get the hang of it," which I am sometimes told is the reason why I think the labor greater to harvest corn which is shocked, than that which is topped.

While I agree with your correspondent in so many things, I must dissent from his opinion that it is better to feed out all the corn stover in early winter, to the exclusion of other fodder. Fed out exclusively it is too laxative, and nothing but the husks will be eaten; but a few foddings a week, from November to April, will tend to keep the bowels of the cattle in a loose and healthy condition, especially if you have much straw or poor hay to feed out. A few corn butts, through the winter and spring, occasionally, will be chewed with a relish. From my own experience I am led to believe that the well secured fodder from 150 to 200 bushels of corn, fed out judiciously, to a stock of 25 head, is nearly as valuable as an equal weight of medium quality hay.

WHY SOW DESTROY THEIR YOUNG.—A writer in the Homestead gives an article on this subject, in which he argues very conclusively that "controversy and its accompanying evils are the main causes of sows destroying their young."

Agricultural Miscellany.

THE WEATHER has been unusually cool for the season, since our last. This region has thus far escaped frost, however, though winter storms and few have been in demand. We hear of light frosts in New England. The corn crops are well advanced, and we shall make a crop, sound and plentiful, unless a blighting frost occurs within two weeks.

TRANSACTIONS, 1858. We are indebted to the American Society of the Transactions of the N. Y. State Agricultural Society, with an abstract of the Proceedings of the Society, Agricultural Statistics, &c. It is a handsomely executed volume of 300 pages, cloth and arranged in a neat and readable form. The statistics, in our opinion, will be noticed in future.

WHEAT SOWING.—Considerable wheat has been sown in this section during the past few days. A much larger breadth of land is being devoted to wheat sowing in Western and Central New York, than has been thus occupied for many years. We trust cultivators will not be disappointed in the result.

PREPARING AND SOWING GRASS SEED.—Correction.—J. H. of Henrietta, writes:—"I did not preserve a copy of my statement, in Rural of Aug. 31st, on preparing grass seed; but if I am not mistaken I used the term cooler where you have it printed cool. A temperature from 75 to 80 degrees I call hot; following that a temperature from 45 to 75, I would denominate cooler, but not cool. The last of Aug. or first of Sept. is the true time for sowing timothy seed, all other things being right, and the temperature generally about as last named above—cooler, not decidedly hot."

THE WHEAT CROP.—Yield East and West.—We have heretofore spoken of the large yield of wheat in this State, and stated that, on harvesting, the crop proved much lighter at the West and South than had been anticipated. Recent letters, and statements in our exchanges, show that the yield has proved unusually large in New York and Canada West, while the result is the reverse in the West. The N. Y. Tribune of the 5th, after quoting letters relative to the yield in different localities, says:—"Everywhere at the East the yield of wheat appears, from all the accounts that come to us, entirely satisfactory, while every account from the West agrees in the statement that, although the straw is heavy, the yield of grain is unusually light." As we intimated in a late Rural, the yield of the wheat crop of the country will prove far below the estimates which have been made by commercial papers and operators in breadstuffs.

FLOUR FROM DAYTON WHEAT.—We are indebted to Mr. L. BRADEN, of JUNIOR, for a sample of flour made from Dayton wheat. It is a good article, and makes bread which compares well with that made from the ordinary brands of Genesee Flour.

JOHNSTON'S BEAN HARVESTER.—A correspondent writes us that he is glad to see Mr. HOWARD, of Buffalo, advertise this, for he is satisfied, after using one last year, that every farmer who gives it a trial, "will never consent to pull beans by hand again—for it is the meanest business ever done on a farm." He says the machine cuts off the stalk near the surface of the ground, or a little below it, and runs under the pods, so as not to shell them—that he harvested eight acres in one day, last year, which he calls a great day's work—that in looking at the field after the machine passed through, you could hardly suppose a bean stalk had been cut, as they mostly stood up where cut—that the vines curved rapidly, so that all were in nice order in a couple of days to go along with a wagon and fork them into it without any gathering. He adds:—"I write you to let farmers know that this is a machine every bean-grower wants. With it the raising of beans is made easy, and a remunerating crop." And we thus condense and give the testimony of H. E. P., of Ebeby, for the benefit of those of our readers interested.

BROOM CORN.—An Illinois paper makes the following sweeping statement, asserting that whoever "owns the corn" can drive poverty from his threshold with a broomstick:—"There is a field of broom corn this season in the vicinity of Rockford, Ill., of nearly 800 acres. The seed was planted by machinery, the corn being drilled in rows, two feet nine inches apart. The whole crop is contracted at \$35 per ton. The crop this year will amount to \$29,000."

TWO OSWEGO CO. FAIRS.—We learn from the Syracuse Journal that, in addition to the Fair to be held at Mexico, Sept. 13-15, (as already stated in the Rural,) another Oswego Co. Fair is announced—to take place at Fulton, Sept. 13-15. Each organization claims to be the County Ag. Society, we believe—though we know little of the merits of the case, and should not consider it our duty to express an opinion in favor of either, even if fully advised. We sincerely trust that both Fairs will prove valuable auxiliaries in promoting the cause of Rural Improvement. We hope to have the pleasure of spending a day at each, not doubting but the spirit of emulation aroused by the rivalry of the two associations will render both exhibitions highly creditable.

Fair at Fulton.—Officers of the Society, &c.—Blossie the above was written we are in receipt of the Fulton Patriot & Gazette containing list of Officers, Premiums, &c., of the Society which holds its Fair at that place, (called Oswego Fair in the announcement,) Sept. 13-15. The principal officers are: President—JOEL TURNER, Oswego City. Vice-Pres.—J. W. Pratt, Fulton; ORAM TITUS, Hamlet. Rec. Secy.—JOHN U. SMITH, Oswego Falls. Cor. Secy.—B. K. Sanford, Fulton. Treasurer—SAMUEL O. MORRIS, New Haven. Executive Committee—JOHN REEVES, Granby; C. E. CAIR, M. B. KIMBALL, Fulton. Finance Committee—JOHN E. DUNTON, A. O. FLEM, Elliot Hamlet, Fulton. The towns of Lyonsard, (Onondaga Co.) and Ira and Sterling, (Cayuga Co.) are admitted to all the privileges of the Society. The premiums offered are liberal and include the various branches of Agriculture, Horticulture, Mechanical and Domestic Manufactures, &c. On the 15th, there is to be a Regatta, trial of Fire-Engines, exhibition of Horses, and other attractions.

FAIRS NEXT WEEK.—In addition to the Oswego Fair already noticed, New York County Fairs are to be held next week in Cayuga, Chautauque, Delaware, Genesee, Queens, Rensselaer and Schuyler. Ulster and Towns Fairs as follows—Adams, Galen, Lebanon, Melara, Smithville and Sonny. The Kentucky, New Jersey and Vermont State Fairs are to be held next week; also the National Fair at Chicago.

THE LIVONIA TOWN Fair is to be held Oct. 6th. SYLVESTER FRANCIS is President of the Society; Norton Gibbs, Vice-Pres.; A. Still, Secretary; and G. F. Pratt, Treasurer.

BEA-HIVEN FOR SOUTH AMERICA.—We learn that Mr. E. W. PHELPS, of BROOKLYN, N. Y., is shipping as an officer of the U. S. S. Commodore Perry—1100 lbs. of seed to South America, and that 600 have already been shipped.

GOOD FRUIT.—Mr. N. N. TERRY, of Mendon, has favored us with specimens of a rich and delicious apple which he calls the "Loomis Sweetwater," and a beautiful supply of the Golden Sweet. A fine tree.

SUNSHINE AND SHADOW.

Written for Moore's Rural New-Yorker.

"There's beauty all around our path,
But sorrow, too, is there."

Watch the bright sunbeams as they play
O'er hill and vale on a summer's day.
Gaze at them now as they calmly rest
Like waves of gold on the streamlet's breast.
Look yet again, for the glory has fled,
The waters are sleeping all rayless and dead,
A sable-bird sails o'er mountain and vale,
The leaflets are rustling now breathless and pale,
The birds and the blossoms are trembling with fear,
For the sunbeams have fled and the shadows are here.

List to the soft and murmuring breeze
As it moves at twilight amid the trees,
Bringing sweet voices of loved ones at rest,
On its pinioned wings from the land of the blest.
Why change it now to a low, sad moan
Like the voice of death in the forest lone?
The wind-god is rushing o'er mountain and dale,
And the waving boughs echo the heart-piercing wail.
Gone, gone is the voice from the loved and the dead,
The harp strings are broken—the music has fled.

Gather the rose from its mossy stem
With dew-drops bright for a diadem,
Has fancy o'er breathed of a thing more fair
In sea or in sky, in earth or in air?
Why cast it away thus to wither alone?
Why turn in such haste from that leaf-mantled throne?
Learn now that the beauty which most does adorn
Conceals 'neath its fairness a heart-piercing thorn,
And thus it is with life's sweetest flowers,
The perfume soon dies, but the smart is long ours.

Fold to your bosoms the gifts of your God,
The loving and loved ones that light your abode,
List to the voices that steal o'er your breast
Like breathings of bliss from the haven of rest.
Now loosen your clasplings and let them depart,
The hand of the Death-King is cold on the heart.
Rest their cold forms 'neath the dark oypress shade,
Then gaze on the spot where your treasures are laid,
Turn to the world with a grief-mocking tone,
The heart-bonds are riven and you are alone.

Go to those graves at the coming of night,
Go when the world is receding from sight,
Weep o'er each lonely and desolate mound,
Weep where your heart lies beneath the cold ground.
Tis sorrow all now, but sweet beauty will come,
And mark of that lone spot a bright spirit home,
Those yellow earthed mounds will be covered with bloom,
And the trailing grass creep o'er each tear-watered tomb.

The wild birds will warble thy spirit to cheer,
Pale sorrow will vanish, God's angel be near.
O, shall we take good at the hands of our God,
And murmur when darkness o'reshadows the road?
There's beauty around us to bless and to cheer,
Though sorrow oft comes with its darkness and fear.
Our God is our Father, in Him is our trust—
What though our bright hopes should be laid in the dust,
His love is around us to guard and to guide,
With Him for our keeper, what harm can behide?
And, though sorrow shade o'er our pathway may fling,
Sweet beauty around it still fondly will cling.

MANAGEMENT OF CHILDREN.

"O, Aunt Polly, I'm so glad you have come!
I was just going over to Mrs. Brown's to borrow a
needle, but now you can lend me one of yours."

"No, Fanny, I haven't my needle book; I have
only brought my knitting to sit with you awhile.
But how happens it you are out of needles, Fanny?"

"O, the same old story, Aunt. FRANCES, that
little witch, has carried them off, and lost them, I
suppose. I never did see such troublesome children
as mine are! I declare, I can hardly keep a thing
in my house. You can't imagine what a sight of
trouble I have with them. Yesterday, when Ed-
ward got hurt, and was faint, I ran for the cam-
phor, and don't you think, they had filled it with
water, and I had to go to Mrs. Brown for some;
and they fill my vinegar cruises with water, and I
can't begin to tell you all the pranks they are at.
Do tell me, Aunt, now you have raised a large
family, how did you live?"

"Well, Fanny, I will tell you. I have, as you
say, raised a large family, and am getting old, and
shall use the privilege of age to talk plainly to you."

"Wait a moment Aunt, while I get my scissors.
O dear, what has become of them? Here, JAMES,
you mischief, where are Ma's scissors?"

"Why Ma, FRANCES had them down to the barn."

"O, all the world! Go call her, JAMES."

"She ain't there now, Ma—she's gone way off."

"Well, here, my son, you run over to Mrs.
Brown, and ask her to please lend Ma her scissors
a moment."

"O, Ma, I don't want to. She said she would
lend them to you again."

"Well, go along with you, to your play. Did
you ever, Aunt! Would't lend them to me again!
I declare!"

"Fanny, has Mrs. Brown any children?"

"Dear, yes—half a dozen."

"Does she ever send here to borrow needles,
scissors, &c.?"

"No, never, and for a very good reason; she has
a great abundance of everything, and Mr. Brown
is able to keep her well supplied."

"How did they get their means, Fanny? Was
Mr. Brown any better off than your husband,
when they started for themselves?"

"No, indeed; but somehow or other they have
always had good luck, while it really seems we
never do."

"Well, Fanny, it is all plain enough. You will
always have bad luck, and will never have any
means, or independence, unless you alter your
way very much. Why is Mrs. Brown under obli-
gations to furnish you with things to go with, and
what would become of the world if all women were
like you?"

"But, Aunt, Mrs. Brown's children are not a
bit like you."

"No, and for the simple reason their mother is
not a bit like you. It is not your children who are
at fault, but you are a careless, heedless woman,
and mother. How do your children know what is
best for them to do or to do? They are placed
in your care, and under your guidance, and should
be taught to submit to your sense of right or
wrong, if you have any. You turn them off to
seek amusement, and scarcely know where they
are, or whether they have food or clothes. You
leave everything where they can get it, and allow
them to destroy it, and exclaim, 'Why, FRANCES,
why, JAMES, how astonished I am!' &c., and that
is the end of it. Fanny, there is no need of such
mischievous children. It is because they are un-
governed, untought, untrained. It is the natural
consequence of your own undisciplined mind, and
habits of disorder, and the heedless example you
set before them every day. Take the admonition
of an old woman, and reform yourself and children."
And Aunt folded her knitting, and left Fanny to
chew the bitter cut of mortified pride and vanity,
May she profit thereby.

QUEZCUI.

Written for Moore's Rural New-Yorker.

IN MEMORIAM.

It was the even-tide of Saturday. The mellow
light of an August sunset had slowly climbed the
eastern hills, and left the frowning forests in a
time enlivened with its smiles in deeper gloom.
All Nature was not hushed, for the calls of a lonely
robin, pining for its mate, issued from amid the
sighing branches of the old elm, and crickets in the
long grass chirped a requiem o'er the expiring
season. Yes, summer was dying, and with it much
that was bright, beautiful and good. Hope-flow-
ers that bloomed in the summer of the heart, were
withering 'neath the blast of the soul's approach-
ing Autumn,—loves that for a long time had
cheered our pathway, were with it finding their
grave,—and the fading leaves upon earth's bosom
covered the forms of many we had loved, and were
soon to nestle above one who had been so long and
kindly spared, that we forgot she was Heaven's and
not ours.

"Are they come?" The mild eyes that had over-
beamed with looks of kindly love were turned
towards the open door with one last, eager glance,
as though her soul went out to meet absent ones;
and as she quailed the bitter o'er of "hope deferred,"
they were gently closed, like a flower that
sleeps at even. Loving, faithful hearts were near,
weeping that one so good must die, and as they
leaned to catch the last sweet whispered words,
"peace, peace,"—her spirit passed o'er the dark
stream to a home of eternal peace beyond.

'Twas Sabbath eve. O'er the little village, nest-
led amid the green hills which she was wont to
call "home," the solemn stillness of that holy
hour prevailed. The sweet tones of Sabbath even-
ing bells rang on the clear night air, calling the
quiet villagers to the house of prayer, when 'twas
whispered "she is dead," and with pallid lips and
hearts that wept, the worshippers deserted the
Sanctuary and repaired to her cottage home.—
There were the mourners that leaned o'er the nar-
row coffin for a last look at the sleeping "Mother
in Israel." Their grief was great, but how doubly
painful to bear, for not having been permitted to
close those loving eyes in their dreamless sleep.
But a short time previous she had left them in
apparent health, and far from home,—not amid
strangers, however, for none could meet her with-
out loving, but denied the nearer and more devoted
ones, who love only as life-long companions can
love,—with the harvest of life past and its summer
ended, like a "shock of corn fully ripe," she
was gathered home. Weeping mourner, weep no
longer! Though sorrow encloses the portals of
the tomb, beyond, all is light, and from the tenor
of her peaceful life, as well as the impenetrable
future, comes the sweet, though warning voice,
"Be ye also faithful."

CONSTANCY OF WOMAN.

It is pleasing to contemplate female excellence.
The heart of man warms with emotion as he hears
of the noble deeds of woman—as he views her
quiet goodness—as he marks her conjugal devo-
tion, her fidelity, her firmness of principle, the
thousand little tendernesses clinging around her
heart animating her to please by all the winning
graces and attractions that can fix affection; nor
relaxing after marriage in the cultivation of those
powers which first commanded admiration, be-
cause he has secured her victory. He loves and
adores her when thus true to the amiable im-
pulses of her nature. But if captivated in the
freshness and poetry of her early feelings, when
the fragrance of her own spirit falls on everything
like dew, how much higher does she erect herself
in his esteem when the hour of trial comes—and
adversity overtakes those she loves—and the ap-
peal to her sympathies is the strongest that can
be made, because it comes through the channel of
her affections? See what a power of endurance
she exhibits—what fortitude, what energy. Qualities
which, amid the sunshine of prosperity, lay latent
and unperceived for want of occasion to call
them forth, now appear to view with the hope-
reviving influences which we may suppose a near
and friendly beacon would have upon the sinking
heart of the shipwrecked mariner. Difficulties
which crush the spirit of man, and subdue his
strength to the weakness of a child, are met by
her with a courage that seems to increase propor-
tionally to its demand. With a self-sustaining
energy she counteracts the impression of grief in
her own heart, and, roused by her love and con-
stancy, she turns to her partner, now dearer than
ever from the touch of misfortune, to console, to
invigorate, to assist—shedding a benign influence
upon his existence—causing him to feel, amid all
his misery, that happiness still remains for him
while blessed with the affection of such a friend
and ministrant. Labor, however rude, cannot de-
grade him while he is encouraged by the esteem
of a heart so noble and so true.

THE MOON.

"Yea Moon that light's my native land,
Shines on my distant friends the while."

How delightful to gaze in the stillness of night
On the Moon when she's shedding her tremulous light,
Or to wander alone by the pure, lustrous stream,
And behold there reflected her silvery beam,
While around me so calmly the soft zephyrs play,
And the landscape is more lovely by night than by day;
But more pleasing the thought while her pale face I
view,
That some far-distant friend is beholding it too,
And, though mountains and billows asunder divide,
I imagine my friend to be close at my side;
In the reverie lost, I continue to gaze
Till a cloud intervene and o'reshadows her rays.
Volney, N. Y., 1859.

Choice Miscellany.

BIRDS'-NESTS.

THEY whose perceptions of the poetical in the
still life of a winter landscape have never led
them to observe how much more interesting and
attractive an object is a brown, leafless tree, with
one or more birds'-nests resting on or hanging
from its branches, than another destitute of such
ornament, must have overlooked or underlooked
a very charming feature of winter scenery. The
wealth of bird architecture that only winter dis-
closes to view, as if in compensation for the
temporary absence of the foliage that makes the
distinguishing glory of trees in summer, consti-
tutes, to an eye appreciative of the lesser, more
delicate traits of natural scenery, an important
element of the beauty for which we are indebted
to the season of frost and snow. Especially as a
source of quiet, refined enjoyment, in a pleasant
winter ride over a road lined with orchards, fruit
gardens, and frequent forest trees, the birds'-nests
scattered, generally with sparing hand, among
the branches, are of infinite worth; and a habit
of looking for them, observing their peculiarities
of form and position, the ease and security with
which they rest in the chosen places, and specu-
lating on, if unable to decide, to what species of
the feathered tribe the different patterns and sizes
of nests belong, is well worth cultivating for the
constant pleasure and amusement it affords the
traveler.

Many pleasant fancies arise in one's mind at
sight of these pretty summer-houses of the birds;
it is so easy to imagine that the trees, whose arms
they grace, put them on for the sake of decoration,
as men and women wear gold and precious stones—
their very rarity favors the idea—and when we
see a tree adorned with an unusual richness and
profusion of those jewels, what more natural than
to set down that one as king, queen, or other
personage of royal rank? Or, the location of a
nest may furnish an index to the character of the
proprietor and late occupant. If placed among
the topmost branches of a lofty tree, high above
the homes of other birds, the builder was a bold,
ambitious spirit; if remote from the habitations
of its kind, it was the abode of a grand, solitary
nature, careless of the small chatter of social life;
if in near neighborhood with the dwellings of
other birds, one can fancy the pretty, gossiping
visits the tiny matrons paid each other, to talk of
their house-keeping cares and their little ones;
and if one of these cunning little architects has
hid its house in the bush close under the window,
or in the vine that runs over the doorway, or in
some other secluded nook of man's habitation, we
imagine it chose that spot for the opportunity it
gave of observing the ways of human, domestic
life; and we trust that if the wee mansion was
discovered before it was abandoned by its owner,
the tenant's curiosity was not punished nor its
shy confidence abused. But there is no need of
calling in the aid of imagination to invest these
beautiful structures with poetic interest. Fiction
cannot heighten our admiration of such master-
pieces of skill and ingenuity, nor can it add
anything to the romance of the actual lives of the
artisans that constructed them. Coming among
us in early spring, with voices full of the sunshine
of Southern skies, out of the commonest materials
they fabricate nests which are marvels of grace,
elegance and economy, serving at once for dwell-
ing-house and cradle; and when summer is over
they take their departure so quietly that we do
not notice their absence till, some day, when
perhaps their boat-like bodies have skimmed
through thousands of miles of the great upper
sea, we suddenly find ourselves wondering that
we had not missed them before.

Specimens of all the attainable varieties of
birds'-nests would form a most curious and inter-
esting collection. Even children manifest more
wonder and admiration on being shown one of
these beautiful pieces of workmanship, than at
sight of the prettiest shell, notwithstanding shells
have the high advantages of color and polish.
Perhaps the nest engages our deeper attention as
the habitation of a creature which owes its home
to its own consummate skill and untiring industry,
while the formation, and in great part the econom-
ical uses of the shell, are mysteries to us; or
perhaps a considerable share of our interest in
the miniature house in the air is due to our ac-
quaintance with the accomplished builder, and to
the nearer relationship its circumstances of living
and its glorious gift of song seem to establish
between itself and man. Yet, such as we admire
the exquisite art displayed by birds in the con-
struction of their nests, we greatly undervalue
the worth of these nests in the ornamentation of
our dwellings. Nearly every house in city or
country boasts its little cabinet of shells, rare
stones, or other curiosities; but how seldom a
bird's-nest! Sailors, bound on distant voyages,
are commissioned by their friends with innumera-
ble little errands relating to the procurement of
curious trifles in foreign lands; but how rarely

do they bring home the wonderful creations of
the strange birds that live in the countries they
visit. Our northern birds, though building nests
of every gradation of size, from the comparatively
rude structures of the Hawk and Crow down to
the Humming Bird's mite of a house, do not
present the remarkable varieties of style that we
find, especially in tropical countries, where birds
are compelled to use every artifice to deceive their
rapacious enemies. What a treasure, in any
house, would be a well-preserved specimen of the
Tailor Bird's craft—or the bottle-shaped nest of
the Titmouse—or the long, purse-like contrivance
of the Loxia Bengaleensis—or a cluster of the
edible nests of commerce; or scores of others
that we know only by drawings, or by verbal
description. A collection of such curiosities
would be a valuable possession indeed, whether
to the resident of town or country; and doubtless
a few nests of our common birds would be as
great a wonder in many a city home as the rarest
foreign specimens would in our own houses.
There is, of course, no inducement for us ruralists
to despoil our trees and shrubs of these jewels for
the sake of having them in our houses, because
they show to far better advantage where the birds
placed them; and by merely looking from the
window we can see nests of Robins, several vari-
eties of Brown Birds, the little Yellow Bird's nest
that we contributed candle wick for, and which,
when finished, was as white outside as a snow-
ball, (we mean to furnish colored materials next
summer,) the hollow branch of a tree that the
Blue Bird inhabited, and the deep, swinging,
pouch-like nest of the Oriole. But if we lived in
the city, and were privileged to spend the hot
months of the year in the green country, we
should certainly carry back, as a memorial of our
summer visit, at least one bird's-nest, with the
bough the bird fastened it to; and we doubt not
it would tell as sweetly and as faithfully of its
native home as the shell sings of the sea.
South Livonia, N. Y., 1859.

CHANGE.

CHANGE, constant and universal, is a law of
nature and of our very being. Change and ex-
change but fill up the measure of our existence.
The seasons change; the times and the men change.
The mind changes—our likes and dislikes change.
Our years change, and the events that mark them
change—at times so forcibly, so mightily in their
effects upon ourselves. Sudden changes are noted
in man as well as in the atmosphere. Ever fluctu-
ating—over unsteady—like a troubled ocean the
mass of mankind are in constant commotion.—
There is an ever-restless longing for something
yet in the shadowy future, intangible, indefinite,
and dim to our own imagination. A wish, an if,
a hope operates strongly on our action, and con-
tributes much to the purpose of our conduct. We
cannot know the future, and how far the principles
and sentiments of to-day shall be changed or sacri-
ficed to meet and conflict not with those of to-
morrow, must remain with its coming. This is
equally true in the revolution of years. Though
he who comes after us may con strange and con-
tradictory pages in the history of our lives, those
that follow him may read equally forcible contrasts
and inconsistencies in the records of his existence,
while some of our more palpable errors are avoided.
Might changes to weakness, power to dependence,
fame, honor and position, to obscurity and oblivion.
Respect, confidence and frankness, change to
disgust, suspicion, caution and deception. Compe-
tence and wealth change to poverty and want.
Our days change to nights—our life to death.
From joyous childhood to weary, weak old age.
Our life is a series of changes. Change is written
in imperishable characters across the horizon of
our life; inscribed on all sublimity things unmis-
takable, unavoidable. Let us strive, oh, earnestly,
that of ourselves they be not recorded changes for
the worse.

DAN BURNOCK.

Barry, N. Y., 1859

LOVE OF COUNTRY.—There is a love of country
which comes uncalled for, one knows not how. It
comes in with the very air, the eye, the ear; the
instincts, the first taste of mother's milk, the first
beatings of the heart. The faces of brothers and
sisters, and the loved father and mother,—the
laugh of playmates, the old willow tree, and well,
and school-house, the bees at work in the spring,
the note of the robin at evening, the lullaby, the
cows coming home, the singing-book, the catechism,
the visits of neighbors, the general training,—all
things which make childhood happy, begin; and
then the age of the passions and the age of the
reason draw on, and love and the sense of home
and security of property under law, comes to life;
and as the story goes round, and as the
book or the newspaper relates the less favored
lots of other lands, and the public and the private
accuse of a man is forming and formed, there is a
type of patriotism already. Thus they had imbibed
it who stood that charge at Concord, and they
who threw up the hasty and imperfect redoubt on
Bunker Hill by night, set on it the blood-red
provincial flag, and passed so calmly with Prescott
and Putnam and Warren through the experience
of the first fire.—Rufus Choate.

HUMANITY.—The inclination to goodness is im-
printed deeply in the nature of man; inasmuch
that if it issue not towards men, it will take unto
other living creatures; as it is seen in the Turks
a cruel people, who nevertheless are kind to beasts,
and give alms to dogs and birds.—Inasmuch, as
Busbequius reporteth, a Christian boy in Constan-
tinople had like to have been stoned for gagging,
in vagabondage, a long-billed fowl.—Lord Bacon.

READING.—Says the Rev. Henry Giles—"To go
through books is not to read them. Men may
masticate thousands of volumes, but not convert
them into nourishment; after devouring hecatombs
of folios, they may have minds as lanky as before;
or if, with acquiescent memory, their mind increases
in bulk, the bulk is that of obesity and not of
muscle."

KINDNESS is the golden chain by which society
is bound together.

Written for Moore's Rural New-Yorker.

LOVE.

Love had its emanation from Heaven's holy hand,
A royal flower transplanted into this barren land,
Its odor sweet, diffusing o'er all the sinful earth,
It must be born of Heaven, that plant of sinners
with.

It bloometh in the cradle—young innocence so mild,
Can love its gentle mother—sweet, tiny, little child;
Its fairy blossoms twining around the maiden's heart,
It sheddeth there a beauty no other can impart.

It thrives in sterner manhood—a glory all its own
It throweth o'er his pathway,—but not for him alone,
'Tis with the aged pilgrim to guide his soul above
To realms of endless glory—the home of beautiful
Love.

It floweth in perfection there, in its native soil
Sin cannot mar its beauty, transgression never spoil,
By Jesus' hand 'tis water'd, and bloometh ever there,
Its petals never drooping, eternity to share.
Picard, N. Y., 1859.

JANE E. H.

DIVINE ENTHUSIASM.

There are many ministers, good, conscientious,
faithful, and who do a certain amount of good in
keeping up the forms of religion in their vicinity,
who yet very seldom make any very deep and defi-
nite mark on any soul. There are conversions, and
sometimes even revivals, under their ministry, but
they seem to come more from the native yearning
and upbreathing of souls feeling after God, than from
any impulse given by them. The most that can be
said of them is, that they do not hinder, and often
have skill to guide these aspirations Godward. Many
a poor weaver or tinker, in the days of the
Wesleys, made a more definite mark on mankind,
and rolled up a more evident wave of feeling than
they.

Now, we say, if this divine enthusiasm wrought
so with uneducated men—if it made the common
plowshare and scythe-blade in their unskilled
hands a mighty weapon—what would it do, might
it gain equal power in the breast of skilled and
cultured ones—if it guided the use of polished
spears and well-tempered swords?

Now, we do not disparage in the least the drill
and culture of theological seminaries—the mental
vigil produced by that kind of athletic training
which is given in theological dialectics. So much
the more as a man can make of himself physically,
mentally or morally, so much the more has he to
give to Christ; but when all is done, of what use
is it if he lacks inspiration? An altar candle may
be made of the purest wax, in the straightest
mould, with the most orthodox wick, and put into
the golden candelstick with every appropriate cor-
omony, but, after all, what is the use if it never
burns? A penny tallow-candle, that gives light
and heat, is then better.—Mrs. H. B. Stone.

TRUST IN GOD.—Let us treasure up our experi-
ences of God's faithful and tender care during the
whole course of our lives, that they may come in
aid to our faith and hope in the last great conflict;
let us carefully consider the examples of others,
whose happy death we witness, or of which we
read, or hear, to allay our fears, and encourage our
hearts; let us prepare daily for this important
season by faith and repentance, and a conscientious
attention to the duties of our stations; and let us
watch and pray against anxious and distressing
fears. The Lord will provide for our passage
over this Jordan when the time comes; yes, He
will come and meet us, and by His animating
presence invigorate our faith and hope, till we join
the innumerable multitude that in the Canaan
above are singing the praises of their great Deliv-
erer, who hath both redeemed them from far worse
than Egyptian bondage, and brought them safe to
the promised land through His precious blood,
and by His all-conquering arm.—Scott.

THE DIVINE MANT.—However old, plain, deso-
late, humble, afflicted we may be, so long as our
hearts preserve the feeblest spark of life, they
preserve also, shivering near that pale ember, a
starved, ghostly longing for appreciation and
affection. To this attenuated spectre, perhaps, a
crumb is not thrown once a year; but when
abandoned and athirst to famine—when all human-
ity has forgotten the dying tenant of a decaying
house—Divine mercy remembers the mourner,
and a shower of manna falls for lips that earthly
nutrition is to pass no more. Biblical promises,
heard first in health, but then unheeded, come
whispering to the couch of sickness; it is felt that
a pitying God watches what all mankind have for-
saken; the tender compassion of Jesus is recalled
and relied on; the fading eye, gazing beyond time,
sees a home, a friend, a refuge in eternity.—Char-
lotte Brontë.

SOUND ADVICE.—Dr. Emmon's Advice to Young
Preachers was not to preach over thirty minutes,
saying,—"There are no conversions after the first
half hour." Wesley held the same opinion, and
said, in one of his letters,—"If any, then, of the
preachers exceed their time (about one hour in the
whole service), I hope you will always put them in
mind what is the Methodist rule. People imagine
the longer the sermon is the more good it will do.
This a grand mistake."

"ALL YOUR NEED."—Why was the "Bread of
Life" hungry, but that He might feed the hungry
with the bread of life? Why was "Rest" itself
weary, but to give the weary rest? Why was the
"Prince of Peace" in trouble, but that the
troubled might have peace? None but the Image
of God could restore us to God's image. None
but the Prince of Peace could bring the God of
peace and the peace of God to poor sinners.—Old
Author.

In the arrow of prayer is to enter heaven, we
must draw it from a soul full bent.

The Reviewer.

AN AMERICAN DICTIONARY OF THE ENGLISH LANGUAGE. Containing the whole Vocabulary of the First Edition in two volumes Quarto; the entire Correction and Improvements of the Second Edition in two volumes Royal Octavo: To which is prefixed an Introductory Dissertation on the Origin, History, and Connections of the Language of the Principles on which Languages are Formed. By Noah Webster, LL. D. Revised and Enlarged by ANASTAS A. GOODSON, Professor in Yale College. With Pronouncing Vocabulary of Scientific, Classical, and Geographical Names. To which are now added Pictorial Illustrations, Table of Synonyms, Peculiar Use of Words and Terms in the Bible, Appendix of New Words, Pronouncing Table of Names of Distinguished Persons, Abbreviations, Latin, French, Italian, and Spanish Phrases, etc. [The one volume, Crown Quarto, pp. 1,700.] Springfield, Mass.: Geo. and Charles Merriam.

Webster's Unabridged has for years been the Dictionary of America—the standard and by far the most popular work on lexicology ever published in this country. But that has been eclipsed by a great improvement and achievement—the publication of this pictorial, illustrated, unabridged edition. Valuable as was the former edition, the present surpasses it in many essentials, and particularly in being enriched and adorned with fifteen hundred cuts illustrative of important subjects. In the language of a contemporary, "the idea is a novel as well as a good one, and we predict for the great Pictorial a popularity equal to that which the Unabridged has already attained on both sides of the Atlantic, and wherever the English language is made the medium of thought. It is of no use for the opponents of Webster's orthography and orthoepy to deny this work. It is a fixed fact, a living entity, and will maintain its place as the most complete and accurate Dictionary of the language of our time. It is now the recognized standard, constantly cited and relied on in our courts of justice, in our legislative bodies, and in public discussions, as entirely conclusive. . . . The present edition is a splendid specimen of art, typographical and otherwise, and fairly entitles the Messrs. Merriam to a first class premium as book-publishers. The table of synonyms, which is included in this new and pictorial edition, is a most valuable and interesting feature. Taken as a whole, the publishers of Webster's Unabridged Pictorial have good reason to be proud of their achievement, and the country ought to thank them for it by patronizing them liberally." For sale in Rochester by E. DARROW & CO., and STEELE, AVENY & CO.

ROMAN ORTHOGRAPHY.—A Plea for the Restoration of the True System of Latin Pronunciation. By JOHN F. BICHARDSON, Professor of the Latin Language and Literature in the University of Rochester. [6mo. pp. 114.] New York: Sheldon & Co.

There above is the title of a very logically written work, designed to exhibit the absurdities and incongruities of various modern methods of Latin pronunciation, and to furnish plain, practical rules and guides for restoring the Orthoepy of the Language to its pristine purity. The Latin having become extinct as a living language, except so far as it mingles with, and makes up a part of, all the modern Languages of Western and Southern Europe, the original pronunciation has been lost sight of, and each nation in teaching it follows the peculiarities of its own vernacular; hence has arisen a multiplicity of pronunciations, differing from each other and from the original as widely as the tongues of Babel differed from the language of our first parents. National vanity goes a great way in producing national absurdities. Thus, every nation with any claim to scientific knowledge maintains that its studies are the most directly under their National Capital; and hence the Principal Meridian is in England made to pass in the immediate vicinity of London; in France, through Paris; and in the United States, through Washington—each believing that he illuminates other nations simply from the superiority of his rays, but that he would not relegate his deeds out of their accustomed track (which he keeps for the benefit of that particular meridian) to save all the rest of the world from Cimmerian darkness. This pertinacity in clinging to national singularities is perhaps nowhere more disastrous than in the pronunciation of the dead languages in England and America, for none differs so widely from the original, and it is high time that some uniform method of Latin Orthoepy should be adopted, not only for ourselves, (for we have at least two distinct methods,) but for the civilized world. What better method can be agreed upon than the original when it was spoken as a living language? The rules for pronunciation in Prof. BICHARDSON'S work are plain and explicit, easily understood, and practically applied, and the book should find its way into the hands of every American teacher and scholar. Rochester—ADAMS & DANEY.

FARM DRAINAGE. The Principles, Processes, and Effects of Draining Land with Stones, Wood, Plow, and Open Ditches, and Especially with Tiles; Including Tables of Rain-Fall, Evaporation, Filtration, Excavation, Capacity of Pipes; Cost and Number to the Acre, of Tiles, &c., &c., and more than 100 Illustrations. By HENRY F. FARMON. [12mo.—pp. 384.] New York: C. O. Moore & Co.

As its comprehensive title indicates this work discusses the whole subject of Farm Drainage. The author is evidently a close observer, has had some experience, and thoroughly acquainted himself, by reading, observation and experiment, with the various principles and processes upon which he treats. To the thousands who are looking for information on Drainage—who wish not only to understand its scientific principles, but the *modus operandi* and expense—this treatise will prove invaluable; for, in addition to showing what lands require drainage, and the way and wherefore, it gives plain, practical and easily comprehended directions for executing the work in the best manner. We regard this work as a most valuable contribution to the Agricultural Literature of America, and cordially commend it to the large number of our readers interested in the important subject it elucidates. Rochester—E. DARROW & CO.

PLATANTERA CILIARIS—YELLOW FRINGED ORCHIS.

1. A Spike of Flowers. 2. The Lower Leaf and Roots, or Tubers. 3. A Flower, with its Spur, Wings, and Ciliated Lips, Capsule and Bract. 4 is the Pod. 5 is the Singular Snake-Headed Pod of the *P. Bracteata*.

For Moore's Rural New-Yorker.
ABOUT BOTANY.

BY J. STAUFFNER.

There are but few persons who do not admire flowers, yet it is equally true that but few have the patience to undergo the seeming drudgery to study the science of Botany. This arises from a common objection urged against the hard names employed to designate the various plants, or their several parts, and deters most persons (otherwise curious to know), from a patient investigation of the subject, on its very threshold.

Hard and arbitrary as the names may seem, even to an ordinary good scholar, they are, nevertheless, usually significant to him who is master of the Greek and Latin languages, as the peculiar ideas which the plant suggests is clothed in words compounded from those languages. The excuse for which is, that thus a universal nomenclature is obtained, alike available to every classical scholar, be he German, French, or English, &c., thereby obviating the necessity of learning the name for objects in other localities or countries, so perplexing to the naturalist.

This would be well were it actually carried out in every instance. We have apes, however, too prone to coin names at random, having neither "rhyme nor reason" to support them, and those again who, for a compliment, will call a plant *hospitable* after some obscure Bohemian botanist, which hard name is applied to a genus of the Mallow family, differing but little from the Hibiscus, (we have the *H. virginica*.) The Schwabes, Castilleja, &c., &c., are of this class. There is room for improvement, and Dr. LINLEY, in his late English work, as also Dr. GRAY, in our country, have made innovations by Angloizing most of the terms used, and now say the "Pink Family" in place of "caryophyllaceae," and the like, which sounds more in accordance with the general taste of readers.

Apart from all this, be the objections what they may, vegetation has an individuality like every other branch of science, and its various species must be brought into generic relation; those again into groups and divisions, which constitutes the classical arrangement, and must needs be first understood to some degree, so that a starting point for examining a plant is had. This requires some study, or examination at least; and the natural system is now becoming more popular than the artificial of LINNEUS, which had its day, and may still be used as a secondary method.

Permit me, kind reader, to speak of the pleasure the pursuit yields when we once have commenced to make a collection of pressed and dried specimens, each successive acquisition stimulates the desire for more extended research, and with what joy we cull new and rare specimens to be added thereto. With one of Dr. A. GRAY'S *Manuals of Botany*, we can name all the plants that may be found north of Virginia. Then to walk forth into Nature's sequestered haunts, and cull the silent emblems of her sweetest smiles, perchance

"A violet by a mossy stone,
Half-hidden from the eye,
Fair as a star when only one
Is shining in the sky."

Then to examine it closely and see which of the eighteen native species named it is, and thus with the various flowers that line our path as we stroll onward to the deep and silent solitude of the valley, where

"Man nor brute,
Nor dint of hoof,
Nor print of foot,
Lays in the wild, luxuriant soil"

Perhaps the Hermit Thrush, in his solitude, is startled at your presence—all is still—scarce an insect chirps. But what of solitude, when every step brings some new wonder into view. Here, indeed, do the Orchids luxuriate; on every side are seen the *Pyrocnis*, *Oxyphragma*, *Platanthera*, and *Orchidea*. Such a locality, it was my good fortune to fall upon in the Northern section of Lancaster, my native county, in the early part of August, 1855. Then and there did I first meet with the splendid "*Falses Orchis*," bearing the hard name of *Platanthera ciliaris*, of which see engraving.

Oh, what a glorious sight!—here, hid away from the noise and bustle of the jostling world, they stand erect amid the grass and underbrush—bright as jewels set in emerald. It is well worth the toil to be thus rewarded with one of those wondrous displays of Nature's handiwork. The densely flowered spikes, of a bright golden yellow, on their stems from one and a half to two feet high, clothed in oblong leaves of a brilliant green

color; and, as we examine them more closely, the fancy needs no stretch to conceive the flowers to be a flock of miniature birds of Paradise, perched around a common centre, exquisitely wrought out of burnished gold. The only void I felt on that occasion was that I had no one with me to share the pleasures of this enchanting scene. I could have shouted like ANCHIMANES, *Bureka!* only that the word were tame in its abused application, and silent admiration more in keeping.

This is a native plant, truly well worthy a place among the rarest exotics, both for its profusion of showy flowers and their peculiar structure. There are sixteen species, all of them more or less showy like the large and small purple fringed Orchis, &c., but this is decidedly the handsomest species. To conclude, though I am not one of those

"Wild enthusiasts that cannot rest
Till half mankind are alike possessed,"

I would, nevertheless, strongly urge the study of this science on our young men and women as both profitable and rational, and one that will yield its full reward, notwithstanding some may say, with an eye only to "*dollars and cents*," that the pursuit "*don't pay*." Mrs. HALE, in one of her poems, says truly:

"There's not a plant that springeth
But bears some good to earth;
There's not a life but bringeth
Its store of harmless mirth;
The daisy, wayside clover
Has honey in its cells;
The wild bee humming over,
Her tale of pleasure tells;
The oaks o'er the fountain
Keep cool the water's breast—
And on the roughest mountain
The softest moss is pressed.
Thus holy nature teaches
The worth of blessings small,
That love pervades, and reaches
And forms the bliss of all."

Lancaster, Pa., 1859.

Written for Moore's Rural New-Yorker.
THE FROZEN WELL AT BRANDON, VT.

BY PROF. DEWEY.

CONCERNING this phenomenon there has been much doubt, which is now wholly dissipated by the excellent paper of Rev. Dr. HIRNCOCK, read at the late meeting of the Scientific Association, and by other documents.

Brandon is a village at the west base of the Green Mountains of Vt., on Otter Creek, some miles south of Middlebury College. The well is not a year old, as it was dug in November, 1858. Its location is on the eastern slope of a hill of moderate elevation, and half a mile west of the center of the village. The well is three feet in diameter, and about thirty-four feet deep, and has at its bottom more than two feet of water. The hill is composed of gravel, coarse and fine, which slopes with the surface of the hill. When the digging reached to about fifteen feet through the gravel, or about nineteen feet from the surface, a frozen mass was struck, consisting of gravel and ice, the ice being in greater or less masses, according to the cavities; and this was continued about fifteen feet more, when water was reached and the bottom of the well filled as above by the flowing of the water from different directions. The water of the well is next below this frozen and icy stratum, and near thirty inches deep.

As might be expected in these circumstances, the well was very often frozen over in the winter and spring, and even in May and June ice, some inches thick, covered the stones of the sides for several feet above the surface of the water. This is not prevented even by the partial covering over of the well. The water in the well, even in summer, is not one degree of far above the freezing point, while the ice on the wall, or side, is below the freezing point. The air near the water was 34° , while the atmosphere at the mouth of the well was fifty degrees. Such are the facts of the Frozen Well.

On various sides of this well, and at no great distance, are springs and wells. The former are fed by surface water, for the temperature is nearly that of the air; and the latter do not reach the frozen stratum, if indeed it is under them. Probably the ice-bound layer of gravel is of quite limited extent. It is necessary that the fact should be ascertained by digging or boring, so that the actual conditions of the ice-bed may be more fully known.

The cause is not yet fully ascertained, Dr. HIRNCOCK supposes it may be owing to modified drift, frozen and then buried under drift and con-

ected with very poor conductors of heat; or, that the air of winter permeates the bed of gravel by some fortunate opening into the earth, by which the congelation takes place. As the subject has attracted so much attention, other discoveries, it is hoped, will lead to some satisfactory and adequate solution.

The chief object is to give your readers the interesting facts, derived from different sources which place them beyond all doubt. O. D.
Rochester, N. Y., August, 1859.

WHERE IS THE "FAR WEST?"

In a recent issue of the RURAL we made brief mention of the trip lately performed by the steamer *Spread Eagle*, which is considered the most remarkable voyage in the annals of river navigation. The *Kansas City Journal* gives the following additional particulars:

The steamer *Spread Eagle*, Captain Chouteau, returned on Saturday from the most remarkable voyage ever performed in river navigation, having, when reaching St. Louis, performed on one trip over six thousand miles. She was 850 miles above the mouth of the Yellow Stone, or 2,500 miles above Kansas City. To realize the country which she skirted, it will be necessary to compare. From Cairo to Pittsburg, the Ohio is 1,000 miles— from New Orleans to Pittsburg, the river navigation is 2,200 miles. On the Ohio are the States of Kentucky, Illinois, Indiana, Ohio, Virginia and Pennsylvania, and below to New Orleans are Missouri, Tennessee, Arkansas, Mississippi and Louisiana. On the Ohio are the towns of Cairo, Paducah, Smithland, Shawneetown, Mt. Vernon, Henderson, Evansville, Louisville, New Albany, Madison, Cincinnati, Mayville, Portsmouth, Pomeroy, Parkersburg, Marietta, Wheeling, Steubenville and Pittsburg—none less than 5,000 inhabitants, and more than half having from 10,000 to 250,000 each. Below this line of river to New Orleans, we find Memphis, Napoleon, Natchez, Vicksburg and New Orleans.

What an array of wealth, population and commerce does the list produce, yet they embrace a country of only two-thirds of the extent of that traversed by the *Spread Eagle* on her present trip. And on all the line of navigation, as great as that between New York and Liverpool, there is not a rapid fretting of the current of the Missouri, or a fall to stop the even strokes of the steam engine.

This is a most remarkable fact, unparalleled in the world, belonging to no continent save our own, and no river save the Missouri. The Empire of the West was born with the steamboat, and what twenty-five years has made on the Ohio and Mississippi, less than half will do for the Missouri. We have an empire beyond us, and while the citizen of the East points to Kansas City as the "Far West," we can direct his attention to the fight of the *Spread Eagle* two thousand five hundred miles west of us, on the great river of the continent, and yet she has not seen that mythical land—the West.

Answer to Miscellaneous Enigma:—An incorruptible press is the palladium of our liberties.
Answer to Political Problem:—21 tons 6 cwt.
Answer to Riddle:—Sunday.

YOUNG RURALIST.

"NEVER PUT OFF TILL TO-MORROW."

BY GEORGE W. BROTHMAN.

Now is the time to be busy—
Now is the season for toil—
Work while 'tis Spring, and the Autumn
Will bring you the fruits of the soil.
There's no time for work like the present,
Let idlers not lead you astray—
For "never put off till to-morrow
The thing you can do to-day."

Be up with the dawn of the morning,
In time to your labor repair,
And, though you do ever so little,
Be sure that you do it with care.
And should the world tell you to linger
And jolt for a moment in play,
Mind, "never put off till to-morrow
The thing you can do to-day."

So, youth is the time for progressing
In wisdom's delightful road,
That age, at the end of the journey,
May find a repose with God.
Then remember while youth is in splendor,
(Not when you are old and gray),
To "never put off till to-morrow
The good you can do to-day."

Simsco, C. W., 1859.

THE RISING GENERATION.

We may call this the age of intellect, the era of colleges and schools. Poets are plenty as blackberries, and professors as the leaves of the trees. Men use their brains more than they do their hands. The genius of the age is bringing a dearth in the land. But hunger is a great enemy to genius; it cools the ardor of youth, and the evil is working out its own remedy. Men when thus brought to the starving point, are taught that they must not only labor with their head, but with their hands. Already there is mutiny in the camp.—The necessities of life are so dear, that the people groan and sigh for the "flesh pots again." We must have cultivated minds and cultivated fields, but one must not be had at the expense of the other.

"All work and no play makes Jack a dull boy,
All play and no work makes him a mere toy."
This is just as true now as it was in the days of the unknown bard who penned these lines. Now the true position is at the mean between these two extremes. Labor and study should go on together. That they can go on together, we have abundant evidence in the lives of N. P. BANKS, and ELISHA BOWEN, and other eminent men. Necessity is the main spring of labor, and a great promoter of virtue. She is the mother of our most useful working men. It must have been the design of our Creator, that man should earn his bread.

The Cretans were in ancient times the most expert elingers in the world. Their mothers used to place their bread upon a high tree, and no boy could have his meal till he had brought it down with his sling. Something similar should be done for the benefit of the rising generation. Every boy and girl should be early taught that they have duties to perform. When they have arrived at the age of fourteen years, they should be a help to their parents, and cease to be a burden. They should be encouraged in every possible way to be busy, studious and useful. They should not be *hubbled and cased*, but treated as men and women. The girls should obtain a practical knowledge of every household duty. They might be encouraged to rise early and do an ironing or get a meal, with neatness and dispatch, by the present of a book or side-saddle. They should also have a plot of ground, with time and opportunity for cultivating flowers. To make the boys trusty and faithful, charge them with business. Let them buy and sell, pay a note, cast interest, &c. Suppose they make mistakes; if you deal with honest men, (and you need not deal with any other,) the mistakes could be rectified. No class of men have such a choice of men with whom to trade, as the farmer. He deals with a very few men, and those few may be the best. All that is wanting is a little care at the outset. He can thus with a proper discretion, steer clear of disputes, and the mazes of the law.

To encourage boys to work, say *come boys—not go boys*. Come boys should be the farmer's watchword. Working parents generally have industrious children. The boys should have a piece of land to do with as they please. The great aim of parents should be to teach their children to do for themselves. This is at least half of the great battle of life. There are thousands who are faithful to others, but cannot do anything for themselves, because they never learned to do it. Like unfledged birds, they need be under wing. What is working the mischief with our young men is, that the old folks hold the staff of authority too long. They keep their sons in the background, and as a consequence they get into nomadic habits, or if at home remain complete underlings, without spirit or ambition. If, then, the fathers who are farmers wish us, their sons, to be spirited and ambitious, let them turn over their business to us, in part. Allow us to drive occasionally to the store, the mill and to meeting. Nothing has a tendency to please young men, or make them more virtuous than to be *trusted* by their parents. If then, you have sons industrious, virtuous and ambitious, charge them *early* with business, for by this means you put binders upon them, that will hold them to good habits as they pass up and down the hills of this life. H. K. F.
Cambridge Valley, N. Y., 1859.

No TIME.—We complain that we have "no time." An Indian Chief of the Six Nations once said a wiser thing than any philosopher. A white man remarked in his hearing that he had not time enough. "Well," replied Red Jacket, gruffly, "I suppose you have *all there is*." He is the wisest man who can crowd the most good actions into "now."—Emerson.

ROCHESTER, N. Y., SEPTEMBER 10, 1859.

DOMESTIC NEWS.

Matters at Washington.

The Treasury Department is now preparing some interesting statistical tables relative to the trade between France and the United States, and exhibiting, by comparison, the amount of duties paid by each on the imported products of the other. These tables, it is understood, are designed to facilitate the negotiation of a treaty between the two countries, by which our commercial interests will be extended.

The State Department has been officially informed of the ratification by the Government of Nicaragua, of the treaty between the two Governments. The obnoxious claims objected to by this Government had been previously expanded.

The Government has been advised by General Harney of his proceedings in taking possession of the Island of San Juan, and the steamer tomorrow will convey a reply. From what has been transpired, it is reasonable to infer that the position of the Administration admits of no compromise, it being fully satisfied that the island belongs to the United States.

The Secretary of the Interior has informed certain memorialists in St. Louis, who ask that the public lands of Kansas and Nebraska be withheld from private entry at the close of the public sale, that the President is of the opinion that the law invests him with no power to grant such request.

The State Department has been informed by Mr. Wright, Minister to Berlin, that it is not true, as reported by many American newspapers, that there are several American citizens in the Prussian army. He knows of none.

A letter from Vera Cruz states that Minister O'Quay has been ordered by the British Government to avail himself of the leave of absence previously granted, and surrender the charge of the Legation to Mr. Matthews, Secretary of the Legation. A letter written circulars have been addressed by Ocampo to the Governors of the several States of Mexico, impressing upon them the necessity of enforcing the recent reformatory decrees of the Constitutional Government.

Nothing concerning the late Convention between Guatemala and Great Britain, the former ceding a large extent of territory to the latter, has reached this Government in an official form, but it is known that the Administration is not an indifferent observer of events in that quarter.

The Secretary of the Navy has issued the following general order, viz.:—"No order will be given to medical officers of the navy to render professional aid to any person who is not attached to the naval service on board a ship of war. The department will concede in their humanity to respond to any appeal for their assistance whenever the requisite aid cannot be obtained elsewhere. An exception may be made in favor of vessels in distress, when, if necessary to secure the requisite medical aid, the authority of the commander may be interposed."

Personal and Political.

Mrs. John Biddle, who was identified with the early history of Michigan, having been a delegate in Congress, and a member of the Convention which formed the first Constitution, a candidate for Governor, &c., died at the Virginia Springs, a few days since. He was the last of six brothers, one of whom was the famous Nicholas Biddle, President of the United States Bank.

The National American State Committee of Massachusetts, have determined to issue a call for a State Convention, to assemble in Boston early in October, for nominating a Governor and other State officers. They will have no coalition with any other party.

The Wisconsin Republican State Convention, on the 30th ult., nominated Alexander W. Randall, the present incumbent, for Governor. The vote was, Randall 118, Schurz 40, scattering 20.

A dispatch from Washington says Senator Douglas has been invited by the Democratic State Committee of Ohio, to address the people of that State, and that he has accepted.

The American Convention of New Jersey, on the 1st inst., nominated Hon. Peter J. Clark, of Hunterdon, for Governor.

The first of a series of State Conventions, designed to arouse the people of this State to the importance of protecting the interests of the canals by legislation, as against the unequal competition of the Railroad lines, was held in this city on the 1st. The attendance of delegates from abroad was quite respectable,—many of the leading canal men in the State being present and taking an active part in the deliberations and proceedings of the Convention. The Convention was organized by the appointment of the following gentlemen to office:

President—D. R. Barton, Moore. Vice-Presidents—G. R. Babcock, Erie; H. J. Sickles, Orleans; G. D. Lamont, Niagara; Thos. Parsons, Alfred Ely, Monroe; L. B. Crocker, Oswego; Jas. J. Glass, Oneida; A. R. Culver, Oneida; H. O'Reilly, Erie; New York. Secretaries—A. M. Clapp, Erie; B. D. Jones, Monroe; H. Allen, New York. A Committee on address and resolutions was appointed as follows:—Anscl Bascom of Seneca; S. B. Hunt of Erie; T. T. Flieger of

Niagara; W. F. Holmes of Monroe; L. B. Crocker of Oswego; R. C. Palmer of Oneida; H. O'Reilly of New York; T. Kempshall of Monroe.

The following resolutions were presented and adopted:

1. Resolved, That this Convention re-affirms and endorses the act and resolutions adopted by the Canal Convention, held at Syracuse on the 29th and 30th days of December, 1858.

2. Resolved, That the systematic depreciation of the value of the Canal, the embarrasment of the Canal by its practical operation; and the recent public expression of a foreign power in that end; render it evident that a scheme is already matured to take them out of the field of competition, by transferring them to the control of a corporate monopoly, before which the interests of the people will be sacrificed.

3. Resolved, That in view of the efforts thus making to deprive the people of a property in their own power, and the incidental benefits of such an action to the State, which it may afford to the State, the Canal question becomes the paramount issue in the State, and to be held in November next, overriding all obligations of party, and demanding from the friends of the public works a careful scrutiny of the antecedents and relations of candidates for office.

4. Resolved, That to the end of united action on the part of the friends of the Canal may be secured, we recommend the appointment of a State Central Committee of Ten, to be appointed by the Chair, with power to call State Conventions.

5. Resolved, That it is recommended that organizations be formed in the various Senatorial and Assembly districts for the purpose of discussing the question of the Canal, and as may be most favorable to the objects of the Convention.

6. Resolved, That the State Central Committee be authorized, at an early day, to give notice for a State Convention to each judicial district of the State, and to hold a convention at Utica on the 24th of September, to discuss the merits of the Canal, and to elect a State Central Committee of Ten, to be appointed by the Chair, with power to call State Conventions.

The Chair appointed the following gentlemen as a State Executive Committee:—Erie—Carlos Cobb, Geo. R. Babcock, Monroe—H. L. Fish, Thomas Parsons, Oneida—A. H. Hovey, I. J. Hughes, Seneca—Anscl Bascom, Oswego—L. B. Crocker, Oneida—A. R. Culver, New York—Henry O'Reilly.

Weather of the Last Half of August.

We have been favored with another half month of delightful weather—showers enough—dewy mornings—fair days of sunshine—bright starry nights, and one of them gorgeous with Northern Lights of all colors and forms for many hours—and no very uncomfortably hot mid-days. Indeed, the weather has been rather cool for the season. The average heat was 65°, being 2° below the mean for 22 years, but a degree above that for last year. As the average of the first half was above the mean, the average of the month was 68°, or 1.5°, above that for 22 years, and almost the same as for August, 1858, but warmer than that of August, 1857.

Vegetation has advanced with good promise for the fall crops, and many fields of Indian corn will give the average yield. Some, however, in this and adjoining counties give not so much promise. Apples, and pears, and plums abound, and are fine; the blackberries have not yet expelled the whortleberries from market; tomatoes were early, and have been very plenty till the last three days, in which they have matured too slowly to supply the demand, and of course called louder for more of the ready; all the products of the farm and dairy abound, and butter—were it not for the city of New York and the railroads—would be cheap enough; wheat still holds on its long face, which attracts many admirers, and some not so buoyant, with delight. On the whole, the banner of plenty is raised high, and the cornucopia has a full horn.

The Aurora Borealis shone out brilliantly about nine o'clock in the evening of the 28th, and was magnificent on the morning of the 29th from two to three. The display was equal over a great part of our country, to the richest exhibitions of the kind a few years ago. These Auroras have been few and feeble since 1850, and their return has been anxiously looked for. The cause of them is not yet ascertained. Many yet maintain their electrical character, and this hypothesis is held to be supported by the effect on the telegraphic wires the other night. The flashing, too, of light over the canopy from east to west, or from north-east to south-west, has no parallel but that of lightning.

The late Prof. Olmstead held that electricity had no agency as the cause, but that a nebulous body between the earth and sun, in certain situations, sent forth its illuminations into our atmosphere, and thus amused and delighted our vision. Others have held to reflection of the sun's rays from Arctic icebergs or fields of ice, or from the crystals of ice high up in the atmosphere. All these seem to be annihilated by their inadequacy to account for that splendid aurora seen the other night, and often in former displays, overhead or within a little south of the Zenith, toward which all the radiations of light shoot up from the horizon. Even a nebulous body seems to fail of producing the wondrous effect. The only analogy is, that of the ring of Saturn, and how such a ring should present light under such an aspect, no one has conceived. The electrical influence on the magnet and on the telegraph wires, as well as other phenomena, seem to demand the operation of that wonderful power, electricity.

With all the bounties of the season, and all the wonders of the heavens, the Father of mercies has continued to the people the great blessing of health. To the Great Benefactor let gratitude ascend.

Rochester, Sept. 1, 1859. O. D.

News Paragraphs.

The *Onida Sentinel* says that Mr. Sanford Adams, of Rome, has a fig tree in his garden, which has upon it about one hundred figs. Some of them are ripe, and have quite a luscious taste.

"Axalon," one of the finest stallions in the world, the property of Col. George Elliott, near Gallatin, Tenn., died on the 18th ult., only a few days after his owner had refused eight thousand dollars for him. He was twenty-two years old.

The editor of the *Fredericksburg (Va.) News*, who is summing at the White Sulphur Springs, writes of a colored man whom he has found there, who is an Ex-Judge of the Supreme Court of Liberia. At present he is superintendent of the bath-house. He was born free, had \$1,600, and concluded to go to Liberia; went, and was appointed Judge by President Roberts. He remained, however, only six months.

The Treasurer of the New York State Colonization Society acknowledges the receipt of twenty-five thousand dollars, a donation from a friend, towards a College endowment in Africa.

The *Cleveland Herald* says it learns from a source in which the utmost confidence can be placed, that the Welland Canal is to be enlarged at an early day. Matters have gone so far with the Canadian authorities that this work may be set down as a fixed fact.

The big tunnel on the Covington and Ohio Railroad, in Greenbrier county, Va., is 4,700 feet long, and 700 feet below the surface of the earth. It is 300 feet longer than the Blue Ridge tunnel. The width is 27 feet, to accommodate a double track, and the height is 23 feet.

The amount of land sold at the recent Government sales in Kansas is said to have been astonishingly small, compared with former years; while the subsequent location of land warrants was very limited.

The Nebraska land sales, recently in progress at Nebraska City, were a failure. Not more than 2,000 of the 300,000 acres offered were taken. The pre-emptionists—the actual settlers—have no money, and there is danger that they may lose their homesteads. Lands offered and not sold at these sales, may be located with land warrants, holders of which are on hand in great numbers.

BETTER LATE THAN NOT AT ALL.—A base, constructed of granite, to support the slab in memory of Benjamin Franklin and his wife, was on Friday week placed in the position assigned to it in Philadelphia. It rests upon a plain foundation of stone, and in dimensions is six feet ten inches long, four feet ten inches wide, and three feet deep. The new lettering, chiseled in the solid stone, comprises the simple inscription:—"Benjamin and Deborah Franklin, 1790."

GREAT DISCOVERIES OF COPPER ore have been made in Newfoundland. The mines contain large quantities of sulphur and also rich veins of silver. The supply of copper is said to vie with that of the best mines in England.

THE ST. LOUIS REPUBLICAN remarks that the amount of Pike's Peak gold thus far brought into that city is trifling,—some three or four thousand dollars. Including that reported as in private hands, the aggregate does not exceed \$10,000 or \$15,000.

CRIMES IN NEW YORK.—The quarterly report of the Metropolitan Police Department, shows the whole force to be 1,435 men. The whole number of arrests during the quarter was 19,262, of which 2,614 were for offences against property, and 16,598 for offences against persons or the public peace. Of the arrests, 14,019 were for offences generally traceable, directly or indirectly, to the use of spirituous liquors.

LETTERS received in Boston from commercial houses at Nagasaki, Japan, to June 5th, make no mention of any disturbance or trouble with American shipping and the Japanese authorities, as recently represented. On the contrary, everything was going on harmoniously.

The great western plains are literally covered with Buffalo. The number each year seems to increase rather than diminish. They go in immense droves, and at times seem to cast a dark shadow over the valley.

A LETTER from Nagasaki, Japan, says:—"The new Emperor becomes every day more and more liberal to the Europeans, and the mandarins of the provinces, instead of subjecting them, as heretofore, to all sorts of ill-treatment, display great regard for them."

NEW OREGON BOUNDARY QUESTION.—The boundary, after leaving the parallel of 49, was to follow the main channel from the Gulf of Georgia to the Pacific, but it so happens that through the Archipelago of Haro there are two main channels, with several islands of important military value between. Gen. Harney, in command of the Oregon department of the army, has taken possession of these islands, contrary to the British construction of the treaty. The dispute will have to be settled by diplomacy.

AMERICAN RAILROAD IRON.—The assertion that the American railroad iron is cheaper than that of England, in consequence of its superior durability, has often been made, but there have been doubts on the subject in some minds, the majority of men thinking that low-priced articles are necessarily cheaper than those of a higher original cost. A proof has recently been afforded of the truth of the declaration with respect to the railroad iron of Pennsylvania, by an experiment that has been made on the Central Railroad of Georgia. In 1858 the track was supplied with iron, one side being furnished with American and the other with English rails. After an experience of two years, the report of the General Superintendent decides in favor of American iron.

FOREIGN NEWS.

GREAT BRITAIN.—Lord John Russell said in the House of Commons, prior to the delivery of the Queen's special report, that Mr. Bruce had been sent to Peking with a view to the ratification of the treaty with China, and that it was the intention of the government to require the Chinamen to fully carry out the conditions of the treaty.

Lord Palmerston, in reply to a question, said it was the express desire of the government to encourage the formation of artillery corps.

The nomination of Chas. Lennox Whyte as Envoy Extraordinary to Central America, and rumored cession of territory in Honduras to Great Britain, had given rise to the impression that the English government was seeking to strengthen its possessions in that quarter.

The steamship Great Eastern was to leave the Thames on the 2d of September for Portland, in Dorsetshire, and thence proceed on her trial trip, and return in season to take her departure from Holyhead for America on the 15th, as already announced.

FRANCE.—The triumphal entry into France of the army of Italy took place on the 14th inst., and passed off with great éclat. The streets were decorated and crowded to excess, and the illuminations in the evening were on a grand scale—the soldiers bearing standards taken from the enemy received ovations. The Emperor, it is said, was coldly received in the Democratic quarters. On Sunday evening the grand banquet was given by the Emperor to the principal chiefs of the army. At the

close of the banquet he made a speech, and distributed medals to all who were engaged in the Italian campaign. On the day of the fête he pardoned upwards of 1,100 persons sentenced to prison for various crimes.

It was rumored at Paris that Marshals Canrobert and Niel had fought a duel, and that the latter was killed.

From Paris, we are told that the general amnesty recently announced by the Emperor, although it had created much surprise, nevertheless gave great satisfaction to all classes. Louis Blanc, however, flatly refuses to place himself again under French jurisdiction. In addition to the civil pardons, numerous military sentences had also been commuted.

It is officially announced that the Empress Eugénie is again *en route*.

The Zurich Peace Conference was doing nothing apparently.

AUSTRIA.—The ministerial crisis is not yet over. It was reported that the new constitution would be characterized by the principle of decentralization, by the re-establishment of the representative provinces by the prerogatives given to the aristocracy, and lastly by a strict Catholic spirit.

The Austrian Plenipotentiary of the Peace Conference had announced at the recent Zurich banquet, that he had strong faith in the final success of the Conference.

ITALY.—Advices from Italy state that the National Assembly of Tuscany, had formally declared that the dynasty of Hapsburg-Lorraine, could not be recalled.

Two National Assembly of Modena are also taking strong grounds in behalf of National liberty. Chevalier Farini had quitted Modena for Parma, to assume the dictatorship offered him. The municipality had issued a proclamation expressing unanimous desire for this, and the population evinced great enthusiasm. The government had purchased 4,000 rifles, and invited the disbanded corps of riflemen of the Alps to enter service under Parma.

It was reported from Vienna that the Emperor was getting impatient at the delay in the restoration of the Grand Duchy. Also that an Austrian corps d'armes was to be concentrated near Rovigo, on the road to Legatione and Modena.

INDIA.—Calcutta advices to July 16, by the overland mail, have been received in London. They contain the announcement that the King of Oude, who was seized during the Indian war, and been detained in captivity ever since, has been finally released by the Indian government. Increased duties on stamps had been proposed in the Calcutta Council. Five thousand of the local European troops in India had accepted of the discharge offered them by the government.

COMMERCIAL—Broadstuffs—Richardson, Spence & Co. report floor trading down warms and prices nominal. American 108 1/2 @ 112. Wheat declined 3/4. Western red 7 1/2 @ 9 1/2, do. White 8 1/2. Corn 6 1/2. Holders were asking an advance of 1/4 per qr. Mixed and white 6 1/2 @ 7 1/2. White 7 1/2 @ 7 1/2. Provisions.—Pork heavy. Lard quiet, but steady.

Clippings from Foreign Journals.

The London Medical Times announces the appearance of the Asiatic cholera, by its usual route, from Hamburg. Two cases had proved fatal, both being importations on the Hamburg steamers. In the latter place, during the week ending July 31st, there were 424 cases, of which 382 proved fatal. The proportion of deaths is very large, being four fifths of the whole number attacked.

The habitual confiscation of English papers sent to Paris has induced the correspondent of a London print to inquire into the fate of the purloined journals, and it appears, as the result, that the quantity seized amounts to several tons annually, the seized papers being sold for two pence per pound for waste paper after the lapse of a few months. This fact arouses the ire of Briton.

The eccentric Englishman, who joined Garibaldi's corps from pure love of shooting at such high game as the Austrians, always took out his memorandum book and made a note on it, every time he brought down one of the enemy. The result of his season of shooting counted up twenty-five head certainly, and ten more under the head of "uncertain." Among others, Garibaldi had two Frenchmen, members of the Paris Jockey Club; five Americans, a few Germans, and one Chinaman.

Among the recent money-grants voted to the British Government by the House of Commons, is the sum of \$50,000 for alterations in the copper coinage of England. It is intended, as we have done in this country, to reduce the size of the inferior coin, and to change the metal—only, instead of nickel, (which was first issued here in '57,) the material will be bronze. This metal has already been tried in Canada and Nova Scotia, and the new issue in England will resemble the small coinage adopted in these colonies.

Prussia is to send some vessels from her Lipulian Navy to Japan, as she seeks intercourse with that country. She'd better be quick about it, or there may be no Prussia left for them to find on their return, if the Kaiser and the Emperor should unite to spoil it.

It is officially reported to the Emperor of the French, that chloroform was used in 30,000 surgical operations in the Crimea by skilled assistant surgeons without a single death; a similar success has followed its administration at Solferino and Magenta; but in English hospitals there have been about 100 deaths in one-third of the number of operations in the Crimea. The London deaths from chloroform begin to be so common that Coroner's Inquests are rarely called for. Everything depends on the mode of administration.

It is becoming pretty evident that one part of the Villafranca programme cannot be carried out without much difficulty. The people of Tuscany, Parma and Modena will not submit to the return of their Austrian Grand Dukes and Duchesses. They will resist it by peaceable means, and if need be, by forcible means. Their protest is not noisy, but it is firm and decided. Under these circumstances, Louis Napoleon says he will not help these sovereigns regain their thrones. If Austria undertakes their restoration, single-handed, there will be more war in Italy.

The News Condenser.

- Snow was plainly seen from Portland on Mt. Washington, 4th ult.
- Great Britain is putting the island of Jamaica in a state of defence.
- Some of the banks of the interior of Mexico are refusing to pay specie.
- In Dover, N. H., there annually made by 18 arms 900,000 pairs of shoes.
- The rate of taxation in New York this fall will be about \$17 per \$1,000.
- The Jews in America number 250,000 who still adhere to the faith of Abraham.
- The venerable Daniel Dasa, D. D., died at Newburyport, Mass., Aug. 26, aged 83.
- Mr. Alfred Tennyson contemplates a tour in the United States the coming autumn.
- Hon. Robert Dale Owen arrived home on the 5th ult. after an absence of six years.
- The Anti-Renters of Albany and Rensselaer counties are still bent on making trouble.
- In Bombay, India, the deaths by cholera in June last amounted to 800 or 400 per week.
- Passengers are to be brought over by the Great Eastern at rates ranging from £18 to £25.
- At some points in New England, the brilliant Aurora of Sunday night was followed by a frost.
- There are only 18 Revolutionary pensioners in Massachusetts. Their ages vary from 94 to 100.
- At the State Fair of the Pennsylvania Agricultural Society there is to be "a steam fire engine tournament."
- The crops in Nova Scotia are pronounced by the Halifax papers to be superior. No reports of the potato rot.
- Extensive preparations are being made by pork-packers at Chicago for the approaching season's operations.
- Advice from the South show that the growing cotton crop will probably reach the quantity of four million bales.
- The New Orleans Picayune learns that the widow of General Quitman died on the evening of the 23d of August.
- The Fifth Avenue Hotel, just opened in New York, cost \$1,150,000. The furniture, carpets and the painting \$350,000.
- There are 61 lawyers, 36 doctors, 15 clergymen, and 20 land agents in Leavenworth, Kansas—besides 60 "saloonists."
- Astronomers have given the rate of solar light one hundred and ninety-two thousand five hundred miles in a second.
- The eyes of needles are punctured by a machine, which, superintended by one boy, can punch twenty thousand a day.
- There were 1,085 boxes of cheese, weighing 67,565 pounds, received at the freight depot at Little Falls, N. Y., Monday week.
- The public debt of the Canadian Government since the Union of the two provinces, has risen from \$6,000,000 to \$60,000,000.
- Ballston Journal's advocate the levying of a tax of \$2,000 upon the town, to be expended in searching for new mineral springs.
- The St. Augustine (Fla.) Examiner asserts positively that cargoes of African negroes are constantly landed in the United States.
- The New Bedford Standard says there is a man in that city who is the smallest of eleven children, and yet weighs 219 pounds.
- The Central Railroad of Texas is completed to the 75th mile. Ten miles more are expected to be completed early next spring.
- In and about New York, 300 churches are closed, owing to the absence of their Pastors, who are taking an airing in the country.
- The sugar crop in Louisiana looks exceedingly well; in Texas, the sugar and cotton go on very finely, and a large crop is anticipated.
- The Prince of Wales, accompanied by his tutor and a Court Physician, is expected to reach Quebec by the next Canada steamer.
- A Niagara correspondent of the New York Times insists that Biondini is a myth, and that he never crossed the Niagara on a rope, &c.
- The St. Joseph (Mo.) West of the 22d ult., says that peaches and pears "taste rather starchy" in that market at six dollars per bushel.
- A Cincinnati man brags about the Ohio river as "the Rhine of the New World." A matter-of-fact man replies—"Yes, the pork Rhine."
- New York city is about nine miles long and not more than a mile wide. Present population not far from 800,000, including suburbs.
- There are 14 revolutionary soldiers now living in Massachusetts whose united ages amount to thirteen hundred and forty-nine years.
- Horace Greeley says that no Mormon can be convicted by a Mormon jury for any crime that he may commit in behalf of the church.
- The people of Beth, Me., are building a school-house that will cost \$14,000, and be one of the finest structures of the kind in the State.
- About as many are returning from Pike's Peak as are going on, and every few miles along the great North Platte route you meet small trains.
- In one hour and five minutes, 1,600 hogheads of tobacco were sold in New York on Monday—aggregating the enormous sum of \$400,000.
- The Washington monument contribution box put up in the New York Post-Office yields only about half a dollar a day, which is decidedly slow.
- Greenwood Cemetery, N. Y., was founded in June, 1840, and from that month up to the 28d ult., 63,040 bodies took up their residence in the silent city.
- The Boston Locomotive Works are reported to have failed for \$600,000. Taking pay for work in worthless railroad bonds has caused the smash.
- The young son of Mr. Eben Knowlton, of Rockport, Mass., who contracted the glanders while playing around a horse stall, died on Saturday week.
- Dr. Hays, one of the companions of Dr. Kane, will organize shortly another Arctic expedition, under the auspices of the American Scientific Association.
- The way in which Napoleon III. disarms is to withdraw old cannon from his depots and fortifications, and have rifled ones to replace them at a minute's notice.
- The Prussians are adding rapidly to their stock of rifled cannon, now the *ultima ratio regnum*. They have a number on hand, and mean to have many more.
- There is a field of broom corn in the vicinity of Rockford, Ill., of 800 acres. The seed was planted by machinery, the corn drilled in rows 2 feet 9 inches apart.
- Simrock, the celebrated Professor of the University of Bonn, is confined in a lunatic asylum. The recent excitement in Germany destroyed the balance of his mind.

DAY-DREAMS OF HOME.

DEAREST HUBBARD, raise the curtain,
Let the dying sunshine in,
For a glorious spell is on me,
And I seem at home again.
Again I see the tall fir trees
That stand before our door,
And the sunlight shining through them,
Falls upon our cottage floor.

But I pass beneath their shadow,
O'erward to the house I go—
Past the snow-drops and the roses—
Past the place where myrtle grows;
Once I tended them and loved them—
And I love the myrtle now—
For I often used to bind it
Round my sister's baby-brow.

Mark! Is that the child's laughter
Falling on my listening ear?
Flowers, ye have no claim upon me
When my loved ones are so near.
Now I enter; O, ye dear ones,
I am with you all once more!
Father, put your arms about me,
Let me kiss you o'er and o'er.

Mother, brother, I am with you—
Here is little brother, too,
Where is Lulu? Little darling,
Sister has a kiss for you.
(Mother, see her holding kitty
In her arms for me to kiss.)
Oh! it almost pays for parting
Now to feel a joy like this.

But, alas! the gathering darkness
Brings me to myself once more;
All are gone—the vision vanished;
It was bright—but it is o'er.

Aahabula, O., 1899.

CARLIE MATTHEW.

THE INSPIRATION OF NECESSITY.

BY LYDIA A. TOMPKINS.

Chapter I.

"And so you're come at last. Some people have a talent at staying away when they're wanted," said my peevish and bed-ridden husband as I entered hurriedly from my long walk to town.

"Did you bring the wine and medicine, or am I to be put off again?"

"Never fear that," I hastily replied, "money is too scarce, and fretting too expensive, for you to be forgotten, or neglected." Turning away with shame and vexation that I had been betrayed, by weariness and momentary irritation, into an unkind reply, I quickly prepared the medicine and brought the wine, saying cheerfully,

"And so you needed me in my absence. I was obliged to wait an hour to see Mr. Jones before I could get the money."

"O, money, money!—Fire and torture! Am I forever to be haunted with the gaunt spectre of famine? O, Jane, what has become of our charmed life! How can we learn to endure patiently such an accumulation of evils!"

"O, we can suffer long and be kind to each other, and the world will not forget to be kind to us. Contentment is our philosophy, and our only chance of happiness. Let us grasp it as it flies."

Our story was only the common one of early marriages and American fortunes. Born and bred in affluence, sailing upon the top-most wave of society in our native city, and accustomed to believe ourselves belonging to an order of beings far above those who were without our immediate sphere, it is no marvel that we never had even a distant conception of life as it is, until alone, helpless, and friendless, we were shipwrecked upon the sea of life. My eye is dim and my brain reels as I glance backward upon that one week of crowding thoughts and thrilling events. I cannot even yet think calmly of the beautiful home which was once mine, with all its wealth of air, sunlight and flowers. I left it for my husband's elegant town-residence, and believed myself about to realize the rapture of novelists and poets, with which I was thoroughly familiar in theory. Two years of my married life had been passed in a whirl of gaiety, when suddenly, with the stealthiness of a serpent and the fierceness of a lion, the dire calamity came.

I was wearily leaning back in my carriage, at three o'clock in the morning, on my return from a brilliant party, when suddenly the startling cry of fire and the wild glare of its light, as it simultaneously burst from a long range of front windows, shocked me from my stupor, paralyzed with terror as I found myself gazing at my own home thus deluged in flame. I rushed from the carriage frantically ejaculating, "my husband," and madly dashing within the crackling door-way, was, in an instant, caught, and wrapped in a thick carpet, but not before the fluttering lace of my party array had reached the flame, which wreathed its coiling embrace about my neck and arms. Stilled and senseless, I was borne to a friend's house, awaking to hear the agonized groans of my husband as he was undergoing the horrifying process of an amputation of one of his limbs. In consequence of a slight indisposition he had not accompanied me to the party, and under the influence of an opiate, had retired, leaving the gas in full blaze and giving no orders to the servant, except to await my return. She was soon comfortably sleeping upon the sofa, oblivious to the sound and breath of fire, which originated in the vicinity of the kitchen, how or where, it was impossible to ascertain. The whole inner work was a burning mass, a raging flame, before the marble front was reached, or the fire to be discovered from without. The watch gave the alarm and but a few moments had elapsed ere the aristocratic neighborhood was one indescribable scene of confusion. Three servant girls appeared at the attic window with frantic cries for help, and the noble firemen, heeding

neither danger nor suffering, planted their ladders and bore them safely to the ground. All this had occurred ere my arrival, and but a moment after I was taken from the burning door, my husband appeared, wrapped in the burning clothes of his bed and through some inadvertent step, fell in the flaming door-way. Before he could be lifted from his dangerous position, the walls above had fallen, fatally crushing and mangling one limb and frightfully mutilating the other. The horrified spectators spared no effort to release him and save a life which he, so often afterwards, wished had been then ended. Rendered torpid by the smoke, he only awoke at the touch of fire, and springing from the bed with little consciousness of what he was doing, rushed with a blanket about him down the burning stair-way to the front entrance. His whole body was burned,—even his hair nearly gone, and the agony of life was, for long weeks, far worse than death. His escape seemed almost miraculous, and now, a year from that eventful night, he was so weak that he could scarcely move, and so sore and sensitive that but a touch of cold gave him intense pain, while a flush of hot air renewed the tortures of that fearful night. The lightest breath of smoke was suffocation, and the sight of fire, thrilling agony. Pitiable as was his condition, calamitous enough for human endurance it would seem,—yet his cup was not full.

Ten days after the destruction of our mansion, Mr. GLIDON, President of Monteith Bank, in which our funds were mostly invested, called upon me with the astounding intelligence that he should be obliged to suspend payment; and that, in consequence of other failures, which were daily multiplying, the whole capital was exhausted and my husband's drafts could no longer be honored. I demanded immediate investigation, and employed the most skillful attorneys to examine papers, but all agreed in taking from us every dollar and, as usual, deploring the unfortunate necessity. A month before, my father had been ruined in the general crash which has so leveled society, and in the sudden desperation of his tireless energy and unconquerable pride had hurried to the West with the wreck of his fortune, and purchased a farm of new land, which his unwearied spirit hoped to redeem from utter worthlessness.

Hard words had passed between my husband and father, and he left us in anger. I could not appeal to him and now, in my utter helplessness, I felt most unwillingly crippled and inert, even almost insane. I appealed to my numerous friends, (as I believed them,) and they, although deeply grieved, could see no possible chance for recovering any portion of our possessions, or any cheering prospect for the future. One after another of them failing to recognize me as I passed down Broadway, opened a new vista to my tear-dimmed eyes and sickened my soul with despair. Now that the truth was fully evident, I turned to my stricken husband, and in the silence of that long night of watching, while hanging upon his incoherent words, took a stern resolve, and in the strength and heroism of youth, and the reviving of early faith, determined to do battle bravely for myself and the helpless one beside me; and kneeling by his couch in a chance moment of his sleep, I felt that my vow was registered in heaven.

One might almost hope for affliction, were it only to feel, for one moment, the God-given power to struggle with difficulties, and see clearly, by the light of faith, through the darkness of midnight gloom. I had an attached servant, who would not leave me when told of our misfortunes, and through her good offices I obtained part of a suburban cottage, occupied by her aunt. With the jewels and diamonds adorning my party-costume, I resolved to commence the world anew, and as soon as life would not be periled thereby, we quietly removed to our humble quarters. I forbore to look back upon the scene when I was obliged to darkly hint our circumstances and suggest a change of residence. Alone and desolate, save the absorbed nature of the care thus cast upon me, yet I turned not back upon the past, feeling happier and more satisfied, notwithstanding my unceasing anxiety than at any other period of my life. Language is as powerless to utter the wearying torture of a useless life, as to portray the satisfaction of an active one, spent in the unfaltering discharge of pressing present duties. Heading no bodily weariness as I felt my better nature expand, bemoaning no misfortune, I experienced the welcome throes of this unlooked-for soul-birth. The marvelous power within, supplied at our need, availed me now; and I, the crawling earth-worm, scarcely awaited the chrysalis ere I could flutter my wings and fly wherever Our Father should bid.

Chapter II.

"Mrs. RABBITON, shall I make you out a receipt for this month's rent," said the gruff agent, one morning, putting his head unceremoniously within the door.

"If you please," said I, advancing with the money in my hand—a hand that shook just a little as it parted with its last penny. But I consoled myself with the fact that I had a piece of sewing nearly finished, and that Mr. RABBITON was ignorant of the state of our exchequer, supposing that the income of the little remnant of our fortune was sufficient to support us, which idea I had not attempted to dissipate, however unorthodox such truthfulness may be considered. Our little life was now gone. I had endeavored to eke it out as long as possible by trying to sew, that being the first resort for a woman in need, and finding my health sinking in the attempt, I grew positively frightened at the suffering and privation which stared us in the face. I walked to town that evening, and presenting my work, was told that it was not sufficiently good to command the usual price, and that they would pay me when I had finished another garment, if the work was satisfactory. With a heavy heart and tottering frame, I turned to find my way home, and absorbed in my sorrows, did not observe a stranger intently gazing and then following as I left the store; but after walking some distance became conscious of a footfall behind me, even out upon the obscure street through which I was hastening. Visions of garrotting, murder and abuse loomed up as I sped on, the measured footstep continually gaining upon me. I had an alley to pass through, and just as I turned to enter, was grasped by the

shoulder and suddenly turned face to face with my dread pursuer.

"Are you Mrs. RABBITON?" he almost shrieked.

Trembling with fright, I gave a faint affirmation, when he said fiercely, and with an oath, "Ah, you are poor, are you? And that puppy husband,—he'll find out what it is to grind and dig. Poor!" screamed the maniac, "ha! ha! We all find out what's good for us before we die. Do you know me, woman; who am I?"

"I do not know you. Let me go," replied I, with sudden courage, looking him commandingly in the eye. With the imbecile leer of insanity, he visibly flinched and dropped my arm, only to seize it again when I turned my eye from him. His wild shout as he caught me again, brought a policeman, and I was relieved.

Redoubling my speed, I arrived safely at home, falling within the doorway in a fainting fit, from which I did not recover in an hour, and which threw our patient sufferer into a new paroxysm of intense pain.

"Dear, where is the cordial, or the wine?" he asked, as he recovered. O, grief untold—there was none.

"Never mind—I suppose you forgot it, to-day," was the apologetic remark as he noted my distressed silence. O, the agony of poverty, when it denies what have become necessities of life to the beloved sick and suffering.

My head laid achingly and wearily upon its pillow that night, and even faith seemed lost and stifled. With the morning came new hopes, and my sewing progressed with new vigor. Mr. RABBITON had grown gradually weaker and less earthly,—worn to a shadow,—yet the glowing and peaceful light beaming from his spiritualized face gave him the look and manner of one about to be released from the fetters of clay which had so long bound him. His thoughts were more of heaven than earth, and clothed in the sublime language of Scripture, they came as a voice from the spirit-land, breathing words of wisdom and prophetic inspiration. I felt a solemn resignation and almost joy pervade my soul, as I sat beside him with my sewing, and all through the summer day drank hope and comfort from his inspired lips. After lying a long time silent, he said,

"There is no possibility of my recovery, JANE, and if I have one murmuring word against Providence, it is that I must leave you without even the poor consolation of knowing that you are temporally beyond the reach of want. I have an atonement to make to your father for the harsh words spoken at our last interview. How it goads me to see you thus unceasingly toiling! It is a sad heritage that has fallen to you, my dear,—toil and poverty,—but God will reward such patience and labor."

How like balm came the words of praise from lips so loved. I scarcely heeded the now rebuff which awaited me at night,—the refusal to furnish any more work on account of the stains upon this last piece. Dear reader, they were tears of joy at my husband's sympathizing words. I still felt the genial elevation and peaceful trust caught from his heaven-sent spirit, and unaccustomed to calculate consequences, did not heed this new difficulty. The haggard face and gleaming eyes of the wild man who had followed me, glared through a shop window, and I should have been again persecuted by his presence, except for the protection of a police-officer. I only felt secure when I had arrived at home in the presence of my helpless husband, whom God would save from all harm,—his weakness being certain safety. Such a composed and settled frame of mind was imbibed from his holy serenity, that I slept peacefully, with only hope between myself and absolute want.

The next morning found me seeking employment in the large sewing establishments of the city, all of whom preferred to employ those who could come to their rooms and sew—one recommended me to such and such numbers, where they gave out work, and all these had as many seamstresses as they wished. One dismissed me with the remark, "You have too much of a fine lady air about you, to do your work right"—another said, "Go to some family"—another, who knew me, and pitying my distressed look at his refusal, said kindly, "Why not try embroidery? we will pay you well," and handing me several bands, mentioned the price, which was so meagre for the labor that I found my spirits ebbing low, and my heart very sore.

Let those who scoff at discouragement and mock at the calamities which so often beset the struggling child of adversity, leave for one day their comfortable homes, and clad in the garb of labor, go forth into the broad streets, the byways and lanes, sneering for employment. "Ah," says one, "this happy land of free institutions leaves none to want who are willing to work." Try it, ye croakers,—forget your pompous prosperity, and limit yourself by that surrounding of circumstances which must envelop every person. Try it just after a panic, take the position allotted me,—my husband ill, whom I could not leave,—myself unused to labor,—fresh from the lap of luxury,—hurled from the tide-wave into an inextricable whirlpool of difficulties,—how slight the chance for a successful issue of the struggle with staring want,—weakness unutterable the foe to be overcome. Not one lesson of my whole life had been given with a view to independent effort, and how could I survive. I might teach music, painting, or a school, perhaps; but my sick charge could not be left. I had no capital to purchase a piano or painting materials, and thus pursue these avocations at home,—my path was narrow, yet not straight, although faith whispered that it would ultimately reach Heaven.

I turned slowly homeward, having exhausted every resource for employment, as I believed, and with a sort of numbness in my limbs, I paused before the pictured-lined window of an extensive bookstore, more through weariness than from any interest in the life-pencillings there traced. Looking mutely and passively at the miniature representations in still steel, of the great artists and grand masters, I wondered, in my heart, if any evil of their lives had gnawed into their souls as poverty was now gripping mine. I turned sadly and slowly away, meeting the wistful, gladdened eyes of—a friend. My God, had I a friend? How

my heart leaped,—how the fountain enclosed and the summer dew cooled the fever-beat of my throbbing pulses,—a friend, true and tried, tender and faithful. My teacher, my governess, whom I had not seen for a long, long time, united in my face with unaltered joy. I had lost sight of her for many years, she having married and removed to the West, was now en route for Washington, whither her husband went as a National Representative. Times were changed with us, but true hearts do not forget, and her pure nature poured the healing oil into mine with no unsparing hand. She became to me in that half-hour a beacon-light,—a guiding star,—a rock of refuge and a haven of safety. Thank God for those dear human friends which He is sure to send in our direst need! [Concluded next week.]

IMPORTANT TO FARMERS
AND
DAIRYMEN.

We would respectfully announce that we have become the Publishers of this Valuable and Beautiful Work,

MILCH COWS

AND
DAIRY FARMING,

The Best Book Extant on the Subject. Comprising the Breeds, Breeding and Management in Health and Disease, of Dairy and other Stock; the Selection of Milch Cows, with a full explanation of Flocken's Method; the Culture of Forage Plants, and the Production of Milk, Butter and Cheese; embracing the most recent improvements, and adapted to Farming in the United States and British Provinces; with a Treatise upon the Dairy Husbandry of Holland, to which is added Horsfall's System of Dairy Management.

BY CHARLES L. FLINT,
Secretary of the Massachusetts State Board of Agriculture; author of "A Treatise on Grasses and Forage Plants," etc.

FULLY AND BEAUTIFULLY ILLUSTRATED WITH
130 ENGRAVINGS.

12mo., 416 pp. Price \$1.25.

The chapter on the Diseases of Dairy Stock, mostly prepared by Dr. W. W. and Dr. J. H. DADD, is worth many times the cost of the Book.

OPINIONS OF THE PRESS.

MILCH COWS AND DAIRY FARMING.—Charles L. Flint, of Boston, Secretary of the Massachusetts Board of Agriculture, is the author of a new work upon a subject never before fully treated in this country, which, if we mistake not, will prove the most valuable book for universal use among farmers that has ever been published in this country. There is scarcely anything worth knowing about how to select a cow, how to treat her, and how to make butter and cheese, that cannot be found in this volume, which contains numerous illustrations, besides its concise language, carefully written from all the best authorities, and much personal observation. It is a work that was much needed, and one that is recommended to every farmer who has an interest in it. It is published on good paper, clear type, with many well-cut wood engravings, and contains over 400 pages, and we would sell it for \$1.25.—V. T. Tribune.

This work is marked by the clearness and perspicuity which have characterized Mr. Flint's previous productions. It contains an account of the most enlightened practice in this country; the details of the dairy husbandry of Holland, and the most recent and productive modes of management in English dairy farming, embracing a large amount of practical and scientific information not hitherto presented to the American farmer in an available form.—Salem Gas.

We recommend the work to every one who keeps a cow, or intends to do so.—Ohio Farmer.

We recommend it as a matter of economy, because, if studied, it cannot fail to impart facts of more value to most dairy-men, and dairy-women than several times its cost.—New England Farmer.

It should be in the hands of every owner of a cow.—Vermont Stock Journal.

It can be rank as a standard American Dairy Book,—the best, we have no hesitation in saying, yet issued upon the subject.—Country Gentleman.

The more we examine the book the better we like it. To say that it is superior to any work hitherto published on this subject, is not enough; it is a better book of its kind than any other we have seen.—Wisconsin Farmer.

PUBLISHED BY

PHILLIPS, SAMPSON & COMPANY,
13 Winter Street, Boston.

Sold by all Booksellers and Periodical Agents throughout the country.

N. B.—Copies will be sent, postage paid, on receipt of the advertised price. A dollar bill and eight three-cent stamps may be enclosed and sent by letter to the publishers, for a single copy. Or ten copies will be sent to any address in the United States, on receipt of the postage for ten dollars. Any Bookseller, Periodical Agent, or Postmaster, can procure a copy by mail, if requested, at the wholesale price.

And will be Published September 1st, 1899.

A new and enlarged edition, uniform with the above, of another valuable Agricultural Work, by the same author, to be issued in the same elegant style, under the title of

PRACTICAL TREATISE
On Grasses and Forage Plants,

Comprising their Natural History, comparative Nutritive Value, Methods of Cultivation, Cutting and Curing, and the Management of Grass Lands. Fully and beautifully illustrated.

PHILLIPS, SAMPSON & CO.,
501-eowth 13 Winter Street, Boston.

HICKOR'S PATENT PORTABLE
CIDER AND WINE MILL AND PRESS.

This celebrated machine, which from the test of several years has proved itself superior in point of simplicity and efficiency to anything in the market, is now ready for the sale of 1899.

It is made of iron better than ever, and where there are no Agents, farmers will do well to send to the manufacturer early for a circular. We also make large iron presses from 3 inches diameter and 4 feet long, to 6 inches diameter and 8 feet long, at reasonable prices. Address

W. O. HICKOK, Erie Works,
Harrisburgh, Pa.

TO HOUSEKEEPERS.—SOMETHING NEW.
B. T. BABBITT'S
BEST MEDICINAL SALERATUS.

is manufactured from common salt, and is prepared entirely different from other Saleratus. All the deleterious matter extracted in such a manner as to produce Bread, Biscuit, and all kinds of Cake, without containing a particle of Saleratus when the Bread or Cake is baked; thereby producing wholesome results. Every particle of Saleratus is burned to gas, and passes through the Bread or Biscuit while baking; consequently nothing remains in the food. It is made of Water and Flour. You will readily perceive by the taste of this Saleratus that it is entirely different from other Saleratus.

It is packed in one-pound papers, each wrapper branded "B. T. Babbitt's Best Medicinal Saleratus"; also, picture, twisted loaf of bread, with a glass of effervescent water on the top. When you are making Bread, you should preserve the wrapper, and be particular to get the next cake, as it is the first—brand as above.

For directions for making Bread with this Saleratus, ask for "Salt Milk or Cream Tartar," will accompany each package; also, directions for making all kinds of Pastry; also, for making Soda Water and Salads Powder.

MAKE YOUR OWN SOAP,
WITH
B. T. BABBITT'S Pure Concentrated Potash.

Warranted double the strength of ordinary Potash. Put up in cans—1 lb., 2 lb., 3 lb., 5 lb., and 10 lb.—with full directions for making Hard and Soft Soap. Consumers will find this the cheapest Potash in market.

Manufactured and for sale by
B. T. BABBITT,
Nos. 68 and 70 Washington St., New York,
and No. 28 India St., Boston.

MAKE YOUR OWN SOAP.
SAPONIFIER.

PURE CONCENTRATED POTASH.

Warranted double the strength of ordinary Potash. Without potash will make little trouble. Manufactured and put up in 1, 2, 4 and 6 lbs. cans, in lumps, with directions, at the CHELSEA CHEMICAL WORKS, New York.

E. R. BURKE & CO.,
141 Pearl Street, N. Y., Proprietors.

Sold everywhere.

GUANO!—The superiority of Phosphate over Ammoniacal fertilizers, in restoring fertility to worn-out lands, is now a well-known fact. The subject has been the attention of Farmers to the SWAN ISLAND GUANO, which is rich in Phosphates and Organic matter, and its SOLIDITY is UNEXCELLED.

For sale at \$20 per ton of 2,000 lbs., and liberal discount will be made by the cargo.

Circulars, with directions for use, may be had on application at our office.

FOSTER & STEPHENSON,
125 Beaver Street, New York.

MOORE'S RURAL NEW-YORKER

AGRICULTURE RURAL LIFE EXCELSION LITERATURE SCIENCE ARTS NEWS

TWO DOLLARS A YEAR.]

“PROGRESS AND IMPROVEMENT.”

[SINGLE NO. FOUR CENTS.

VOL. X. NO. 38.]

ROCHESTER, N. Y.,—FOR THE WEEK ENDING SATURDAY, SEPTEMBER 17, 1859.

[WHOLE NO. 506.

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
RURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,
With an Able Corps of Assistants and Contributors.

TERMS, IN ADVANCE:

Two Dollars a Year—\$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for \$5; Six, for \$10; Twelve, for \$20; Twenty, for \$40; Forty, for \$80; Eighty, for \$160; and one free, for \$22; Twenty, and one free, for \$26; Thirty two, and two free, for \$40; (or Thirty for \$37.50) and any greater number at same rate—only \$1.25 per copy—with an extra copy for every Ten Subscribers over Thirty. Club papers sent to different Post-offices, if desired. As we pre-pay American postage on papers sent to the British Provinces, our Canadian agents and friends must add 12½ cents per copy to the club rates of the RURAL.—The lowest price of copies sent to Europe, &c., is only \$2.50—including postage.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

SEASONABLE SUGGESTIONS.

The farmer's year is fast drawing to its close. The labors of Spring and Summer have been concluded, and with these beautiful September days we are getting in readiness to write "finis" to the duties of an extremely active season. Many things, however, remain to be accomplished ere we can say the harvest is ended, and to some of these it is our present purpose to call attention.

Prominent among the tasks soon to be taken in hand by the agriculturist, is the securing of the various root crops. A potato digger—ooo that will work, and work well—is sadly needed, but we believe the demand will soon be supplied by NIVEN, or some other inventor, so that the old-fashioned modes of digging may be dispensed with. The great object in getting the potatoes ready for the cellar, or pitting, is to have them perfectly dry before storing. We have noticed that some place them in heaps in the field, and throw the tops over "to protect from the rays of the sun," and we have almost invariably (when the rot was at all prevalent,) noted these individuals were among the first to complain. Moisture is the invariable accompaniment of decay. Another rule which should be generally observed, is to gather them without bruise or fracture, and care in loading and unloading ought to be exercised. In harvesting carrots, the readiest mode is to run the plow deeply at the side of the drills, when they may be easily removed by the hand. When stored, and it is desired to retain all their freshness, this can be done by surrounding each root with earth. Parsnips may be removed very late in the fall. A cool place must be had in which to put them, and with this root covering with earth is a necessity, as heat and air very soon cause shrinkage and softening, materially affecting their value either for the table or stock. When not wanted for use they might remain in the ground until spring, at which period they are particularly rich and juicy. Turnips soon become pithy and comparatively worthless where the atmosphere is dry, warm, and the circulation impeded, and this condition of affairs should be avoided. Many stock growers pit turnips extensively, and we republish the mode of one whose success has been very satisfactory:

"A dry part of the field is selected, the ground excavated to the depth of about six inches, three feet wide, and as long as may be needed. In this the turnips are placed, as high as the width of the narrow trench will admit, the pile being two feet in the middle. Over the mass a good layer of corn-stalks or straw is placed, when the earth is carefully and compactly heaped up to a sharp pitch, and well beaten with the flat of the spade. At the distance of every fifteen or twenty feet, a vent hole is left, the size of a common stove pipe, in which a roll of straw is firmly twisted. This has the effect of exhausting the pit of the heated, impure atmosphere by which it naturally becomes filled, producing decomposition. By this simple, easy mode of pitting, English turnips have been preserved throughout the winter in good condition."

Pitting potatoes we are averse to, especially in our northern climate, and believe there are satisfactory reasons for not adopting such practice. First, it is almost impossible to obtain the freedom from moisture necessary to the safe-keeping of the

crop. Second, the period of marketing, and when the demand is at its height is, as a general thing, during the winter, and the inclement weather is such that the opening of the pit for their removal is attended with much hazard. To the in-door keeping a good cellar is essential, and, as we have frequently remarked, this portion of a farm building, when properly constructed, will be found to return a large per centage for the investment. Good, substantial stone walls is the first requisite, and the mortar used ought to be of the best quality. The walls never should be less than two feet above the surface—three were better—and windows inserted at such points as are best calculated to furnish light and complete ventilation. The thickness of the wall will be governed, in a degree, by the size of the dwelling to be erected upon it, but fifteen inches is as little as our severe frosts will admit. Drainage is another important item in the construction of a cellar. If the soil is a compact one, and possessed of a tendency to hold water—strike a stone drain from the lowest corner of it—using small, or flat stones, well set in cement for its base. Again, it should be rat proof—and if the proper means are used—for instance, permitting the bottom course of stone in the foundation to project six or eight inches it will be well protected from the outside. Finally, a large, roomy external entrance should be made to it, and a strong pair of steps leading therein.

The Corn Crop seems to be a little behind the times, in this section at least, and the cold weather we are now experiencing does not mature it as rapidly as could be desired. Still, fair days may yet shine upon us in abundance, and if thus blessed, the present month will furnish excellent opportunity for gathering such as is intended for seed. When the earliest ears are glazed, let each cultivator stroll through the field and make choice from such stalks as exhibit unmistakable signs of health and vigor. If any should be in readiness, braid the ears carefully and hang them up in a dry, warm and airy place. If not convenient to gather now, a few light, pointed sticks might be carried upon the arm, and when any deemed worthy are observed, place the stick in the hill that it may be noted hereafter. The finest, longest, fullest ears are what you want—reject all that are not thus.

Pigs destined to occupy pork-barrels the coming winter ought to be penned shortly, and the fattening process commenced by pushing a little on feed. Use such material as is at hand, the long-keeping of which may result in deterioration or loss. The pig is omnivorous—will eat anything and everything that is edible. The prime object is to feed regularly—don't starve to-day and fill to repletion to-morrow. Corn, peas, beans, carrots, parsnips, cabbage, &c., will all come in good play, and be found to essentially aid and assist in carrying out the specified plans of the owner. If you have any number of swine a steaming apparatus will be found both convenient and economical. It prepares the food to be more readily acted upon by the digestive organs, and whatever will tend to this object, diminishes the necessity of an expenditure of vital force to its accomplishment, and of necessity enables the animal to thrive more rapidly upon a certain quantity.

AG. FAIRS—IMPORTANCE AND PROFIT.

In our issue of the 20th ult., we gave a list of State, County and other Fairs, and the time and place of holding them, to the number of over 850. These were all that we could obtain precise information in regard to, but there are, of course, many others that have not come under our notice. These annual gatherings of the farmers are becoming important, on account of their great and increasing number and the vast amount of time and means employed. They have become a great power in the land for good or evil; and it is of the utmost importance that they should be so conducted as to yield a harvest of good fruit. Let us make a brief calculation upon the list as published. These fairs we will suppose to occupy two days each, and to be visited by 4,000 persons each day, which we think a low estimate. This will add up 1,400,000 days, or nearly 40,000 years, or a year each for 40,000 men. Supposing each visitor to spend 50 cents for admission fees and other expenses we have a cost of \$700,000. This is in addition to the time and money given gratuitously by officers and committees. For this large outlay of time and means we have a right to expect great results. An institution which enlists such a vast multitude of the practical working men of the country in its support cannot be considered unimportant, or unworthy the attention of the press having the interests of this class especially in its keeping.

Without saying what the Farmer's Fairs should be, we will merely remark that they should not be permitted to become mere shows, or prominently partake of the character of the museum, the circus, the caravan or the horse-race. If this is

done the time and money which we have shown is expended in maintaining them will be worse than wasted, for though it may by some be claimed that these shows are innocent in themselves, the evils always incident to large gatherings of people will more than counterbalance any good likely to result. Our object, however, at this time is not to advise in regard to the management of Fairs, but to give a few hints as to the most profitable way to examine these shows, for as much depends upon those who visit, as upon those who get up and manage these exhibitions. Many go away from the finest exhibition dissatisfied, having spent a day, seen a great deal, and learned but little. The knowledge of this fact makes them unhappy, and very many, on returning home, are ready to vote all fairs a humbug—an unprofitable outlay of time and money. We would like to show the way in which every tolerably good exhibition may be viewed with profit, but have only space to briefly allude to one or two points.

Those who attend one of our State, or even a large County Fair, and spend five or six hours upon the grounds, or even twice this time, in looking over the whole exhibition, will go away with a confused jumble of men and women, cattle and flowers, sheep and pigs and pumpkins daguerreotypes upon the mind, without one new or valuable idea that will be of service in practice. Almost every farmer has some subject in which he is more particularly interested, and this he should make a special study, whether it is stock, grain, potatoes or roots, thoroughly examining everything of the kind exhibited, asking questions of exhibitors, and taking all necessary pains to gather information. Every one before going to the fair should determine to make a specialty of some department, and give it his almost entire time and thought. By doing so he will gain much knowledge, that will be of value to himself and to those to whom it may be imparted.

The first thing that demands our attention is the Horses. Too much attention perhaps has been given to speed, of late, and too little to strength and endurance, qualities that make the horse valuable for the farmer. Our improved and improving system of agriculture—deep plowing, subsoiling, &c.,—calls for heavier horses than were needed when farmers, as in olden time, only turned over the virgin soil a few inches in depth. Farmers who look for fine farm horses should remember this fact. Still, if farmers can breed horses that will sell for high prices on account of their speed, we know not why this may not be done.

To examine the CATTLE, the various breeds and the different animals in each, and to judge of their comparative merits, and their adaptation to different purposes and circumstances, and to do this thoroughly and profitably requires all the time of the show. Here you will find the owners, ready to answer a host of questions as to feeding, milking, fattening, &c., and here too, better than by reading a library of books, you can learn the good and bad points of animals, no mean acquisition to the farmer.

The Implements are a curious and profitable study, and from their careful examination may be learned not only how to lessen labor by the use of labor-saving implements, but much knowledge of mechanical principles, very useful to their management.

We might continue these remarks, but we have said enough to give our ideas of the best way to look at an exhibition, when the object sought is to gain knowledge, and not to pass an idle hour, or day in useless sight-seeing.

EUROPEAN AGRICULTURE.

EXTIRPATING THISTLES FROM GRASS LANDS.—A correspondent of the London Field, in commenting upon this class of pests, remarks that there have appeared few things more extraordinary in the history of farming knowledge than the perverse tenacity with which prejudice has so long preferred the scythe to the roller in keeping down thistles. In the North Riding of Yorkshire, as far back as forty years ago, the roller was an improved instrument for destroying thistles in pasture grounds; and most effective was it found to be, the bruise and crush of the top of the plant extending its mortification to the root. No doubt the scythe makes a clean sweep; so does a surgeon when he cuts a leg off; but let a crushed leg remain attached to the body, and the undertaker will assuredly have employment.

STEAM PLOWS IN ENGLAND.—At the meeting of the Royal Agricultural Society in Warwick, England, July 12th, a prominent feature of the exhibition was the collection of steam plows and steam cultivators. Sixteen steam plows were entered for competition, and ten steam cultivators, the last named being intended for cutting and

THE "TURN-TABLE APPLE PARER" is one of the best machines for the purpose of its invention with which we are acquainted. It is a genuine Yankee invention, was patented some two years ago, and has since been introduced to some extent in New England. We have had one of these machines only two weeks, yet has become an indispensable article in the "kitchen cabinet,"—being considered the best of several apple parers yet tried in that department. In the language of a contemporary, "it is simple in construction, is made entirely of iron, and can be readily attached to the side of a table or shelf. It is small and compact withal, and may be put into a box 4½ by 6 by 8 inches, without taking it apart. The most important thing, however, is, that it works well. We have tried it on guaily apples, and found the flexible or movable knife to adapt itself admirably to the irregularities of the fruit. This knife cuts upward instead of downward or horizontally. Simply turning the crank revolves the apple on the fork, and carries the knife round the fruit, against which it is kept pressed by a spring. A cam under the turn-table, throws the knife lever

thoroughly pulverizing the soil to the depth of six to nine inches along a track four and a half to five or six feet wide. The Manchester Guardian says that "the most peculiar and novel implement exhibited under this head is ROMAINE'S Patent Steam Rotary Cultivator, which professes to perform perfect spade husbandry, digging six acres a day at nine shillings (\$2.10) per acre. The machine is very cumbersome and unwieldy, weighing ten tons, but it does not require any assistance from horses, as it is self-propelling."

BEST AND CHEAPEST METHOD OF MANURING A FARM.—The Mark Lane Express contains an article upon this subject by Mr. MASON, from which we extract the following:—"I am often amused at the various unfounded charges laid at my door, seeing that they originate in the brain of erroneous conviction and unfounded belief. I should think that your correspondent, 'Kent,' had convinced himself by his own experiment that making meat is the cheapest way of obtaining manure, but as he still seems doubtful, I would recommend him to read Mr. LAWES' paper on the subject, in the Royal Agricultural Society's Journal, which ought to convince him, scientifically. A farmer will seldom fail to have an abundant crop of corn on one-half of his farm, if he makes, as I do, ten score of meat per acre on every acre of his farm. The laborer makes thirty-two score per acre. How that meat is to be made is dependent on circumstances. Nothing pays me better than giving sheep one pound of rapecake per day; as they get fat, they will eat nearly one and a half pounds per day. Rapecake costs £6 per ton; as manure it is worth £3 3s. per ton, and we believe that seven pounds of rapecake will make one pound of mutton. Fattening hogs entails a loss of about ten per cent. as an average, but still it is much cheaper than guano; fifty-six lbs. of barley-meal is generally sufficient to produce eight pounds of pork. Fattening bullocks, on the principle laid down by Mr. HONSFALL, is also a cheap way of obtaining manure. When you have made your manure, take care not to waste an ounce of it. This has been my custom for the last fifteen years, and as a consequence my farm teams with fertility. The slops and excreta from the house should all go on the farm. Guano pays very well on a distant field, or when you are too busy to cart manure; it is also a good addition to the farm manure for a greedy root crop. Nine-tenths of the land in this kingdom is neither well manured nor sufficiently cultivated. If I know how many score pounds of meat a farmer produces per acre, I can generally make a shrewd guess at what his crops are.

"P. S.—A laborer generally fats one pig, using about four sacks of barley meal, and adding about six score to the weight of his pig. This, on his garden of one-eighth of an acre, would be 48 score per acre on the consumption of 15 to 18 quarters of barley per acre."

TURKEY BREEDING.—Several inquiries upon the subject of raising turkeys, and the responses thereto, have appeared in the RURAL recently, but the following, credited to an American writer in one of the English journals, contains some valuable suggestions. The author remarks:

"Every turkey breeder is not aware of it, but it

TURN-TABLE APPLE PARER.

outward as soon as it has completed the paring; it then goes round, and back to the starting point, ready for another apple. By continuing to turn the crank, the apple will be sliced into thin parings, if desired, for drying or cooking. The implements are not expensive, as they are wholesaled so they can be retailed at \$1 each with a fair profit."

is a fact, that of either sex, one old turkey is worth two yearlings for rearing young ones. A turkey does not arrive at its full growth and maturity till the next fall after two years old, and of consequence, to its full strength and vigor for breeding in the best possible manner. The continual repetition of keeping young gobblers and pullets for breeding, as some people do, reduces the size of their young until they arrive at scarcely half the weight they should do. Besides this, the young of these immature birds are exceedingly tender, and much more difficult to raise than those of old birds. We have tried this thing thoroughly, and are convinced of the difference. Were we choose our birds for the best breeding, both cocks and hens should not be less than three years old, and then the cock should be from a different stock from the hens. We think turkeys bear breeding from close affinities less successfully than any other fowl—at least we have found it so—and we would never breed a cock to hens which were closely related, if it could be helped.

Another thing, we prefer to let every hen sit upon her own eggs, and with the first laying of the season. She hatches them better than a barn-door hen, and is the most natural and satisfactory mother. We have most repeatedly set the first laying of eggs under the common hen, and turned the turkey out for a second clutch of eggs, on which she sat herself. But these second chickens are apt to be weaker than the first, and so late as not to obtain a fair growth before cold weather sets in—in fact, not worth half price. The turkey is a "natural" bird in all its habits, domesticated from a wild state, and yet retaining the constitutional propensities of its original race; therefore the young should be reared in their proper season, when the varieties of food they are partial to are the most abundant. Every young turkey should be out of the shell by the middle of June, at the latest, which gives them full time to get up to good size by 'Thanksgiving,' and fat and juicy by Christmas."

DRIVING OXEN WITHOUT LINES.

"Give a Yankee an ox, with a whip or a rod; Let a Dutchman have horses when hauling a load. Give Dutchmen and Irishmen lines to pull; Give a Yankee a whip to drive ox or bull."—EDWARDS.

Oxen were always calculated to be driven without bridles or lines. But horses, not so much so. Oxen chew the cud; and bits in their mouths would be a great hindrance to them in ruminating. Horses do not chew the cud, and therefore, because they usually possess more spirit, and agility, and impetuosity in their movements, "we put bits in their mouths that they may obey us." (James, 3:3.) It would be a very difficult task to learn a span of fiery, spirited colts to obey the motion of a whip; but a yoke of steers, however wild and skittish, can be learned, in a very short time, to render most complete obedience to the driver, if he understands how to use his whip with skill and propriety. Perhaps there is not another domestic animal that can be driven with so much ease and precision, without lines, as an ox.

I have observed that there has been very much written, in years past, on the subject of breaking steers, and driving them; but I have always

noticed that what I consider a very important consideration in driving steers and oxen, has been left out, either because the writers did not understand the business of driving oxen without lines, or they took it for granted that everybody knows how to drive oxen with nothing but a whip. I have no hesitation in saying, that there is not one man in ninety-nine, who knows how to take a whip and drive a yoke of oxen correctly, even when the oxen are well trained.

In driving oxen with a whip—without lines—the driver needs, in the first place, a whip that is a proper thing to drive oxen with. A man cannot expect to drive a yoke of oxen well with a cudgel, nor hand-spike, nor pitchfork, nor with a hoop-pole, as many use for such a purpose; nor does he want a little switch, or lash whip, not more than a yard in length. But, he wants a real Yankee's ox whip. The stalk should not be less than seven or eight feet in length, small, light, and elastic, with a small light lash tied on the end, about two feet long. It should be long enough so that the driver can sit behind his team in the wagon, and reach the heads of his oxen with the lash. Such a whip is not designed to flagellate oxen with, but to drive them, by its light touches and skillful motions.

Now, then, a teamster needs to understand how to make a motion with his whip, when to make a certain motion, when to touch the off ox, before or behind, and when to touch the near ox, before or behind, or in any other place, in order to make an ox move in a given direction. Every motion of the whip of a good teamster will be just as intelligible to well trained oxen, as plain, intelligible language is to us; and it is as easy to drive a yoke of oxen by the simple motions and light touches of the whip, without uttering a word, and drive them correctly too, as it is to tell how it should be done. Every motion with the whip of a skillful driver means something; and if the driver makes all his motions correctly, steers and oxen will readily understand and promptly obey them. But, when a driver makes a motion with his whip, and the oxen obey it, and in obeying it, they move directly the reverse of what he desired, and they then receive an unmerciful lashing for it—which is a most common occurrence—how can it be expected that a well trained yoke of oxen will be any more obedient than Balaam's stupid ass. (1st Kings, 22:27.) There are certain motions and touches of the whip which well trained oxen understand, as meaning, *whoa*, to stop; *gee*, to turn to the right; *haw*, or *hoi*, to turn to the left; *come along*, or *go along*, to proceed forward; and back, to step backwards. A good teamster will never use but one of these phrases at once. But, it is no uncommon thing to hear ox-teamsters, now-a-days, halloo at their team, "whoa-back-gee-go-along," or "whoa-back-hoi-come-here-to-me!" while the lash is applied at random, wherever they can best hit the oxen. When you want an ox to stop, speak out a good round *whoa*; with the long, open sound of O. Not *whoa*, nor *when*, nor *ho*, nor *how*. Never let the word *whoa* be used in connection with *gee* or *haw*, for it confuses oxen and one might as well speak to them in an unknown tongue. What kind of a movement would a yoke of oxen make, if they should obey, promptly, the command to, "whoa-back-haw-come-here-go-along," or "whoa-back-gee-go-along?" Yet such commands are very common, with many of the ox-teamsters of the present day, which accounts very conclusively for the unaccountable stupidity of working oxen in so many instances. Let the ox-teamster "keep his tongue, with all diligence," and when he desires his oxen to move in a given direction, give them the corresponding word, and motion, or touch of the whip, and they will very soon obey, as promptly as horses that are guided with lines.

When driving a yoke of oxen straight forward, let the driver stand by the side of the near ox, say three or four feet from him, with his whip erect, so that both the oxen can see. Now, as the word *come along* is given, in a plain, open sound, just touch them both with the lash, on their rumps. Touch the slowest ox first. Now, keep the whip erect, as a soldier carries his musket when marching. When the word *whoa* is announced, let the driver stop short and speak distinctly, *whoa*. If he is not able to bring out this Yankeeism, in a round, full tone, let him speak the letter O, with an open, round sound—not draw it out, nor snap it off, like the yelp of a wolf—and at the same time raise his whip and let the lash fall on the forehead of the ox that is least inclined to stop. It may be necessary, in some instances, to give an ox a blow with the lash, so that it will smart a little; but it is much the best to try a light touch with the lash first. Never keep the whip swinging over the oxen, and around their heads, when they are moving forward. In driving oxen that are very spirited, when they are going straight forward, and are inclined to go too rapidly, the driver should stand about even with the yoke and put his whip forward of the heads, touch them lightly, and try to check their rapid pace with light blows. If they become too impetuous, give them the word *whoa*, and stop, and then start on again for a short distance. But spare all the hard blows with the lash until there seems to be no efficacy in gentle touches with it. Never keep up an incessant *whoa, whoa, whoa*, in order to make any team walk more steadily, and with less rapidity.

When it is desired to have oxen *gee around*, let the lash drop on the buttock of the near ox, immediately after the word is given to *gee around*, and let the driver step forward, near the head of the near ox, and make a motion to the off ox to back. If the off ox is not inclined to *gee*, touch him with the whip, on the left shoulder. If the off ox dashes ahead too much, touch him lightly on the head, and touch up the near ox, behind, with the lash. To *haw them around*, let the driver step back opposite the tails of the oxen, and give them one word, *haw around*, and at the same time touch the near ox with the lash on the forehead, and the off ox on his rump. If the near ox does not *haw* as much as he ought to by touching on the head, give him a blow with the lash over the shoulders, so that the lash will strike on the right shoulder. As soon as oxen have become accustomed to the words of command, and touches of the whip, they

will obey very promptly, with only the motion of the whip, without touching them. Oxen will notice the motions of a whip and the motions and words of the driver; and if they are always made intelligibly and understandingly, oxen will very soon learn to step to the mark with all desirable promptness. A swing of the whip from near the rumps towards the heads of oxen, when the driver is standing by the side of the near ox, they will very quickly learn means to go forward. But if the driver drops back, as they are going forward, and swings his whip over the oxen in a diagonal direction, from over the rump of the off ox, towards the head of the near ox, well trained oxen will immediately *haw*, if not a word is uttered to them.

When a driver walks or rides behind his oxen, a swing of the whip, over the oxen, from right to left, or a touch on the forehead, or right shoulder of the near ox, and a touch with the lash on the buttock of the off ox, will always make them *haw*; while a touch on the forehead and left shoulder of the off ox, and a touch at the same time on the buttock of the near ox, will make them *gee*. But the words of command should always precede the motions and touches of the whip. It is very seldom necessary to strike good oxen a smart blow with a whip; and raw hands should always be very careful how they touch their oxen, and above all, how they strike them. It is always attended with no good consequences to whip any oxen, unless we know they are in the fault, and know how to obey better; and when oxen are very spirited they will always obey infinitely better with a gentle touch of the lash, and a good round word of command, than with all the whipping and yelling that a boisterous teamster is able to bring out on the occasion. Whipping obedience into spirited oxen, is not unlike old aunt Chloe's whipping her refractory boys: "while she whipped out one devil, she whipped seven more in." Let young ox teamsters always be taught to spare the whip, and to give the words of command correctly, and the proper touches with the whip.

As intimately connected with this subject, I may be allowed to pen an egotistical anecdote—which I trust you will pardon—showing how often good oxen are most shamefully abused, when the driver is ten fold more stupid than the beasts he is endeavoring to drive.

When at one of my neighbors, who had a good yoke of oxen, Pat was trying to drive the oxen before the wagon to hitch them to it. He brought them up to the tongue of the wagon, with their heads to the side of it, and with a cudgel gave the off ox a crack on the head, and bid him "step over the tongue." Of course the ox backed up and went in an opposite direction. All his efforts failed to get them before the wagon; and Pat, like an infuriated fellow, was making the most desperate efforts to "claw them to the skull," threatening to wreak the most direful vengeance on their "contrary nacks," when I said to him, "Pat, let me assist you a little." Said I, "Pat, go get the ox whip." "Indade, sir, and Mr. B. will allow no man to be after whipping his oxen." "Get me the whip," said I; "I'll teach them a lesson, (but I meant him,) so that they will trouble you again like this. Pat, these oxen are Yankees." "Indade they are, and the ugliest kind, sure." Taking the whip in hand, said I, "Now, Pat, I want you to observe just how many times I strike that contrary ox, how hard I strike him, and where I strike him." "They'll surely run away," said Pat. "Now, Pat, I will give these oxen three words of command, and they will step exactly to the spot where you want them, and stop." With an understanding swing of the whip and the command, *come along*, they walked lively up to the tongue of the wagon; and, as the off ox put his forward feet over the tongue, I halted, short, and elevated the whip, and bid them *whoa*, when that contrary ox placed his hind feet over the tongue, and stopped, exactly in the desired spot. "And you are not the man that can do that again," said Pat. At the word *come along*, Buck, and the swing of the whip, they stepped forward, and hawed around, and at the word *whoa*, stopped as before, within two inches of their first tracks. After showing him how to swing his whip, and where to stand when driving, Pat could drive his oxen over the tongue, and to any other place, without any difficulty. S. EDWARDS TOWN.

Lake Ridge, Tompkins Co., N. Y., 1859.

SORGHUM.—WHERE IS IT?

EDS. RURAL:—Any circumstance that makes a deep impression on the mind is apt to be recalled to the memory on each anniversary of its occurrence; and this is the reason doubtless that, as the season wanes and frosty nights approach, I experience a rising emotion of interest in regard to Sorghum! And this is intensified by a little fact in domestic life. You know the "better half" of our households are willing enough to prepare delicacies and dainties for their "liege lords," but they are not willing, and can not be driven to do so, without a preliminary supply of the needful requisites wherewith to work. Hence, they are everlastingly calling for this, that, or the other thing, among which sugar is prominent. To my question to-day, "how much?" the reply was, "O, no special quantity—any amount less than a tun will come in play!" Considering that the family is of but ordinary size, this reply fairly made me stare, and brought up in touching and affectionate remembrance my old-time and well-beloved Sorghum friends, whose self-sacrificing devotion to the cause of Cheap Sugar, in the face of sneers by the garrulous, and the jeers of old fogymen, is greatly to their praise.

How is the Sorghum? but more particularly, where is it this current year? The public prints have had much to say all along during the summer of the growing and garnered crops. Wheat and corn, grass and rye, potatoes and fruit, have been closely watched, and the prospect reported at each stage of development, but "nary a word" have we had of Sorghum. What does it mean? Is it studied despite? or are the cultivators thereof planning "startling announcements" when the crop shall be gathered, and the "mills" have done their work? I profess not to know. We can hope for the best, but be prepared for the worst.

I am in the dark—as one born blind. I see none, hear of none, nor smell, nor taste, nor feel any. But "altitude" is against us,—this is a region of frosts, say they. And were not some other sections "frosty" the fourth of June last? Those who live in glass houses should not throw stones.

But let us possess our souls in patience. We shall see. The Sorghum defenders of former years are committed on the subject, and will, of course, report. We want the facts of Sorghum culture in 1859. We do. They must not say that the season has been unpropitious, for it was in the face of the known character of the climate on the 42-45 parallel that they declared it was no humbug, but would become a general and standard crop. Messrs. S. W., DOOLITTLE, &c., &c., stand up to the rack! Don't dodge. Give us the facts. Prattsburgh, N. Y., Sept., 1859. W. B. P.

GREAT DAYS' WORKS.

The men who at fifty or sixty years of age boast of the half-dozen extraordinary days works of their youth and early manhood, can seldom be counted among those whose life-long labors have been of great effect in subduing the earth or converting its products to the use of man. In a multitude of instances, those who treasure up and recount the occasional great industrial achievements of their earlier days, are persons of naturally indolent dispositions, whose ambition, having been roused by rivalry in the field or shop, they put forth their utmost strength on brief occasions, and, content with having outworked their competitors for a day or half-day, and proved how much they were able to do if they only chose to make the necessary exertion, relapsed into their usual forced, reluctant habits of work. Others of really ambitious nature, in the playful zeal to try their strength, or in the anxiety to accomplish the greatest possible amount of work in a short time, under some particular circumstances of weather or other urgency, fearfully overtasked themselves—such imprudence often doing more to break down the physical constitution than years of ordinary labor would have done.

There is, thus, commonly nothing gained but much lost by the great days' works, on the credit of which the lazy excuse their idleness, and the industrious account for their inability to do full work in the prime of life. In whatever business one is engaged, he will generally accomplish more in the long run by doing regularly a fixed, moderate amount of labor each day, than by performing an extraordinary day's work occasionally, and admitting that as an excuse for slackness at times when he feels disinclined to work. One easily overestimates the gains he makes by unusual effort, as well as undervalues what he loses by indulgence in sloth. Idleness eats up the gains of past industry very fast; before we are aware of it rest has consumed the savings of extra toil. South Livonia, N. Y., 1859. A.

STACKING AND CURING BEANS.

MR. MOORE:—I noticed in a late RURAL a request for information about putting up beans to cure. The following plan has been practiced in this section for several years, and I have never known beans when so put up to injure, even in the wettest seasons.

Cut good stiff poles, about eight feet long, so as to have one or more limbs $2\frac{1}{2}$ feet from the lower end. Cut the limbs off to six inches—in lieu of the limbs $1\frac{1}{2}$ inch pins might be used—these will keep the beans off the ground. Set the poles firmly in the earth and they are ready for use. Place a handful of beans across the snag, and one across that on each side of the pole; wind the tops around so that they will not fall apart and build right up with the tops out, and so that the stack shall not be over $2\frac{1}{2}$ feet through. At the top of the stack the roots should be turned up and tied to the pole, to hold them in place and turn off the rain, or a little straw can be used for a covering. If well put up after this plan the rain will never soak into them, while the air can circulate under and through the stack. One set of poles, if housed when not in use, will last a great many years.—S. T. K., Great Valley, N. Y., 1859.

Rural Spirit of the Press.

Imperfect Vision in Horses.

A WRITER in the London (Eng.) Review gives the following mode of detecting imperfect vision or blindness in horses:—"The novice in horsemanship may have good grounds for suspicion as to the existence of imperfect vision or blindness, when the horse moves his ears in a constant and rapid motion, directing them in quick succession to every quarter from whence the least sound proceeds. His action is lofty and faltering, and he lifts up his feet and replaces them on the ground as if stepping over some obstacle, when there is actually nothing to impede his free progression. But, notwithstanding that these symptoms would be sufficient to create suspicion, there are other causes (besides imperfect vision) by which the same, or similar symptoms, would appear in horses. For instance, if a horse with the most perfect pair of eyes were led from a dark stable into the blazing sunshine, the sudden contraction of the pupil of his eye would render it impossible, for a few moments, for him to see but very indistinctly; hence would arise the same symptoms of uncertainty in his movements, until the pupil becomes steady after the sudden contraction. The dilation and contraction of the pupil of the horse's eye furnishes the principal means of ascertaining whether the blindness exists in one eye or both, as this pupil varies in size, according to the degree of light which is brought to bear upon it. In a dark stable, the pupil is expanded, so that a greater portion of light falls upon the cornea; but if the horse is led to the door of the stable, the pupil will contract, so as to exclude more light than could be endured; and if suddenly exposed to the sun, the aperture will be all but closed; therefore, the novice should carefully notice these variations in the pupil, whether they contract or expand equally by the increase and decrease of the light—which he may readily perceive by advancing the horse's head to the open door or window

of the stable, and backing him again into the darkness, until he is satisfied as to the perfection or imperfection of the horse's vision. But if the horse should be examined in the open air, the novice should first notice whether both pupils are of exactly the same size. After this, he should carefully place his hand, so as not to alarm the horse, over each eye, to shade off the light, and hold it there for a short time, noticing the extent to which the pupil dilates, then pass his hand over the other eye, and ascertain whether it also dilates to the same extent; and if he should still be uncertain, let him place both hands in the positions of shades over both the eyes of the horse, and he will at once perceive (if his own vision be good) whether they are perfect; and if not, which of the two are imperfect."

Diseases Among Cattle.

UPON the practice of boring the horns, cutting off the tails, and similar remedies for diseased animals, Dr. G. H. DABB, veterinary surgeon, Boston, Mass., thus writes to the *Valley Farmer*:

I wonder that intelligent men, Christians, and men who have been for many years the owners of high-priced and rare specimens of what we are pleased to term the *inferior* orders of creation, should so far disregard the feelings and claims which the latter have on them, as to permit the barbarities of by-gone days to be enacted over again, for no earthly use than to harass and torment a sick, and perhaps dying animal. For every intelligent man must be aware that cattle are as susceptible to pain as ourselves, and that the introduction of a *spike gimlet*, at the base of the horn, *low down*, must put the animal to an immense amount of torment; for, in the region indicated, the parts are highly organized and very sensitive. It gives me pleasure to find that you have a heart to feel for these much abused specimens of creative power, and also that you have manliness to denounce the practice of cruelty to animals, although it attempts to shield itself under the garb of science; but you and your readers may rest assured that all *educated* veterinary surgeons consider the practice of boring cow's horns and cutting of their tails, both cruel and unnecessary. Some of your readers may ask, How are we, who have not studied into the matter, to know that such operations are *cruel* and *unnecessary*? I answer, appeal to your own intelligence; would you suffer an ignorant pretender or a neighbor, having no more experience in the treatment of disease than yourselves, to send a *gimlet* into the frontal sinuses of your sick friend, wife, or child, for no other reason than that the region of the same was hot and feverish? Where is the man who would stand by and witness such an outrageous procedure? Some persons may contend that animals recover after such operations have been performed. Granted, but that is no proof of the efficacy of the same; the recuperative powers of the system are often strong enough to bear the animal safely through the disease and the wretched treatment.

Small Pens for Fattening Swine.

THAT exercise conduces very little toward fattening on flesh, while quiet assists materially in hastening the operation of fattening, is well known, and should ever be taken into account by those who would fit any animal for slaughtering. The following, from the *American Agriculturist*, is worthy the attention of farmers:

"From observation extending over a dozen years or more, made in villages and the rural districts, we have noticed that the fattest and best pork is made in the former, where one or two pigs is usually kept in a small pen. The villager has a small room, and crowds his pig into narrow quarters for the whole year. It is fed on slops for eight months, and for the last four is crammed with scalded Indian meal. He gets pork of decidedly better quality than he can purchase, and gets it cheaper. The whole energy of the animal is forced by his training into the production of flesh and fat.

The pigs of the farmer, on the other hand, run in a pasture or on the common, for six or eight months, and are shut up a dozen or more in a large pen to fatten, because he has plenty of room. The energy of the animal has gone very much to the development of snout and feet, and the propensity to run and to root is not circumscribed very much in his roomy pen. By Christmas he is not more than two-thirds fattened, and he has consumed quite as much as the village pig, which is ready for the knife. We have two yearling pigs, good for four hundred and fifty pounds of pork by Christmas, that have never been out of a pen, eight feet by twelve, since they were eight weeks old. Small pens kept dry, and regular feeding is the secret of their thrift."

Winter Fallows.

"JONATHAN," in the *American Agriculturist*, gives his opinion of fallows in general thus:—"Summer fallows have pretty well gone out of fashion, as they deserved to; for the fields when left unsown, 'to rest,' as people used to say, seemed to delight to grow weeds, just for recreation, and then it took a long time before they could be brought to mind their business, and bear the old crops again. But I believe in *Winter Fallows*. When I want a good, clean, and heavy piece of corn, I begin the Fall before, and turn the sod under, early enough to let the scattering grass and weeds get a start, to be mostly killed out by the cold in Winter. Jack Frost is a capital hand, too, to kill grubs and worms, and he leaves very few if they are turned up where he can have a good chance at them. If the ground be left in ridges, just as it was plowed, the freezing and thawing will pulverize it, and in the Spring it will be light work to run the plow and harrow through again. The sod will also be so well subdued that the after work of hoeing will be very different from fighting grass all Summer, as I've often had to do in a wet season, where a heavy sod had been turned under in the Spring. I would spread manure on in the Spring before plowing, and then plow light, leaving the sod below undisturbed for the corn roots to work in when they get down there."

VALUE OF CORN PODDER.—According to the experiments made by the Massachusetts State Farm School, corn-stalks are worth one-quarter as much as the best hay, and fully equal to wild or marsh hay in value.

Agricultural Miscellany.

THE WEATHER of last week was generally favorable for growing crops, and the holding of Agricultural Fairs. No frost has yet occurred in this State, though we have accounts of its recent visitations in the West and Canada. The *Toronto (O. W.) Globe*, after speaking of the frosts in June and July, says—"And now, in the latter end of August and earlier days of September, we have had a succession of severe frosts, which have proved very destructive." It adds that the buckwheat is almost all gone; corn has fared better, but potato vines are withered to the ground, though it is hoped the tubers are safe.

FIELDS' STEAM CULTIVATOR AND FLOW.—In the RURAL of the 27th ult. we briefly stated that a Steam Cultivator had recently been constructed at the extensive "Island Works" of GRANT, MYNDESS & Co., Seneca Falls, N. Y.,—that it had been tested to some extent, and that a public trial was to take place in a few days, which we should probably witness and notice. Since then the machine has had several trials, and been improved in some respects. On Friday last we had the pleasure of attending a public exhibition of the machine near Waterloo, and can now speak more definitely of its appearance, construction and operation.

The machine is of ponderous size, weighs about six tons, and is propelled by a Rotary Engine of ten horse power, only half of which power, it is estimated, is expended upon the cultivating apparatus. There are two driving wheels, each eight feet in diameter and one foot wide, and a double guide wheel four feet in diameter. The inventor claims that it can perform the work of spading or plowing, according to the nature of the soil or wants of the owner. Spade culture, however, is its chief feature. There are six spades, which turn up the soil nine feet wide to any depth required from six to fifteen inches. Each spade is about four and a half feet long, and operated by a circular crank motion. The crank pin is attached to the upper end of the spade handle, which, in connection with a guide arm or lever, fastened to the spade handle by a knuckle joint about two-thirds the distance from the top, gives the spade its up and down, forward and backward motions.—In its operation casting the earth in an upward and backward direction about three feet high and four feet to the rear, and pulverizing every portion of the soil over which it passes. To the machine may be attached a revolving harrow and the ordinary seed drill, thus enabling the operator to complete the whole labor of spading or plowing, harrowing and drilling at one operation, and (as is claimed) at the rate of one and a quarter to two and a half acres per hour, according to the nature of the soil and depth of cultivation. It is also provided with driving gear for the purpose of propelling a reaper and mower, or stationary machinery for threshing, grinding, sawing, pumping, &c., and is said to be particularly adapted to hemp-breaking. Thus much of its appearance, construction and claimed capacity. As to its operation we can only say it worked well on light, sandy stubble ground. It also operated well on plowed ground, and that which had been spaded. The forward stroke of the spades was about 8 inches, and the depth from 10 to 12 inches. The soil was very light, and not a fair test, perhaps, of the power of the machine,—but we were assured it had worked well in heavy clay, though the forward stroke of the spades should only be 4 to 5 inches in order to pulverize clay properly. We fear that it would not operate satisfactorily on stony soil, or at least where the obstructions are larger than cobble stones.

—This machine is still in its embryonic stage, yet we regard it as the germ of a valuable improvement. The inventor, Mr. GEO. B. FIELDS, of St. Louis, Mo., is evidently a man of genius and enterprise, and will be likely to perfect his ideas and render the machine successful. It is not designed for breaking up, but for all after culture, and Mr. F. claims that his spading process will prove far easier and cheaper than any other. Time will determine,—but whatever the result, we are more confident than ever before of the early success of Steam Culture in America.

EGYPTIAN MILLET.—A Massachusetts farmer—Mr. OLIVER WILLIAMS, of Sunderland— informs us that he has tried Egyptian Millet for sowing, two or three years, and finds it superior to any other plant for that purpose. The product is about double that of Indian corn, and is eaten with avidity by cattle, horses and other stock. It will grow from eight to ten feet high during the season, but should be cut, if used for sowing, when from two and a half to three feet—thus producing two or three cuttings or crops in the course of the summer. Mr. W.'s only difficulty, thus far, has been to obtain good seed, as his has not ripened. He is anxious to procure seed of the genuine article—much that is called the Egyptian millet being spurious. If as valuable as he represents, we think this plant worthy of special attention, and shall be glad to aid in its dissemination.

DEATH OF AN AGRICULTURAL EDITOR.—The death of JAMES PEDDER, senior editor of the Boston *Cultivator*, is announced. He died at his residence in Roxbury, on the 27th ult. in the 54th year of his age. Mr. P. was born at Newport, Isle of Wight, and, after filling prominent stations in his native land, came to this country in 1832, since which period his life has mostly been devoted to the promotion of Rural Improvement. We believe he was editor of the *Farmers' Cabinet*, published some twenty years ago at Philadelphia, though connected with the Boston *Cultivator* for the past sixteen years. Mr. PEDDER was known as a ready and earnest writer, and a kind and genial man in all the relations of life.

THE ILLINOIS STATE FAIR—held at Freeport last week—opened well, as we learn from a correspondent, promising a successful result,—but his final report has not yet come to hand. From other sources, however, we learn that the exhibition was large and creditable in most departments. FAWCETT'S Steam Flow, and another Steam machine for plowing and other purposes, were operated and attracted great attention. The receipts on the opening day were only \$900; the next, \$2,400; and the third \$4,500.

AG. FAIRS NEXT WEEK.—The Ohio and Maine State Fairs occur next week—Sept. 20-23—the former at Sandusky and the latter at Augusta. The American Institute Fair, N. Y. City, is also held next week. New York County Fairs as follows:—Chequoaga, Cortland, Essex, Jefferson, Lewis, Livingston, Oneida, Orleans, Orleans, Tompkins, Wayne and Westchester. Town Fairs—Byron and Bergen, Hartland, Harpersville, Susquehanna Valley and Tonawanda Valley.

THE UNION FAIR to be held at Trumansburgh, Tompkins Co., N. Y., Sept. 28th, 29th and 30th, comprises the towns of Ulster, Hector and Covert. Officers of the Society: President—Hon. THOMAS BOARDMAN. Vice Pres.—Warren Haley, Nestor Woodworth, and Isaac Banker. Treasurer—F. S. Dumont. Secretary—L. H. Owen. Directors—James M. Mattison, J. W. Rappleye, and Abram V. McKel.

THANKS to the officers of various State, County and Local Societies for cordial invitations and complimentary tickets to attend their Annual Fairs. Regret that our engagements preclude acceptance in most cases.

HORTICULTURAL SOCIETIES AND EXHIBITIONS.

Almost every prominent paper we open gives us an account of a successful Horticultural Exhibition, or the formation of a Horticultural Society. Never before, since the founding father of all was driven from the first and best of gardens, has so large a percentage of the people been interested in the culture of fruits and flowers. In the papers now before us, we have notices of the following meetings:

THE KENTUCKY HORTICULTURAL SOCIETY held its Eighth Annual Exhibition on the first two days of September, at Louisville. The *Courier* says—"We have attended larger horticultural exhibitions than this; some larger have taken place in our own city; but a better show of apples and pears we have rarely witnessed at this season of the year—considered more with reference to quality than quantity—and we doubt if as splendid an array of peaches and grapes, with the same qualification, has at any time been spread upon tables in the Ohio valley. Flowering plants, cut flowers, and floral designs were numerous in the exhibition, and many of them of great beauty."

For the purpose of showing the varieties of fruits that succeed best in that section of country we give the varieties to which the premiums were awarded.

PEACHES.—Best 12 varieties.—Lawrence Young, premium—consisted of Grand Admirable, Yellow Grand Admirable, Robinson Crusoe, Tippecanoe, Stump the World, Crawford's Late, Leopold, Parvle Pomponne, Lemon Cling, Red-cheek Malacaton, Red Pine Apple, and Columbia.

H. S. DUNCAN took the premium on the best plate of *White Fleshed Clings* with the Grand Admirable. LAWRENCE YOUNG on the best plate of *Yellow Fleshed Clings* with the Leopold. H. S. DUNCAN on the best plate of *White Fleshed Freestones*, with the Red-cheek Malacaton. H. S. DUNCAN on the best plate of *Yellow Fleshed Freestones*, with the Columbia.

PEARS.—Best 12 varieties.—Mr. Young took the premium with the Bartlett, Flemish Beauty, Seckel, Buffum, Louise Bonne de Jersey, White Doyenne, Easter Beurre, Lawrence, Columbia, Glout Morceau, Vicar of Winkfield, and Beurre d'Arenberg. HOBBS, WALKER & Co. took the premium on the best six varieties, with the Seckel, Bartlett, Belle Lucrative, Duchesse d'Angouleme, Swan's Orange, and Glout Morceau.

Mr. Young took the premium for the best plate of pears with the Bartlett.

THE BUFFALO HORTICULTURAL SOCIETY held an exhibition on the 6th inst. The *Courier* of that city says—"The display of grapes, pears and apples was extensive, and finer specimens were never shown. The grapes grown by GAUS B. RICH, and Hon E. G. SPAULDING attracted the lion's share of attention. Mr. SPAULDING exhibited six bunches of Syrian grapes which weighed two pounds each, and their flavor was proportioned to their weight. The Black Hamburgs shown by Mr. RICH were remarkably perfect specimens of this luxurious fruit." The list of exhibitors is large, and among them we notice many names well known to the Horticultural world. Buffalo should have a flourishing society.

PENNSYLVANIA HORTICULTURAL SOCIETY.—The last meeting of this Society was a delightful affair, and was considered one of the most interesting meetings ever held. The fruit tables, especially, literally groined under the weight of the contributions, and attested, by the crowd they attracted around them, the great point of interest they possessed. The hot-house Grapes from numerous contributors, were particularly well grown, though there were but few kinds not often seen on the Society's tables. The *Figs Tomato*, now becoming generally known for its superior excellence, was freely brought out. So says the *Gardener's Monthly*.

HARTFORD HORTICULTURAL SOCIETY.—The *Home-Steak* gives very interesting reports of the exhibition of this Society.

WAUKEGAN HORTICULTURAL SOCIETY.—The Waukegan *Gazette*, (Illinois,) gives a flattering account of an exhibition recently made by this Society, and closes with the following remarks:—"The exhibition did great credit to Waukegan and the good taste of those of her citizens who contributed to this, the first of her Horticultural Exhibitions since 1858. Such demonstrations as these, where our people meet together in a friendly way to exhibit to one another the result of their labors and experiments in this beautiful art of Horticulture, are just what has given to Waukegan the enviable name she enjoys of being ahead of all others in the West, in point of good taste in the laying out and keeping up such beautiful gardens and cultivating such choice collections of flowers and fruits."

THE MASSACHUSETTS AND CINCINNATI HORTICULTURAL SOCIETIES. we should judge from the reports, were never more successful than the present season. Almost every paper from California, gives us accounts of large Horticultural exhibitions, and the formation of Societies, in such numbers that we sometimes think it will not be long before such an association will exist in every county and in every city.

FRANKFORT WORKINGMEN'S HORTICULTURAL SOCIETY.—The *Gardener's Monthly* contains an account of a Society with the above name, at Frankfort, Pa. In August this Society held an *Onion* Exhibition, and awarded premiums for *White Silver Skinned*, *Yellow Strasburgh*, and for *Seedlings*. In November the Association will make an exhibition of *Celery*. This is somewhat of the

European plan, and we are glad to see it inaugurated in this county. We will be happy to record the formation of many similar Societies.

CHICAGO GARDENER'S SOCIETY, composed of practical gardeners, we judge from the published proceedings, to be in a flourishing condition. They have just resolved to make an exhibition at the National Fair, held at Chicago, on the 12th inst.

ROCHESTER GARDENER'S ASSOCIATION.—An Association similar to that of Chicago, has just been organized in this city, with every prospect of success. A reading-room, library, &c., is to be established.

FRUIT GROWER'S SOCIETY OF WESTERN NEW YORK.—The September meeting of the Fruit Growers' Society of Western New York, will be held at the Court House, in Rochester, commencing on Thursday, September 22d, at 11 o'clock, A. M. Several very interesting topics for discussion have been selected by the Committee on Subjects, among which are the following:

Does summer pruning of the Grape Vine hasten the maturity or improve the quality of the fruit? What varieties of Pears have proved productive and of good quality in all parts of Western New York? Should Pears that sometimes crack be rejected from the list recommended for general cultivation? What are the best manures for the Apple, Pear and other Fruits?

The question will also come up of making a list of fruits for general cultivation in Western New York, with a list of sorts promising well and of those unworthy of cultivation.

Other questions will be introduced relative to the profits of the culture of certain fruits here, &c. Which fruits are best adapted to our soil, climate, &c. As to the profit of extensive cultivation of the Grape here, and the probable net profit per acre, &c. As to the pruning of the Apple, the Pear, the Grape, &c.

GENESEE VALLEY HORTICULTURAL SOCIETY.—The Annual Autumn Show of the Genesee Valley Horticultural Society will be held at Corinthian Hall, Rochester, on the 22d and 23d inst. This will be, no doubt, the largest and finest exhibition of the season.

THE KINGSTON HORTICULTURAL SOCIETY. (Canada West,) gives an exhibition at Kingston, on the 28th, 29th and 30th of September.

STRAWBERRIES.

The great point in all culture is economy and its results, and the true test of the Strawberry is farm culture, with or without cutting off the runners. The following varieties I consider the best for field culture where the plants are allowed to cover the entire ground, without further labor, thus saving extra expense, and producing much larger crops as the whole of the ground is occupied. All are pistillates.

Scarlet Magnolia, the heaviest of all strawberries. *Diadem*, splendid scarlet, producing double the crop of *Wilson's Albany*. Mr. MARZMUS BROWN, of New Jersey, stated that he did not deem it possible for so great a crop of fruit to grow on a given space of ground as he saw growing of this kind.

Eclipse, early, bright scarlet, on upright stalks, clean and beautiful.

Minerva, very estimable in quality, produces more than twice *Wilson's Albany*.

Imperial Scarlet, large, bright scarlet, fine for market, upright stalks.

Perfumed Pine, seedling of *Burr's Pine*, obtuse cone, very large, bright scarlet, sweet, juicy, high flavor, plant vigorous, very productive, combines more valuable qualities than any other.

Hovey, qualities well known.

Malvina, same qualities as *Hovey*, but more productive, brighter color, better flavor and one week earlier.

Globose Scarlet, large, rounded, very productive.

Florence, very large, conical, splendid scarlet, fine flavor, vigorous, very productive, valuable.

Prince's Globose, a late variety, very large, scarlet, moderate flavor, very productive and vigorous, ripens twelve days after the general crop, and therefore valuable as a late market fruit.

The following are the six best staminate varieties for field culture, in stools with the runners cut off, thus, however, entailing additional expense, besides leaving much of the ground unoccupied:

Scarlet Prize, very large, fine flavor, bright scarlet, productive.

Wilson's Albany, qualities well known.

Sirius, monstrous size, light orange scarlet, splendid.

Burr's Extra, fine flavor, light scarlet.

Primate, each flower produces a fruit, bright crimson, moderate flavor, showy for market.

Montrose, very large, productive, admirable.

Varities preferable for families, being of finest flavor:—Le Baron, Ladies' Pine, McAvoy's Superior, Sirius, Longworth's Prolific, Ward's Favorite, Globose Swainstone, Fragrant Scarlet, Hooker, Imperial Crimson, Minerva, Perfumed Pine, Scarlet Prize.

W. R. PRINCE.
Flushing, N. Y., Sept., 1859.

STRAWBERRY PLANTS BY MAIL.—T. B., of Davenport, Iowa, inquires in the *RURAL* of the 10th inst., if strawberry plants can be sent by mail. I would inform him and others, that they can with perfect safety. I received a package about a week since from I. W. BRIGGS, of Macedon Centre, which to all appearance were as fresh as though they had just been taken from the ground, and from present appearances I shall not lose a plant.

I like your suggestion as to petitioning Congress for a reduction of postage on plants, cuttings, &c., so that it will at least be as low as on books and papers. It is now equal to letter postage, and amounting on 40 plants to 36 cents. Who will set the ball in motion?—W. HAYDEN, JR., Port Byron, N. Y., Sept., 1859.

LION ON HONEYSUCKLE.—My mother wishes me to inquire if you can inform her through the *RURAL* of a preventive or cure for lice on a fragrant Honeysuckle?—I. K. LEON, Mich.

Smoke the plant with tobacco, or wash it with tobacco water. Strong soap-suds will kill insects, if applied at various times.

DOWNING'S EVER-BEARING MULBERRY.

A few weeks since we gave a description of *Downing's Ever-Bearing Mulberry*, and since that a lady who has cultivated this fruit for several years, kindly favored us with the following interesting communication, and also with a colored drawing, from which we make the above engraving. To the same source we are also indebted for a basket of fruit, in all stages of growth. The specimens we received were not quite as large as those represented in the engraving, but we are assured they attain this size with good culture.

EDS. RURAL:—In the days of Solomon, as there was nothing new under the sun, his people had doubtless the full enjoyment of delicious mulberries, but a new adaptation of it to the circumstances of our climate was needed before we could receive the blessing. This took place in the hands of our mutual friend and benefactor CHARLES DOWNING, some fourteen years since, and although known to but few, we are certainly in possession of a most delicious fruit under that name. To those who have tasted the insipid white varieties, or the wild dark one of our woods, which is but little better, I shall seem to state an "incredibility" when I describe *Downing's Everbearing Mulberry*, which is perhaps unnecessary, after what you have said, but with your permission I will add my testimony.

I have never before known a fruit that gave such universal delight, suiting all palates, and equally excellent with cream and sugar for the table, or freshly gathered from the tree to eat from the hand. In that state they are suggestive of a well ripened *Hooker* or *Burr's New Pine Strawberry*. In puddings they are very good, in pies unsurpassable. The abundant juice that flows from them has the flavor of rich Bordeaux wine to which a little sugar has been added. Put up in preserving cans with half their weight of sugar, they may be kept any length of time, to be used for cooking or as preserves for the table, having a vinous flavor, or slight grape-like aroma.

The tree is of so rapid growth that one of three years, is not only an object of picturesque beauty quite distinguished, but affords a deep, cool shade,

A FINE EARLY APPLE.

EDS. RURAL:—Inclosed you will find a specimen of fruit known here as the *Hornet Apple*. Ten years ago I received some scions of this excellent variety, from a gentleman in Crawford Co., Pa., who positively asserts that it was there raised from seed, and that the tree was never changed by grafting or budding. None of the late authors describe it in their works. With the scions received I grafted two bearing trees, they bore the second year and have borne regularly ever since, large crops of the finest fruit. I also sold many trees to persons, with whom it has fruited and who all pronounce it the finest early variety yet known. The fruit is large and perfectly free from insects; mostly of an oblong form, though sometimes oblate. In perfection the middle of August. This year a little later than usual. The tree grows very slender, straggling and pendant. Had I thought of it sooner I might have given you a fairer and larger sample, but as they are about done, these are the best I could select, of sufficient hardness to send at present.

JOHN SMITH.
Mt. Lebanon, Allegheny Co., Pa., 1859.

REMARKS.—The specimens accompanying the above were very fine, and of excellent quality. We judge it to be the *Hawley*; at least it very much resembles this variety, in appearance and quality.

DOWNING'S MULBERRY.—ALICE MAUDE STRAWBERRY.

2. Seeing the statements in *RURAL* about *Downing's Ever Bearing Mulberry*, and considering them reliable, I wish to learn where and of whom the trees can be obtained, and the price of the same. 2. I would like to know something of the history, origin, hardness and productiveness of the *Alice Maude Strawberry*. I saw the fruit for the first time in Buffalo this season, where they readily sold for \$8 per bushel, while other standard sorts barely commanded half of that price. Answers to the above questions, by yourself or some of your numerous readers, will be thankfully received by a number of your rural subscribers.—STEPHEN LARSON, Brown Cottage, Eden, Erie Co., N. Y.

DOWNING'S MULBERRY has been most extensively cultivated by Dr. C. W. GRANT, of Iona, near Peckskill, N. Y., but perhaps can be obtained of most of our principal nurserymen. Price from \$1.50 to \$3 each, according to size. The *Alice Maude* is a handsome English strawberry. It is not very high flavored, and has not been considered very productive, though around Washington and at some other places it is quite popular. We would much prefer the *Triomphe de Gand*, another European sort, as we believe it will prove a much more popular and profitable market fruit.

LARGE FRENCH PEACHES.—Mr. HAINLA of this city, presented us with some *French Peaches*, as large as Egg Plums. He has a large crop on his trees, which are healthy and vigorous. We don't know why the growing and drying of peaches could not be made an important business in this country.

larger than would be furnished by a thrifty Linden or Maple of twice the age, having a head of fourteen or sixteen feet in diameter.

We have them growing in deep, rich sandy soil, and that probably is best suited to them, but they will thrive in any deep rich soil. Our neighbors have them in heavy or clayey soil doing equally well. Their hardness after the first season is equal, apparently, to that of the Sugar Maple, or any of our forest trees.

It gives fruit very early, which improves in quality and size as the tree advances in age, and never fails of yielding a profuse crop for more than two months of the season when such fruit is most wanted. In bearing time the tree is covered with berries in all stages of progressive ripening. The color changes from a pale green, with a slight blush of pink, to all the varying shades of carmine, until when completely ripe it hangs a rich cluster of dark purple fruit. These different hues, contrasted with the bright green of its exceedingly large leaves, make it an object of striking beauty for lawn or garden.

ISWELLEN.
On the Hudson, Sept., 1859.

PRICES OF FRUIT IN NEW YORK.

Now that so many of our fruit growers are selling their fruit for the New York market, it is important that they should know the current prices in that city. We shall therefore give the market prices occasionally, and notice all the important changes.

APPLES.—Golden Sweet, from \$2 to \$2.25 per barrel; common fruit, \$1.50 to \$2.00; Twenty Ounce, \$3 to \$3.50; Fall Pippin, \$2.75 to \$3.00.

PEARS.—Bartlett's, choice, \$12 to \$14 per barrel; Bartlett's, common, \$5 to \$7; Common Cooking, \$2.50 to \$3; Seckel, \$3 to \$10.

PLUMS.—Green Gage and Egg, \$4.50 to \$5 per bushel; Damson, \$4 to \$5; Common Blue, \$2.50 to \$3.

PEACHES.—Choice Jersey and Delaware, \$2.50 to \$3 per basket; fair quality, \$1.50 to \$2.

GRAPES.—Catawba, from Cincinnati and Washington, from 8 to 15 cents per pound, according to quality.

KEEPING GRAPES.—I have admired the spirit of liberality manifested by the Editor of the *RURAL* in giving heed and reply to the numerous questions propounded, but have hoped the tax on his patience may benefit all around, as it makes the paper serviceable to all branches of a family.

1. I would be glad to have more definite instruction as to putting up Grapes for winter. Where is the most suitable place to keep them? I have been so unsuccessful, have thought I would not try again, but find others do keep them.

2. Is the Hubbard Squash used for boiling in summer, or is it only a winter variety?

3. Is the *To Kalon* grape as good or nearly so, and desirable as the *Diana*?—A. SUBSCRIBER, Gloucester, N. J., 1859.

1. GRAPES for keeping should be selected carefully, taking only good bunches, and removing all bruised or unsound berries. Place them in a box, a layer composed of two or three thicknesses of paper, or cotton between each layer of bunches. Put the boxes in a cool room where it will not freeze, though a slight frost will not injure them. This is the way we keep them.

2. The *Hubbard Squash* is a winter variety, and the very best.

3. The *To Kalon* is a good grape, not quite as sweet and rich as *Diana*, and ripening about the same time as the *Isabella*, perhaps a few days earlier. The fruit resembles the *Catawba* in form of berries and bunch, but is a little darker in color, though not much darker than we have seen the *Catawba* at Cincinnati.

THE WINE CROP.—Mr. R. Buchanan, of Cincinnati, in a letter to the St. Louis Horticultural Society, says the vintage of 1859, near Cincinnati, will be the largest since 1855. The average yield will be about 400 gallons to the acre, although some vineyards will produce 600 to 800 gallons to the acre. Within twenty miles around Cincinnati it is estimated the crop will amount to 300,000 gallons; so that the wine crop of Ohio the present year may be safely estimated at over \$1,000,000 in value.

TOMATO PIES, GRAPE PRESERVES, &c.

GREEN TOMATO PIE.—Slice full grown, green tomatoes very thin; line a baking tin with thinly rolled pie paste and put in the tomatoes nearly an inch deep; sprinkle over them a teaspoon of sugar, a tablespoonful of cinnamon, one of flour and a little water; cover with the paste and bake well. Half a pound of lard and a teaspoon of salt worked into a pound of flour with water enough to bind it together, makes a nice crust for any pie.

RIPE TOMATO PIE.—Four boiling water over ripe tomatoes, then peel and slice them thin; line a deep pie dish with paste, fill it with the sliced tomatoes, slice a large lemon into it, add a large cup of sugar, cover with the paste and bake three-quarters of an hour.

CREAM PIE.—Beat four eggs light and stir them into a quart of scalding cream; add half a teaspoon of salt, one teaspoon of lemon extract, and two tablespoons of white sugar. Line plates with pie crust, rolled thin, and set them in a quick oven ten minutes, then nearly fill them with the cream and bake half an hour.

GRAPE PRESERVES.—Pick ripe grapes from the stems and squeeze the pulp from the skins; take a pound of sugar and a cup of water for each pound of grapes, and when boiling hot skim it and put in the inside of the grapes, after having bruised them a little to get out the juice. Let it boil up once or twice, then strain all through a coarse cloth to remove the seeds; put in the skins and return it to the fire and they will fill up in a few minutes. Boil them until the syrup is thick and rich, then put them in jars and keep them in a cool place.

PICKLED PEACHES.—Take ripe (not soft) peaches and pare them, or, if preferred, leave the skins on and remove the down with a brush. Make a gallon of good vinegar hot, and add to it five or six pounds of brown sugar, and cloves and cinnamon to taste. Put in the peaches and cook gently ten minutes; take them out one at a time with a spoon; put them in a jar and pour the vinegar over them while hot. When cold cover them close and keep in a cool place.
JENNIE.
Livonia, N. Y., Sept., 1859.

TO KEEP CIDER SWEET.—TOMATO FIGS.

DEAR RURAL:—In answer to an inquiry for a recipe to keep cider sweet, I send the subjoined, also one for Tomato Figs, and one for Pie Crust:

TO KEEP CIDER SWEET.—To 40 gallons new cider, add one quart hard wood ashes; 2 oz. isinglass; 4 oz. alum. Leave the bung out ten days, then rack off and bung up tight.

TOMATO FIGS.—Take smooth tomatoes, and to eight pounds allow three pounds of sugar. When skinned, put them with the sugar, and boil them until they are thoroughly penetrated by it. Take them out, press them flat, and dry on dishes in the sun. Sprinkle them occasionally with a little sugar. When dry pack them in boxes, sprinkle each layer with sugar. Boil down the remaining syrup for future use, or use it for preserving tomatoes.

GOOD PIE CRUST.—To all lovers of pie, who wish to avoid as much as possible both lard-shortened and saleratus-sweetened articles, I would recommend the use of rich, sweet cream, with or without a little salt, as an article of shortening. This is a mode quite original, but good, however, (I think,) as you will not have "soggy" crust at the bottom. Try it.
M. L. CLARK.
Fulton, N. Y., 1859.

WASHING RECIPE—FRIED CAKES, &c.

Being a subscriber to your paper, and having a few excellent recipes, I cheerfully send them for the good of the public.

WASHING RECIPE.—One-fourth pound of borax; 1 lb. saltpetre; 1 gallon rain water—pulverize the borax and dissolve it in warm water—use eight tablespoonsful of the liquid to 1 quart soft soap—make a suds of the soap—soak your clothes an hour or two (or over night.) The soils will come out easily—make a suds of the same and scald for an hour, not boil. Suds and rinse, as is usual.

RECIPE FOR COOKIES.—One cup of butter; 2 of sugar; 4 eggs. Season to your taste.

FRIED CAKES.—One cup of cream; 1 do. sugar; 8 eggs; a little soda; fry in hot lard.

ANOTHER MODE.—Two cups buttermilk; 2 do. sugar; 1 of water; 4 eggs; a little soda; fry in hot lard.

CRUMLERS.—One spoonful of butter; 1 of sugar; 1 egg—roll thin, and fry in hot lard.

GOOSEBERRY JELLY, PEARL STARCH.

MESSES. EDS.:—Noticing an inquiry in the *RURAL*, how to make Gooseberry Jelly, (and also Starch, and as yet, not seeing any answer,) I send mine, which is nice:

GOOSEBERRY JELLY.—To 1 pint of juice add 1 pound of sugar; boil 15 minutes, and set in the sun several days. The fruit should be green. Put them in a tin pail, place in a kettle of cold water, cover closely and boil until cooked. Strain as for jelly.

TAKE "Pearl Starch," dissolve in a little cold water, and then pour on boiling water enough to make it thick. A little salt and mutton tallow, or spermaceti, makes a nice polish.

Will some of the readers of the *RURAL* please inform me how to preserve "Stowell's Evergreen" Corn for winter use?—F. Grand Rapids, Mich., Aug., 1859.

REMARKS.—F. will observe that the information desired is furnished in our last and previous issue.

ALWAYS mend clothes before washing.

THE MOTHERLESS.

I saw a child of infant years,
Bowed low with sorrow and with care,
While from her eyes the bitter tears
Were flowing slowly in despair.

It was a tiny little form
That, sorrowing, bent her weary head,
And while the tears were flowing warm,
She murmured "my mamma is dead—"

"They laid her in the cold damp ground
When winter winds were blowing chill,
And there, though summer smiles around,
And all is fair—she sleepeth still."

She called, but yet no answer came,
She wept, but oh! no sweet caress,
No gentle hand will press again,
For she, alas! is motherless.

But now she's sleeping; 'er that brow
So young, so fair, so innocent,
A holy calm is resting now,
With childish trust and beauty blent.

The lips are parted—soft and low,
A gentle sigh came to my ear;
And then a smile, whose radiant glow
Told angel visitants were near.

And as I saw the sufferer there,
By sleep calmed to forgetfulness,
My heart arose to God in prayer,
That he would shield the motherless.

That while upon life's troubled tide,
The sorrowing one must lonely stand,
Her barque might safely onward glide,
Guided by His unerring hand.

South Danby, N. Y., 1859. MARY A. B.

"I'VE A KISS FOR THEE, MOTHER."

Once again both the Saviour sent His Reaper—
Angel to our earth-home and bade it take from us
A loved heart-jewel. We had treasured it well—
had hidden it within the warm folds of our love,
and had made for our gem a priceless setting—
had encircled it with the purest pearls of our
affection, until we had forgotten that Death loves
but to aim its shaft at "a shining mark!"—had
forgotten that our Father hath said, "Little chil-
dren, keep your hearts from idols!"—and, almost
unconsciously, we had placed an earthly shrine
within our heart-temple, and we loved to worship
there. But the angel whom we love not, wrapped
his sable plumes about him, and like a darksome
shadow, rested beside our door,—watching,
waiting!

Morning dawned, and forth came the glad sun-
shine from its amber-hued couch, to smile upon
the beautiful earth! It kissed the dewy tear from
the pure flower, glanced through the palace halls
of wealth, played awhile beside the humble cot-
tage door, and then entered our darksome home.
But it could not chase the shadows from our
hearts, and the sunlight seemed a mockery, as we
shut it out from our dwelling and it fled away!

Our darling was sleeping! The long lashes lay
motionless on the pale cheek, and the silken hair
—a mother's pride—was pushed away from a
forehead whereon Death had set his seal. 'Twas
like the marble, save that it seemed colder when
we pressed our lips thereon.

Slowly the hazel eyes were opened, and the
white lips parted as if to speak; the hands were
raised, and while affection lent a love-light to the
dim eyes, the lips whispered, "I've a kiss for thee,
mother!—I've a kiss for thee, mother!" Then,
with the warmth of that kiss still clinging to the
marble lips, and the love-let words still lingering
there, he left the house, *O! so desolate!*

We mourn that the shadow has fallen so heavily
upon our hearts, but we know that in Heaven
there is no darkness, no sorrow, and the death-
angel is but God's messenger, sent to bear us
safely over the dark waters and through the
shadowy vale, and we know that our loved one,
our only treasure, is an angel now, and upon his
pure brow he wears a bright-gemmed coronet.

He has gone to meet his angel-sister, and together
they walk the golden streets of the "new Jerusa-
lem," singing praises the while to the "Good
Shepherd." Fit worshippers at God's throne—a
band of pure-robed children! In Heaven we hope
to meet him, never more to part—aye, never more!

Then fold the hands gently
O'er the still breast;
Wake not his slumbers,
Our boy is at rest.

Not in the grave-yard—
Not in the grave—
In the arms of our SAVIOR
Our darling we've laid.

There in that blissed Haven,
From suffering free,
Fond mother, thy loved one
Is waiting for thee!

And when thou shalt join him,
May his greeting be,
"I've a kiss for thee, mother,
A fond kiss for thee!"

Brighton, N. Y., 1859. NETTIE NETTLE.

CO-OPERATION OF THE WIFE.—No man ever pros-
pered in the world without the co-operation of his
wife. If she unites in mutual endeavors, or re-
wards his labors with an endearing smile, with
what confidence will he resort to his merchandise
or his farm, fly over lands, sail upon seas, meet
difficulty and encounter danger, if he knows that
he is not spending his strength in vain, but that
his labor will be rewarded by the sweets of home!
Solitude and disappointment enter the history of
every man's life; and he is but half provided for
his voyage, who finds not an associate for his
happy hours, while for his months of darkness and
distress, no sympathizing partner is prepared.

SPEAK GENTLY TO THE ERRING.

"Speak gently to the erring,
Ye know not all the power;
With which the dark temptation came.
Is some unguarded hour."

For some wise purpose God has hidden from us
the power of discerning the entire effects of kindly
spoken words. In our intercourse with our fellow
mortals we see some more liable to err than others.
Some appear never to do a wrong act, so far as
we are capable of judging. They have been taught
from their infancy, perhaps, that it is wrong to
wound a fellow-creature's feelings, by thoughts,
acts, words or looks, and the principles that are
so thoroughly impressed upon their minds in
childhood follow them through after-life, and prove
a safe-guard to shield them from meriting the
censure of a cold unfeeling world. Then, again,
there are those who have to struggle through this
life, all alone as it were, unaided by kind words
or approving smiles, if, perchance, they perform an
act worthy of either. They know not the power of
a mother's love and example—there is no guardian
voice whispering words of peace, comfort or ap-
probation, giving "precept upon precept and line
upon line." Nay! they receive nothing but harsh-
ness, stern and angry looks. Let us follow those
lonely ones to the place where they hold com-
munion with their own thoughts—witness the
tears that are shed, hear the sighs that come from
a wounded heart—a heart that longs for sympathy
and kindness. Do not our hearts yearn towards
them with sympathetic feelings? But are we not
actuated by the impulse of the moment?—are our
kindly feelings founded upon a principle that is
fixed in the heart? Let each one answer the ques-
tion, remembering that kind words oftentimes
turn away wrath, and speak gently to the erring.
Edwardsburgh, Mich., 1859. D. S.

LEGISLATION IN THE NURSERY.

See the young mother in the nursery, with an
unfolding human character committed to her charge
—see her profoundly ignorant of the phenomena
with which she has to deal, undertaking to do that
which can be done but imperfectly, even with the
aid of the profoundest knowledge. She knows
nothing about the nature of the emotions, their
order of evolution, their functions, or where use
ends and abuse begins. She is under the impres-
sion that some of the feelings are wholly bad,
which is not true of any one of them; and that
others are good, however far they may be carried,
which is also not true of any one of them. And
then, ignorant as she is of that with which she has
to deal, she is equally ignorant of the effects that
will be produced on it by this or that treatment.
What can be more inevitable than the disastrous
results we see hourly arising. Lacking knowledge
of mental phenomena, with their causes and con-
sequences, her interference is frequently more
mischievous than absolute passivity would have
been. This and that kind of action, which are
quite normal and beneficial, she perpetually
thwarts; and so diminishes the child's happiness
and profit, injures its temper and her own, and
produces estrangement.

Deeds which she thinks it desirable to encourage,
she gets performed by threats and bribes, or by
exciting a desire for applause, considering little
what the inward motives may be, so long as the
outward conduct conforms, and thus cultivating
hypocrisy, and fear, and selfishness, in place of
good feeling. While insisting on truthfulness,
she constantly sets an example of untruth, by
threatening penalties which she does not inflict.
While inculcating self-control, she hourly visits
on her little ones angry scoldings for acts that do
not call for them. She has not the remotest idea
that in the nursery, as in the world, that alone is
truly salutary discipline which visits on all con-
duct, good or bad, the natural consequences—the
consequences, pleasurable or painful, which in the
nature of things such conduct tends to bring.
Being thus without theoretic guidance, and quite
incapable of guiding herself by tracing the mental
processes going on in her children, her rule is im-
pulsive, inconsistent, mischievous often in the
highest degree; and would indeed be generally
ruinous, were it not that the overwhelming ten-
dency of the growing mind to assume the mono-
type of the race, usually subordinates all minor
influences.—*Westminster Review.*

CHILDREN'S FOOD.

To this fact the attention of parents and guard-
ians should seriously be given, that by it they
may learn to avoid the petty tyranny and folly of
insisting on children eating food for which they
manifest repugnance. It is too common to treat
the child's repugnance as mere caprice, to con-
demn it as "stiff and nonsense" when he refuses
to eat fat, or eggs, or certain vegetables and
"wholesome" puddings. Now, even a caprice in
such matters should not be altogether slighted,
especially when it takes the form of refusal, be-
cause this caprice is probably nothing less than
the expression of a particular and temporary
state of his organism, which we should do wrong
to disregard. And whenever a refusal is con-
stant, it indicates a positive unfitness in the food.

Only gross ignorance of physiology—an igno-
rance unhappily too widely spread—can argue
that because a certain article is wholesome to
many, it must necessarily be wholesome to all.
Each individual organism is specifically different
from every other. However much it may resem-
ble others, it necessarily in some points differs
from them; and the amount of these differences
is often considerable. If the same wave of air
striking upon the tympanum of two different men
will produce sounds to the one which to the other
are inappreciable—if the same wave of light will
affect the vision of one man as that of red color,
while to the vision of another it is no color at all—
how unreasonable it is to expect that the same
substance will bear precisely the same relation to
the alimentary canal of one man as to that of
another.—*Buckland.*

We run the risk of experiencing the greatest
disgust if we observe too closely how government,
justice, and cookery are managed.

WAITING FOR DEATH.

"I AM waiting now to die; for death seems very
pleasant to me."

Have you ever stood and listened
By the window late and long,
Till the midnight gloom grew deeper,
And your fears grew with it strong?
Have you listened for the footsteps
Of the one whose voice alone
Could drive away the shadows
That around your heart had grown?

Have you ever watched and waited
While the mournful night-winds grieved,
A thousand times believing,
And a thousand times deceived,
As you anxiously, eager glance,
Peering through the darkness drear,
Behold amid the phantoms
The beloved presence near—

Yet as often—bitter lesson—
Learning that your hopes were vain,
Till your spirit, crushed and wearied,
Would not let you look again?
Have you ever like this listened—
Watched and waited, late and long,
Till the midnight shades grew deeper
And your fears grew with them strong?

Lo! thus my soul is waiting,
In the dim and shadowy vale,
For the footsteps, long expected,
Of the Angel grim and pale;
The Angel feared and dreaded,
Most of all God's watchful ones;
Most unloved and most neglected
By earth's shrinking, guilty sons;

But who, though cursed and hated,
To his mission ever true,
Over both the young and aged
Sprinkles the Lethæan dew,
Till the mother mourns her baby
In the wakeless slumber hush'd,
And the children kiss the forehead
Laid with the life blood flush'd.

This Angel to others so fearful,
With the shadow upon his brow—
Is to me an angel of glory,
And I'm waiting for him now;
Waiting, to hail his coming—
Listening, with lips apart,
One hand reached forth to greet him,
And one hand upon my heart,—

Striving to still his beatings—
Striving to grow more calm—
For I know he will bring with his coming
To my wounded spirit balm.
So I earnestly watch and listen
For the tread of his phantom band,
Reaching to gain through the darkness
The clasp of his shadowy hand.

To the music of earthly voices
My spirit is deaf and dumb;
I hearken to hear him only,
Will he never, never come?
Come to my soul o'erwarded—
Worn by this restless breath;
For to me an Angel of glory
Is the pale brow'd Angel, DEATH!

Hastings, N. Y., 1859. ROSIE.

LAZINESS.

When we view the many improvements of the
age, and the hurry and bustle which is every-
where seen, we call ourselves an industrious peo-
ple. And so we are taken as a whole; yet, when
we look about us thoughtfully, who can fail to see
that no one evil is gaining ground faster than
laziness,—nothing more nor less than *Laziness*,
homely as the name may sound. Look into our
country neighborhoods, villages, and cities.—
Everybody is trying to get a living without labor.
See the peddlers traveling around carrying packs
heavy as themselves—not feeble and delicate,
persons unable to work, but stout, healthy men,
with no other disease than Laziness. See the
gentle loafers in every village lounging in their
chairs, pitching quoits, or strutting about in all
the pride of conscious idleness, with no pennies
in their pockets or brains in their heads. Notice
the numbers of healthy young men in our cities,
standing behind the counter all day long, dressed
in the height of fashion, and displaying to the
greatest advantage their white and ornamented
fingers. Talk not to me of its being tiresome
business—I wish it were a hundred times more
so. "Snuff up your nose," if you will, at the
honest, sunbrowned farmer—if it were not for
him, ye silly sons of Laziness! you would be
poorer than you are. I have due respect for the
learned professions, but I contend that, for several
years past, this has been the great vortex for lazy
people to slip into. If every other avenue leading
to ease is closed, persons can slip into this and be
saved. It is a fact, you can scarce find an educated
man in these days, but he is too lazy to take care
of himself. He can eat, sleep and smoke—yes,
even walk with the aid of a cane—but he cannot
work,—no, no, no.

But this lazy principle is not confined to men
alone, far from it. It has become a settled fact with
our ladies to which there are few exceptions.
When a man marries he is obliged to marry a
BANDER also, to take care of his wife. She, the
delicate one, can not endure the least fatigue—
she cannot be burdened with a single care.—
Money makes but little difference,—the poorest
lady in the land, does she not marry to be sup-
ported? Talk about the delicate women of this
age. What makes them delicate? nothing but the
idea that has taken root among us, that labor is
not genteel,—they will not work, how can they be
strong? If every woman in the land was obliged
to work as hard as our mothers and grandmothers
did, there would be fewer diseases and deaths than
now. More die from Laziness than hard labor. I
know there are men and women all over the
country who labor hard, but how few of their

children lift a finger in useful occupations—the
boys must have a fast horse and prepare for Col-
lege—the girls must dance, play the piano, and
singer in the parlor to entertain a brainless ex-
quisite, and finally must marry an establishment
and live without work. If that is not the pro-
gramme for the rising generation, in a few words,
tell me what is. Laziness is becoming a fixed
principle, and if there is no stop put to it in some
form or other, we must bide the generations
yet to come.
Cayuga, N. Y., 1859. AMELIA.

RESPONSIBILITY OF PARENTS.

"Time was, when settling on thy leaf, a fly
Could shake thee to the root; and time has been
When tempests could not."

If to pilot a ship across the ocean be a work of
great responsibility, requiring prudence and judg-
ment, as well as knowledge and experience, much
more is it such a work to guide an immortal spirit
through the tumultuous sea of youthful passion
and childish impetuosity, and to secure for it a
safe passage through the dangers and perils of
manhood and old age. A ship on the ocean may
founder and go to the bottom, and no one, per-
haps, suffer a single pain, or breathe a single sigh;
but an immortal soul, wrecked upon the shores
of time, may spend an eternity in sighs and
groans, but they cannot undo the past, or rectify a
single mistake.

What the pilot is to the ship, the parent is to
the child. The one conducts the frail bark far
out to sea, beyond the reach of special dangers,
and then surrenders his charge into other hands.
The other guides a deathless spirit through the
perils and quicksands of childhood and youth,
and then leaves it to the mercy of a treacherous
world, to drift upon the tide of circumstances, or
to follow the bent of its inclinations, given to it
by parental training and discipline. Though the
parent cannot insure a successful issue, yet he is
in a great degree responsible for the future career
and the fate of his child; for it is expressly com-
manded, "Train up a child in the way he should
go, and when he is old, he will not depart from
it." If, then, the words of the wise man are true,
and if the children do depart from the way they
should go; or, rather, are never taught to walk
in it, and go down to destruction and to eternal
death, whose fault is it, if it is not the parent's?

Parents cannot be too deeply impressed with
the weight of responsibility which presses upon
them, or of the importance of the early religious
training of the immortal spirit entrusted to their
care. Next to their own salvation, there is no
subject of so great importance, or that should
command so much of their attention, their time,
and their labor, as the spiritual and intellectual
education of their children. It is their duty to
train them up for heaven—to fit them for use-
fulness in this world, and for the enjoyment of the
rest and felicity of the redeemed. This obliga-
tion is laid upon them; and it is in their power,
in a measure, so to do, else the injunction of the
apostle had never been given them to bring up
their children in the nurture and admonition of
the Lord. Yet how many there are in every com-
munity, children even of professing Christians,
who, through the negligence of their parents, or
the force of their evil example, or the want of
timely or judicious instruction, have grown up in
ignorance; to become vicious, prodigal, and
wicked men; a cause of grief to their parents,
and a source of moral contagion to the wide circle
of acquaintance in which they move. Many
parents there are who see these evils, and charge
them to their proper source, who at the same time
are little conscious that the course which they are
pursuing with their own children is tending to the
same results—to profligacy and ruin.—*Advocate
and Guardian.*

THE UNIVERSAL LANGUAGE.—Prentice, of the
Louisville Journal, says:—The English language
seems destined to gather to itself all the scattered
readers. Slowly it is whispering its way into the
heart of mankind—and is acknowledged to be the
best adapted to the universal reader. In Lord
Bacon's time he deemed the Latin language the
safest to entrust his immortality in. "I do con-
ceive," he said, "that the Latin volumes, being
the universal language, may last as long as books
last." Milton, more modest, "content," (to use
his own expression with regard to Britain and his
native tongue,) "with these Islands as my world,"
set his great works in the English. He did not
care "to be once named abroad," though he deemed
that he might have attained to that. "Paradise
Lost" was written in English, and where is it
not read in English, and where is it not "named
abroad?" English readers have been sown like
seed in

Whatever clime the sun's bright circle warms;
The English language has been planted on all
shores—and everywhere, like a native flower of
thought, it grows. And everywhere are its readers.

A MAN'S force in the world, other things being
equal, is just in the ratio of the force and strength
of his heart. A full-hearted man is always a pow-
erful man; if he be erroneous, then he is powerful
for error; if the thing is in his heart, he is sure to
make it notorious, even though it may be a down-
right falsehood. Let a man be ever so igno-
rant, still if his heart be full of love to the cause, he be-
comes a powerful man for that object, because he
has heart-power, heart-force. A man may be de-
ficient in many of the advantages of education, in
many of those niceties which are so much looked
upon in society; but once give him a strong heart
that beats hard, and there is no mistake about his
power. Let him have a heart that is right full up
to the brim with an object, and that man will do
the thing, or else he will die gloriously defeated,
and will glory in his defeat. Heart is power.—
Spurgeon.

THE sorrows, calamities and disappointment,
that a man suffers outwardly, have a most intima-
te, although secret, connection with hidden
evils, until these are removed, it is in vain to hope
that the outward life can be orderly, pleasant, and
happy.

SHALL I BE CROWNED?

If I, "along the cool, sequestered vale of life,
Shall keep the noiseless tenor of my way;"
If I shall shun the scenes of earthly strife,
And only live to meditate and pray:
Or if contented with a humble lot,
I shun the busy city's tempting round,
And seek seclusion in a cave or grove,
Shall I be crowned?

If I shall be content to carve a soldier's way
To golden gates, and hope at last to stand
In the full brilliance of eternal day,
Not having lent a brother once a helping hand,
Not having dried a tear, or caused a smile
On the wan faces which on earth abound,
Nor felt for any sin the sinner's lurking wile,
Shall I be crowned?

Not so: I must of strife and labor bear an honest part:
"Tis not by coward that the laurel's won;
The while I keep a pure and spotless heart,
"Tis sin and not temptation I must shun:
I must, while here, maintain the faithful fight—
In the front rank of God's array be found:
Live in the world a champion of the right,
And then be crowned!

"IT MIGHT HAVE BEEN."

This is an every-day phrase, but its significance
is varied and often very expressive. Frequently
it sounds reproachful,—there are periods in our
past lives when we have formed grand projects
to accomplish much good in the world, and
make ourselves noble and great, but it was only
an impulse; time has hurried us past the golden
days of youth, and as we enter upon the duties
of mature life, we pause a moment to review the
scenes left behind. We remember those youth-
ful plans, and the opportunities for their accom-
plishment now lost. How many sad hearts we
might have cheered,—how much of sorrow we
might have escaped,—how much more noble we
might have been. These words are like sharp ar-
rows driven into our souls, as we reflect upon un-
improved opportunities, lost pleasures, long cher-
ished hopes now crushed. Daily, as we peruse
our life-book, as we turn over leaf after leaf, we
read upon almost every page—"It might have
been."

An old man sat and pondered. His locks were
white with age, and his countenance showed that
he had been a man of crime and sorrow. His
features indicated deep, earnest thought. Now
and then you might discover a smile as though a
ray of light had penetrated his dark soul—he was
thinking of long ago, when, in his boyish dreams,
he had resolved to be great and good. And why
should he not? His prospects were as fair as
those of others; he fancied that his intellect, nat-
urally so brilliant, had been cultivated; that his
heart had been made alive to all that was pure;
that he honored God as his Creator,—his fellow-
man as himself, and in return was honored. Then,
again, you might have seen that cold, and look, as
if the darkness within was still more profound,—
in the light of fancied prosperity he had seen more
distinctly the great moral and intellectual wreck.
His misery was tenfold greater, and he only
sighed, "It might have been."

Sometimes these words are expressive of heart-
felt gratitude. We consider what our condition
would have been, had not our kind Father in
Heaven led us so gently, and watched us so
carefully. Many times our feet had well nigh
slipped, and almost inevitable destruction was
hidden from our eyes by a veil of error; we
might have been like the hundreds of fallen
ones about us, destitute of every generous im-
pulse. The fountains of purity might have been
forever sealed,—despair might have been thrown
like a thick mantle about us. We shrank back,
almost overwhelmed, and exclaim, "It might have
been." Every day as the expression rises to our
lips, if it expresses aught of discontent, check it,
for, though our past lives may have been clouded,
yet
"When life's journey is ended, its sands run at last,
We'll find more of sunshine than shadows we've past."
But if it is the out-gushing of a grateful heart,
give it utterance, that, by a backward glance at the
evil that might have been, the sunshine of our
future may not be darkened.
M. M. M.
Lima, N. Y., 1859.

FOLLY OF PRIDE.—Take some quiet, sober mo-
ment of life, and add together the two ideas of
pride and man; behold him, creature of a span,
stalking through infinite space in all the grandeur
of littleness. Perched on a speck of the universe,
every wind of heaven strikes into his blood the
coldness of death; his soul floats from his body
like melody from the string; day and night, as
dust on the wheel, he is rolled along the heavens,
through a labyrinth of worlds, and all the crea-
tions of God are flaming above and beneath. Is
this a creature to make for himself a crown of
glory, to deny his own flesh, to mock at his fellow,
sprung from the dust, to which both will soon
return? Does the proud man not err? Does he
not suffer? Does he not die? When he reasons,
is he never stopped by difficulties? When he
acts, is he never tempted by pleasure? When he
lives, is he free from pain? When he dies, can
he escape the common grave? Pride is not the
heritage of man; humility should dwell with
frailty, and atone for ignorance, error and imper-
fection.—*Sydney Smith.*

COMPANION SINS.—When one sin is admitted, it
is generally found that it hath a companion wait-
ing at the door; and the former will work hard to
gain admission for the latter.

THE OCEAN.—How little of the sea can a child
carry in his hand! As little do I take away of my
great sea—the love of Christ.

TEACHERS' ASSOCIATION—ANNUAL MEETINGS.

The State Teachers' Association of Michigan, now one of the recognized educational institutions of the Peninsular State, held its annual meeting at Pontiac. Addresses were delivered by Prof. H. S. Frieze, Rev. Dr. E. O. Haven, of Boston, and by the retiring President of the Association, Prof. A. Winchell. The addresses were eminently practical. According to the *Michigan Argus*, the attendance upon the Association was fair, but not as large as it should have been. There is power in these meetings, and the teacher who will not make some little sacrifice to attend them, either does not properly appreciate their benefit or his position. During the session, papers were read upon various topics connected with teaching, by Messrs. Richards, of the Albion Female College; Fisk, of the Agricultural College; and Briggs, of the Ann Arbor Union School, which severally elicited considerable discussion.

The *Journal of Education* was continued in its present able hands until the close of the year, when its future will be provided for by the Executive Board.

The following officers were elected for the ensuing year:—President—E. J. Bora. Vice Presidents—1st District, A. L. Watkins; 2nd, G. W. Perry; 3d, D. H. Davis; 4th, E. L. Ripley; 5th, E. Olney; 6th, Rev. D. J. Poor; 7th, Rev. B. M. Fay; 8th, E. Danforth; 9th, H. Bross; 10th, A. L. Bingham; Lake Superior, O. E. Fuller. Res. Secretary—Frank Penney. Cor. Secretary—D. Putnam. Treasurer—D. B. Briggs. Executive Board—Hon. J. M. Gregory, Prof. L. R. Fisk.

The State Association of Pennsylvania convened at West Chester, Chester County, on the 2d ult., and continued in session three days.

The following officers were chosen for the ensuing year:

President—C. R. Conover, of Bradford. Vice Presidents—J. E. Weaver, J. L. Richardson, of Luzerne; Jonathan Gauss, of Chester; David Dennison, of Allegheny. Secretaries—Wm. Sterling, of Philadelphia, and S. D. Ingraham, of Harrisburg. Treasurer—A. Rowe, of Lancaster. Cor. Secretary—Wm. H. Johnston, of Bucks. Executive Committee—Messrs. Allen, Sherman, Thompson, Wickersham and Lawrence.

Written for Moore's Rural New-Yorker.
A WORD TO TEACHERS.

What do you teach? This is a question upon which teachers should think and ponder—a question that should not be treated with ridicule and contempt, or passed lightly over. It is a question that should engross attention; one upon which you should bring your minds to bear, and see if you are training the young minds entrusted to your care in such manner that, with a clear conscience, you can stand up and say, "I have done my duty—I have done the best that I could—I have sought to train them up in the way of truth and morality, and the fear of God. There are many who call themselves teachers—instructors of the young mind—that cannot, I very much fear, say this; that, if called upon to-day to give an account of the time they have spent, would be "weighed in the balance and found wanting."

All teachers impart knowledge for money. This is well, certainly every teacher should expect and receive a reasonable compensation for his services, but there are those who make this the great and only object of teaching. Take the young man, for instance, who has been through the Arithmetic, looked inside of a Grammar, and, in a word, has merely skimmed over the surface of common English. He thinks if he can engage a District School for a winter's term, it will pay pretty well. And then it is something to have the name of being a school-teacher. Ah, how it will lift some empty-brained fools above the "common herd" to teach a school. Observe some of the young ladies—(I fear I should offend some verdant Miss if I did not call her so,)—just obtaining a smattering of common English, and preparing to teach school. It would not look well to stay at home and help mother—her hands are too fine for such drudgery—she engages a school, and is metamorphosed into a school-teacher. Dressed to "kill," she parades into the school-room. It is a matter of little moment whether the lessons are learned or not, if the time passes by all is well. A dull, hum-drum affair is the instruction of the young—anything to kill time is the object sought. This is not the case in all instances, but I fear it is in far too many.

Teachers, did you ever realize what a responsibility is resting upon you—did you ever consider that you are framing the minds and making the morals of a future generation. Perhaps you have under your charge one whose logic and eloquence shall yet entrance and hold thousands in its mystic sway. Some one, doubtless, is now instructing the future ruler of our nation. And who can take upon themselves the duties of the situation and pass it lightly over, as they contemplate and feel how susceptible are the minds of the young, and how lasting are early impressions? We all know that the minds of the young learn evil very quickly. One act, one word of the teacher, may entail upon the child a life of misery and woe. He sees the teacher do this and so, and he thinks, why may not I do the same. He observes the teacher commit moral and physical wrongs—he does the same. You may say one error cannot effect much harm, but remember, drops make the ocean—little sins make the hardened and confirmed sinner. Next to the mother the teacher has the strongest influence on the child. Then should you not keep watch over your actions—lead the young by the hand of love. And if you feel weary, or if your

patience is tried almost as much as it will bear, give not way to the feelings, but ever keep a sense of right before your eyes. Press on through the difficulties that surround you, and remember,

"A pebble in the streamlet scant,
Has turned the course of many a river;
A dew drop on the tiny plant,
Has warped the giant oak forever."

Oedip, Cat. Co., N. Y., 1859.

L. H.

RIGHT KIND OF TEACHERS.

Hiram Orcutt, Principal of the Ladies' Seminary at North Granville, in a little work entitled "Gleanings from School Life Experience," thus speaks in relation to teachers:

"A blight upon the trusting mind of youth."

"We need the noblest order of minds for this work. We need persons of ripe, extensive, thorough scholarship, persons of refined, elegant tastes, and high and commanding intellects; but they must be individuals of perfected power, who can communicate themselves, as well as their learning—individuals of profound impulses and burning sympathies, who have souls to move the world.—There is an acknowledged want of this kind of personal power in many of our teachers. They may exhibit no prominent defects, either in character or attainments; may, indeed, be living editions of text-books, capable of patient elaborations and learned comments on the subjects before them, but they are destitute of all vital, transmissive, inspiring influence; no virtue goes out of them as they mingle with their scholars; they never stir the deep fountains of their souls, nor waken in their bosoms those lofty sentiments that incite to greater efforts and nobler deeds. The teacher who cannot rouse his pupils to think and act for themselves, who is satisfied to drag the almost lifeless body of an uninterested class through formal recitations, does not deserve the name he bears. No matter how great his abilities, or how extensive his learning, his main work is undone. The high office of the teacher reaches far beyond the mere formalities of the school-room. Where acquisition ends, the highest education begins; hence, the paramount aim of the teacher should be to cultivate the faculties and cherish the spirit of a nobler life. If he possesses such a power, an unconscious tuition will be felt upon all around him; his spirit will have all the glow that imagination kindles, and will be filled with impulses more stirring than chivalry ever excited. Such a spirit will consecrate him to his work, and bear him through his labors as a glorious pastime."

COMMON SCHOOL STUDIES.

One of the most prevailing vices of the present system of education, is the disposition to attach undue importance to collegiate, and undue indifference to common school studies. Without thinking that collegiate education, if not built upon thorough common school training, is mere gilding on mud; people are eager to see their children flaunting their Latin attainments or their mathematical astonishments, as if these were the end of all instruction, instead of being only one process, and by no means the most important, in training the mind for life labors. The encouragement of this feeling we cannot think either a healthy indication, or a possible benefit, and we therefore regard with some mistrust the great and growing disproportion between seminaries and common schools. Not that there are likely to be too many seminaries, but that there are too few common schools. We must have good nurseries if we are to have fruitful orchards, and we shall be apt to find the best education in those States that give the best care to common schools. They are like the pennies of Franklin's proverb, take care of them and the seminaries will take care of themselves. We need collegiate education, far more of it than we are likely to get soon, but we need much more the thorough, systematic, conscientious training of common schools. When our colleges turn out graduates every year who can't spell, who blunder in grammar, who can't solve a single arithmetical problem, though they may construe Longinus correctly, and demonstrate the binomial theorem easily, it is time that a little more attention was given to common schools.—*Indiana Journal*.

NECESSITY OF HOME INSTRUCTION.

It is the nature of a child to imitate what is around it. The influence of example is as certain as the action of the air upon the body. Influences educate the child long before it is large enough to be sent from home to school. It is in the unwritten, unspoken teachings of home in our tenderest years that our destiny has its beginnings. Every word, tone, look, frown, smile and tear, witnessed in childhood, performs its part in training the infant for eternity. Instruction should begin early, but let it be oral, and consist chiefly of a few moral precepts, Bible stories, and chaste fables. A great error in our times is the pressing of the infantile mind, cramming the memory with what the child does not understand, and at the same time, so compressing and cramming it as to prevent the proper physical development, and impair the reasoning faculties.

Another of the alarming evils in our day is the circulation of demoralizing publications. Earnest warning entreaties on this subject have often fallen from the pulpits. But the warning cannot be too often repeated. The influence of immoral prints and books is calculated more than anything else to corrupt the morals, and enfeeble the intellects of the juvenile portion of our country. To circulate such publications is a serious offence against God and man; and yet I fear greatly it is a growing evil; nor do I see any corrective so available, so potential and so practical, as family government and instruction. Let the home be for amusement, pleasure, knowledge and religion, as attractive as possible.—*Dr. Scott*.

The American Institute of Instruction held its Thirtieth Annual Meeting in New Bedford, Mass., on the 23d, 24th and 25th days of August. More than one thousand teachers were in attendance, and the deepest interest was manifested.

GROUP IN THE BAZAARS.

SHOPPING AT JERUSALEM.

BY MRS. SARAH BARCLAY JOHNSON.

The bazaars of no Oriental city are comparable to those of Damascus, a city which is so beautiful in every respect, that Mohammed dared not look upon it, fearing that he should find so entrancing an earthly paradise as entirely to rob him of any desire to reach that of the skies. But Damascus is not Jerusalem, and as everybody likes to know how one goes shopping in Jerusalem, I shall not withhold a description of its bazaars because of their small share of attractiveness. True, the idea of shopping in Jerusalem is not a very poetical one, and some, I dare say, suppose it is an unpracticed art in this city of hallowed associations. But not so think the residents, who, notwithstanding the indifference of the shops, find an occasional visit to them quite an indispensable requisite to their comfort. My first expedition of this kind, apart from the novelty, afforded me but little satisfaction. Being uninitiated, I gladly accepted the offer of several of my Turkish friends to accompany me, who called quite early in the morning, that we might devote several hours to this all-absorbing feminine occupation, and the remainder of the day to a bath. Many quiet streets were threaded before joining the busy crowd which thronged the bazaars.
